FOREWORD TO THE 1971 REISSUE

Responding to widespread demand from librarians and other researchers, The H. W. Wilson Company has brought back into print the six early volumes of Current Biography Yearbook, 1940-45. Although their style and format depart considerably from present editorial policy, the volumes constitute a rich source of information on persons of the World War II period. They provide contemporary viewpoints on major world figures and furnish valuable leads to further research into the lives of a host of authors, organization heads, war correspondents, and women military leaders. And their reference value is enhanced by photographs that are difficult or impossible to come by elsewhere. The Company is pleased to make these volumes once again available to serve the research and reference needs of the scholarly community.

Preface

The 1943 Yearbook of CURRENT BIOGRAPHY continues to reflect the impact of the present World War. While in 1942 many members of the armed forces of this or other countries and many persons in civilian work directly connected with the war effort were featured, the 1943 Yearbook of CURRENT BIOGRAPHY includes numerous new war names which have come up in the news during the past year.

This, the fourth Yearbook of CURRENT BIOGRAPHY, includes in one alphabet all the sketches which appeared in the twelve monthly issues for the year 1943. All the biographies, including the accompanying lists of references, have been brought up to date, so far as time and the printer's "deadline" have allowed—in most cases to December 31, 1943.

Since its founding in 1940 CURRENT BIOGRAPHY has included a grand total of 3,515 sketches—long ones for living persons and short obituary notices for those no longer living. Many curious readers have asked us if we can hope to continue to find enough newsworthy persons to go on indefinitely. So far our answer is yes—we have on file a great many names of national and international importance, and each day's newspapers furnish new names of significance.

The 756 biographies in this volume include both long biographies of living persons and short obituary notices, the consensus among our advisers being that the interest in persons no longer living can usually be satisfied by a brief description. It is the practice of CURRENT BIOGRAPHY to include in these notices the dates of births and deaths and references to longer obituary notices in sources such as the New York *Times*.

Research for CURRENT BIOGRAPHY entails constant search for biographical material through periodical indexes, book catalogs, and many miscellaneous sources of biographical information, plus the reading and clipping of quantities of newspaper and magazine articles. This research is supplemented by telephone calls and correspondence with individuals, publishers, publicity agencies, special libraries, and other sources of information. Where it has been possible to get in touch with biographees they have been asked for additional information and for the correction of any errors in fact. In no sense, however, are these official or "authorized" biographies.

A photograph accompanies nearly all full-length sketches (i.e., of living persons). Whenever the photograph has been obtained from an individual studio appropriate credit has been given; those not obtained from individual studios or from the biographees themselves were furnished by the Press Association, Inc., Rockefeller Plaza, New York City.

Credit for the work in preparing this Yearbook is shared by the Editor with the former Managing Editor, E. Mary Trow, and with the new Managing Editor, Anna Rothe. Credit is also due the editorial staff consisting of Frances Jennings; Venita Blumoff, Helen Demarest, Urania Giordano, Ruth Lechlitner, Marian Prince, Frances Rosenberg, and Dana Rush (part-time contributors); Elba Lohman, Evelyn Smith, and Violet Smith (former members).

Cumulated Index—1940-1943 873

Explanations

Authorities for forms of names are the Library of Congress and the bibliographical publications of The Wilson Company. Biographees are entered under the name by which they are best known, i.e., Ronald Colman, instead of Ronald Charles Colman; if a shortened form of name is used, the full name appears in the sketch itself.

Each biography is headed with the name, its pronunciation if difficult, date of birth if obtainable, and occupation. The sketch proper is in turn supplemented by a list of references to sources of information, in two alphabets, 1) newspaper and periodical references and 2) books. Space limitations require that these bibliographies be short, but an effort is made to include the most useful references. The books chosen are limited to those of a biographical nature, including such reference tools as *Who's Who in America, Living Musicians,* etc.

Articles from periodicals are listed in abbreviated form, i.e., "Sat Eve Post 215:24-5 Mr 27 '43 por"; this means *Saturday Evening Post,* volume 215, pages 24-5, for March 27, 1943; contains a portrait. (See the section "Periodicals and Newspapers Consulted" for full titles.) When a name is followed by '^{40}, '^{41}, '^{42}, '^{43}, reference is made to the 1940, 1941, 1942, or 1943 CURRENT BIOGRAPHY Yearbook.

The sketches in this Yearbook are followed by various indexes, as shown in the table of contents. The last is a cumulated index to all the biographical sketches and obituary notices appearing in the Yearbooks published for 1940 to 1943, inclusive.

ADAMS, RANDOLPH G(REENFIELD) Nov. 7, 1892- Librarian; historian; author; teacher

Address: b. Clements Library, University of Michigan, Ann Arbor, Mich; h. 2030 Norway Rd, Ann Arbor, Mich.

Dr. Randolph Greenfield Adams, custodian of the William L. Clements Library of American History at the University of Michigan, was born in Philadelphia, Pennsylvania on November 7, 1892, the son of John Stokes and Heloise Zelina (Root) Adams. "My father," Adams writes us, "was the son of a Kentucky judge who married a Philadelphia Quaker; my mother was the daughter of a Connecticut Puritan who married a girl who was mostly French! (It would take a psychologist to make anything of that.)" Adams' father is a prominent Philadelphia lawyer and is also an author.

Adams was reared in Philadelphia and attended the University of Pennsylvania, from which he received his B. A. degree (Phi Beta Kappa) in 1914 and his Ph. D. in 1920. He also studied law at the same University for one year. In 1938 he received an honorary LL. D. from Albion College. Adams' first book, *The History of the Philomathean Society of the University of Pennsylvania,* was compiled during his undergraduate days and was published in an edition of 500 copies in 1913.

In 1915 Adams received an assistantship in history at the University of Pennsylvania, but left the following year to become a fellow in history at the University of Chicago. He held the latter position until 1917, when his career was interrupted by the United States' entering the First World War. Adams enlisted as a private on June 7, 1917. Ten days after he had enlisted he was married to Helen Newbold Spiller. At first Adams was attached to Base Hospital No. 20, but in the spring of 1918 he went to France with the University of Pennsylvania unit, and in the fall of that year he was commissioned a 2nd lieutenant in the Quartermaster Corps. On May 5, 1919 he was honorably discharged. He returned then to the University of Pennsylvania as a Carnegie fellow in international law.

Bachrach

DR. RANDOLPH G. ADAMS

In 1920 Adams left the University of Pennsylvania again, when he was appointed assistant professor in history at Trinity College, which has since become Duke University. He remained there until 1923 when William L. Clements, a retired manufacturer and bibliophile of Bay City, Michigan, asked him to take charge of the Library of American History named for Clements and presented, with a completely equipped building, to the University of Michigan. "Its manuscripts of the British statesmen," said an article in the *Library Journal,* "its great collection of voyages, as well as its stores of early newspapers and broadsides, have made it a treasure-house of Americana." Dr. Adams holds the rank of professor at the University. In 1929 he was visiting professor of International Relations at St. Andrews, Scotland.

Adams' first published work, *Political Ideas of the American Revolution . . . 1765-1775,* appeared in 1922. *History of the Foreign Policy of the United States* followed in 1924. Other books include two children's books on

ADAMS, RANDOLPH G.—*Continued*

American history, *The Gateway to American History* (1927) and its sequel, *Pilgrims, Indians and Patriots* (1928). Both consist of a narrative based upon pictures reproduced from the rare Americana in the Clements Library, and were the outgrowth of scrapbooks Adams compiled for his two young sons, Thomas Randolph and Richard Newbold Adams. These two books were well received by the critical world and declared to be excellent for both children and adults. Dr. Adams also wrote *Three Americanists*, concerning Henry Harrisse, a Frenchman living in America who collected Americana, George Brinley, who also collected Americana, and Thomas Jefferson, whose library formed the nucleus of the Library of Congress. The book appeared in 1939 and was considered a valuable addition to library literature. Besides these and his numerous other scholarly books, Dr. Adams has written a number of pamphlets and magazine articles, and has edited the *Selected Political Essays of James Wilson* (1930); *Benjamin Franklin's Proposals for the Education of Youth in Pennsylvania* (1927); and *A Brief and True Report of the New Found Land of Virginia* by Thomas Hariot (1931). He has also contributed biographies to some volumes of the *Dictionary of American Biography.*

Dr. Adams belongs to a number of scholarly societies, including the American Antiquarian Society, the American Bibliographic Society (president 1940-41), the American Historical Association, the New York Historical Society, and the Massachusetts Historical Association. Although a librarian, he considers that "book-collecting comes before librarianship," and has expressed his viewpoint in an article entitled *Librarians as Enemies of Books.*

Adams is tall, slim, and dark. His favorite recreation is gardening. One of Adams' friends, a well known bookdealer, considers him "in the first rank of library directors," and believes that "the present high position of the William L. Clements Library in the field of scholarship and research owes much to his efforts. . . He has encouraged and inspired many people to become book collectors, and has served with distinction on committees of many learned societies, particularly as director of the Tracy W. McGregor Fund for Historical Americana for College Libraries."

ALBEE, FRED H(OUDLETTE) (ôl'bē) Apr. 13, 1876- Orthopedic surgeon

Address: b. 57 W. 57th St, New York City; h. Colonia, N. J.; Nokomis, Fla.

Called "the Burbank of surgery" for his skilled work in grafting the human bone, Dr. Fred H. Albee has become internationally known for his orthopedic accomplishments. In the course of his career he has performed over 30,000 operations, restoring crippled men, women, and children to active, normal life, including many soldiers injured in the First World War. Dr. Albee has been interested not only in surgical rebuilding, but in the complete rehabilitation of patients through mental and occupational therapy, fitting them for unhandicapped participation in normal life. This particular interest is stressed in his autobiography, *A Surgeon's Fight to Rebuild Men* (March 1943), following chapters on his experiences as a young doctor, and on the development of his bone-graft technique.

Had he not fortuitously learned the art of tree-grafting in boyhood, Dr. Albee might never have discovered the fundamentally analagous principles of bone-grafting. "I was born on a farm in the township of Alna, Maine, on Friday, April 13, 1876," he writes. "From some hundred acres of stony soil my father wrenched a scanty living for the nine of us." Eldest of the seven children, the boy carried his load of farm work by the time he was eight. His father, Freling Huysen Albee, "combined a Spartan quality with an unflinching discipline and an authoritativeness acquired when he had served as deputy sheriff of our county." His mother, Mary Charlotte (Houdlette) Albee, "maintained an unconquerable girlish spirit all her life. I suspect that she was always something of a rebel." The Albees traced their ancestry back through the earliest Maine pioneers to Norman-English stock. Many were sea-going men. Besides sailing and farming, religion was "also an early regional industry." Albee's parents were Methodist, and strict church-going requirements were imposed on the children. They had few pleasures, since the father believed "that anything we really liked must be bad for us."

As a boy Fred Albee really liked only one farm chore—that was assisting his uncle Charles Houdlette with tree-grafting. The method of live grafting itself, and the safeguarding of the tree from outside infection and displacement, all carried out according to the principles of tree biology, were to be applied later in Dr. Albee's development of bone-grafting operations. Even in those years young Albee dreamed of the world in which he would become a doctor and surgeon. He made a medical case out of an old salt box, stocking it with bread pills and drugs made of the juice of wild berries. He even made a set of surgical instruments from white pine, "including cruel-looking saws and scalpels and an intricately carved needle." The local country doctor was his hero.

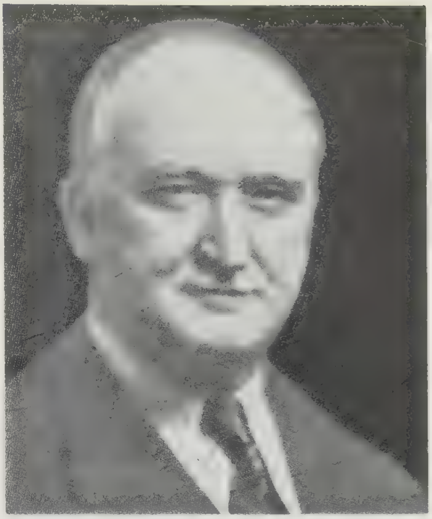
In 1891, when Fred Albee was sixteen, his father decided to send him to Lincoln Academy at Newcastle. He had to earn his own way, so he did errands for the local drygoods merchant and in winter helped cut ice on the

Kennebec River. In 1895 he entered Bowdoin College, waited on table at his fraternity house for his board and room, and played on the Varsity football team. He earned money by various means, the most pleasant being the job of laboratory assistant to the bacteriology professor. He got permission to take a special post-graduate course in biology. "My extra work in bacteriology, biology, and practical laboratory technique paid rich dividends later at Harvard."

His big ambition—and a costly one—was to be a graduate of the Harvard Medical School. Accordingly in his freshman year at Bowdoin he studied very hard and won one of the two medical scholarships then offered. When he also got a $500 tutoring job his financial worries were temporarily settled. At Harvard, Albee records, he was fortunate enough to work under several distinguished men of medicine. He assisted Dr. Richard Cabot, who was then investigating the importance of measuring blood pressure. He was also the pupil of Professor Regnall Fitz, discoverer of appendicitis. In his fourth year Albee was chosen as one of two prosectors, an honor that meant stepping in to assist the professor of surgery, Dr. Maurice Richardson—a man "without peer at the operating table."

On receiving his degree Albee won an internship at Massachusetts General Hospital, at which more major surgery was then performed than at any other hospital in the country. "Sixteen months was the usual length of internship and it passed like a flash." The young intern was impressed by the mechanical inadequacies of surgery in dealing with fracture cases; and some experience at the Children's Hospital in Boston made him realize how little had been done to prevent and cure deformities. A short period of general medical practice followed his internship. Then, through Dr. Charles Ogilvy, an orthopedic surgeon, Albee was given the opportunity to work as assistant in the Department of Orthopedic Surgery in the New York Post Graduate Medical School Clinic. At that time "there was practically no open technical orthopedic surgery being done, and I felt that such surgery was desperately needed."

Having taken over the vacancy left by Dr. Ogilvy, Albee struck out boldly on his own. In 1906 he performed his first successful operation of bone-grafting to cure the pain of chronic rheumatism in the hip of a patient. The operation attracted wide attention, and from that time on Albee blazed the way in the field of bone surgery. In 1907 he met and married Louella May Berry of Maine. In 1918 a son, Fred H. Albee, Jr., was born. He is currently studying to be a doctor.



DR. FRED H. ALBEE

Albee found a method (1911) of "joining together the spinous processes of tubercular infected vertebrae by using living bone instead of metal." For a long time he practiced these bone-graft operations on dogs, discovering that bones that are to be grafted must be from the same species, and usually from the same individual, to be effective; and that the classification of blood types in transfusion applied also to bone types. Having perfected his process, Albee also had to invent automatic, power-driven machine tools for these delicate bone-graft operations. His invention was known as the "Albee Bone Mill," and the first model was used in 1912 and demonstrated in London in 1913. Applying his operation to human patients, Albee learned much from working with crippled children. With the Bone Mill the graft operation could be done in a very short time, ten to fifteen minutes, and would enable a child burdened with casts or braces to walk normally very soon. He emphasized, however, the necessity of early operation, instead of years of treatment, in cases of tuberculosis of the spine.

When in April 1914 Albee was invited to open the German Orthopedic Surgical Congress he didn't realize that the Germans were preparing for war: hence their great eagerness to learn about treatment of bone injuries without amputation. When War came, Albee had already had a book on the subject published: *Bone Graft Surgery* (1915). He went to England in 1916, his wife with him as a Red Cross nurse. Following a tour of the military hospitals there, he went on to France to advise and operate at the military hospitals close to the Front. There a large percentage of the wounds were fractures. Before the use of Albee's methods, the procedure had often been amputation of the limb. Under constant bombardment Albee worked with other doctors and nurses in eight-hour shifts. Most of the shattered jaw cases were turned over to him, since restoring jaws is the most difficult operation of all bone-surgery.

On his return to the United States, Dr. Albee impressed upon Americans the necessity of immediate medical preparations. Fortunately, with the cooperation of Surgeon General William C. Gorgas, the Medical Corps was reorganized and expanded in 1917. Albee was made chief surgeon of United States Hospital No. 3 at Colonia, New Jersey. He had stressed to the War Department the need of a purely orthopedic hospital for the care of returned wounded bone cases, which constituted seventy to ninety per cent

ALBEE, FRED H.—*Continued*

of war casualties. At the Colonia Hospital Albee appointed a staff and made facilities not only for a medical and surgical program but also for the psychological rehabilitation of the wounded. In 1918, at a cost of $3,500,000, it was made ready for patients. Albee also started the first military graduate school in bone and joint surgery. Soon the returning American wounded filled his hospital, and within a year "I was privileged to perform approximately half of all the bone-graft operations done in the First World War." He discovered, however, that more hospital space had to be allotted to mental cases. Educational courses for post-War rehabilitation were given, including the editing of a newspaper, *Over Here*. The Curative Workshop provided occupational therapy; dances were even given exclusively for men learning to use artificial limbs. In October 1919 United States General Hospital No. 3 was closed, having fulfilled its post-War purposes. It was in this same year that Dr. Albee's *Orthopedic and Reconstructional Surgery* was published.

Dr. Albee then went to the Inter-Allied Conference on Rehabilitation held in Rome. After a tour of the battlefields he returned home with one conviction: "The War must pay back its debt to humanity by the alleviation of suffering for mankind in general." For his part, Albee became interested in the problem of aiding the large number of industrial workers injured annually, some 30,000 of whom required limb operations. He succeeded in getting the Rehabilitation Act of New Jersey passed, and became the Commission of Rehabilitation's first chairman, a post he held for twenty-three years. He also helped establish a Curative Workshop for cripples in New York City. The motto of the New Jersey Rehabilitation Commission was: "Never train around a disability that can be removed." The plan was to care not only for workers injured, but for victims of public accidents, those with congenital deformities, etc. Approximately 8,000 people were rehabilitated in New Jersey during a twenty-year period, and their subsequent earning power increased to four times the Government's investment in them. While the Government pays for such rehabilitation, the big need, according to Albee, is for industry to re-employ handicapped men. In the cases where industry has cooperated, it has been proved that these men are more efficient and faithful workers than most normal men.

In 1929 the American and British Orthopedic Associations met together in London. Plans were made to organize an International Society of Orthopedic Surgery, admitting those former honorary fellows from Central Europe hitherto dropped. The International Congress, with Albee as founder and first vice-president, held a meeting in 1936 in Rome and Bologna, a year before the publication of Albee's *Injuries and Diseases of the Hip*. In 1939 a further Congress was to be held in Berlin. When Dr. Albee and the rest of the American delegates arrived, war had been declared, and they could do nothing but return home as soon as possible. In 1940 Dr. Albee's *Bone Graft Surgery in Disease, Injury, and Deformity* appeared.

During the Second World War years Dr. Albee has interested himself in Pan-American medical relations. The Pan-American Medical Association had been formed in 1928, and in 1930 a "flying clinic" trip to Central America and parts of South America undertaken. It was in 1936 that Albee made a second itinerary as guest lecturer and demonstrator in South American clinics. A third visit was made in 1942. At the University of Buenos Aires and at the University of Brazil operating rooms were named for Dr. Albee. President de la Guardia '42 of Panama has said that one reason for his friendship for the United States is an operation performed by Dr. Albee a few years ago which enabled him "to walk without a stick or crutches."

When not traveling Dr. Albee spends much of his time teaching at the New York Post Graduate Medical School and at Cornell University. President of the International College of Surgeons, he is also consulting orthopedic surgeon in twenty-four different hospitals in New York City, as well as in New Jersey, Vermont, and Florida. Because he likes a warm and sunny climate after having endured in boyhood the cold of Maine, Dr. Albee particularly likes Florida—for that and for its excellent fishing, his favorite sport. For a permanent home he bought thirty miles of water front along the Florida coast, and there he opened the Florida Medical Center (at Nokomis) with a large orthopedic department. At the Center there is current emphasis, Dr. Albee writes, on the importance of vitamins in medical treatment.

Dr. Albee has been described by Rex Beach as "a restless, forceful, aggressive, middle-aged man with thick strong hands and the body of a football player. He resembles an artist's conception of the figure of John Bull and certainly no one would suspect him of possessing the dexterity and delicacy of youth for which he is famous." Of him Lowell Thomas '40 has said: "He is one of the great surgeons of all time. It is a definite fact that thousands of men today are walking about and enjoying their strength only because Fred Albee discovered how to graft the human bone." Dr. Albee, who has been a fighter all his life, does not recommend medicine as an easy profession. "The lot of the doctor," he says, "is like the lot of the English as Winston Churchill '42 has described it: blood, sweat, and tears. But there is another element, the one that makes all the others possible—hope."

ALDRIDGE, JAMES 1918(?)- Author; journalist

Address: b. c/o Little, Brown and Co, 34 Beacon St, Boston, Mass.

"Hell breaking loose here. What about it?" Aldridge cabled to a London newspaper when he saw the Russians march into Finland. He was given the assignment he wanted then, as he has been given almost every assignment he has requested since the Second World War began, shortly after his twenty-first birthday. In less than four years he has covered battles and battle fronts "from the Arctic to the antipodes."

James Aldridge was born in Australia. His father was the publisher of a country newspaper near Melbourne, and at sixteen James left school to work as an office boy and filing clerk in the library of the Melbourne *Sun*, a tabloid owned by Sir Keith Murdoch. According to the late Lemuel F. Parton in the New York *Sun*, Aldridge was fired from his position and he replied to his discharge by writing "a powerful letter, making it clear that he intended to be a top-ranking journalist and that the *Sun* was missing a big chance in letting him go." He got his position back.

By the summer of 1939 Aldridge had developed into what he had promised, a first-rate reporter. He was unable, however, to persuade any of the Australian papers or the Sun-Herald News Bureau to send him to Europe to cover the big events which were by then very obviously in the offing. According to Parton, Aldridge got a job on a freighter and worked his way to London. He had a letter of recommendation to the editors of the London *Sketch*, and until the outbreak of the War he did feature articles for the *Sketch* and attended lectures at the London School of Economics. Some of his pieces were so well done that the Sun-Herald Bureau in Australia put him on its list of foreign correspondents.

When the War broke out he could find no newspaper to send him to the Front as a correspondent, but he set out to cover the War anyhow on a free-lance basis. He was in Finland on speculation that something might happen when "hell broke loose," and since then he has seen action in Norway, Albania, Egypt, Crete, and Libya. He covered the news in Russia and Turkey. His publishers tell us that "he has traveled the Mediterranean on British battleships, that he flew in a Wellington bomber the first time Brindisi was bombed, and that he was one of the first correspondents in Albania, covering the Italo-Greek war. He then flew on a reconnaissance flight to Egypt, where he was accredited to the Australian Imperial Forces, and he sailed in convoy with troops to Greece. When the Germans entered Greece, Aldridge was evacuated to Crete in a small Greek boat, and from Crete to Egypt in a tanker." As a war correspondent, Parton pointed out, Aldridge "shoots from the hip and gets by the censors, quite amazingly in his dispatches from Cairo . . . in which he launched a verbal onslaught against the stuffiness of the British campaign—still making war an art rather than a business, like the Germans."

Aldridge has been wounded three times, when he was in Finland, in Norway, and in Greece. While on his way to cover the Syrian campaign he received a spinal injury in a truck accident and he was invalided home to Australia. He flew to the United States while convalescing and spent six months in the foreign department of *Time* Magazine, using his leisure time to write a novel. In February 1942 he left again for the battle front, this time signed to serve as war correspondent for the North American Newspaper Alliance.

JAMES ALDRIDGE

Before book publication, his novel, *Signed with Their Honour*, was serialized in *Collier's* as *Flight to the Sun*. Originally scheduled to appear in July, the book did not appear until the fall of 1942 because advance copies and the original edition had to be recalled in order that, the publishers said, "certain passages in the book which might give rise to serious legal difficulties" might be deleted. The passages had to do with names mentioned in the sections on Crete in the story and with military references, it was reported, but it was not revealed at whose request the changes were made.

Signed with Their Honour is a novel about the R. A. F. in Greece and in Libya during the Second World War. The hero is John Quayle, an English flying officer; the heroine is Helen Stangou, the daughter of a Greek journalist. The story, against a background of British aviation in Greece, concerns their romance and their attempts to work out their personal problems while caught in the net of a larger conflict.

Aldridge's novel received mixed reviews. Almost every reviewer compared him with Hemingway, sometimes to Aldridge's advantage, more often to his disadvantage. Clifton Fadiman '41 called the love story "stock Hemingway, as every reviewer will wearily point out"; Virgilia Sapieha found "the shadow of Hemingway" hanging over the book, "which never reaches the banked power of *A Farewell to Arms.*" Other critics, however, found the "Hemingway manner admirably apt for the telling of Aldridge's story."

Robert van Gelder thought that "perhaps too much has been made of the fact that the style is rather reminiscent of Hemingway . . . whatever resemblance there is is wholly on the surface; there is neither challenge nor swagger beneath the style. Instead there is curios-

ALDRIDGE, JAMES—*Continued*

ity and youth, the excitement of telling an important story and the pleasure of telling that story well." Another reviewer commented: "One must pay tribute to Mr. Aldridge's adeptness in depicting spectacular air-battle scenes so lucidly that the untechnical reader has no difficulty in following the most complex maneuvers. . . Here is a profoundly moving romance which, as a first novel, sets a remarkably high standard of all-round excellence." And Lewis Gannett '41 called *Signed with Their Honour* "the finest fighting book of the War." Motion-picture rights to the book were sold to a British film company.

Parton described Aldridge as a "pink-faced Australian lad with taffy-colored hair and amiable blue eyes, with just a medium chest expansion and no hirsuteness or toughness discernible. . . His blond hair is always tousled, and his manner is diffident, almost apologetic—quite deceptive behavior as he heads straight into anything that interests him, even if it's belched right up out of hell." His wounds have not left many marks, but he does have shrapnel scars on his neck. "When you come out of the War," he explained his eagerness to get back to the Front, "you feel lonely and anxious to get going again." The fall of 1943 found him in Cairo as correspondent for the Associated Newspapers, Ltd., of Australia, publishers of the Sidney *Sun* and other newspapers. (His next stop was to be Russia again.) A new novel, *The Sea Eagle*, was scheduled for publication in February 1944.

ALEXANDER, RUTH Economist; lecturer

Address: b. c/o Finance Magazine, 608 S. Dearborn St, Chicago, Ill; c/o Harold R. Peat, Inc, 2 W. 45th St, New York City; h. 234 E. Pearson St, Chicago, Ill.

Maurice Seymour

DR. RUTH ALEXANDER

"One of the most noted American experts in economics," Dr. Ruth Alexander has crusaded, in her writing and on the lecture platform, for private enterprise as opposed to collective government. Convinced that the American variety of capitalism gave and will continue to give the world its highest standard of living and that the American people in their overwhelming majority are opposed to Communism, Socialism, Fascism, or any other form of collectivism, she is confident that they will support a program of economic reconstruction after the War on the basis of "free enterprise." Besides working in the fields of political science and economics, for which she holds four university degrees, Miss Alexander is also a professional concert pianist and the possessor of a degree in music.

Ruth Alexander was born in Chicago, but was reared in Tennessee and Kentucky. Her father, Dr. Gross Alexander, was professor of Greek at Vanderbilt University in Nashville, Tennessee, where the child spent the first eight years of her life; her mother, Arabel (Wilbur) Alexander, was "a famous beauty" and "an incorrigible aristocrat." A strict disciplinarian, the elder Dr. Alexander started his daughter's education in Greek when she was five. Three years later the family moved to Louisville, Kentucky, where the little girl was entered in a public school, since the family could not afford a private one, and her classical education continued.

When Miss Alexander was fifteen she won a partial scholarship to the University of Chicago, but decided that she would prefer to study music, in which she was already interested. She received her B. M. degree in music and married a childhood sweetheart in 1916. Since she now had no personal financial concerns, she interested herself in social service work, and became active in charity organizations. "I worked with one charity organization for about a year," Dr. Alexander said, "and in every single case the family I assisted went right back to its depraved condition after it was helped to its feet. One night I was sent to persuade a young girl to leave a man accused by the court of contributing to her delinquency. That girl told me she preferred to be delinquent, and, after calling me a 'meddlesome unmentionable,' she pushed me out the door and I fell downstairs. When I came to I thought the whole thing over and came to the conclusion that people didn't want others interfering with their lives. My experience also convinced me that the poor are the authors of their own misery, and from that day to this I have seen no reason to change my opinion."

When America entered the First World War, Miss Alexander, worrying about the possibility of her husband's being called to the Front, decided to fit herself for some profession besides music and enrolled at Northwestern University, Evanston, Illinois. Her daughter was born four months later, and the young mother, according to Percy Waxman in *Cosmopolitan* Magazine, "did a semester of French and German while still in the hospital." In two and one-half years, having won her Phi Beta Kappa key, Miss Alexander was graduated *summa cum laude* with a B. A. degree. Her pictures, together with those of her child, appeared in the newspapers, which lauded her achievement. Since her husband had not been called to the Front, Miss Alexander felt that her activities had been pointless. Becoming interested in political science, she nevertheless acquired her M. A. degree at Northwestern University in 1921, the year following her graduation.

After ten years Miss Alexander's marriage ended in a "friendly disagreement." She continued her studies, particularly in languages and economics, and, after a divorce, in 1925, she was married again—to Raymond L. Redheffer, who had begun his career as a newsboy and had risen to the position of bank president. There were two sons by this marriage. Miss Alexander resumed her musical career and appeared on the concert platform with some success. After a number of recitals, however, she began to lose interest, and, on her husband's advice, returned to her studies at Northwestern University and prepared for her Ph. D., which she obtained in 1933. Her thesis was entitled "The Value and Distribution Theory of the Soviet Union," and to obtain the material for it she read over 300 books and pamphlets, necessarily acquiring some knowledge of German and Russian in order to do so. Her studies of Communism and Fascism resulted also in a book, *Can the Leopard Change His Spots?*, which was offered to two publishers, both of whom called it "brilliant" and declined to publish it.

Two years later when the late Lord Stamp, British economist, was dining at the Redheffer home, the manuscript was given him to read. After having finished the book, Lord Stamp made the statement that the most original thinking in the field of economics was being done in Chicago "by a young and beautiful woman named Ruth Redheffer." He said she owed it to her country to share her knowledge. Shortly afterward Dr. Alexander delivered a lecture for charity at the home of Mrs. Rufus C. Dawes.

This was the beginning of a long lecture career for Miss Alexander. Of her debut as a lecturer in Town Hall, New York City, George V. Denny '40 said: "Her penetrating analysis of present-day conditions and her brilliant synthesis on which she based her conclusions were the admiration of our entire audience. We want her back again." On a subsequent lecture tour throughout the country, however, Dr. Alexander complained that the "heartbreaking indifference of most audiences to their political fate" left her almost frantic. They did not know how to listen, much less how to think.

In her lectures Miss Alexander pleaded for the Old World with its proven past, against the speculative system of any new world. She stressed the utter futility of reform. "I am often astonished," she said, "at the number of people who think that because I have studied Socialism, I am in favor of it. Just because I display a knowledge of Marxism is no reason to conclude I am convinced of its truth. I have often admitted that Marx was a great man, a great mind, and therefore a great enemy. And, unless we recognize the greatness of our enemies and the seductive attractions of their doctrine of security, we are a lost nation." She found, however, that people did not seem to appreciate the true freedom of the American Way of Life, seeming willing to sacrifice it all just for security. Wondering what to do about it, she developed her famous lecture, "Education for Freedom." This lecture has been given with conspicuous success at state teachers' organizations. As such it was well received and, according to Miss Alexander, has proved to be an aid to them in controverting the Marxist propaganda to which they are being exposed daily. Ruth Alexander went to work to restore them to "the old-fashioned American point of view." At the Northwestern Missouri District Teachers Association she appealed to the intellectual superiority of her audience: "You teachers are not only the last hope but the only hope that our country will remain free." "Preserve the strong at all costs," she also told them, "for the weak can live from the strong." At the Northeast Oklahoma Education Association she blasted at John Steinbeck's '40 *The Grapes of Wrath* as a "one-sided emotional appeal to class prejudice and unworthy of America." She advised people to make use of their leisure time to "secure knowledge" instead of spending (in Emerson's words) "sleazy, rotten, fraudulent hours" at the motion-picture theatres. Although Miss Alexander declares that she is seeking "a renaissance of religious consciousness in the United States," she admits candidly that one of the purposes of the renaissance would be to put new life into freedom and new realization of its indispensability to spiritual development.

Miss Alexander has been described as "a Tory, a Bourbon, a Constitutionalist, and even a Founding Father." Some of her lecture topics are: "What Does Capitalism Mean?", "The Role of Amusement in Social Discontent", "The Spiritual Meaning of Democracy," and "Shall Man or the State Survive?"

Dr. Alexander speaks six or seven languages and is, according to a press release, the author of numerous articles in current periodicals. She is also associate editor of *Finance* Magazine, which has its headquarters in Chicago. Heads of advertising and selling leagues, bankers, and other businessmen are impressed equally by Miss Alexander's defense of free enterprise and by the good looks which she possesses. Tall and "Junoesque," with Titian hair and blue eyes, Dr. Alexander impresses audiences as being unusually attractive. Not forgetting her family obligations in the pressure of her professional affairs, the versatile economist has continued to be a "mother and homemaker"; cooking is her hobby, and she calls it "as much an art as painting or music." "Good food," she says, "is a part of gracious living."

Miss Alexander is a frequent speaker on the *Wake Up America* program over the Blue network. On December 4, 1942 she was the first and only woman to address the National Association of Manufacturers at its annual convention in New York—called that year "The War Congress of Industry." Her speech was published in *Vital Speeches* (January 1, 1943). It was entitled "The Post-War America That America Does Not Want," and was a plea to reject all forms of collectivism, Fascist and Marxist alike, on behalf

ALEXANDER, RUTH—*Continued*

of the "America of our Forefathers." "We want capitalism," Dr. Alexander said in the speech. "I do not apologize for the word or the concept. I do not cringe before collectivism and attribute only virtues to it. Nor do I attribute only virtues to capitalism. I do say that by comparison with all other forms, capitalism wins in a walk. Capitalism is the great Liberal and the great Liberator. Capitalism is the great humanitarian, for it has provided the highest standard of living for all classes known to mankind. . . Capitalism did not create poverty. It inherited poverty from collectivism. And it has done more to alleviate poverty than all preceding centuries. For that reason if for no other, capitalism must be salvaged as the *humane* way of life."

ALLEN, TERRY (DE LA MESA) Apr. 1, 1888- United States Army officer

Address: b. c/o War Department, Washington, D. C.

Everybody in the Army calls Major General Terry Allen "Terrible Terry"; that is, every one except General George C. Marshall '40, who refers to him as "The Firebrand." A professional Army man and distinguished veteran of the First World War, General Allen commanded the 1st Infantry Division in its successful participation in the campaigns of North Africa and Sicily. It has been said that the most outstanding single achievement of the North African campaign was the transformation of the American Army from a group of uniformed civilians into a "magnificent fighting machine." Much of the credit for this metamorphosis belongs to General Allen's leadership of his intrepid troops.

Major General Terry de la Mesa Allen came into the world as "an Army brat," at Fort Douglas, Utah, April 1, 1888. His father, Samuel Edward Allen, served forty-two years in the Regular Army as a professional artillery officer. His mother, Conchita Alvarez de la Mesa Allen of Brooklyn, was the daughter of a Spanish colonel who fought in the Union Army during the Civil War. She now lives in Washington, D. C. and loves to indulge in reminiscences of Terry's hectic boyhood, which was spent at Army posts, mostly in Texas. He liked to ride off to maneuvers with his father and his father's battery, enlisted men who taught him "to ride, smoke, chew, cuss, and fight, at the earliest possible age." According to A. J. Liebling of the *New Yorker*, the General's favorite memory is of a tearful playmate who explained that his mother had just spanked him for playing with Terry. "My opinion of myself went up like a rocket," observes the General.

"From horseback and post life" Allen proceeded to West Point in 1907, never doubting that a commission in the cavalry would soon be his. But his career as a cadet was not a triumph scholastically: paying scant attention to curricular activities, and accumulating demerits by the score, in his fourth year he failed a course called ordnance and gunnery and had to leave the Academy. His class regretted it because they had considered him one of their "most amusing members." They had even made a pun on his name: Tear-around-the-mess-hall Allen.

Allen then entered Catholic University of America in Washington, D. C., where he settled down to a year of intensive mental effort. He was graduated with a B. A. degree and on November 30, 1912, following a competitive Army examination, he was commissioned a 2nd lieutenant of cavalry.

General Allen began his official career at Fort Myer, Virginia, with the 14th Cavalry. He accompanied his regiment to Eagle Pass, Texas for border duty, during which he pursued and captured a party of ammunition smugglers near San Ambrosia Creek in September 1913. Allen continued to serve on border duty until August 1915, when he was assigned to the Mounted Service School at Fort Riley, Kansas. He was graduated from Fort Riley on May 10, 1916 and in July of the same year was promoted to a 1st lieutenancy. After serving briefly at Del Rio, Texas, he was again assigned to border patrol duty at Eagle Pass.

In May 1917 Allen was promoted to the rank of captain. At the beginning of the next year he left the 14th Cavalry for a short while for training camp duty at Camp Stanley, Texas. He rejoined his regiment at Fort Sam Houston in April 1918 but remained there only until June, when he was sent overseas to serve with the A. E. F. in France.

Although officially a cavalry man, General Allen was to distinguish himself, both in the First and Second World Wars, in the infantry. During the First World War he arrived at a school for infantry officers in France the day before a class was to graduate, and with his customary boldness lined up with the class while the certificates were being distributed. Said the commandant, according to *Time* Magazine, "I don't remember you in this class." Allen promptly retorted, "I'm Allen—why don't you?"—and got his certificate.

After serving with the 315th Ammunition Train until August 1918, Allen went to the front with the 358th Infantry. Wounded in action the next month, he went back into action as soon as he could, and on October 24 led his battalion against the enemy with telling results. Although "Terrible Terry" managed to make merry during his war service, and although several of his acquaintances "still yarn about his Paris operations, remembering more about his escapades than about his combat experiences," the record he established for himself as a soldier defied comparison. During one bitter operation against the enemy Allen was wounded in the shoulder. He kept on fighting, however, and after another two hours was wounded in the arm. By that time he was too infuriated to consider withdrawal. He continued pounding at a machine-gun nest for another couple of hours and was shot through the jaw. (It is interesting to note that after this bullet he lost his stutter, a handicap which had always added to his pugnaciousness.) Finally, when his ammunition ran out, he broke his fist on a German machine gunner's head and called it a day. General Pershing subsequently cited him for distinguished and exceptional gallantry and awarded him the Silver Star.

After the Armistice had been signed Allen remained with the A. E. F. in France and with the Army of Occupation in Germany until September 1920, "taking time off to go to England in 1920 to play in some polo matches." He returned to the United States and to the cavalry as a full-fledged major and reported for duty at Camp Travis, Texas, serving there until March 6, 1922. He then became a squadron commander at Fort McIntosh, Texas, and in September he was assigned to the 61st Cavalry School at Fort Riley, Kansas. When he was graduated in June he "endured" another course—for two years—at the Command and General Staff School at Fort Leavenworth, Kansas, "as an indispensable preliminary to senior rank." General Eisenhower['42] was in this same class of 241 members. Eisenhower, then a major, finished first; Allen came out 221st. In June 1929 General Allen saw the last of border service, for it was then that he went into the 6th Cavalry, serving at Camp Jackson, South Carolina, Fort Oglethorpe, Georgia, and Fort Benning, Georgia.

With an eye to the future, Allen next took an advanced course at the Infantry School at Fort Benning which he completed in June 1932. It was here that Lieutenant Colonel George Catlett Marshall, now chief of staff. noted his reckless, casual manner and classified him as a soldier "likely to be mighty useful in wartime."

Allen returned to Fort Bliss, Texas for an interim before entering the Army War College in August 1934 for a one-year course. Promoted to the rank of lieutenant colonel in August 1935, he next became instructor at the Cavalry School of Fort Riley, Kansas, where he served until June 1939. He then returned to Fort Bliss as an executive officer of the 7th Cavalry. In October 1940 he was assigned to duty as temporary brigadier general with the 3rd Cavalry Brigade at Fort Riley, Kansas, and in April 1941 was made commanding general of the 2nd Cavalry Division there.

America's entrance into the Second World War found General Allen once more preparing for action. In December 1941 he was assigned as assistant division commander of the 36th Infantry Division at Camp Bowie, Texas; in May 1942 he was given command of the 1st Infantry, a tough outfit of regulars, famous for its exploits in the last war. That entire group of hard fighters contains only six draftees. In North Africa the able leadership of the General was one of the major factors responsible for the welding of American troops into a first-class fighting force. During the Tunisian campaign General Allen personally led his famous 1st Division during the most difficult moment of the battle of Oran. His behavior served as an example and an inspiration to his men, who crushed the stiff resistance of the enemy. His orders to the division, which had three days' rations and was fighting its third day, were, "Take Oran or you don't eat!"

MAJ. GEN. TERRY ALLEN

A foreign correspondent who covered the Tunisian campaign reports that the splendid performance of the American Army won the grudging praise of the enemy prisoners. He states that the American 1st Infantry in particular, which was "led in battle by a slim, shy, hard-bitten, brown-and-gray Army careerist named Major General Terry Allen, can count among its souvenirs the unsolicited statement of those prisoners that they have met no better troops since the War began."

General Allen and his men, the only ones in the 7th Army who fought the Germans and Italians before the Sicilian Campaign, were in the vanguard of the fighting forces in Sicily. In the fierce fighting that raged around Troina, "a craggy road junction shielding the German position on Mt. Etna's northwest shoulder," General Allen threw a combat team against the Germans, only to have it torn down by enemy machine-gun bullets. German howitzers and mortars skillfully and easily held the hilltop. The 1st Division massed its artillery and, with the aid of dive bombers of the Tactical Air Force, smashed toward and through Troina.

Late in the summer of 1943 General Allen returned to the United States to command the 104th Division at Camp Adair, Oregon, "in keeping with the policy of rotating officers to give troops in training the benefit of working under commanders who have had combat experience," it was explained later. There were, however, "insistent but unconfirmed reports that he had been involved in difficulties with General Patton['43]."

The much-decorated General received the Distinguished Service Medal in June 1943 for

ALLEN, TERRY—*Continued*

his work in North Africa, and in August he was awarded the French Croix de Guerre by General Louis Koeltz of the French 19th Corps. His previous awards include the already-mentioned Silver Star, and the Purple Heart with Oak Leaf Cluster.

In appearance General Allen is as tough as his reputation. He is of medium size, close-knit, and has a thick neck, sloping shoulders, and a nose that looks as if "it had been flattened by the sudden application of considerable force." A *Time* correspondent has this picturesque bit of description to add: "The distance from the flat of Terry Allen's feet to the top of his skull is about five feet ten inches, but his stiff, straight hair stands up far enough above that to bring his total height up to six feet. His hair also sticks out at the sides. It is blue-black, flecked with gray, and his bushy brows are the same color. His eyes are deep brown and gentle. He is a gentle man. He does not like the fact that men will be killed carrying out his orders, but he has accepted the inevitability of it. He will spare or spend his men as military necessity demands; while they live he will see that they get every comfort and consideration. That is one reason why the spirit of the 1st Division is second to none in the United States Army."

The General was once a professional boxer, a circumstance which, he fears, detracts from the dignity of his present status. One of the best polo players in the Army, General Allen now keeps his wiry body fit by a three-mile after-breakfast trot on foot. In true Spartan fashion, he sleeps on the ground and requires all of his staff to do the same; he explains that several extra trucks would be needed if folding cots were used. The General's only reminder of the civilian world is a leather pocket-case containing photographs of his wife, the former Mary Frances Robinson (whom he married in 1928), and of his son, Terry, Jr., both of whom reside in El Paso, Texas.

His speech is described as picturesque: "No writer can fully capture him on paper because his talk is so wonderfully profane it can't be put down in black and white." His thinking is hardboiled and as stripped of illusion as his personality. "A soldier," he says, "doesn't fight to save suffering humanity or any other nonsense. He fights to prove that his unit is the best in the Army and that he has as much guts as anybody else in the unit."

Who's Who in the Regular Army 1925

ALLEY, REWI (al'lē rü'ē) Dec. 2, 1897- China representative of Indusco, Inc., of the United States; field secretary of Indusco Services, International Committee

Address: b. c/o Indusco, 425 Fourth Ave, New York City

Rewi Alley, with his exotic name and his boundless energy, has already become a legendary figure, although he is still very much alive and active on the Chinese industrial scene. Often compared to the fabulous Colonel T. E. Lawrence who taught guerrilla warfare to the Arabs, Alley has devoted his life to teaching methods of modern industry to the Chinese people. More than any other individual he is responsible for the development of China's guerrilla industry, for as an active member of Chinese Industrial Cooperatives (CIC) in China he has initiated a sweeping program of industrial reconstruction in the vast regions of the interior of the country.

CIC has been called an "economic defense against Japanese penetration." Plans for its organization were conceived in 1938 when the invading Japanese forces had destroyed or taken control of ninety per cent of China's east coast industries. With 60,000,000 refugees driven into the interior, China was in a desperate economic plight. Then a few progressive Chinese and Westerners joined their efforts to form the Chinese Industrial Cooperatives (known popularly as "Indusco") for purposes of establishing "an indestructible industrial system against enemy bombing, so that it can use its own people and its own raw materials to provide the goods it needs and so sustain its economy." CIC's mission was "to provide jobs for refugees, to create new supplies of consumer, medical, and military goods, and to erect an economic wall against the traffic in Japanese smuggled goods."

Rewi Alley, who, according to *Time* Magazine, deserves the "lion's share of credit for organizing cooperatives," was born in Springfield, Canterbury, New Zealand, on December 2, 1897, the son of an Irish father and an English mother, "with a strain of Scotch somewhere." His father was an ardent champion of progressive legislation and of the rural cooperative movement in New Zealand, and his mother was active in the fight for suffrage for New Zealand women. Young Rewi, the second of seven children, was named after the Maori chief, Rewi Te Manipoto, who fought against the British occupation of New Zealand and is remembered for a statement he made in answer to a British demand to surrender: "We will fight on forever and ever."

Raised in rugged pioneer surroundings, Alley was quick to learn initiative and self-reliance. He describes the frontier country in which he lived as "a wild, hard country with sweeping cold winds. We kids used to spend days living like Indians, trapping and hunting, or catching trout and cooking them on hot stones." He admits that he never wore shoes until he went to school.

When the First World War broke out Alley promptly enlisted in the Anzacs and went into active service. Severely wounded and twice gassed, he was decorated by the Prince of Wales for gallantry in action. Upon his discharge from the Army he bought a half interest in a 2,000-acre sheep ranch. The ranch failed, and Alley set out for China, working for his passage as a wireless operator on a tramp steamer. Reaching China in 1927 in the middle of a Kuomintang revolution, he was hired by the Shanghai Municipal Council, first as factory inspector of the Shanghai Fire Brigade, then as chief factory inspector of the Council's Industrial Department.

Factory conditions in Shanghai at that time were appalling. Alley summed up the labor situation when he wrote: "Tragedy, day after day, and most of it easily avoidable. It would be better to have no industry than to compete in this way—bringing children into the cities, starving them, working them longer hours than any horse could stand." It was not long before Alley had launched his program for factory reform. He traveled to the industrial centers of Europe and America to study working conditions, and he made long trips through the interior of China, "during which he investigated rural industry in every province." He wrote pamphlets and magazine articles and tried to force the adoption of new factory regulations. Ultimately Alley saw the success of his campaign of reform, but it was short-lived; for after the Japanese bombings of Shanghai in 1937 "more than 140,000 business and factory buildings and houses were demolished. China's main industrial base, such as it was, lay immobilized after but three months of battle."

Alley's career in China was never limited to industrial activities. Long interested in rehabilitation, he spent his vacations doing relief work, first in 1928 and 1929 in the Suiyuan famine and then in 1931 during the Yangtse flood. Edgar Snow '41, who was later to help in the founding of Indusco, met Alley during the famine of 1929 and wrote: "He worked all summer among the typhus-infested people, distributing relief grain, helping build irrigation ditches, and nursing lean children back to health."

With this background it is small wonder that Alley should have "worked at Indusco with the nervous energy of a dye-stamping machine." Together with Mr. and Mrs. Edgar Snow (who writes under the name of "Nym Wales"), Alley decided that the millions of starving refugees who were flocking into the interior should be mobilized "to start thousands of small 'semi-mobile' cooperative industries, located in the hinterland close to unexploited raw materials, using salvaged tools and machinery" in the beginning. With the active support of British Ambassador Sir Archibald Clark Kerr '42 the plan for Indusco was presented to Generalissimo '40 and Madame Chiang Kai-shek '40 and to Finance Minister H. H. Kung '43. Favorably impressed, Kung became president of the cooperatives and pledged $5,000,000 of government money. T. V. Soong '41 and his sisters, Madame Chiang Kai-shek, Madame Kung, and Madame Sun Yat-sen, all contributed their services on advisory committees.

While CIC has interested itself little so far in political movements of any kind, the political character of its founders and backers (in particular H. H. Kung and General Chiang Kai-shek) is distinctly conservative. It is a cooperative movement in industry, not in government, with many of its technicians trained in the industrial plants of the Ford Motor Company in the United States. (A political writer has commented, "Hitherto the Chinese cooperative workers have had a closer contact with Dearborn, Michigan, than with Moscow.") Both Indusco and Rewi Alley, however, have been the object of considerable criticism from Chinese Rightist groups who are fighting for "vast state-capitalist and state-subsidized private industries along with an all-pervading flow of *laissez-faire* commerce." To all such criticism Alley replies, "The War has taught China that she must industrialize in a decent way or perish as a slave nation. Democratic cooperative industry is the way out, not only for China but for all the backward Oriental countries, if they want to avoid disastrous class wars."

REWI ALLEY

Indusco is today growing so rapidly that no accurate figures on its size can be determined. (At the end of 1941 it was estimated that over 1,000,000 people were connected with CIC.) The cooperatives are extremely flexible; the units are light, cheap to build, and easy to move. Alley himself wrote: "As the struggle for resistance deepens, and as China is thrown more and more upon her own resources, the necessity for the spread of small productive units to whatever corners of the country will carry industry becomes more and more evident." Truly a guerrilla industry, CIC supplies many of the needs of the Chinese Army, including blankets, uniforms, and bandages. Over 300 types of articles are produced, and the production units cover the fields of printing, weaving, tanning, spinning, mining, and others. Entire towns have been taken over or newly built by the cooperatives, and it takes only seven persons to start one of them. Individuals apply to local Indusco offices for financial aid and instruction in a trade. The goods the small enterprise then produces are marketed through the Indusco offices, and the loan is paid back in monthly installments.

(Continued next page)

ALLEY, REWI—*Continued*

Many commentators feel that Alley is uniquely fitted for his job as technical expert and adviser to Indusco. He is thoroughly at home in the difficult dialects of the Chinese language and, indeed, is said to know Celestial Chinese better than most natives. Riding in trucks, on bicycles, and often just walking, he "leads the CIC staff to carry the message of working together into the farthest corner of the country." In the first two years of Indusco's existence Alley covered 18,000 miles, and wherever he went he preached: "Every undeveloped resource is a challenge to the youth of China."

"The youth of China" plays a large role in the cooperatives. Alley recruited technicians and engineers from a group of American-trained Chinese students. Many of them volunteered their services, went into the interior, organized plants, and kept production running smoothly and efficiently.

Rewi Alley has always emphasized the social and humanitarian aspects of Indusco's existence—its educational program, its clinics, orphanages, and hospitals. Although he could never be called an evangelist, he is definitely a visionary and dreams of the day when cooperatives will lead the way toward the establishment of a free, democratic, and prosperous China. When the Bishop of Hongkong compared him to a saint because of the hardships under which he voluntarily lives, Alley answered indignantly: "What about the four hundred million Chinese who have been living the same way ever since the War began?" He likes to call himself "China's No. 1 White Coolie."

"Apart from being the father of the cooperatives," writes Agnes Smedley, "Rewi Alley is one of the most truly civilized and tenderhearted of the men who walk this spinning ball of mud."

It is Alley's appearance that is most responsible for the legendary aura which surrounds him. The Chinese call him "Mr. Big Nose" and wonder how he "can see around an obstacle like that." Edgar Snow describes him as of medium height, with "a pair of tremendous rugged legs" and a profile "like something carved from Stone Mountain." That profile inspired the British sculptor, Francis A. Shurrock, to make a bronze bust of Alley which he called "The Profile of Tomorrow" and which now stands in the Royal Academy in London. Rewi Alley is unmarried. He is the adopted father of two Chinese peasant boys, Michael and Alan.

ANDERSON, SIR KENNETH A(RTHUR) N(OEL) Dec. 25, 1891- British Army officer

Address: b. c/o Ministry of War, London, England

A six-foot fighting Scot, Lieutenant General Sir Kenneth A. N. Anderson commanded Britain's 1st Army in its drive into Tunisia that was completed in May 1943. The 1st Army was at that time composed of seasoned veterans who had previously met the Germans in action, to which were joined some American forces under General Charles Ryder.

A long and varied career of soldiering prepared General Anderson for his present post. Of Scottish descent on both sides of the family, he was born on Christmas Day, 1891, in India, where his father was a distinguished authority on railroads. Like most English children born in India, he was soon sent to England to be educated. He attended the Charterhouse School, and then the Royal Military College at Sandhurst. Well-educated, he has spoken fluent French since boyhood, and he has also learned Italian. As a young man he made the acquaintance of leaders of Arab opinion when he traveled, often afoot, through Tibet and Iraq to the Mediterranean shores. In 1911 in India he became a 2nd lieutenant in the Seaforth Highlanders Regiment, and in 1915 he attained the rank of captain.

In the First World War Anderson fought in France, Palestine, and Syria. He was gravely wounded in the Somme offensive in France in 1916, and later had an even more narrow escape from death: as a major in Allenby's Palestine Army he contracted influenza and was left behind to live or die. Only the diligent care of his orderly brought him through. For his heroism in the Somme he was awarded the Military Cross. In 1917 he rejoined the Seaforths in Palestine and Syria, where he remained until 1919. Attaining his majority in 1923, he spent the years 1924 to 1928 in India, returning in 1929 to act as G. S. O. 2 of the 50th (Northumbrian) T. A. Division. In India he helped put down a number of tribal revolts. He was sent out again to India (1930), this time to command the 2nd Battalion Seaforth Highlanders, and was promoted to lieutenant colonel. Two years later he took the Battalion to Palestine, but left it at Haifa and took over the appointment of O. C. British troops in Palestine, with headquarters in Jerusalem. In June 1934 he returned to England and was given command of the 152nd Infantry Brigade at Inverness. India claimed him once more in 1936 as G. S. O. 1 to the 4th Indian Division at Secunderab, but in December 1937 he returned home to command the 11th Infantry Brigade.

In the Second World War General Anderson saw action in engagements beginning in the Saar and continuing through Dunkerque. He commanded the 11th Brigade and the 3rd Division during the closing stages of Dunkerque, for which he was made a Companion of the Bath. Back in England again, he took over a division from General Alexander '42. He commanded one corps from May to November 1941 and another corps from November until April 1942, when he was given the Eastern command.

Strict military censorship surrounded the departure of General Anderson as well as the opening of 1st Army maneuvers in North Africa. It is said that Anderson's wife, the former Kathleen Lorna Mary Gamble (whom he married in 1918 and by whom he has a son and a daughter), didn't know any more than anyone else where her husband was going when his pre-embarkation leave came to an end. She was helping him pack when she spotted a tube of anti-mosquito lotion in his kit. She thought then that she knew where he was going. "You look some more," said her husband imperturbably. She did, and made the further discovery of a preventive against frostbite. She could be sure only that the General was prepared for all eventualities, whether tropical or Arctic. A letter she received from him from Gibraltar a few days later didn't help much. "There is no black-out here," he wrote, "and mountains of bananas."

The 1st Army was landed early in November at Bougie and Bone, the easternmost port of debarkation of the Allied expedition to North Africa, where Axis planes strafed General Anderson's advancing columns. The Allied offensive in North Africa was described by the British commander as "a real combined operation of the Royal Navy and United States transports with British and United States Armies participating." The General said the British were determined "not to lose the initiative," but added, "I don't want to holler until we are out of the woods."

British Official Photo

LT. GEN. SIR KENNETH A. N. ANDERSON

The initial objects of the 1st Army were the airdromes in enemy hands. Through mid-November it continued its advance eastward through Algeria toward the French naval base of Bizerte. Royal Air Force bombers plunged ahead to strike German air transports and other aircraft near Tunis. On November 26, 1942 it was reported that Anderson's 1st Army had met the enemy at Medjez-el-Bab and driven him out after having overcome "fierce resistance." Following this engagement it was further reported that the British 1st Army, with its supporting force of Americans, was on the verge of "beginning a large-scale offensive."

On December 1 communiqués reported fighting east of Djedeida, a junction point on the Tunis-Bizerte railway about twelve miles from the Capital. This suggested to observers that the Allied plan was to reduce Tunis before assaulting Bizerte. Allied aerial bombardment proceeded steadily, with R. A. F. and American fliers making record attacks on Bizerte. Then came a counterattack by the Nazis near Tebourba. Djedeida was reported to have changed hands several times, with only the western part remaining in Allied control. Tebourba remained in Axis hands, and Mateur continued to be held by the enemy. Apparently the Allies had come up against a stone wall of resistance. Further, they still lacked sufficient planes at the right places.

In mid-December the Axis forces were sitting tight in the Mateur-Tebourba-Djedeida triangle. General Anderson was suffering anxiety because of his long and overburdened lines of communication as well as lack of sufficient air strength. Bad weather with heavy rains added to his difficulties by making roads impassable. The British summarized the situation when they stated that General Anderson had "outrun his air cover and rein-

ANDERSON, SIR KENNETH A. N. *—Continued*

forcement supplies." Most military observers believed that, with conditions as they were, it would be at least a month before a decisive land battle could be fought. The British and Americans were forced to mark time while defending their lines against counterattacking Axis forces enjoying superior air strength.

By the end of December Allied Headquarters were reporting only "continuous activity of our patrols" and Allied fighter plane flights over the Axis-held areas. No sign of enemy withdrawal was observed, but there were encouraging reports of increasing British and American air power. General Anderson was busy preparing his 1st Army for the climax of the hard-fought struggle. That climax came after a series of long, steady Allied drives into the heart of Tunisia. Through the early months of 1943 Anderson concentrated on defensive warfare, staving off Nazi counterattacks and preparing for the major blow, which was struck in the spring. Finally, on May 14, 1943, the last resistance in Tunisia was ended, and the Dunkerque in reverse, which General Anderson and the 1st Army had so long hoped to enjoy, was a fact of history.

Extremely energetic, Anderson spends as little time as possible at his headquarters and as much time as possible with his troops in the field. British Army men say that his Highlanders were devoted to him, and that Anderson repaid their devotion with unremitting care for their well-being. His wife describes him as "sometimes rather quiet . . . and people generally have confidence in him." In August 1943 General Anderson was knighted.

ATHERTON, WARREN H(ENDRY) Dec. 28, 1891- National commander, American Legion; lawyer

Address: b. 777 N. Meridian St, Indianapolis, Ind; h. R.R. #2, Stockton, Calif.

In 1943 the American Legion had a record membership of approximately 1,180,000, and was swelling its ranks with discharged veterans of the Second World War. By the end of the year, Atherton says, 100,000 had joined the Legion, which waits until personnel of the armed forces are honorably discharged and become civilians before accepting them as members; approximately 150,000 had become members of the rival Veterans of Foreign Wars. With the average First World War Legionnaire's age now fifty years, one of the biggest tasks before Warren H. Atherton, elected national commander of the Legion on September 23, 1943, is to persuade men now in uniform "to take over and make the organization theirs."

A Californian, a lawyer, and a former president of his local Chamber of Commerce, Atherton seems eminently qualified for any job that requires powers of persuasion. He was born in San Francisco on December 28, 1891, the son of Dwight C. and Elizabeth (Hendry) Atherton. After graduation from high school in Concord in 1908 he studied law by correspondence, took the Bar examinations, and on January 8, 1913 was admitted to the California Bar. (Before this he had been a member of the Railway Brotherhoods.) On July 7, 1917, after America's entrance into the First World

War, he was married to Anne Holt of San Francisco. Three months later he enlisted in Company D, 363rd Infantry, 91st Division. Commissioned as a 1st lieutenant on January 8, 1918, in April of that year he was shipped overseas, where he earned promotion to captain of Ordnance in February 1919. For sixteen years, following his discharge on September 3, 1919, he held a commission as a captain in the Infantry Reserve Corps.

During the next years Atherton rose from the ranks in the American Legion just as he had risen from the ranks in the Army. In 1919 a charter member of the Karl Ross Post 16 at Stockton, California, he served first as executive committeeman of his post, then (1926) as post commander. In 1927 he became commander of the 11th District; in 1928, department chairman of the Armistice Day Closing Committee; in 1929, member of the Community Betterment Committee of the California Legion; in 1930, chairman of the department Membership Committee and member of the department Committee on Institutions. In 1932, after having served for a year as department Americanism chairman, he was elected department commander for the year; in 1934 he was called to the chairmanship of the department Veterans' Home and Farm Campaign Committee.

In the meanwhile this energetic lawyer was also active in civic affairs. He served as president of the San Joaquin County Bar Association in 1921; as police judge in Stockton from 1920 to 1925; as president of the Kiwanis Club in 1924. In 1933 he was chairman of the Building Code Board of Examiners and Appeals; from 1933 to 1935 president of the Stockton Chamber of Commerce; from 1934 to 1935 a member of the State Board of Prison Terms and Paroles; and from 1935 to 1941 attorney for the Veterans' Welfare Board of California.

Entering the national Legion picture in 1933, Atherton was appointed a member of the Legion's Americanism Commission, serving until 1936. He was elected national executive committeeman from California for the year 1937-38 and in 1939 became national defense chairman, a non-salaried position to which he was to devote nearly all his energies for the next four years, spending a great deal of his time in Washington, D. C. In March 1941 he completed a six-week, 7,000-mile tour of the country's defense setup, reporting his conclusions to the Legion's national executive committee in Indianapolis. He advocated legislation providing for a "cooling-off" period in industrial disputes and standardization of deferment procedure among draft boards for trained men in defense industries.

The twenty-fifth national convention of the American Legion in September 1943 placed its 1,171,000 members on record as favoring American participation in "an association of free and sovereign nations, implemented with whatever force may be necessary to maintain world peace and prevent a recurrence of war" after the present War is won, although "it would be premature now to state with particularity how the peace shall be implemented and enforced." America's own national interests, it was further stated, "must ever be first": the United States must keep its own military forces large and strong. On the domestic front, the Legion pledged itself to defend "freedom of individual enterprise" so that the veterans of the Second World War might return "to find the institutions for which they have fought unimpaired." At the same time, however, the delegates urged that Government and industry cooperate in post-War planning to insure jobs for all veterans after the War and that the Government provide financial aid for all veterans until placed in permanent employment, and set aside funds for their rehabilitation and completion of their education. A committee of seven Legionnaires was established to advise the National Commander on labor policies.

WARREN H. ATHERTON

Atherton's election as new national commander, as well as these resolutions, led commentators to expect some changes in the Legion's approach to national and foreign affairs, for Atherton, probably the only Legion commander to carry a union card, was known as a less severe critic of labor and a stauncher advocate of international collaboration than his predecessor, Roane Waring '43. In his first address after his election Atherton declared that America must maintain its military might to insure an enduring peace and that "collaboration with the nations of the world in the preservation of peace will depend on our ability to enforce peace and deter aggression." The Associated Press also quoted him as saying that although there had been recent efforts "to split our home front" by starting a fight between union labor and the American Legion, "that fight will never happen," and the two would work together for common aims.

It soon appeared, however, that no great revolution in Legion policies had actually taken place. On October 6, 1943 Atherton was in New York conferring with H. L. Chaillaux,

ATHERTON, WARREN H.—*Continued*

the Legion's director of Americanism, and with Louis Johnson '42, chairman of the post-War fact-finding committee authorized by the convention. At that time the National Commander announced his conviction that with proper planning private industry would be able to provide enough jobs for all after the War without forcing the country to resort to "artificial methods," particularly if youths, women, and older workers would make way for the returning veterans. He also emphasized the importance of retaining and maintaining all naval and air bases "necessary to the protection of our country and its commerce." On October 8, speaking before the sixty-third annual convention of the American Federation of Labor, he attacked strikers for "impeding the war effort," stating that during the first six months of 1943 there had been 1,855 strikes in the United States involving 1,974,000 workers, and that labor as a whole had been unwilling to abide by wage decisions. He asserted that if it was treason for a man to refuse to use his gun at a fighting front, it was equally treasonable for another man on the home front to do anything that prevented the fighting man from getting the gun. It seemed as if the battle between the Legion and labor was now on again, for although Atherton said he was praising the workers while damning the strikers, the Eastern vice-president of the Union Legionnaires Conference promptly announced:

"We support President William Green '42 in his prompt rebuttal of Atherton's unwarranted and calculated attack on the men who have achieved a 99.9 per cent perfect record of war production. For nearly twenty years labor has been taking it on the chin from those who forget that millions of organized workers have laid down their tools to take up arms for this country. That line about labor's being traitorous is more than a line. It begins to look like the National Association of Manufacturers' second front against the workers in uniform who are dying on a dozen fronts. If, as it appears, Atherton came to this convention to lay the groundwork for another post-War union-busting open-shop drive, that attempt must be stopped and repudiated now."

On November 26 Atherton presided over the first American Legion Inter-American dinner in Washington, D. C., which launched the Legion's new program of promoting friendlier relations with the other American nations. On December 1 he filed a vigorous protest with the White House and Congress against delays in the settlement of the compensation claims of disabled veterans of the Second World War, both men and women, demanding immediate corrective measures. The protest was based on a telegraphic survey of thirty-four states which netted 1,537 cases of undue delays, some of them as long as eleven months between the date of the filing of a claim and its adjudication. During this waiting period many such veterans had no income, as their Army or Navy pay and family allowances stopped on the day of discharge. Into this fight to speed up settlements of such claims Atherton threw the weight of the Legion.

Aside from Legion affairs, Atherton's chief interest is his family. He is the father of four children: Holt, Sandy (both of whom in 1943 were serving in the Army Air Corps), Dwight (in military school), and Nancy. His hobbies are fishing, swimming, and boating. He is a Protestant and a Republican.

BAKER, DOROTHY Apr. 21, 1907- Author

Address: b. c/o Houghton-Mifflin Co, 2 Park St, Boston, Mass; h. 59 Frost St, Cambridge, Mass.

"Dorothy Baker is the brilliant young novelist who was trumpeted to fame with her first, fast-moving narrative of the rise and fall of a jazz musician—*Young Man with a Horn.* It was obvious to most critics that here was a verbal musician who could play sweet, hot, or blue and could handle the high notes with the skill of another Louis Armstrong."

This young American writer was born Dorothy Dodds in Missoula, Montana, April 21, 1907, the daughter of Raymond Branson and Alice (Grady) Dodds. The greater part of her early life was spent in California, where her father was in the oil business. She attended three colleges—Occidental College, Whittier College, and the University of California at Los Angeles, where she took her B. A. in 1929, having specialized in French. She then went to Paris.

In 1930, while living in Paris, she was married to Howard Baker and began to work on a novel. The novel, she says, was influenced by all the writers she then admired; but nothing came of it at the time. The unfinished manuscript was shelved for future use and Mrs. Baker stopped writing for four years. Ten years later the novel was completed and published as *Trio* (1943). Before that, however, Mrs. Baker had gone back to California. There she earned an M. A. in French in 1931 and took a position teaching French, Spanish, Latin, and English in a small private preparatory school. She taught there for three years, and her experiences went into a short story called "A Glance Around," which was published in 1934 in a small literary magazine known as *The Magazine.*

With the publication of this story Mrs. Baker left the teaching field in order to spend all of her time writing. Her next story, which was about the San Francisco general strike, was bought by *Vanity Fair*, "which changed the locale and printed it between the columns of their dog directory." After that, relates Mrs. Baker, "I wrote a long story about my grandmother's admiration for Herbert Hoover '43. I revised this three times for *Scribner's* Magazine, and they revised it once themselves, and then threw it out." Another story was more successful; it dealt with the Lamson trial and it was told to the *New Republic*, which printed it in 1936.

For a long time Mrs. Baker had thought of writing a novel about a jazz musician. "Jazz music," states Mrs. Baker, "was one of the very few things I knew much about, and the only thing, except writing, that I had had a consistent, long-term interest in." She had, as a matter of fact, spent more than half her life listening to the great jazz men, from "Jelly Roll" (Ferdinand) Morton and Louis Armstrong to "Duke" Ellington '41. Her first attempt at writing about jazz was a short story which she entitled "The Lady Pianist"; *Coronet* Magazine printed it but changed the title to "The Jazz Sonata." However, the author was far from pleased with the way the story had taken shape; she realized that it would be difficult to write a good novel with jazz as its theme. It was then that she saw a copy of the *New Republic* which contained an article on the life of the greatest of jazz trumpet players, the late Bix Beiderbecke. In the well written piece by Otis Ferguson, Mrs. Baker found exactly what she needed—a simple, moving pattern for the novel she wanted to write. She used Beiderbecke's rise and fall as the basis of her book and "filled it in" with things she knew.

When she had written about a hundred pages of the novel she submitted them in a competition for a Houghton Mifflin Literary Fellowship. Besides a $1,000 prize, the winner of the Fellowship was to have the book published upon its completion. Dorothy Baker won the award in the spring of 1937 for her manuscript, which, in its final form, became *Young Man with a Horn.* That same year Mr. Baker completed his work for the Ph. D. degree at the University of California and was appointed to the faculty of English at Harvard.

The Bakers moved to Cambridge, where Mr. Baker taught and Mrs. Baker finished her prize-winning novel, which was published in 1938. The book was successful both artistically and commercially. Clifton Fadiman '41 called it "darned near perfect." It made the best-seller lists, and the following winter it was published in England. Although the book was not so popular in England as it was in the United States, it was sufficiently well liked to be reprinted by an English book club known as "The Readers' Union." *Young Man with a Horn* is still regarded as "one of the few attractive and unusual first novels of the 1930's."

DOROTHY BAKER

The publication of her novel caused Mrs. Baker to be considered an authority on jazz music, "which," she states emphatically, "nobody is." Magazines invited her to write pieces on jazz for them. In answer to one such invitation, she wrote an article for *Cosmopolitan*, which was to form part of a series called "Autobiography of America." Not long after she wrote an article for *Vogue* which dealt with the music of Bobby Hackett, a highly talented young jazz musician whose style has been said to resemble that of Beiderbecke.

Dorothy Baker's next work of fiction was again about jazz. It was a story called "Keeley Street Blues," first published in the February 1939 issue of *Harper's Bazaar*, and reprinted the same year in the London edition of the same magazine. It was printed a third time in the *O. Henry Memorial Best Short Stories for 1939*, and in June 1941 it was read on a short story program over the Columbia Broadcasting System.

In the meantime, Mrs. Baker had sold the motion-picture rights of *Young Man with a Horn* to a small film company which she favored because it was a newly formed group, pledged to the ideal of making pictures a living art, unhampered by the Hollywood box-office slant. The author herself was to do the script, Jed Harris was to be the director, and Burgess Meredith '40 was to play the lead. The music was to have been provided by Mrs. Baker's friend, Bobby Hackett. All the preparations had been arranged for the filming of the work when the company struck one snag after another in matters of financing and distribution. Finally both the project and the company folded up.

But the president of the defunct company had not lost interest in Mrs. Baker's book. When he suggested to the author that she make a play of the book, she immediately set to work. "I spent two years," she informs us, "surrounded by experts, writing some six versions of a three-act drama." Everyone connected with the production was at first enthusiastic about it: Vinton Freedley, the producer, Burgess Meredith, the leading actor, and a long line of directors including Guthrie McClintic '43, Jed Harris, Chester Erskin, and Charles MacArthur. The music was to have been by Louis Armstrong.

If financial knots were avoided this time, other difficulties were not. The play, as Mrs. Baker had written it, was unorthodox, the production was big, and everybody was worried.

(Continued next page)

BAKER, DOROTHY—*Continued*

Mrs. Baker recalls that she "rewrote and rewrote under a succession of mentors, each of whom had a different idea what to do, and in the end, though three opening dates were set, the play never went into rehearsal. . . It was a question of too many cooks, and the play, in the last form I remember, was badly top-heavy and overcomplicated and pretentious. I learned a lot, though, and one day I think I will write a good play."

The playwriting grind left the author with something of a literary hangover. Her entire output during the years 1940 and 1941 was three short stories: "Private Lesson," published in the *Yale Review* in 1940; "Grasshopper's Field Day," printed in *Harper's* in January 1941; and "Romance," which appeared in the August 1941 issue of *Harper's Bazaar*.

By 1942 Mrs. Baker felt ready to write another novel. She dusted off the manuscript which she had begun in Paris and developed it into the work published in the summer of 1943 under the title of *Trio*. Its story, which is set on an American college campus, deals with the rivalry between a sophisticated but perverted female professor of French and an unsuspicious young man for the affections of a girl graduate student.

The book has caused more than a flurry of interest in literary circles. If most critics disagreed as to its merit, they nearly all conceded that it missed the mark set by her first novel. John Chamberlain '40 of the New York *Times* wrote: "No doubt Mrs. Baker had to get *Trio* out of her system. Technically speaking, the book is first-rate." But, he adds, "one suspects that the search for a perfect form for *Trio* has kept her from writing six or seven other novels, each of which might have been a *Young Man with a Horn*." Clifton Fadiman, however, while "bored" by the theme, was "overcome by Miss Baker's superb craftsmanship."

The Bakers have a young daughter, Ellen. Both Mrs. Baker and her husband want to be "good writers and to spend the rest of [their] lives working at it." Not long ago Mrs. Baker was offered a job writing dialogue for a Hollywood studio. She turned it down because, she states, "I have something of my own I want to do and I'd much prefer taking my chance doing my own kind of work than getting mixed up with formulas and story conferences."

BALDWIN, C(ALVIN) B(ENHAM) Aug. 19, 1902 Former United States Government official

Address: h. 4340 E. West Highway, Bethesda, Md.

Bulletin: On November 21, 1943 it was announced that C. B. Baldwin would leave Government service to join Sidney Hillman's '40 C.I.O. Political Action Committee as assistant to Hillman. In a reorganization of Government agencies, he had been transferred to the Foreign Economic Administration under Leo T. Crowley '43, and Secretary of State Hull '40 had appointed a new man to handle the Italian job.

From November 1943 issue:

Early in September 1943 the United States State Department announced the appointment of C. B. Baldwin as the area director for economic operations, relief, and rehabilitation in Italy, effective "whenever the United States civilian agencies enter the country to assist in connection with its supply and other economic problems." Such an occasion came far sooner than was perhaps expected, for a few days later the Italian Government of Marshal Badoglio '40 surrendered, and Allied troops launched large-scale operations on the Italian mainland. Baldwin promptly prepared to leave for Italy and assume his duties in a position that has been interpreted as "a pattern for all future United States administration abroad."

Chief of the Farm Security Administration since 1940, Baldwin resigned from the FSA in order to take his new post. In the former post he had been the subject of considerable heated argument in the Seventy-Seventh and Seventy-Eighth Congresses. He had been accused of radicalism and of trying "to communize American agriculture." The fact that his new appointment came directly from the State Department, which was itself under severe criticism from both liberal and conservative quarters at the time, added further to his difficulties. In the face of this opposition, however, stood Baldwin's record as administrator in the FSA and President Roosevelt's '42 wholehearted endorsement of "the high standard of public service" which characterized his career and which, the President wrote, "strengthened this nation immeasurably for the defense and perpetuation of its democratic principles."

Calvin Benham Baldwin was born in Radford, Virginia, August 19, 1902, the son of William Thomas and Lizzie (Worth) Baldwin. At one time the elder Baldwin, who had a real estate business, ran a hotel, and was a banker as well as a staunch Democrat, led a political crusade to persuade Radford to buy out the local power company and run its own municipal electric system. Calvin Baldwin received his education in Radford before attending Virginia Polytechnic Institute from 1920 to 1923.

For the next two years Baldwin worked as shop inspector for the Norfolk and Western Railroad in Roanoke. He was promoted to assistant general foreman in 1925 and held that job until 1928, when he became manager and owner of the Electric Sales and Service Company in East Radford, Virginia. With the advent of the New Deal in 1933 Baldwin was persuaded by Paul Appleby, present Under-Secretary of Agriculture, to come to Washington as an assistant to Henry Wallace '40, then Secretary of Agriculture.

Under Secretary Wallace, Baldwin gained valuable experience in the administration of the Agricultural Adjustment Act, serving his apprenticeship in government during the first two years of the AAA's stormy existence. In 1935 he was made assistant administrator of the Resettlement Administration, a new office created by the Emergency Relief Appropriation Act and headed by Rexford Guy Tugwell '41. In the following year that office was transferred to the Department of Agriculture, and in 1937 its name was changed to the Farm Security Administration.

FSA came into being to promote rehabilitation among low-income farmers. With Dr. Will W. Alexander as its director and Baldwin assisting him, FSA made loans to small farmers to enable them to purchase equipment, pay debts, and maintain family subsistence. The loans were repayable in periods of from one to five years at an interest rate of five per cent. Beyond this, the office was concerned with the education and health of the small farmer and tried to encourage the establishment of cooperatives where model farm living conditions could be put into practice.

Except for occasional public answers to critics of FSA, Baldwin did not break into the news until 1939, when he was sent to Buenos Aires, Argentina as a United States representative to the First Pan-American Housing Congress. There the work of FSA, in particular its construction of camps for migratory workers, was looked upon as an encouraging sign of the development of better housing conditions everywhere. In June 1940 Dr. Alexander resigned, and on October 11, 1940 Baldwin took over the duties of chief of the Farm Security Administration.

In the first year of his administration Baldwin managed to side-step controversy with enemies of FSA. He praised the record of repayments on loans, estimating that ninety-five per cent had been repaid (Senator Harry F. Byrd '42, leader of FSA's Congressional opposition, estimated that eighty per cent had been repaid). But by 1942 the powerful Congressional farm bloc had thrown all its weight against the agency and, added to the general anti-New Deal sentiment in Congress, its opposition proved highly effective.

The fight against the FSA was opened by the Byrd Committee's recommendation, early in 1942, that as an economy measure the agency should be abolished. The attack was centered primarily on the fact that with the money lent by the FSA many small farmers found themselves able to pay their poll tax and vote. Congressmen from the poll tax states charged that FSA was lending money "for the purposes of influencing votes"; and Baldwin was called before the committee to defend the actions of his agency in a hearing which Senator Robert La Follette denounced as an "inquisition." The young chief of FSA justified the loans, saying that the loans were made to farmers to cover all their needs and obligations including back taxes and that he considered restitution of the right to vote a part of rehabilitation. Adding that he considered poll taxes the same as any other delinquent tax and had never used the loans for political purposes, Baldwin went on to explain that FSA borrowers "have shown a greater percentage of production increase in this War than the big farmers."

C. B. BALDWIN

The existence of the Farm Security Administration was guaranteed for another year, but the committee summarized its criticism as follows: FSA was responsible for "lending excessive amounts to individual borrowers for indulging in a land-purchase program, for the carelessness and inefficiency of its employees, and for its experiments in collective farming, which seemed to resemble the collectivist practices followed in Russia." With the convening of the next Congress FSA's life was again in jeopardy. Meanwhile, however, it had won the support of many liberal groups and had received high praise for its war activities from the National Catholic Rural Life Conference and from *Commonweal*, the Catholic periodical. In order to ease the severe labor shortage in certain areas FSA became the executive agency for the planned migration of Mexican workers to the United States, contracting the worker, guaranteeing him a minimum wage, and providing him with housing. In September 1942 Secretary of Agriculture Claude R. Wickard '40 put FSA on a war basis, reshaping its activities in an effort to increase food production, keep food prices low, and supply needed agricultural manpower and housing for relocated industrial workers.

Baldwin was again obliged to fight for the existence of his agency in the spring of 1943 when the House Appropriations Committee proposed its abolition "with transfer of its credit functions to the Farm Credit Administration." Baldwin immediately warned that if FSA were eliminated, food production would be curtailed seriously. He answered the charge that his organization was communistic by pointing out that FSA was helping each small farmer to buy his own farm. "That's the exact antithesis of communism," he declared. "It's making small capitalists out of a lot of little people."

In spite of Baldwin's repeated assertion that cooperative farming adhered to the concept of Jeffersonian democracy rather than communism, he was forced to admit in May 1943 that

BALDWIN, C. B.—*Continued*

the thirteen FSA-sponsored collective farms were an economic failure and should be liquidated. His admission was interpreted as "designed to placate the House members so that if the Senate restored the FSA funds they would acquiesce." The battle against FSA continued in full swing during the following weeks, the opposition headed by Ed O'Neal, chief of the American Farm Bureau Federation, an organization which is said to represent the interests of the large and powerful farmer. Oren Stephens, writing in *Harper's* Magazine, commented that the real reason for the attack on Baldwin and the FSA was that the agency takes away the available supply of free labor. "The oftener the FSA succeeds . . . the more the commercial farmer's labor supply diminishes."

After a bitter struggle, during which Baldwin spent hours testifying before Congressional committees, the House of Representatives refused technically to eliminate FSA but made no appropriation for its continuance. In the Senate, however, funds were restored to the FSA, and its existence was continued for the next fiscal year.

It was no secret that Baldwin was staunchly supported by the Administration in his fight for FSA. When, therefore, late in the summer of 1943, it was reported that Baldwin might resign from his office, charges were made that the Administration was sacrificing New Dealers and that he was being forced out of office. Baldwin vigorously denied this and said that he was leaving voluntarily because "he feels it best for his much-criticized agency." His appointment to his present State Department post a few days later gave the lie to rumors that he was being sacrificed to more conservative interests. And President Roosevelt's letter lauding Baldwin's work in FSA gave further assurance that he was still highly regarded in New Deal circles.

Baldwin's new position is unique in that he was the "first American civilian to be appointed to a post in Italy." While he still claimed, "I am not a policy maker," he acknowledged the fact that in his new job he would set precedents for future operations in occupied territories. Baldwin indicated, furthermore, that "he would not enter Italy with any preconceived prejudices on how to do his job." He was to work with a small staff of specially trained personnel, at all times responsible to the State Department, and with the aim of making Italy "agriculturally, industrially, and in every way, as nearly self-sufficient as possible."

Boyish-looking, "cherubic" Calvin Baldwin (journalists like to call him "Beany") is a quiet, unassuming person, frankly worried about his new job. Since June 25, 1924 he has been married to Louise Delp, and the couple have two children, Calvin Benham and Sally Worth. Baldwin rarely loses his temper, but few things make him more indignant than the statement that FSA and similar New Deal agencies are aiding "worthless, shiftless, no-account people." To such statements Baldwin answers hotly: "I have never met a worthless person in my life."

Baldwin reads six newspapers daily, never misses the *New Republic*, and enjoys biographies and books on economics and history. (Incidentally, he believes that Woodrow Wilson was one of the greatest men of modern history.) Other favorite pastimes are horseback riding, deep sea fishing, and poker.

Who's Who in America 1942-43
Who's Who in the Nation's Capital 1938-39

BALL, JOSEPH H(URST) Nov. 3, 1905-
United States Senator

Address: b. 107 Senate Office Bldg, Washington, D. C.; h. 3193 Porter St, N. W., Washington, D. C.

In 1940 when Joseph H. Ball was appointed to the United States Senate by Minnesota's Governor Harold E. Stassen '40, a one-line editorial appeared in the Fairmont *Daily Sentinel* reading: "Joe Ball for U. S. Senator! Good God!" In 1942 when junior Senator Ball was formally elected to the Senate for a six-year term, the same paper printed the following editorial: "Joe Ball for U. S. Senator! Thank God!" The *Sentinel's* editorial policy in this instance is noteworthy for two reasons. First, because it reflects Minnesota's change from strict pre-Pearl Harbor isolationism to a view which today favors some form of international cooperation; second, because it is a priceless comment upon the young Senator's career.

Joseph Ball might have been simply another member of the Senate, inconspicuously serving out his term of office, had he not been moved by the desire to see the United States take an active part in post-War peace plans and given his name and efforts to the Ball-Burton-Hatch-Hill '43 "Win the Peace Now" Bill, known officially as Senate Resolution 114 and unofficially as B2H2. This bill, which was one of several peace-planning bills introduced in Congress during the seventy-eighth session, has received far more public attention than the others, due largely to Ball's work as its publicity manager.

A Republican of the Willkie '40-Stassen school (described by the *New Republic* as a group of young men who "combine liberalism on international affairs . . . with a program ranging from middle-of-the-road to reactionary on domestic affairs"), Ball is in favor of immediate, active collaboration among the United Nations on plans for the peace. He is young in politics, having been a newspaperman before the Governor appointed him to his first political job in the Senate. But his pleasant, direct manner, his "Lincolnesque" appearance, and his political acumen all point to an important career for him in government.

One of the youngest Senators on record ever to take office (he had to register for the draft before being sworn in), Joseph Hurst Ball was born in Crookston, Minnesota on November 3, 1905, the son of Joseph and Florence (Hurst) Ball. He attended public schools in Crookston and was graduated from the local high school in 1922, working as a farm hand during his summer vacations. In order to finance his college education he borrowed some land from his father and a plow and team from a neighbor, planted some seed corn, and made enough money to take nim to Antioch College, at Yellow Springs, Ohio. There, in line with Antioch's policy of part-time work for all students, he held jobs as a telephone lineman, a carpenter's helper, a construction gang worker, and a factory hand. After two years at Antioch (1923-25), Joseph Ball switched to the Eau Claire Normal School in Wisconsin, where he remained only one semester. This was followed by a year at the University of Minnesota (1926-27), but Ball, who was interested in a variety of subjects ranging from chemical research and engineering to history, sociology, and journalism, never bothered to take an academic degree.

With his formal education completed, Ball went to work as a cub reporter on the Minneapolis *Journal* in June 1927. He was earning $17.50 a week when he met Elizabeth Robbins, who worked in the *Journal's* "morgue" for $15 a week. They were married on August 28, 1928, after a month during which Ball valiantly scraped together $5 for the preacher, "and Betty, who had $120 in the bank for a rainy day, sank $8 in a wedding ring."

It was Ball's sale of a story to a pulp magazine for $50 which convinced him that he was meant to be a writer; he and his young wife promptly resigned from the *Journal* and moved to Bellingham, Washington. There Ball composed "blood-and-thunder" fiction while his wife painted pictures. But freelance writing had its financial anxieties. After a year in Bellingham, Ball decided in favor of a regular pay check and returned to Minnesota, where the St. Paul *Pioneer Press* hired him as a general assignment reporter and rewrite man. Five years later, in 1934, he was raised to the position of state political writer for the *Pioneer Press* and *Dispatch,* a job which he held until his appointment to the Senate. (He still writes a weekly newspaper column which he sends free of charge to nearly 300 Minnesota papers.)

While Ball was covering local and state political news he made the acquaintance of Harold E. Stassen, then a county prosecuting attorney in South St. Paul. Stassen, who had begun his political career in college and who was to be elected Governor of Minnesota at thirty-one, was the organizer and first chairman of the state's Young Republican League. He and Ball became close friends, and they both represented the young and liberal faction of the local Republican Party.

As a political reporter Ball was outspoken in his criticism of Congress and the Administration. So critical was he of Senators that he had to explain to his young son, upon his appointment to the Senate, that this was neither a demotion nor a social "comedown." In a state which was dominantly conservative and isolationist, however, Ball's column was decidedly progressive. When Senator Ernest Lundeen, staunch isolationist and opponent of lend-lease and the draft, was killed in an airplane crash in 1940, Governor Stassen made as unpopular a choice as possible in appointing Joseph Ball his successor. (Commented *Collier's*: "If he had appointed Gypsy Rose Lee '43, there could not have been a bigger uproar in Minnesota.") While old-guard Republicans fumed at the appointment of a "brash upstart" to a position of such great responsibility, Stassen said of Ball: "He is a man who has unusual ability in analyzing the deeper problems of government. He has fundamental and unquestioned integrity. He is not narrowly partisan in his views; his philosophy is forward-looking and sound."

Blackstone

JOSEPH H. BALL

In his first address as Senator, Ball further shocked conservative opinion by taking a firm stand against isolationism. He said: "We are aware of the ever-growing peril to this nation from the ruthless aggression of the totalitarian states. Only Britain, with her fleet and heroic air force, still stands as a barrier between us and whatever designs Hitler '42 and his allies may have on this continent."

The Ball family moved to Washington, rented a "fairly unostentatious" house across the street from the Chinese Embassy, and settled down on a strict budget. The young Senator's first speech in Congress was in support of repeal of the Neutrality Act. He wholeheartedly backed the Administration's foreign policy although he was antagonistic to Roosevelt's '42 New Deal; and in spite of the fact that letters from his constituents "stood twenty-five to one against the bill," he voted for lend-lease on March 8, 1941. Writes Malcolm Logan: "On that occasion no mere weekly political column would suffice to explain, so for a month he and Mrs. Ball toured Minnesota, looking wrathful voters in the eye and telling them why he did it."

Senator Ball's views on domestic policy were far less sensational than his stand on foreign issues. During his first term in the Senate he "called for decentralization of defense industries," in the hope that more industry might be brought to his home state. He was appointed to positions on three powerful com-

BALL, JOSEPH H.—*Continued*

mittees—the Truman '42, Banking and Currency, and Education and Labor Committees—but he remained generally in the background.

With his appointment of Ball, Governor Stassen had indicated that he himself was not interested in seeking the seat in Congress. (Stassen was re-elected Governor and in April 1942 resigned to go on active duty with the Navy.) Ball therefore opened his election campaign in July 1942, speaking to what he expected would be hostile audiences on the need for "post-War collaboration by the United Nations to preserve peace." Ball's election, "with a very comfortable plurality over three opponents," sounded the death knell for Minnesota isolationism. He returned to Congress for a six-year term.

Senator Ball has been generally in sympathy with Congress' anti-labor stand. Late in 1941 he had urged the leaders of the C. I. O. and A. F. of L. to "stop their insistence on the closed shop principle and organizational drives and devote all their efforts to placing the nation's production facilities on an all-out basis." He felt that Congress should pass legislation which would permit the existence of the open shop and warned labor that Congress would soon be "forced to adopt restrictive measures" against it. Before making this statement Ball had introduced a measure which proposed a twenty-day "cooling off" period before a strike could be declared in war industry. More dramatic than any bill was Senator Ball's clash with John L. Lewis '42 in March 1943 during a Truman Committee hearing. Lewis had testified that the miners were not getting enough to eat. Ball questioned that statement and, according to the New York *Times*, "without waiting for an answer, added loudly, 'That is demagoguery, pure and simple, and you know it.'" To that Lewis replied: "When you say I am a demagogue I say to you that you are less than a proper representative of the common people." Charges flew back and forth until Senator Truman finally ordered silence.

A few weeks later Senator Ball debated the affirmative side of the question, "Should There Be Stricter Federal Regulation of Labor Unions?" on a *Town Meeting of the Air* program. In view of his stand on labor, Ball caused considerable comment in Washington circles when he voted to sustain President Roosevelt's veto of the Smith '41-Connally '41 anti-strike bill. (He had previously voted for the bill itself.) He has, however, voted with the Administration on many other domestic issues. In 1943 he voted against limiting the National Labor Relations Board; against farm-labor deferment; against including farm labor costs in parity; for continuing the loan powers of the Farm Security Administration; for subsidies to encourage the production of some crops; for money for the National Resources Planning Board; for extending the reciprocal trade agreements; and against dismissing Watson, Dodd, and Lovett '43. Although he voted against money for the National Youth Administration, against the $25,000 limit on salaries, and for the modified version of the Ruml '43 plan, he also defied the dairy interests of his state by fighting for the Administration's consumer subsidy program.

Before bursting into the limelight with the B2H2 resolution Senator Ball had put only one bill before the Seventy-Eighth Congress, and that was "to make the Little Steel formula part of the Stabilization Act." Then on March 16, 1943 Joseph Ball submitted to the Senate a resolution "favoring organization of the United Nations to maintain peace." The resolution was brief but detailed. It proposed that the United States take the lead in forming a United Nations organization with the power to rehabilitate and to protect with an international armed force the member nations.

More sensational than the bill itself was the fact that it was introduced under bi-partisan auspices (Senators Ball and Burton are Republicans, while Senators Hill and Hatch are Democrats). According to Ball's own story the idea for it was first conceived by Hill and himself as they sat talking at their desks in the Senate Chamber about the Gillette post-War resolution which had provided that the Senate "approve the program of purposes and principles embodied in the Atlantic Charter." The two Senators agreed that a resolution stronger than the Gillette one should be introduced, and Hill suggested that Ball "draft a tentative resolution." After many drafts and conferences with Republican and Democratic Congressmen, Senator Truman suggested that Ball, Hatch, Burton, and Hill "serve as the committee to take the bugs out and improve the language." Conferences at the White House and the State Department followed. While President Roosevelt at first seemed cool toward the resolution, he later gave it his support.

As soon as the resolution was publicly proposed controversy sprang up on all sides. Letters poured into Senator Ball's office, most of them favorable to the resolution. (Letters from Minnesota were about twenty to one for it.) Isolationist Congressmen provided its main opposition, charging that the country's first job is to win the War, and that the American people would never accept the idea of an international police force. As its author and publicity manager, Senator Ball served as B2H2's chief trouble shooter. He lashed out against its critics in no uncertain terms, even expressing regret at Prime Minister Churchill's '42 plan "to wait until after the defeat of Germany to institute conferences on world organization." He assailed foes of world collaboration with "their defeatist ideas" and their "counsel of despair," and sought to show them the overwhelming preponderance of logical reasons for an internationalist position.

Congressional approval of the bill was very slow and never quite distinct. Other plans were up for consideration, and Congress was hesitant in committing itself. General criticism of the bill revolved around the accusation, specifically denied by Senator Ball, that it "resulted from a Willkie-to-Stassen-to-Ball play." Although both Willkie and Stassen endorsed the plan, neither was said to have had any part in its conception. Significant, however, was the omission of the names of Senators Ball and Burton from the newly-formed Republican post-War advisory council, a move which was interpreted by some critics as showing an isolationist trend in Harrison Spangler's '43 administration of the Republican Party.

Meanwhile the four Senators who proposed the bill announced that "they would demand debate on their resolution when Congress returns this autumn." Through the summer months of 1943 they stumped the country publicizing their bill, confident that Congress would take some action on it in the fall.

In the fall of 1943 the House of Representatives passed the Fulbright '43 resolution, but Senator Connally of the Senate Foreign Relations Committee promptly announced that his Committee would do nothing about the Fulbright resolution or any other post-War resolution. Ball, backed by other supporters of B2H2, then threatened that unless the Committee acted within a "reasonable time" he would force a showdown by tacking the resolution on to some bill. Connally surrendered, but by October 13 a Foreign Relations Subcommittee had framed a Senate resolution which rejected not only the wording of the Fulbright resolution but also the form of that resolution, which had been proposed as a joint declaration by both Houses of Congress. The Connally resolution pledged the United States only to collaboration with "free and sovereign" nations after the War in establishing a world "authority" to maintain peace.

This was too general and "rubber-worded" to please internationalists. Through eighteen days of voteless debate Ball's group of fourteen Senators therefore urged that the Connally resolution be strengthened to conform to the B2H2 program. "Free and sovereign nations" should be replaced by "United Nations," they argued, and specific provision should be made for a United Nations post-War organization with power, "including military force," to enforce peace. The Moscow Conference strengthened their arguments, and on November 5, by a recorded vote of eighty-five to five, the Senate passed a compromise resolution which virtually reproduced the language used in Article 4 of the Moscow declaration. The work of Ball and his friends during all the past months had not been in vain, it was generally agreed.

Senator Ball's home life has been characterized as "typically American." His wife, who helps him with his secretarial work and is a columnist, radio commentator, and volunteer publicity director for the League of Women Voters, manages also to find time to do her own cooking and to take care of their three children, Jennifer Ann, Peter Joseph, and Sara Elisabeth. The young Senator is six feet three inches tall, with iron gray hair, blue eyes, "and the walk of a big man who isn't quite sure of getting through a room without bumping something." He is not a great orator but speaks plainly in a slow, deliberate voice. An avid reader, Senator Ball finds his favorite relaxation in discussing politics.

BANKHEAD, JOHN H(OLLIS) July 8, 1872- United States Senator

Address: b. Senate Office Bldg, Washington, D. C.; h. Jasper, Ala.

"Parity John" is the name which John H. Bankhead's friends gave to the Senator from Alabama a long time ago, and he has no objections to the nickname. A leader of the "farm bloc" in the Senate, he has organized more than one assault against the Administration's attempt to keep farm prices from rising to inflationary levels, and he has attempted to get farm workers deferred from the draft. In October 1941 he was proclaimed "America's Greatest Agricultural Statesman" by the Alabama Farm Bureau Federation.

The son of Tallulah (Brockman) Bankhead and of John Hollis Bankhead I, a Confederate captain who served for thirty-three years in the United States House of Representatives and in the Senate, John Hollis Bankhead II was born on his father's farm at Lamar, Alabama on July 8, 1872. He received his primary and preparatory education at Fayette, Alabama, then he went on to the University of Alabama. There he earned his Phi Beta Kappa key before being graduated in 1891, president of his class and captain of the staff. (The University was under military discipline at the time.) After receiving his B. A. degree he attended the Georgetown University School of Law, where he was president of his law class when presented with his LL. B. in 1893. Admitted to the Bar that same year, he entered into law practice as junior member of the firm of Coleman and Bankhead, and the next year he married an Alabama girl, Musa Harkins. In 1895 his brother William '40 (the father of Tallulah Bankhead '41 and former Speaker of the House, who died in 1940) took his LL. B. and ten years later moved to Jasper to form a law partnership with him. The firm of Bankhead & Bankhead soon prospered, and a branch was opened at Birmingham, forty miles from Jasper.

Like their father before them, both of the rising young lawyers were active in Alabama politics. In 1903 John was elected to the Alabama House of Representatives, where William had already served. There he fathered the Alabama election law now used for the exclusion of Negro voters. In 1912 William was defeated when he ran for Congress, but he was more successful four years later, and when he went to the House of Representatives in 1917 John stayed behind to practice law. In 1920 Walter William Bankhead, his son, became the junior partner of Bankhead & Bankhead. Power companies and coal corporations were always the chief clients of the firm, and the Bankhead Coal Company and the Bankhead Investment Corporation were John Bankhead's own creations. As president of the former from 1911 to 1925, he developed in Walker County the Bankhead Coal Mine, one of the largest in-

Blackstone

JOHN H. BANKHEAD

dustrial coal mines in Alabama, which was later sold.

In 1926 John Bankhead sought and lost the Democratic nomination to succeed Oscar W. Underwood in the United States Senate. In 1930, however, the victorious candidate, Thomas J. Heflin, was punished for his anti-Smith fusillades of 1928: the Democrats refused to "accept his qualifications" and excluded him from the Democratic primary, in which Bankhead was the victor. Heflin ran on an independent ticket, calling himself a "Jeffersonian," and the Republicans helped him by not naming a candidate; Bankhead campaigned on the issue of "party loyalty," also appealing to "dry" sentiment in Alabama. Bankhead won, but there was a prolonged fight in the Senate in the spring of 1932 when the Senate Elections Committee considered the contest. Bankhead's power activities were cited, among the other things; about half the Republican Senators recommended unseating him. This, however, the Senatorial majority refused to do.

One of Bankhead's first crusades in the Senate was for the bonus proposal of 1932, and in May 1932 he introduced a bill for $100,000,000 immediate unemployment relief for distribution by President Hoover[’43]. From the beginning, however, it was the farmers whom he was most interested in helping—particularly the cotton growers. (Bankhead's associates say that a remark about anything else simply interrupts his thoughts about cotton.) Bankhead was Senate leader for the Administration in handling the processing tax—a tax upon cotton in excess of a certain number of bales ginned from the 1933 to 1934 cotton crop—and other important phases of the 1933 Agricultural Adjustment Act. He sponsored the plow-up of cotton and offered and secured passage of an appropriation to finance it. He sponsored an act which doubled the 1933 cotton crop price through government loans. He was co-author of the Bankhead Cotton Control Act passed in 1934. He was legislative author of the parity payment plan contained in the Agricultural Adjustment Act of 1938, under which Congress has made appropriations of more than $200,000,000 annually for cotton farmers. He was co-author of the Agricultural Adjustment Act of 1938 and chief author of the part of the cotton title of that act in which legal machinery was created to enable farmers to control the production and marketing of cotton. He was co-author of the Soil Conservation and Domestic Allotment Act and author of the Federal Crop Insurance Law.

In those pre-War years Bankhead's views and those of the New Dealers apparently coincided to a great extent—and not only on the subject of cotton. Bankhead was, for example, author of the 1933 Subsistence Homestead law, under which the Resettlement Administration was established, and co-author of the Bankhead-Jones Farm Tenant Act—both Administration-backed measures. In 1937 he was active in trying to smooth over the fuss in the Senate over the appointment of Hugo Black[’41] to the Supreme Court; in 1939 he was co-author of a bill to extend the Federal Housing Administration program, and he also supported the continuation of the Federal Theatre Project. He was, however, in accord with the Southern bloc of Right-wing Democrats in some ways even before the War. In 1935 he made a lengthy attack on the Costigan-Wagner anti-lynching bill, denouncing "any effort to break down our dual system of government, our local courts." In 1938 he again attacked the anti-lynching bill, and he backed racial segregation laws. In 1937 he opposed the President's plan to reorganize the Supreme Court.

The real quarrel with the Administration came over the issue of price control. Bankhead had always advocated inflation or an increase in the amount of currency in circulation. By 1941 he was warning against price control over farm commodities, fighting the threat of a price ceiling on cottonseed oil, and urging farmers to hold their seed for a price rise. That year he also sponsored a bill to increase government loans on five basic commodities—corn, wheat, rice, tobacco, and, of course, cotton—in return for further reduction in their production by the farmers of the country. At every opportunity he defended agricultural price parity.

In January 1942 Bankhead touched off a major intra-Administration row by his drive to give the Secretary of Agriculture veto power over ceilings on farm prices. In February he pressed the fight to forbid sales of government crop surpluses below parity prices in spite of the forecast of Senator Prentiss M. Brown[’43] that such action would add a billion a year to the cost of living. (He told the Senate that he was merely trying to give farmers equal treatment with industrialists and laborers.) In August he took time off to concern himself with the "Negro problem," suggesting to Army Chief of Staff Marshall[’40] that Negro troops should not be quartered in the South, or, at least, that Northern Negro soldiers should be quartered in Northern States only; but this was merely an interlude in his fight for the farmer.

Although he had not voted with the pre-Pearl Harbor isolationist bloc, by January 1943 Bankhead found himself in substantial accord with Herbert Hoover on how to fight a war. Suggesting that the armed forces were expanding so much that there might not be enough workers left to raise the food and manufacture the arms needed by the United States and its Allies, he told the Senate that month that "it would be infinitely better and safer from every standpoint to equip 5,000,000 Russians with exactly the same equipment that our soldiers would use if sent to fight on foreign soil. They are already there. . . Of all the countries in the world China and Russia are in the best position to furnish men, while America is in the best position to furnish equipment." He then called for a study of the situation by the Senate Appropriations Committee and organized a subcommittee to conduct hearings on the size of the Army and "draw the purse strings" if it should decide that the Army was getting too large. Finally, on February 3, he announced his conclusions: if an acute food shortage was to be averted nearly a million men must be released from the Army and Navy to work in the fields, and further drafting of "essential" farm workers must be banned.

The revamped bill that incorporated these ideas provided for automatic deferment from the draft for those engaged "substantially full time" in producing or harvesting "essential" crops. Passed by the Senate on March 17 by a vote of fifty to twenty-four, it was vigorously opposed by the War Department and the Administration on the grounds that it would deprive the Army of thousands of able-bodied men needed for combat service, at the same time deferring many farm laborers who were making no real contribution to the nation's food supply. (Cotton and tobacco, for example, were included in the Department of Agriculture's list of "essential" crops, although there was on hand a two-year supply of short staple cotton and a one-to-two year supply of tobacco, and one-third of the nation's farm labor was engaged in producing these crops.) A New York *Herald Tribune* editorial called the bill "disruptive and dishonest." "It is disruptive for the reason that, without proper discrimination, it proposes special treatment for one economic class; it is dishonest in its implication that the shortage of labor on our farms is due primarily to the draft." It was also pointed out that the bill virtually "froze" farm workers in their present jobs at their present wages, since they would be drafted if they left the farm to take jobs at higher pay in war industry. Less than a month later, although the House had not yet taken action on the bill, it was reported that workers in both non-essential and war industries were returning to the farms in droves.

Senator Bankhead had temporarily enjoyed another victory even earlier in the year as sponsor of a bill to prevent the inclusion of farm-benefit payments in figuring farm parity prices. On February 25 the Senate passed this bill, which undid an executive order of Roosevelt's['42], by a vote of seventy-eight to two, and it was passed in a slightly revised form by the House the following month. Prentiss M. Brown promptly predicted that it would send the retail prices of food products up nearly seven per cent and would threaten the entire price-wage stabilization structure, and on April 2 the President vetoed it, saying that it would give farmers "an unwarranted bonus at the expense of the consumers" and thus set off "an inflationary tornado." Farmers were already getting 107 per cent more for their crops than before the War, he claimed. Finally, on April 7, when it became obvious that the Senate would not override the President's veto, the bill was sent to the Committee on Agriculture to "simmer." When it would come out again would "depend on developments," Senator Bankhead said, calling it a "cudgel" in the hands of the farm group. Bankhead also insisted that the measure had been assailed by misrepresentations and "distorted facts." He did say, however, that he would give "full backing to the President's campaign" against inflation. He also predicted that the Senate would try to keep the Farm Security Administration, which was then under attack, on its feet.

Since that time Bankhead has continued to oppose the Administration on some scores and to support it on others. He voted for the Smith['41]-Connally['41] anti-strike bill and for overriding the President's veto of the same bill, attempted to revive his measure barring the inclusion of farm-benefit prices in figuring farm parity prices, and voted to dismiss Watson, Dodd, and Lovett['43]. In December he was one of the "poll-tax" Senators who, along with eighteen Republicans, voted to kill Federal soldier vote legislation, and he opposed the consumer subsidy program.

On the other hand, in 1943 he also voted against the modified version of the Ruml['43] tax-collection plan; against the McKellar bill; for extending the life of the reciprocal trade agreements for another two years; for continuing the loan powers of the Farm Security Administration; for $100,000,000 for soil conservation; for an appropriation for crop insurance; for money for the National Resources Planning Board and for the National Youth Administration; for permitting subsidies to encourage the production of some crops; against abolishing the domestic branch of the Office of War Information; and against the Danaher amendment to the post-War policy resolution.

As for new legislation sponsored by him—in November the Senate passed his bill directing the Secretary of the Treasury to spend from $12,500,000 to $15,000,000 a year in advertising the sale of war bonds in the smaller newspapers of the country. (Senator Truman['42] had condemned this bill as "a camel's nose under the tent for a Federally subsidized press.") The bill was killed by the House Ways and Means Committee.

Senator Bankhead is a member of the Appropriations, Agriculture and Forestry, Banking and Currency, District of Columbia, Rules, and Irrigation and Reclamation Committees of the Senate. He is invariably de-

BANKHEAD, JOHN H.—*Continued*

scribed as "mild-mannered" and "courteous" and is often referred to as a "rugged individualist." He has three children: Marion (Mrs. Charles B. Crow); Louise (Mrs. H. Melville Davis); and Walter William Bankhead. The Senator from Alabama possesses an honorary LL. D. from the Alabama Polytechnic Institute and also from the University of Alabama. He is a trustee of the University of Alabama and a member of Sigma Alpha Epsilon fraternity. He is also a member of the Methodist Board of Stewards and a teacher in the Brotherhood Sunday School.

Who's Who in America 1942-43

BARBER, RED Feb. 17, 1908- Sports commentator

Address: b. c/o WHN Radio Station, 1540 Broadway, New York City; h. Lynwood Dr, Scarsdale, N. Y.

Flatbush's own "Red" Barber, known widely as "The Verce of Brooklyn," is, oddly enough, neither a red head nor a Brooklynite. When his soft Southern voice is heard over the air waves telling the boys that the game is "all tied up in a crocus sack" (Southern slang for "in the bag"), Dodgers' fans from Greenpoint to Tunis acclaim him as their own.

Actually Walter Lanier Barber, whose hair has been variously described by those who have seen it in the thatch as blond, taffy-colored, or lemon colored, was born on February 17, 1908 in Columbus, Mississippi. His father was a locomotive engineer and his mother a schoolteacher. The name of Lanier was bestowed upon him in deference to the Southern poet, Sidney Lanier, to whom he is indirectly related. When, at the age of ten, his family moved to the truck-garden region of Florida, around Sanford, young Walter found opportunities to start on a varied and colorful career. It was there that he attended high school, and in addition, engaged in such activities as picking celery, working as a truck driver, roustabout, and road construction laborer, loading swamp muck into trucks, and carrying hot pitch up a twenty-foot ladder for a roofer.

Shortly after his twenty-first birthday he decided to go to college and started out with $100 and a pair of new shoes to hitchhike to Gainesville and the University of Florida. Once there, he worked as waiter, stovewood-splitter, tennis court attendant, and finally became a part-time janitor at the University Club. It was in this last capacity, while making up beds one fateful day in January 1930, that opportunity knocked and changed Red's entire life. The traditional absent-minded professor had promised to run over to Georgia to look at some interesting specimens of erosion at one and the same time that he was to read his paper on "Certain Aspects of Bovine Obstetrics" over the air. The University's station WRUF was frantic and, finding Barber "right handy," pushed him into the vacancy. In that moment his career was firmly launched. Regretfully he put aside his dream of being a touring end man in a minstrel show and devoted himself to announcing and later to being director and chief announcer of WRUF. In this last role he wrote and produced plays and programs, broadcasted all kinds of sports from baseball to polo, and became most widely known as a mildly lunatic master of ceremonies for a hillbilly band. Here, too, he polished up the Southern slang which he still uses for the edification of South Brooklyn. While carrying on these multifold activities Red Barber (who at that time really had red hair, he protests) remained a student in good standing, never being out of the top ten student listings during his two years at the college.

At the end of his sophomore year Barber and some of his friends were dumped into a ditch when the car in which they were riding "just naturally turned over." Red doesn't regret it, however, for when he woke up in the hospital he was sure it was heaven, his eye having lighted on "a pert, black-haired little nurse of twenty-two" from Jacksonville, Lylah Scarborough by name. In no time at all Red was able to convince Lylah (between groans) that she didn't really want to be an instructor of nurses at the University, and in 1931 she married him instead. This spurred Barber on to greater efforts, and during his four years as top announcer for WRUF he spent his summer vacations visiting Atlanta, Charlotte, Cincinnati, Louisville, and Chicago by bus, in a search for a better position. "I knew I wasn't good enough for New York," he says. Finally in 1934 he got a call to Cincinnati. Powel Crosley, Jr., had just bought the Cincinnati Reds, and he wanted their antics described over his stations, WSAI and WLW. Barber's difficulties can be imagined from the fact that the first major league game he broadcasted was the first one he had ever seen.

After five years in Cincinnati, Barber was brought East in 1939 to cover the Dodgers' broadcasts, air rights for which had been sold by Larry MacPhail for $1,000 a game. At Red's request, Al Hefler, whom Barber had met and collaborated with in Cincinnati in 1935, came in from the WOR staff as his principal assistant, forming one of the famous partnerships of radio. (In 1943 it is Connie Desmond who keeps the records, broadcasts the fifth inning, and reads most of the commercials.) The "ol' Redhead's" (as he refers to himself on the radio) career since then is stale news to any Dodgers' fan. The fairness and accuracy of the Dodgers' broadcasts is second to none, but the fans love them, not for that (which some of them find privately, in their enthusiasm, a bit galling) but for their colorful and dramatic reporting. Red's effects are achieved not by his own hysteria, for he makes it a point not to get excited, but by speaking conversationally and with soft-voiced authority, by injecting personality into his accounts, and by such techniques as raising his voice slightly or increasing his tempo for a close play, or pausing just before a fly ball is caught. It is a hard and tiring task at the mike, for it means intense concentration over a long period of time. Nevertheless, Barber feels that the hardest work of his day is done in preparation for the broadcasts—for he is clinical in his attitude toward sports and believes a commentator cannot know too much about them. He has charted records and statistics for each big-league player, which are always at his hand while broadcasting, and he has memorized the Spalding *Guide Book* all the way back to 1899. By reason of this tremendously detailed background, he is able to broadcast the out-of-town Dodgers' games from the New York studios, filling in the wireless skeleton of the play by means of his statistics and his knowledge of the personal idiosyncrasies of the players.

For all of these merits, praise and honors have been heaped upon him. He has several times been voted the best baseball announcer of the nation, and he sees concrete proof of the fans' adulation in the 500 letters he receives every week during the season. His chatty, easygoing style appeals particularly to women, and Barber is credited with having practically singlehanded brought the attendance of the fair sex up from the equivalent of a bridge table or two to as high as 15,000 at one game. In 1941, when the Dodgers' enthusiasm rose to its greatest height after the clinching of the first pennant in twenty-one years, frenzied Dodgers' fans felt that Red was so much a part of the team that they started to tear out his hair for souvenirs. His status has been made official by the medal awarded him in 1940 by the Brooklyn Young Men's Chamber of Commerce for being "that young man who has made the largest civic contribution for the betterment of Brooklyn." As Red says: "That is something. You can hock it any time." But his proudest possession is the letter from a man who said: "My wife was a semi-invalid. She enjoyed your broadcasts. Yesterday she began to sink, but she heard the last out. She died happy."

Baseball is not Red Barber's only hobby, although he devotes so many hours to it every day that it well might be. Before leaving for New York from Scarsdale in the mornings, Barber and his wife used to shoot eighteen holes of golf until he "took up hoe and spade to lick the golf bug." He also "does recordings for the OWI for the kids overseas, works out details of other radio shows, is the voice for the newsreels, and is in demand as the guy who welds banquets and gatherings together as the emcee." His young daughter Sarah is another absorbing interest.

Hauser

RED BARBER

Barber, described as being "built on the general plan of an underslung whippet tank, wiry and strong," is under five feet four inches tall, but is endowed with the endurance to stand up under the strain of his broadcasts, one of which reached the record length of five hours and forty-five minutes. In his off hours he listens to classical programs and reads serious books. His favorite radio personality is Raymond Gram Swing '40. He also enjoys the singing of Bing Crosby '41 and the music of the Spitalny '40 girls, but best of all he likes "high-toned" music. When in 1941 Robert Russell Bennett '42 composed a new *Symphony in D for the Dodgers*, Red Barber was pleased but not surprised to find himself taking a part with the Philharmonic. After "The Dodgers Win", "The Dodgers Lose," and "President MacPhail Offering Cleveland the Brooklyn Bridge and Prospect Park in Trade for Pitcher Bob Feller '41," the fourth movement, entitled "The Giants Come to Town," ended with Red chanting against a rising crescendo:

Here comes Hub's pitch,
Camilli swings,
He gets a hold of it.
It's a long one.
Ott is going back to the fence,
But the ball is over.
It's a home run!
That's the ball game.
The Dodgers win.

BARRYMORE, LIONEL Apr. 28, 1878- Stage and screen actor

Address: b. Metro-Goldwyn-Mayer Studios, Culver City, Calif; h. Chatsworth, Hollywood, Calif.

Hollywood's "grand old man," Lionel Barrymore, has been the staid, sedate, responsible offshoot of the scintillating and irrepressible Drew-Barrymore hierarchy not just in his old age, but for many of his sixty-five-odd years. When he was a child his mischievous and energetic sister Ethel '41 and his graceless younger brother John were seldom able to intrigue him into taking a part in their escapades, and he describes himself as a quiet, reserved child who delighted in a book or paintbox for Christmas while brother John was reveling in boxing gloves or a shiny new sword. Detesting love scenes and romantic leads, from his earliest days he was cast in character roles on the stage, often playing Grandpa while still a young man. His greatest stage as well as screen successes were those in which he doddered through elderly and sometimes senile roles.

When John was distinguishing himself by public scandals, Lionel, loathing publicity and feeling strongly that the Barrymore name was about to be besmirched, was more than once called in to use his authority and force John to see reason. Described as "the only living screen star who consistently overacts and yet escapes the brand of ham," the veteran trouper, now at the crest of his popularity, has become so much a fixture in the public mind that he no longer needs to adapt himself to his roles. Hollywood has found it profitable to write scenarios around his gruff, growling personality, only thinly concealing the wide vein of sentimentality beneath. The cancer-ridden Dr. Gillespie, for example, was created so that Lionel's broken hip, which confined him to a wheelchair, would not interfere with his career.

Lionel Barrymore (whose real name is Lionel Blythe and who took his mother's and father's stage name) has always explained that he is an actor for the same reason that a grocer's son starts out as a delivery boy—he was born "in the trade." His father and mother, Maurice (Herbert Blythe) and Georgiana (Drew) Barrymore, were not only famous actors at the height of their success while he was a child, but they were the third generation of the family to be connected with the stage. As a boy he saw Louisa Drew, his grandmother, in the celebrated role of Mrs. Malaprop, and he remembers the performances of his favorite uncle, John Drew, and of the renowned Joseph Jefferson, as well as the scenes his godmother, Helena Modjeska, played with his father. He was born in the family home at 119 North 9th Street, Philadelphia on April 28, 1878, and managed to elude his fate until he had nearly reached the ripe age of six. On tour with his parents and Mme. Modjeska, he suddenly became a very desirable addition to the troupe when the child actor fell ill, and was thrust into service forthwith. Unfortunately, just as he was about to lisp his single speech he caught sight of the mighty biceps of William Muldoon, who had the part of Charles the Wrestler in *As You Like It*. Taking fright, he substituted for the expected childish treble a yell that effectively stopped the show.

His histrionic talents lay fallow after that fiasco until he appeared as Armand in an Ethel Barrymore production of Camille at the age of twelve. After attending school at Seton Hall, South Orange, New Jersey, for a year Lionel stayed with his brother and sister and grandmother at Mme. Bourquin's actors' boarding house near Fort Wadsworth on Staten Island while his father and mother were on tour. All around her Ethel heard nothing but glamorous stories of success on the stage, including the oft-repeated tale of how her own grandmother, who received the homage due a great lady of the theatre, had started her stage career at eight. Ethel, who was ten, felt that the sands of life were running swiftly by and deemed it disgraceful that the Barrymores had as yet made no impression on the public. After considering the problem carefully she decided that *Camille* was a suitable vehicle, for she had heard many a retired or unemployed actress boast of the manner in which the boards had shivered and the audience quailed at the depth and gruesomeness of her coughs in *Camille*. Roping in her two brothers with promises of great wealth, the ambitious Camille, judging the cough to be the heart of the performance, proceeded to spend all her spare time in the bathroom practicing. One day patient boarders, waiting outside the house's one bathroom for their usual Saturday night scrub, drew the attention of Mrs. Drew to the ghastly hacking, and Ethel, to avoid being hauled off to the doctor to get the supposed bone taken out of her throat, had to tell all. The resultant publicity made the play a great success financially, 37¢ being realized in all. The money was equitably divided. John Barrymore confessed in later years that he and Lionel had played in it chiefly for the ice cream, and that they engaged in various other productions of Ethel's during the summer for the same materialistic reason. The performance was really a landmark for Lionel, however. Armand was the first and last lover that Lionel ever played on any stage. From that time to the present he has always despised love scenes and has consistently refused to play them.

The childhood of the three Barrymores, as described by John in later years, was adventurous and turbulent, often gay and always uncertain. The children saw little of their father and mother, who were often away on tour in other cities. Though born in a family where culture was taken for granted, "none of us had schooling that rates now with the education of a high-school graduate. . . Some months, when my father remembered to send money, we had fine clothes and lived in luxury. Mostly, however, we were poor." John told of one summer when Lionel was thirteen and family fortunes were at such a low ebb that they were left in a tumble-down farmhouse on Staten Island with an old Negro called Edward to take care of them. Present also were thirty-five dogs—the results of Commodore Peary's having presented four Eskimo huskies to the Barrymores.

Lionel Barrymore made his stage debut under the sponsorship of his grandmother, appearing with her in *The Road to Ruin* and *The Rivals* in 1893 and 1894. But as soon as he was able to do so he deserted the theatre, with which he had never wanted to be connected, and rushed off to Paris to study painting. There he had three years of freedom doing what he liked best, but to his chagrin he found out that "no one would pay him a plugged nickel" for his painting. John Barrymore's comment on his brother's Parisian interlude was that he had learned as much about art as he had about Parisian cafes, which was a lot better than most students managed to do.

In 1896 Lionel reappeared on the stage in *Squire Kate*, and the next year he first drew general notice in *Cumberland '61.* He continued to appear on the stage regularly with moderate success, for several years appearing with the company of his uncle, John Drew, until he made his first hit as an Italian organ grinder in *The Mummy and the Humming Bird.* It was typical of his painstaking methods that he studied dialect with an Italian secretly for weeks, and on the opening night, to his uncle's "well-bred astonishment," stole the show from him. After that John Drew introduced Lionel for the run of the show as "my nephew, in whose production I am playing quite a minor part." This play was followed by *The Other Girl* (1904), in which the critics were pleased by Lionel's realistic portrayal of a prizefighter, though somewhat taken aback by the play's coarseness.

We find Barrymore in 1905 a young man of twenty-seven, six feet tall, dark-haired, blue-eyed, a recognizable Barrymore in appearance, and, as the critics said, a star who had "arrived." For an entire year he had the title role in James M. Barrie's *Pantaloon*, but his poor health forced him to leave the theatre after its close, and he was in retirement for several years while he built himself up with careful gymnasium work. It was at this time that he made his first contact with the motion-picture industry. Although motion pictures had come to stay, "most actors, especially those of any substance, looked scornfully upon the new medium." Not so Lionel—for now, as in his Paris days, he "had to live." As early as 1909, when he had never seen a single motion picture (except the cinematograph fire engine or train sequences which were commonly shown at the end of the vaudeville shows), he sought out D. W. Griffith and asked him for a job. To D. W. Griffith's reply that he couldn't do anything with "stars," Lionel replied that he was willing to make himself generally useful. He was subsequently assigned to scenario writing at $25 a script.

LIONEL BARRYMORE

Griffith soon realized that he was wasting genuine talent, and Lionel started his career before the camera in the old Biograph Studio on 14th Street, appearing there with such creators of film history as Mary Pickford, Lillian and Dorothy Gish, and Mack Sennett. He recalls that he made several trips with Griffith to Hollywood "when it was not much more than a vast expanse of empty lots." Among his early efforts were *The Yellow Streak* (1915) and *The Splendid Road*, now described as "screen relics quickly seen and soon forgotten," which made Lionel Barrymore's name known to a much larger audience than his stage appearances had ever done.

Not that Barrymore deserted the stage completely. For many years he was to diversify his talents, spending most of his time in Hollywood and occasional seasons on the stage. In 1912 he toured in vaudeville and appeared in *The Still Voice.* By 1917, when he appeared as Colonel Ibbetson in

BARRYMORE, LIONEL—*Continued*

Peter Ibbetson at the Republic Theatre in New York, crowds of his new-found admirers swarmed the theatre. Then followed his most successful stage period. As Milt Shanks in *The Copperhead* (1918) his role required the portrayal of first a young man and then a bent old soldier, and his rendering of the difficult part drew the acclamation of the critics. Heywood Broun said Lionel Barrymore's was "the best piece of acting I ever saw."

Years later, his brother said of him: "Lionel is one of the world's greatest actors from any angle, in any part—and always has been. Years before his great success on the stage in *The Copperhead* Ethel and I knew that he was the best in the Drew-Barrymore collection." So strongly did John feel that Lionel was about to give an unforgettable performance in *The Copperhead* that he bought out the house for *Peter Ibbetson* (in which John himself was then appearing in Hartford) at a cost of $3,000 in order to be present on Lionel's opening night in New York, and, in common with the audience which gave Lionel fifteen curtain calls, was not disappointed. (Actually Lee Shubert, who was sympathetic to John's desire to see his brother in a great role, never let him foot the bill.)

The part of Neri in *The Jest* (1919) brought Lionel further acclaim. Then came "the memorable season of 1921, when his *Macbeth* was the year's sensation. There were critics then to say that Lionel Barrymore was the best the Royal Family had produced." Nevertheless, criticism of his Macbeth was not entirely favorable. Kenneth MacGowan condemned his performance entirely, saying, "If he possessed the spiritual fire and strength that the part demands, the slow pace might not be evident. Certainly if he did not give so absolutely tedious and unimaginative a performance, few would find the background anything but an exciting and immensely stimulating part of the drama enacted [Jones had made a new departure in staging by 'attempting through significant form to create an abstract background expressing the spiritual relations of the play']. As it is, Barrymore plods heavily through the long play, dwelling endlessly on every vowel, never for a moment simulating any natural emotion appropriate to *Macbeth*. . . It is a performance on a dead level."

In the same year Barrymore took the part of Achille Cortelon in *The Claw*, the theme of which was the moral and physical wrecking of a man who, in middle age, falls in love with a selfish and unscrupulous girl. It was in this play that Barrymore met Irene Fenwick (Mrs. James F. O'Brien), who was to become his second wife on July 14, 1923. His first wife, Doris Rankin (from whom he was to be divorced in 1922), took the part of his daughter in the play, and Irene Fenwick the part of Antoinette Doulers, the grasping "claw." Barrymore's remarkable portrayal of Cortelon, from the upright, alert man of forty-eight of the first act to the complete collapse and senility of the last act, was considered a great triumph and "one of the most extraordinary delineations this generation of theatre-goers has seen." During the next few years Lionel appeared in such productions as *Laugh, Clown, Laugh; The Piker,* a revival of *Taps;* and, in May 1925, *Men or Devil.* But his time was increasingly devoted to motion pictures.

Lionel Barrymore believes that the techniques of screen and stage acting are so different as to make comparisons inadvisable, but he himself finds motion pictures an "infinitely easier life, in the sense of physical strain, than the theatre. It suits me perfectly to do my job in the comparative privacy of the workshop. . ." In the early days a movie was completed every week, starting with Monday morning dumbshow rehearsals and ending with the finished film on Saturday night. Lionel has always been interested in the fabulous checks film producers were able to hand out. In the middle '20's, "a free-lance actor in California, he was entirely willing to accommodate the 'quickie' producers and would work for a week or less in some hurried super-epic. He received the usual fee of $500 or $1,000 and he frowned, gesticulated, and tossed his hair with only the vaguest notion of what the picture was all about. Eventually the frequency of his appearances began to damage his reputation, and he abandoned the practice. The quickie people had been advertising Barrymore as the star in productions which were, save for his acting, entirely tawdry."

Actually Lionel worked in semi-obscurity in Hollywood until the advent of the talkies, which put a tremendous premium on stage-actors trained in the skilled use of the voice. Then once again he became a star. He appeared in *Arsene Lupin* (1931) with his brother and in such celebrated films as *Grand Hotel* and *Reunion in Vienna* (1932); *Dinner at Eight* (1933); *Treasure Island* and *David Copperfield* (1934); *Ah, Wilderness* (1935); *The Gorgeous Hussy* and *Camille* (1936); and *Captains Courageous* (1937). "Perhaps Lionel's greatest screen performance of all time came when the entire Royal Family joined their genius and their voices in the talking version of *Rasputin and the Empress*. . . Lionel was the 'mad monk,' and he gave an unforgettable performance in this role." But his portrayal of the dying clerk, Kringelein, in *Grand Hotel* is said to have brought genuine tears instead of glycerine ones to Flaemmschen's (Joan Crawford's) eyes; and for his interpretation of the reprobate lawyer, a habitual drunkard who had to defend his daughter against a murder charge, in *A Free Soul,* he was presented with the Academy Award for the best performance of the year 1931. "Barrymore put incredible force into it—so much force, indeed, that the interpretation would have been definitely ham in the hands of almost any other actor."

Of late years Lionel Barrymore has built up a large group of followers through his role as the patriarch semi-invalid, Dr. Gillespie, in the "Dr. Kildare" series. The script writers discovered two short stories by the pulp writer Max Brand in 1937 and decided that they were "just what the studio needed for ailing Lionel Barrymore, who had been in and out of a wheel chair for two years with a succession of broken hips. . . *Young Dr. Kildare,* the first of the series, was produced on a careful 'B' picture budget of about $150,000, appeared late in 1938, paid its way with enough ease to warrant sequels." Of Barrymore's recent acting Otis Ferguson of the *New Republic* said: "Poor Lionel Barrymore has played Mr. B. so long and successfully that he is under the handicap of having his considerable range of tricks known by heart; but he does a good and restrained piece of work here as the crusty old humanist. . . I say 'poor' because if this had been his first part, those cocking eyebrows, snorts, chuckles, lip-smacking, invective, and gnarled tenderness would be shouted up as an acting masterpiece. . ." Although Barrymore's hip is well on the mend and he can now get about and even drive a car again unaided, "the studio plans to keep him in his wheel chair during future 'Dr. Kildares' unless the medical profession discovers a plausible cure for his cinema cancer."

To a tremendous audience of eager listeners Barrymore has become a radio fixture, too—in the role of Scrooge in Dickens' *The Christmas Carol* each year. (In 1936, when Lionel's wife died at Christmastime, John Barrymore took over the role, and in 1938, when illness kept Lionel abed in Los Angeles, he listened to Orson Welles' '41 portrayal of the part.) Scrooge is a part very dear to his heart, for he has always liked Dickens and he believes that listening to *The Christmas Carol* brings out the good in the hearers by making them remember the noble impulses in their hearts.

Lionel Barrymore has never been a glamorous figure, having inherited little of the famous debonair charm and wit of his father, the gay Maurice. Before his wife's death he led a quiet and happy home life with her. He has gladly permitted the limelight to be usurped by Ethel and by the *bons mots* and escapades of his late brother. Except for a flair for profanity when annoyed (he is said to have equalled or outclassed John in this respect), "Lionel has never been a 'showman. Acting is to him a business, like architecture or salmon canning, and he sees no reason why an actor should act off the screen any more than an architect should appear at dinner dressed in blue prints or a salmon canner walk down the street with a fish under each arm." His common sense and clarity of thought have become bywords in the family, and his actions are seldom influenced by emotion, though his speech when aroused is likely to blast his listeners both by its volume and its acrid quality.

A great lover of music (his *Tableau Russe* has been played by the San Francisco Symphony Orchestra), Lionel Barrymore was enraged during the First World War at those who prevented German music from being played in America. "You're insane," he would say. "We'd be hurting no one but ourselves. It's as idiotic as if a company of German soldiers were to goose-step off the roof of a forty-story building after announcing, 'To hell with gravity, because that English guy Newton discovered it.'" Now somewhat shorter than he was in his prime by virtue of habitual stooping, and with his once brown hair now thin and gray, Lionel Barrymore spends the greater part of his time on his farm at Chatsworth in the San Fernando Valley, "puttering about, etching and composing, listening to music." His dogged and courageous fight to regain his health in the last few years has won him the universal respect and admiration of the film colony. Interviewed on his golden jubilee as an actor, Barrymore refused to look backward—he would talk of nothing but his new roles and the flivver plane he hopes to own and fly some day after the War. In July 1943 he signed a new seven-year contract with MGM to celebrate the start of his eighteenth year as a Metro actor; in seventeen years he had appeared in sixty-two pictures. At about the same time he and Anita Loos began work on a play tentatively titled *Old Buddha*, which dealt with the life of the Dowager Empress of China and was intended as a vehicle for Ethel Barrymore.

BAX, SIR ARNOLD (EDWARD TREVOR) Nov. 8, 1883- English composer; author

Address: h. 155 Fellows Rd, Hampstead, N. W., England

Perhaps the most interesting feature of the outwardly uneventful life of Sir Arnold Bax is the successful manner in which he long shielded his literary activities under the fictitious figure of Dermot O'Byrne. It is curious to note that the same government which recently knighted Bax for his contributions to English music once condemned and banned a poem on the Irish Insurrection of 1916 written by him under his pseudonym. Although he is English by birth and heritage, Bax went to Ireland upon the termination of his studies at the Royal Academy of Music in 1905 and became a Celt by conversion, so to speak. His close association with Irish life and culture has caused the noted Lawrence Gilman to remark that "Bax should be regarded as a neo-Celt, a sort of musical representative of

Herbert Lambert

SIR ARNOLD BAX

the imaginative predisposition and the poetic tendencies of Yeats, A. E., and other literary exponents of the Celtic Renaissance."

Entirely without pretentiousness, Sir Arnold has always chosen to remain in the background, allowing the merits of his works to testify to his worth. The story of his life may best be told in terms of his works, which encompass a wide range of musical compositions—from large symphonic and choral compositions to ballet scores and songs—as well as a play, *Red Owen,* Irish short stories, and poetry. After gaining two honorary academic degrees and a title Bax was appointed Master of the King's Music in 1942.

Sir Arnold Edward Trevor Bax was born on November 8, 1883, the son of the late Alfred Ridley Bax, F. S. A., and Charlotte Ellen (Lea) Bax, and is the brother of Clifford Bax, the well known writer and poet. He received his early education at home from private instructors.

When he was seventeen years old Bax entered the Royal Academy of Music, where he remained for five years. During that time he studied piano with the eminent Tobias Matthay and composition with Frederick Corder. As a student at the Academy Bax impressed everyone by the ease with which he overcame all the difficulties of both the theoretical and instrumental aspects of music. His accomplishments included a facility in sight reading which enabled him to play at sight on the piano any orchestral score. While still at the Academy he had begun his career as a composer; a goodly number of works date from this period. Some of these early compositions, all of which were later withdrawn for purposes of revision, were performed by Bax at his first public appearance as a composer in 1903 at St. James's Hall.

Thoroughly equipped with a complete technical knowledge of music, Bax left the Academy in 1905 and went to Ireland, where he lived for a considerable period of time in the northwestern region and in Dublin. When he arrived in Ireland the Celtic Revival was in full swing; Bax, who was deeply affected by the spell of Irish fable and folkways and by the liberating spontaneity of the new movement, fell in with the writers and artists of the Irish Renaissance—Yeats, A. E., who became his very good friend, Synge, and the rest. Ireland formed the most important single influence not only upon Arnold Bax the composer, but upon Bax the "Gaelic" author, who became known to the literary world as Dermot O'Byrne.

Meanwhile Bax, who continued to divide his time between England and Ireland for many years, had begun to publish his compositions. In 1906 there appeared a string trio, his first published chamber work. This was followed, the next year, by his choral settings of Runeberg's *Fatherland* and of Shelley's *Prometheus Unbound,* the earliest of his works to attract the attention of a larger musical public.

Bax made another of his infrequent appearances as a pianist in July 1908, when he gave a recital consisting entirely of his own works. When, two years later, he visited Russia, the customs and color of that country captured his imagination. The musical results of his Russian sojourn were the piano pieces *May Night in Ukraine* and *Gopak,* both published in 1911; and *In a Vodka Shop* (1915).

The Irish short stories Bax wrote under the pen name of Dermot O'Byrne began to find their way into print. Two of them, "Hunger" and "The Call of the Road," were published in separate issues of the *Irish Review* of 1912; three others, "The Lifting of the Veil", "Through the Rain," and "The Death of Macha Gold-Horn," were printed in the art periodical *Orpheus.* All of these stories together with some new ones were later collected in an edition entitled *Children of the Hills* (1913), which the author described as "tales and sketches of western Ireland in the old time and the present day." The stories, which depend upon the creation of mood for their effect, are regarded as "very good" by some of Bax's literary colleagues.

Always a sincere and fervent partisan of the Irish cause, Bax was highly moved by the events of the Irish Insurrection of 1916. He registered his protest against the British for what he considered their unjust treatment of the Irish in a poem commemorating the heroic spirit of his adopted countrymen. The poem was promptly suppressed by the British Government, and it has never been printed since.

The activities of Dermot O'Byrne, however, in no way interfered with the work of Arnold Bax the composer, for he brought out, during the 1916 to 1917 season, three important orchestral works, *The Garden of Fand, Tintagel,* and *November Woods.* Bax's deep interest in Celtic tradition and myth is evident in the first of these symphonic poems, *Fand,* which, although it is in no way programmatic, derived its initial inspiration from one of the legends in the Cuchulain cycle.

As Dermot O'Byrne, Bax continued to steep himself in the literature of Ireland; he learned to read Gaelic in order to acquaint himself with Celtic writings in the original versions. In 1919 the play *Red Owen* was published, the diction of which was influenced by that of Synge.

In 1920 when the Ballet Russe was at the height of its popularity, Bax, in collaboration with Sir James Barrie, composed a fantastic ballet entitled *The Truth about Russian Dancers* which was produced that year by the Diaghilev company. The following year, Bax again took up choral writing on a large scale; he experimented with media he had not previously used. Perhaps the most serious composition of this period is his motet for a large, unaccompanied choir, *Mater, Ora Filium* (1921), the text of which was taken from a manuscript found at Balliol College, Oxford. Less impressive, but an equally interesting work of the same period, is his charming carol, *Of a Rose I Sing* (1921).

The first symphony by Bax received its initial performance in December 1922 at Queen's Hall under the direction of Albert Coates. Like its successors, the symphony was favorably received, but it failed to create a furor. Together with his viola sonata, it was selected by the jury of the International Society for Contemporary Music for performance at Prague in June 1923, and at Salzburg in August of the same year.

Two more symphonies followed in a rather short period of time: the second, dedicated to Serge Koussevitzky '40, in 1929, and the third in 1930. The next year Bax was awarded the Gold Medal of the Royal Philharmonic Society and of the Worshipful Company of Musicians. In 1932 two new works were given their premières—the fourth symphony and *Summer Music*, the latter a work of "simple and transparent" structure.

The honorary degree of Doctor of Music was conferred upon Bax by Oxford University in 1934; a year later he was similarly honored by Durham. In 1937 he was knighted by the King of England for his distinguished services to the cause of English music.

Since Sir Arnold has never been obliged to earn his livelihood, he has never sought to occupy any official musical post. In 1942, however, he was appointed Master of the King's Music. The office entails such duties as advising on music for royal weddings, coronations, and other special occasions and composing music for them. Considerable surprise was expressed in musical circles at the appointment of Sir Arnold, because the post is generally given to some famous organist who has been associated with the court or church, rather than to a composer.

A complete catalog of the compositions of Sir Arnold would fill several pages. His principal works include six symphonies, four piano sonatas, many chamber works, choral pieces, symphonic poems, numerous songs, and many miscellaneous works. A large portion of the songs are particularly successful settings of poems by Padraic Colum, "Fiona Macleod," John Millington Synge, and J. H. Cousins.

By no means an innovator, Sir Arnold nevertheless favors unusual combinations of instruments in his chamber music. As an example, his *An Irish Elegy* is scored for English horn, harp, and strings; other unorthodox combinations include a quintet for harp and strings and a nonet for string quartet, woodwinds, and harp. An English musical commentator remarked that the symphonies of Sir Arnold "undoubtedly possess individual character as well as individual beauty"; but, he adds, "they have not quite won their place in the first rank, possibly because the public is slow in appreciation." The critic himself believes that the symphonies have "fine lyrical moments but lack in their climax at times not force but the greater light and warmth of a great crisis." The reputation of Sir Arnold in England, reported the same source, "rests on a number of important works, of which every one has been justly praised and appreciated, although it would be difficult to point to any one as having won its way to the heart of the masses."

Sir Arnold is married to Mme. Sabrino, and the couple have two children, Dermot and Maeve. Sir Arnold's retiring disposition has caused him to shun the concert stage and to avoid participating in the conflicts of the musical world. The key to his character, suggests Padraic Colum, is his admiration for country people—especially Irish—with whom he likes to live. His friends, who consider his company charming, report that he is very witty in a quiet way. His relationship to the rest of the world may be likened to that of an Addisonian spectator—amused, slightly ironical, but always kind.

BEHRMAN, S(AMUEL) N(ATHANIEL) (ber'män) June 9, 1893- American playwright; scenarist

Address: b. c/o Playwrights' Producing Co, Inc, 630 Fifth Ave, New York City

The word "urbane," in the critical writing world, has become synonymous with S. N. Behrman. "It is one of my ambitions," wrote one drama critic, "to write a review of an S. N. Behrman play in which the word 'urbane' is not used. At present, though, it is impossible to do any such thing, because Mr. Behrman remains the most urbane of our dramatists."

Vandamm Studio

S. N. BEHRMAN

In plays against a drawingroom background Behrman has investigated socialism, fascism, capitalism, and other isms of the times. His gift for "whipping the English language into a sparkle" and for exposing what is foolish and pompous in people has made him "the American theatre's most accomplished specialist in the comedy of manners."

Born in Worcester, Massachusetts on June 9, 1893, Samuel Nathaniel Behrman is the son of Joseph and Zelda (Feingold) Behrman. He says he spent his boyhood "immersed in assorted literature: Horatio Alger and Shakespeare in equal parts." After graduation from high school he attended Clark College (1912-14). There he met G. Stanley Hall, who "later became the prototype of a professional liberal in *Meteor*." Behrman's interest in the theatre developed at an early age. Before he was twenty he had written a vaudeville skit. Casting himself in one of the roles, he got as near Times Square as Fourteenth Street.

The mecca of the student-playwright at that time was George Pierce Baker's "47" drama workshop and course at Harvard. Young Behrman soon entered Harvard, where he was a fellow-student of Sidney Howard. In 1916 he obtained his B. A. degree and again decided to try his fortune in the New York theatre. Unable to obtain employment in his chosen field, he took his M. A. degree in English at Columbia (1918), studying under famous teachers of the drama, Brander Matthews and St. John Ervine.

Nine years elapsed before Broadway welcomed him as a playwright. During the interim he saw "cadaverous days, living from hand to typewriter in the clangorous byways of Times Square and trying to make both termini meet by reviewing occasional books for the New York *Times*, contributing short stories and articles to *Smart Set*, *New Republic*, *Seven Arts*, *Masses*, and the *New Yorker*." In collaboration with J. Kenyon Nicholson he wrote *Bedside Manners*, which was produced in 1923, and three years later, with Owen Davis, *The Man Who Forgot*. After the failure of these plays he became press agent for *Broadway*, the season's biggest box-office attraction.

His decision to become a playwright on his own came when he tore up a railway ticket which would have taken him to the position of instructor in a small college—a post which offered security but obscurity. A friend, sensing the gloom which accompanied this desertion of the theatre world, had advised: "Tear up that ticket. Forget good sense and safety—and start the next play."

The "next play," *The Second Man* (1927), was produced by the Theatre Guild with Lynn Fontanne '41 and Alfred Lunt '41 in the starring roles. "Critics and audiences alike were astounded at the spectacular emergence of a mature comedy talent." George Jean Nathan said: "There is first-rate worldly experience behind *The Second Man*, and a very good brand of viewpoint." Behrman then dramatized an anonymously written novel, *Serena Blandish* (1928). Presented by Jed Harris with Ruth Gordon '43 in the title role, the play was a "smart satire" on the Cinderella theme "put in gorgeous epigrams."

Meteor, produced in 1929 by the Theatre Guild, "showed an undeniable trend toward the consideration of serious problems," and was considered by one critic as "structurally more compact and closely knit than his other work." *Meteor* was "an excellent portrait of egotism and fanatical self-belief" in the character of a Wall Street wizard who in the course of the play finds himself emotionally bankrupt but who continues to pursue his desire for power. Lunt and Fontanne were cast in the leading roles.

Brief Moment, produced by Guthrie McClintic '43 in 1931, caused a minor sensation among the gentlemen of the press because Alexander Woollcott '41 for the first time confronted his former co-writers from the other side of the stage. Cast as an "obese sybarite, with a passion for reclining on couches," Woollcott was admirably suited to deliver the Behrman lines, which brimmed with "wit, wisdom, and wickedness." Though the event was "urbane and propitious," John Mason Brown '42 concluded: "Mr. Behrman has not written a play, and for that very reason and in spite of the felicity of much of its dialogue, what is happening in *Brief Moment* never comes to matter in the theatre." But, according to Joseph Wood Krutch, Behrman in *Brief Moment* "came closer than any of our contemporary playwrights has ever come before to rivaling the great masters of pure comedy in their own field."

Biography (1932) is "his most human play. For one thing it is a comedy of character (as opposed to that of phrase)." Ina Claire, playing the part of Marion Froude, is a famous portrait painter. "Her dilemma arises out of the apparent necessity of choosing between two men—the one a likable but abandoned opportunist in public life, the other a fanatical revolutionary idealist."

Again and again in his plays Behrman employs for his chief protagonists a liberal and a radical, "each equally endowed with eloquence and intelligence and wit," and each of them states his respective case and exposes the weakness of the adversary while the spectator stands by, "not so much cynically enjoying the discomfiture of each as delighting in the insights which are afforded into both the problems themselves and the characters of those who are trying to solve them. Such comedies . . . are comedies of illumination. They turn to the uses of the moment the most valuable of comedy's gifts—the gift of disinterested insight."

In the '20's this method gave him, as a "master of disputative conversation," the opportunity to write for the theatre in the best tradition of high comedy. In the '30's, as one reviewer put it: "He was confronted with a dilemma: How can he function in a time in which nearly everyone seeks to destroy all principles but his own and remain a writer of comedy?" Aware of the disturbing forces at work in a world where comedy seemed less and less at home, Behrman sought to discover "what, if anything, the comic spirit could add to the discussion into which everyone was being compelled, willy nilly, to take some part."

In *Rain from Heaven* (1934) Behrman stepped squarely into the arena on the question of Fascism. "One of the chief male characters is a popular American hero being exploited by his brother in the interests of a vague Fascist scheme; the other is a German refugee." The third character of the triangle is "Mr. Behrman's testament of affection for the gracious, urbane spirit of the genuine English liberal" represented by an English gentlewoman and played by Jane Cowl in the Theatre Guild production of the play. The opinion of Joseph Wood Krutch was that Behrman in this play took a more emphatic stand, showing plainly where his own sympathies lay by making out a much better case for the refugee than for his adversaries. In the opinion of another reviewer, however, he refused "to argue his points beyond the position that honest and gentlemanly liberalism would establish for him."

In *End of Summer* (produced by the Theatre Guild in 1936) he took another step forward. "His thesis is the illegitimacy of inherited and accumulated wealth. Not only do riches no longer bring immunities, they bring responsibilities." His many contributions to the Theatre Guild's programs drew this comment from a critic: "Like George Bernard Shaw, another contributor of wit and wisdom to the Theatre Guild, Behrman is no longer called upon to concoct a full-fledged drama every time he has assembled enough conversation for a three-act play. . . Behrman's plays bristle with contemporary social, economic, controversial things. . . But his drama is in his talk."

In 1937 the Theatre Guild produced his adaptation of Jean Giraudoux's comedy *Amphitryon 38.* With the Lunts in the starring roles the play proved to be Behrman's biggest box-office attraction and the play provoked no adverse criticism from the reviewers. In *Wine of Choice* (1938) Behrman again took up a problem of the day, but this proved to be the least successful of his plays. There was no divergence in the critical notices; it was generally agreed that Behrman "was lost in a fog of confusions." Frank Hurburt O'Hara asked: "Was he groping to say something that he didn't, or couldn't say any too clearly? Was he becoming self-conscious?"

Though by this time Behrman had sacrificed to some degree the necessary element for high comedy, detachment or tolerance, with the increasing seriousness of present-day problems more and more reviewers were beginning to criticize his failure "to come to grips" with the problems his plays were about. One critic complained of his tendency "to assume the point of view of the people about whom he is writing." In other words, he was being challenged to step out from behind his characters and speak up as Behrman, the man, even if in so doing he might fail artistically as a playwright. Behrman answered his critics in his next play, *No Time for Comedy* (1939). "At least," wrote O'Hara regarding this play, "he has admittedly dramatized what might be called the autobiography of his conflicting impulses during the immediate past."

The protagonist of *No Time for Comedy* is a writer of light comedy who is filled with contempt for his failure to express himself with passion and authority on the serious problems of contemporary life. "After an evening of churning and moaning," wrote Brooks Atkinson '42, "the writer of fashionable comedy decided to stick to his last—a most satisfactory conclusion." In defense of his opinion, Atkinson said: "If a gifted writer like Behrman had to stand aside while the world collapsed, it would be a tragic thing, indeed. . . Let us not underestimate the therapeutic value of comedy today. It represents the application

BEHRMAN, S. N.—*Continued*

of intelligence to a world that is engulfed in anger and despair. . . Superficially it may seem contemptible for a man to be making jokes during a period of agony and suffering. But Molière was not a contemptible figure He criticized the period in which he lived by writing brilliant comedies about it." Of *No Time for Comedy* George Jean Nathan wrote: "Although most of the newspaper reviewers have fondled it . . . and although the first-night audience bravoed it . . . it strikes me as being the feeblest comedy job that its gifted author has done in years."

Unlike his playwright-hero, Behrman did not "stick to his last" in his next play, *The Talley Method*, produced in 1941 by the Playwrights' Company. "The flaw in *The Talley Method*," wrote Richard Watts, "is not that it turns from comedy to deep earnestness but that in its earnestness it never manages to come to grips with its theme."

On November 25, 1942 the Playwrights' Company and Theatre Guild jointly offered *The Pirate* (adapted by Behrman from an original play by Ludwig Fulda) with the Lunts in the leading roles. "*The Pirate* is a larkish blend of musical comedy, poetic farce, and circus, obviously designed to cheer a war-time public. Its fantastic love story would have been duck soup to Shakespeare in his best *Twelfth Night* manner. But S. N. Behrman, dean of sophisticated dramatists, handles it well enough." In its first fifteen weeks the play grossed $342,740—the largest sum a Behrman play had ever grossed. On January 12, 1943 Metro-Goldwyn-Mayer bought screen rights to *The Pirate* "for a sum in the neighborhood of $225,000." The play closed on May 1, 1943, Behrman's most financially successful play, and later that same month the Academy of Arts and Letters (of which Behrman is not a member) presented him with a grant to further his work.

In between his Broadway plays and his membership in the Playwrights' Company, Behrman has worked in Hollywood studios. The dialogue in *Anna Karenina* (1935) was written by him; *Queen Christina* (1933), in which Greta Garbo played the title role, is another of his scenarios, as is *A Tale of Two Cities* (1935) in which Ronald Colman '43 played the lead; and he assisted in the writing of *The Cowboy and the Lady* (1938). In the summer of 1943 he completed the screen play for *Quo Vadis* at MGM. "Like the traditional comedian who hopes to play tragedy, Mr. Behrman hopes one day to write a novel." He writes frequent short stories and articles for literary periodicals. He also does a great deal of volunteer work, including the preparation of radio scripts for the war effort.

A tribute to his loyalty in friendship and business relations, as well as to his gift for writing "lines about which an actor can wrap his tongue," is the willingness of the most distinguished actors of the stage—actors with sufficient prestige to choose their plays—to appear time after time in Behrman's plays. The Lunts have played in four of them; Ina Claire starred in *Biography, End of Summer*, and *The Talley Method*; Alexander Woollcott, after making his stage debut in *Brief Moment*, returned again to a Behrman role in *Wine of Choice*; and in *No Time for Comedy* Katharine Cornell '41 played her first comedy role.

Behrman works hard at his craft. Although a member of a profession which delights in publicity, very little is known of him. He is as witty and amusing as his plays. "Intellectually he is a thorough man about town. But, on the other hand, 'Berry,' as some friends call him, is short, bald, and slightly owlish. And his penchant for disappearing for days without leaving the slightest clue to his whereabouts has brought upon him the sobriquet of 'Slippery Sam.'" In 1937 he married Elza Heifetz, sister of the famous violinist, Jascha Heifetz.

BERGER, MEYER Sept. 1, 1898- Journalist

Address: b. c/o New York Times, New York City; h. Valley Forge Rd, Weston, Conn.

Meyer Berger is known to his readers for his "encyclopedic knowledge of New York and his seemingly effortless writing skill." One reviewer has noted that although "newspapermen are thought of in popular legend as leading an exciting life 'because they meet so many interesting people,' meaning tycoons, Senators, actresses, crusading district attorneys, and such," Berger is more interested in "inmates of the Tombs, the practitioners of unique and peculiar professions unknown to most of the world, the exotic, the bizarre, the pathetic, and the just plain grisly." Most of Berger's writing is lost because of the perishable nature of the publications for which he writes, but in 1942 some of his best pieces were collected into a book, *The Eight Million; Journal of a New York Correspondent.*

Meyer Berger was born of poor Jewish parents somewhere in New York's Lower East Side on September 1, 1898. His parents, Ignace and Sarah (Waldman) Berger, had eleven children, and Meyer had to begin contributing to the family exchequer when he was eight years old. He sold newspapers along Broadway and attended elementary school and two terms at the Eastern District High School until he was twelve. Then he left school for a full-time job running messages for the Brooklyn office of the New York *World.*

In this job he ran advertising and editorial copy from the Brooklyn office to the main building on Park Row. "When there was no copy," he writes, "I ran hot coffee and hot bean sandwiches from Dirty Smith's, or, sometimes, cold pints from Dixon's. On winter nights I'd hold the sandwiches against my chest so the heat would come through the paper and warm me. On hot nights I'd linger outside the office door the longer to cool my hands on the tin growler." Berger liked best, after copy was in, to watch the poker games and listen to the journalists' conversations, full of "all the legends of the craft, ancient and contemporary." "I contracted newsprint fever in this way," he wrote in the preface to *The Eight Million,* "by a kind of osmosis. Here I learned, I think, a sounder journalism than is taught in graver halls of learning."

On the *World* Berger rose from messenger boy to night telephone operator and then to head office boy. After the United States entered the First World War he saw service with the 106th Infantry of the American Expeditionary Forces. He rose to the rank of line sergeant, and in 1919, after having seen two years' service, he was mustered out of the service. He had earned the Purple Heart, the Silver Star, the Conspicuous Service Cross, and citations, in the 27th Division of the A. E. F.

MEYER BERGER

After the War Berger became police reporter for the *World.* From there he moved to the Standard News Association, where he worked as both reporter and rewrite man. In March 1928 he became a reporter for the New York *Times,* where he has remained ever since except for one year spent as a staff member of the *New Yorker* Magazine. Most of his work is done in New York City, a town on which he has become a recognized authority, but in the summer of 1942 he was sent abroad to add the Berger touch to dispatches from England and for two months he was on the London staff of the New York *Times.* He was back in a few months, however, to cover the War on the home front—writing stories about how a New York City block or a little New Jersey town look with their boys gone to war, or the effects of farm life on a New Yorker trying to contribute to the nation's food supply.

In *City Editor* Stanley Walker characterized Berger as "one of the best reporters on the *Times.*" Although much of a reporter's work is anonymous, Berger is well known outside the profession for such personal exploits as the one in 1932 when, after being assigned to cover a spelling bee of the Catholic Actors' Guild, he entered and won the contest. He won a great deal of approval from the public as well as from fellow journalists for his 1939 series of daily columns and interviews from the grounds of the World's Fair in New York. Those light, brisk, witty features were an innovation in the staid pages of the New York *Times,* but their immediate popularity caused the *Times* to continue them until Berger

BERGER, MEYER—*Continued*

begged off when he felt he had milked the Fair dry of human interest.

When *The Eight Million* appeared it was greeted with unanimous acclaim. The articles "vary from brief interviews with individuals notable for some one peculiarity to explorations into the strange financial practices of Broadway chiselers, to more extensive reports on the quaint history of the Tombs or the organization and methods of professional killers." Berger recounts meetings with "New Yorkers who collect pennies wagered on policy tickets, who smoke reefers in Harlem, who fish for coins in the gratings of Times Square, who do business with the worm diggers' union." The book was illustrated by Henry Berger, the author's brother. In late 1943 Berger completed *Men of Maryknoll,* on which he collaborated with Father James Keller. This story of missionaries and their way of life, especially in wartime, was praised for its simple sincerity. The New York *Times* called it a "humble and wondering story . . . a good story to be reminded of during these days of murderous hate."

Orville Prescott has characterized Berger's style as "crisp, sure, pointed, and humorous." Berger, Prescott points out, "knows equally well the value of understatement and the folly of elaborating into excessive human interest poignance a pathetic or dramatic episode whose point can be made perfectly in a few pages."

On August 27, 1926 Meyer Berger was married to Mae Gamsu. He is five feet eleven inches tall, weighs 142 pounds, and has receding dark hair and a fair complexion. His hobbies are photography and gardening.

BERNHEIM, BERTRAM M(OSES) Feb. 15, 1880- Surgeon; author

Address: b. 1814 Eutaw Pl, Baltimore, Md; h. Pikesville, Md.

Blood transfusion is now a fairly commonplace and simple procedure to which innumerable persons on the home and battle fronts all over the world owe their lives; neither the donor nor the recipient experiences the pain, fear, and discomfort which were involved in the procedure some three decades ago when it was a matter of surgery and generally used only when all else failed. Its history, which in a sense is the "story of advancing civilization," has been told in *Adventure in Blood Transfusion* (1942) by Dr. Bertram M. Bernheim, who is associate professor of surgery at the Johns Hopkins Medical School and one of the leading pioneers in the field of blood surgery and transfusion.

Bertram Moses Bernheim was born of Jewish parents on February 15, 1880 in Paducah, Kentucky. He is the son of Isaac Wolfe and Amanda (Uri) Bernheim. After attending grammar and secondary schools, both public and private, Bernheim took his undergraduate work at Johns Hopkins University, Baltimore, Maryland, from which he was graduated with a B. A. degree in 1901. In the fall of that year he entered Johns Hopkins Medical School and in 1905 he received his Medical Degree. During the following year he continued to study surgery, doing postgraduate work in Europe. In 1908 he officially began his career in surgical research, evincing a special interest in the surgery of blood vessels, and in 1909 obtained a position as assistant in surgery at Johns Hopkins Medical School. In 1913 Dr. Bernheim was made instructor in surgery and in 1914 he became an instructor in clinical surgery.

When the United States entered the First World War, Dr. Bernheim served with the medical division of the A. E. F. for nearly two years, with the rank of captain. He was one of the surgeons attached to the Johns Hopkins Hospital Base Unit and as such sailed for France in the first convoy of troops sent over. He landed at St. Nazaire in July 1917 and served as an operating surgeon in every battle, later becoming commanding officer of the Hopkins Hospital Unit known as Base Hospital No. 18, A. E. F. He was promoted to the rank of major and "received a citation for work done with four combat divisions." When the War was over Dr. Bernheim, "broken in health," returned to the United States. After a year in which he made a rapid recovery, he resumed his teaching and medical work.

Prior to the First World War, Dr. Bernheim had been interested chiefly in blood transfusion work and, besides being occupied with his own practice and his work at the medical school, he was frequently called in on special cases necessitating blood transfusions. *Adventure in Blood Transfusion,* in which he tells the story for laymen, is an account of his personal struggles in this work as well as a history of the simplification of the procedure. This procedure he has divided into several periods: the first period, consisting of "very early, abortive, sporadic attempts to do blood transfusions"; the second period of direct transfusion; the third period of indirect transfusion of whole blood, "notable for the general recognition of the necessity for carrying out tests prior to transfusion"; the fourth period of indirect transfusion with the aid of anti-coagulants; and the fifth period of "indirect transfusion of blood plasma or serum."

In tracing the progress made in the simplification of the blood transfusion procedure through these five periods, Dr. Bernheim explains the method or methods used in each, and how the discoveries and improvements over old methods came about. He himself was responsible for devising a new method in the third period of the history of blood transfusion which was an improvement over the famous Lindeman or "needle" method. With the facilities of the Hunterian Laboratory for Experimental Surgery at his disposal Dr. Bernheim constructed a special metal tube "by which blood could be transferred rapidly and easily, and no skilled assistants whatsoever were required for the procedure." On October 9, 1915 a description of this method was published in the *Journal of the American Medical Association*. "An improvement on former methods and requiring no operation, Dr. Bernheim and many others used it almost exclusively in blood transfusion work, and many interesting developments in the history of blood transfusion resulted from the use of it."

As the surgical work connected with blood transfusion decreased with the adoption of the needle method, Dr. Bernheim's interest in it also decreased, and he returned to one of his primary interests—surgery. From 1914 to 1924, except for the interlude of war service, he served as an instructor in clinical surgery at Johns Hopkins Medical School, and by ascending the professional and pedagogical ladder he became associate professor of surgery at Hopkins, a position which he has retained since 1934.

In conjunction with his teaching and his private practice Dr. Bernheim has written some fifty or more scientific papers on surgical subjects as well as several books—*Surgery of the Vascular System* (1913); *Blood Transfusion, Hemorrhage and the Anaemias* (1917); and *Passed as Censored* (1918). Much interested in the services and medical problems of the medical profession in relation to itself, the people, and the Government, Dr. Bernheim also wrote *Medicine at the Crossroads* (1939). In it he describes the present-day medical setup, its faults and virtues, and discusses such problems as private practice, surgery, group practice, private and general hospitals.

Dr. Bernheim is especially concerned with the refusal of organized medicine to recognize or discuss the economic and social aspects of medicine. He was an original member of the "430 Committee of Physicians" which in November 1937 issued an open statement of which the first and basic principle was "that the health of the people is a direct concern of the Government." The A. M. A. took the attitude "that it was being grossly and unjustly attacked by a group of unthinking, renegade members." Dr. Bernheim finds this attitude a distressing one for several reasons —namely that it shows a "lack of enlightened leadership and organization" in the A. M. A.; that apparently "a member or group of members haven't the right, in this country of all countries, to voice their opinions—whether they agree with those of the Association or not"; that younger doctors of more flexible minds are not free to state their views on any subject contrary to those held by the "older men of fixed ideas" for fear of having deliberate professional difficulties put in their way. "We formerly stood very high in the public's estimation and we had their confidence in a way that was most heartening; but with the passing of time much of that faith has been destroyed. Yet we are better doctors than we ever were. . . If we hadn't been so certain that adequate medical care was available to all, and if, instead of assuming the attitude of 'let them come and get it,' we had of our own volition insisted that more and better facilities be provided, our position would not be what it is today."

DR. BERTRAM M. BERNHEIM

Bernheim is a member of the A. M. A., and a founder of the American College of Surgeons and of the American Board of Surgery. By political affiliation he is an independent Democrat.

Dr. Bernheim is married to the former Hilda Hess Marcus. The Bernheims have three children—Minda, Isaac Wolfe, II, and Bertram, Jr. Both of the boys volunteered for service in the Second World War and are officers in the American Air Forces. Dr. Bernheim also volunteered his services for the War but was rejected because of his age. In addition to his regular practice and lectures given at the nurses' school of the Union Memorial Hospital, he has taken on extra work at the Johns Hopkins Medical School and examines draftees for Induction Station No. 6 in Baltimore as a special contribution to the war effort.

BESS, DEMAREE (CAUGHEY) July 28, 1893- Journalist; author

Address: b. Saturday Evening Post, Independence Sq, Philadelphia, Pa; h. 575 Park Ave, New York City

Associate editor of the *Saturday Evening Post*, Demaree Bess started his career as an instructor in an Egyptian school, took up newspaper work after the First World War, and has continued in journalism ever since. In the course of his life as a foreign correspondent Bess has traveled over the whole world, particularly the Far East, which is his chosen field.

DEMAREE BESS

Demaree Caughey Bess was born in Kansas City, Missouri on July 28, 1893, the son of the Reverend Dr. Elmer Allen Bess, a Presbyterian minister, and Emma (Caughey) Bess. Young Bess attended Occidental College (Los Angeles, California) from 1911 to 1912, then changed to the University of Iowa from which he received his B. A. degree in 1916. Immediately after his graduation from college Bess received an instructorship in English at Assiut College, Assiut, Egypt. When the First World War broke out Bess joined the British forces in Palestine; later he served with the American Red Cross in Palestine and also in Syria.

With the close of the War Bess returned to the United States and joined the staff of the Minneapolis *Tribune* in 1919. He remained in the United States for the next five years, working on the *Tribune* and also on the Los Angeles *Times*. After this period of work on "home ground," Bess shifted to the Far East as foreign correspondent of the New York Evening *Post* and the Philadelphia *Public Ledger*. Shanghai was Bess' first stop, after which he traveled about the Orient. In 1927 Bess became the news editor of the Japan *Advertiser* in Tokyo. It was in Japan that he met Mrs. Dorothy (Berezniak) Gould, also a foreign correspondent. She is the daughter of Jewish emigrants who came from Russia. The Besses were married in Tokyo on January 21, 1927, and "since that time the two Besses have worked and traveled as a journalistic team." They have no children.

From 1928 to 1931 Bess was the manager of the North China bureau of the United Press at Peking. For the next six or seven years he served variously as Far Eastern chief, Moscow correspondent, and European correspondent for the *Christian Science Monitor*. "Many of the important diplomats in Europe today," according to the *Saturday Evening Post*, "were third secretaries in the various chancelleries throughout China and Japan when Bess was covering that part of the world, and the friendships he then made have served him well in Europe in recent years." His four years in Russia were not spent sitting in a Moscow office but traveling throughout the country from the Arctic Circle to the Black Sea. As Moscow correspondent for the *Monitor*, in 1934 Bess met John D. Littlepage, an American mining engineer working in Russia for the Soviet Gold Trust. At the time, Bess wrote, he attempted to induce Littlepage to write a book about his experiences in Russia, but Littlepage refused, saying that it would not be ethical for him to write about the Russians while he was in their employ.

Three years later, however, Littlepage resigned from the Gold Trust and finally agreed to collaborate with Bess on a book. The two returned to the United States and set to work. *In Search of Soviet Gold* appeared in 1938. It was an account of Littlepage's life and work during the years 1928 to 1937 when he "was engaged in an attempt to increase the gold production of Soviet Russia." Most of the critics were concerned with the narrative rather than the literary style, except for a reviewer on the *Christian Science Monitor* who remarked that "the modest retirement of Mr. Demaree Bess, co-author and actual writer of the book, behind the strong personality of Littlepage, has justified itself in a work that brings a new and lively interest to the baffling problem of Soviet Russia." The *Spectator* also commented that the book remained readable "in spite of a style that combines the literary artlessness of the engineer with a certain amount of gingering up by a newspaperman." Bess also collaborated on three articles by Littlepage, *Hunting Gold for Stalin, Red Wreckers in Russia*, and *Serfs of the Soviets*, all of which appeared in the *Saturday Evening Post*.

In 1938 Bess joined the staff of the *Saturday Evening Post* as foreign correspondent, and he has remained with the *Post* ever since. At present he holds the position of associate editor. In one of his first articles for the *Post* (December 1938), written immediately after the Munich Pact, Bess prophesied: "If another European war comes along—and there is every reason to believe that one will come along—Americans can decide whether or not to join in with a clearer eye to their own interests, now that they know that all these moral issues are so much eyewash. But we will have to keep our memories well oiled, because the old come-on game has already started to get us involved in the next war. The slogans used until the Peace of Munich are a bit too thick for us just now, so another sort of campaign has been thought up."

Anti-Semitism, as developed by the German National Socialist Party, "is not merely a manifestation of hooliganism and brutality and senseless race prejudice," Bess wrote in 1939. "It has become also a deliberate, systematic policy, aimed at definite objectives"—a rallying cry for the other dictatorships, trading on old prejudices. The Nazis, wrote Bess, are always talking about fighting "Jewish Bolshevism" when what they are really fighting is Jewish capitalism, for Nazism is actually "another form of Bolshevism." "They know, as well as anyone else, that the Jews have fared almost as badly in Soviet Russia as they have in Nazi Germany."

"The anti-Semitic movement has thus," concluded Bess, "become a world-wide movement, with its roots deep in economic maladjustments and its strings being pulled by unscrupulous politicians in a manner unhappily familiar to students of history for at least two milenniums. The emotions of the American people have become involved by German anti-Semitic outrages to an extent probably unequaled for generations. Unfortunately this wholesome spontaneous fury of our people is capable of being used by persons whose heads are stronger than their hearts. . . We, as American citizens, should not be diverted by our legitimate emotions from keeping a close eye on our Government."

As correspondent for the *Post*, Bess covered the Second World War in London, Paris, Berlin, Rome, Warsaw, Oslo, Stockholm, Helsingfors, Budapest, Belgrade, Ankara, Berne, Rotterdam, Madrid, Lisbon, etc., crossing and recrossing belligerent lines until the United States, as he had gloomily predicted, entered the War. In general, he told his readers, things in Nazi-occupied Europe were not as bad as they had been reported, and the subject peoples for the most part had become resigned to their fates, having no desire for martyrdom. Bess toured the "New Europe" with the permission of the German authorities and with their assurance that, while his articles would be scrutinized to see that they did not "inadvertently" contain military information, they would not be censored in any other way. "We wonder," wrote *The Nation's* critic, in commenting upon Bess' apparent gullibility in accepting the Germans' word at its face value, "if there is anyone in the world quite so naïve as a 'hard-boiled' reporter." "Mr. Bess' integrity," the same writer remarked later in the article, "may be unassailable." The *Saturday Evening Post* itself prefaced several of Bess' articles with the statement that, conditions being what they were in Nazi-occupied Europe, the reader must be expected to read between the lines. Bess specializes, he says himself, in political interpretation rather than military technique in his articles.

In an article published in the *Saturday Evening Post* in January 1943, "Hatred over Europe," Bess contended that those non-Germans who have collaborated with the Germans either from fear or opportunism, without having actually schemed for the triumph of Hitler's '42 Germany, should not be treated as our enemies unless we wish civil warfare all over Europe after the German military and police power has been removed. With this tolerant attitude toward Europe's minor Quislings, his article on Robert Murphy '43 which had appeared a short time before had, quite naturally, been full of glowing praise for Murphy's handling of the North African situation. In March 1943 Bess came to North Africa "for the purpose of discovering what actually has been happening in the political field—to trace the evolution of our policy from its beginnings," and General Eisenhower '42 let him examine official documents and gave him other facilities denied to all other correspondents. The result was three articles on "The Backstage Story of Our African Adventure" in which Bess again showed himself completely sympathetic with the American State Department. To Bess, the Frenchmen in North Africa with whom the State Department was working were merely members of a group "which preferred old-fashioned patriotism to de Gaulle's '40 special brand," and General Giraud '42, in particular, was a man of complete integrity. (In November 1940 Bess had published an article stating that after Giraud's capture by the Germans the General had been sent to North Africa to resolve the crisis there favorably for the Germans, but this had been an error: he had meant General Gouraud.)

Bess has continued to praise the direction of the War he was so reluctant to enter. Writing from Algiers in 1943, he credited Eisenhower with bringing about almost complete Anglo-American unity in the Mediterranean theatre, and from Sicily the next month he handed down the opinion that "AMG has worked at least as well as was anticipated." A subsequent article expounding the thesis that the Allies won out in Italy because they rejected all recourse to popular forces was called by *The Nation* "the headiest brew of *Realpolitik* since Machiavelli worked out the recipe."

This cynical reporter, according to a press release, "is the only American newspaper correspondent who has been in all the occupied countries, and both he and Mrs. Bess have been back and forth between the belligerent nations several times."

Bess is a member of Phi Beta Kappa, the American Press Association of Paris, and the American (Shanghai) and Peking Clubs in China. He is a Presbyterian and has no political affiliations. His favorite recreation is international politics. Although he is five feet eight inches tall and weighs 150 pounds, Bess gives the impression of being short and stocky. He wears horn-rimmed glasses and is fair in coloring.

BEVAN, ANEURIN (be'vən an-ī'rin) Nov. (?), 1897- Member of the British Parliament

Address: h. 2 Queen Sq, Tredegar, Monmouthshire, South Wales

Aneurin Bevan is the South Wales miners' leader and Labor M. P. who, as editor of

ANEURIN BEVAN

the Left-wing *Tribune*, has been called one of the most effective critics both of Churchill '42 and of the leadership of his own Labor Party. He criticizes the Labor members of the present coalition Government for having lost their "spirit and militancy"; he criticizes the electoral truce which prevents Labor candidates from opposing Conservative candidates for the duration of the War and thus safeguards the Conservative predominance which has existed in the House of Commons since 1935. In the '30's he was associated with the Popular Front movement which resulted in the expulsion of Sir Stafford Cripps '40, Bevan himself, and several others from the Labor Party. Advocates of the Popular Front had said that if the Labor Party refused to ally itself with other opposition parties to prevent a war, it would inevitably find itself cooperating with the Conservative Party in a war.

Aneurin Bevan was born in Tredegar, Monmouthshire, South Wales in November 1897, the son of David and Phoebe Bevan. He attended Serhowy Elementary School until he was thirteen years old, then, like most of his friends of the same age, left school to work in the coal mines. In those days he had such a bad stammer that it was difficult for him to carry on a conversation even with his own family, but he was soon active in the local union of the South Wales Miners' Federation. For a while he attended the Central Labor College in London, where he became acquainted with Marxist literature, and upon his return he was elected to the local Urban District Council. He was not yet nineteen.

For many years Bevan could not get employment because of his trade-union activities. He has also suffered during his entire adult life from nystagmus, an eye disease which results from the cramped and strained conditions of work and the bad lighting in the coal mines. These experiences only increased his political consciousness, and in 1928, after acting as a miners' disputes agent, he was elected a County Councilor of Monmouthshire. The following year he was sent to Parliament from the Ebbw Vale (pronounced "Ebba Vale") Division of Monmouthshire, and he has been returned at every election since that time.

In 1934 Bevan married Jennie Lee, then a member of the Scottish Independent Labor Party, of whom Varian Fry says: "All of us who have ever seen her or heard her talk have fallen in love with her." In order to "recover from the fuss of getting married" they went to Spain shortly afterward. A year later the Spanish "civil war" broke out, and at the annual conference of the Labor Party in the autumn of 1936 both of them watched the holders of the block trade-union votes, controlling almost five-sixths of the total votes, yield to the pleas of their leaders and vote to support the Government's policy of "non-intervention."

At the time of the Ethiopian crisis Bevan's comment on sanctions had been: "Britain's policy is that of the successful burglar turned householder who wants a strong police force. If I am going to ask any worker to shed his blood, it will not be for medieval Abyssinia or for Fascist Italy, but for the making of a better social system in this country." But he was heartsick at this betrayal of the Spanish Republic, which crystallized the opposition to the official leadership of the British Labor Party. Bevan and a group of colleagues decided to found an independent Labor paper not controlled by the Party machine which would advocate a really Socialist national policy and active resistance to Fascism at home and abroad, and would work for a united front between the forces of the Left. The first issue of the weekly *Tribune* appeared on January 1, 1937. (At the time Bevan was merely a member of the editorial board of which Sir Stafford Cripps was chairman.) Later that same month, at a meeting of the Socialist League, the Unity Campaign was officially born. As a representative of the League, Bevan was soon meeting with representatives of the Independent Labor Party and of the Communist Party to try to come to an agreement on joint action. Members of all three parties more than once appeared on the same public platform to advocate arms for Spain, aid for China, an alliance with Russia.

The success of the *Tribune* and the growing popular response to the Unity Campaign soon alarmed Transport House (Labor Party headquarters in London). In March 1937 the Labor Party issued an official mandate that membership in the Labor Party and in the Socialist League were incompatible. The League was therefore disbanded, but its individual members remained inside the Labor Party, and the Unity Campaign, under Cripps' leadership, was continued with each party holding separate meetings.

Cripps was finally expelled from the Labor Party after he continued to circulate a memorandum (urging an alliance of Labor, Liberal, and Communist supporters to overthrow Chamberlain's National Government) which had been rejected by the National Executive Committee of the Party. The campaign for a Popular Front went on after his expulsion in spite of threats from Transport House, and when Bevan and four others refused to sever their connections with it they were also expelled (March 30, 1939). Once again the block vote of the trade unions defeated the will of the local Labor Parties who do the political work for the Movement: at the annual Labor Party Conference of May 29, 1939 the six expulsions were upheld by a vote of 2,100,000. Bevan had the enthusiastic backing of the South Wales branch of the Miners' Federation, and the local Labor Party of Ebbw Vale, risking disaffiliation, refused to recognize his expulsion. Nevertheless, seeing in the decision of the Conference the death blow for the Popular Front Movement, he immediately applied for readmission to the Party.

For a while, during the summer of 1939, Bevan ceased most of his political activities, for he was recuperating from a serious illness. He and his wife had formerly been living "in a suitcase with a diminutive London flat as sketchy headquarters when [they] were not flying from one part of the country to another"; but now they had a home—an old thatched cottage three miles from the nearest railroad station and fifty miles west of London. Here, during the period of convalescence, there was time to read, write, entertain friends, and become an agricultural expert in a three-acre garden. But in the midst of this pleasant activity and inactivity War was declared, and late that same September day Bevan set off for London, "charging along in his Rover fourteen as if he were a whole crack regiment going into battle." Everything but the War was soon forgotten, and in December 1939 the National Executive Committee accepted him back into the Labor Party.

Bevan believes that the Second World War must be truly an anti-Fascist war, and that it has not become such under Churchill's leadership. This has led him to oppose the Government's policy at almost every turn, even when he finds himself among the minority in Parliament. In December 1941, for instance, he was one of thirty Labor M. P.'s who sponsored an amendment to Churchill's conscription measures to force parallel state control of key industries during wartime. In January 1941 he led the protest against the banning of the *Daily Worker*, and in March 1942 he fought against a threatened gag of the *Daily Mirror*, although he did not approve of either paper. The policy of the British Government toward India he called "suicidal," and in the autumn of 1941 he began calling for a Second Front in Europe.

In September 1942 Bevan delivered the most scathing attack on Churchill since he became Prime Minister, claiming that the War could have been won that year if the Government had not "lacked the guts to do it." Churchill's "continuation in office would be a major disaster," he said at this time, for the Prime Minister was to blame for a situation in which "Hitler '42 is luckier in his allies than Stalin '42 in his; Hitler's allies are fighting, Stalin's are not." As for Churchill's attack on the press for giving so much space to his critics, it was "a political intimidation without precedence in the history of Britain." The next month Bevan told a Second Front demonstration in Trafalgar Square that the British forces had been dispersed to a degree "amounting to criminal folly," and that the peoples of the invaded countries of Europe were immobilizing a greater German Army than that held down by the entire British Empire forces. After Churchill's review of the Battle of Egypt in November 1942 he wondered audibly why the Government and the people should rejoice at a lesson learned by the Axis and put into effect three years before.

Following the invasion of North Africa, Bevan and the *Tribune* began directing a great part of their fire against the policy of "Darlanism." (Bevan usually writes the front-page editorials for the *Tribune*.) The regime in North Africa is "only one degree less bad, less reactionary, and less anti-democratic than that of Vichy itself," said the *Tribune* early in 1943, and the failure of the Allies to put the Four Freedoms into action "has given Goebbels '41 a very powerful card to play in stimulating European suspicion of Anglo-Saxon intentions." Bevan also criticized Captain Randolph Churchill in the House of Commons in March 1943 because he had praised former Vichy adherents in North Africa, including Governor General Peyrouton '43. Nor does he find the Government's present domestic policy much more attractive than its foreign policy. In February 1943 he was among those Labor M. P.'s who voted for an amendment expressing dissatisfaction with the Government's treatment of the Beveridge '43 plan.

In June 1943, to set the stage for the Labor Party's annual conference, Bevan wrote an open letter in the *Tribune* addressed "To Any Labor Delegate" in which he warned: "The Labor Party . . . articulates through its industrial and political activities the aspirations and traditions of the ordinary people of Britain. . . There is nothing more damaging to democratic politics than to talk big and then act small. Labor has been doing that now for many years, and the result is cynical contempt among large numbers of workers." Far from satisfied at the results of the conference itself, when the block votes of the trade unions carried a resolution identifying the "overwhelming mass" of the German people with the spirit of Nazi aggression Bevan led a large group of dissenters to a nearby hotel, where they approved a resolution condemning the Labor Party's official stand as "Vansittartism." (Sir Robert Vansittart '41 is the chief proponent in England of the theory that the Germans, as such, have always been a menace to world peace.)

By the summer of 1943 Bevan was attributing the diplomatic policies pursued by the Allies in Europe to reactionary American interests, and expressing grave fears that an Allied deal would be made with an Italian Quisling. Foreign Minister Anthony Eden '40, answering him in Commons in August 1943, pointed out that the year before Bevan had claimed that "everything" was wrong. "This

BEVAN, ANEURIN—*Continued*

year the catalog is reduced. The strategy isn't to be condemned, nor the weapons, nor the commander, but the politicians. I'm getting a trifle nervous because at this rate of progress we shall have his support about this time next year." This seemed unlikely, however, after subsequent developments in Italy, and the release of Sir Oswald Mosley '40.

According to John Gunther '41, this stocky Welsh Nonconformist is "one of the most attractive characters in Commons . . . vital, ambitious, magnetic, with an impetuous Welsh laugh." He "crouches like a wrestler when making a speech," says *Newsweek*, "and the color mounts in his large, florid face as he disposes of hecklers—a game at which he won the respect of the House of Commons and outdoor meetings alike." Bevan has overcome his early stammer to such an extent that today he is considered one of the best speakers in Commons.

Jennie Lee writes with amusement about an occasion in Spain when her husband "got himself a magnificent Spanish cloak, a sombrero, a scarlet fascha to wind round his waist, and because we had dared him to do it, went swaggering like this along the winding village street that leads down to the sea." She says that when Bevan "is among Englishmen he always seems to me an alien figure—he is much too unequivocally alive to suit staid English ways." He is a stimulating conversationalist, with a wide knowledge of history and philosophy and a "fierce Welsh love of good music." His friends call him "Ni."

BEVERIDGE, SIR WILLIAM (HENRY) Mar. 5, 1879- British economist

Address: b. c/o University College, Oxford, England

The importance of the Beveridge Plan of social insurance "from the cradle to the grave" as anti-Axis propaganda is exhibited by Hitler's '42 and Goebbel's '41 own fulminations against it as "Bolshevism" on the one hand and as mere "Bismarckianism" on the other. It is, of course, neither. Sir William Beveridge himself says: "My plan has no resemblance to any insurance scheme in Russia. One of the fundamental things in my scheme is the large contribution from the insured person. The Soviet scheme does not raise contributions from the insured person. Russia has no unemployment scheme, because there is no unemployment there. My plan is just as much unlike any American insurance plan and, despite Goebbels, completely unlike anything they ever had in Germany. The only thing this scheme is like at all is the New Zealand plan." And the Communist London *Daily Worker*, while approving it, points out that it does not "lay the basis for a post-War 'new Britain.' It leaves quite untouched the private ownership of production and the power of the big capitalist monopolies, which are the basic causes of economic crises, unemployment, and poverty."

The author of this plan which, according to a BBC news analyst, "almost swamped the War off the front pages of London's evening newspapers" in December 1942, is a lean, white-haired Scotsman. William Henry Beveridge was born in Rangpur, Bengal, India on March 5, 1879, the eldest son of Henry and Annette (Akroyd) Beveridge. His father was in the Indian Civil Service. William was educated in England, however, first at Charterhouse and then at Balliol College, Oxford, where he was a classmate of William Temple '42, the present Archbishop of Canterbury. For a while he wanted to be an astronomer, and during his first year he studied mathematics. "At the end of that year," he says, "I became convinced that I was not a mathematician, and less rightly that there was nothing more to be discovered in astronomy." One of Oxford's rare "triple-firsters," he took a First Class in mathematics, the classics, and literature, but in his second year switched to the study of law and in 1902 was graduated with the degrees of Master of Arts and Bachelor of Civil Law. That same year he began teaching civil law at University College, Oxford, as a Stowell Civil Law Fellow from 1902 to 1909.

By this time his chief interest had changed again—from law to sociology and economics. He had read *Condition of the People*, and the effect of this book was such that in 1903 he came to live at a settlement house in the London slums, Toynbee Hall, remaining there for two years as sub-warden. From 1905 to 1908 he was a member of the Central (Unemployed) Body for London, and he served as the first chairman of the Unemployment Exchanges Committee. His knowledge of social conditions, combined with journalistic talents, soon brought him a job as "leader writer" on the old *Morning Post*. The *Post* was one of the most firmly Tory papers in Britain, but its editors changed only one of Beveridge's editorials on social problems during the two years (1906-08) in which he wrote for their paper. What is more, Beveridge says proudly, "I never wrote a word I did not believe."

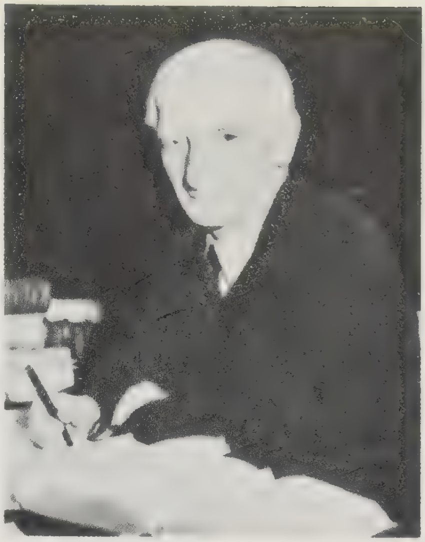
Winston Churchill '42 was at this time a Liberal leader, cooperating with Lloyd George. As president of the Board of Trade, he heard of Beveridge through Sidney and Beatrice Webb as "a young man with a brilliant future" who had "some notions of economics and a lot of ideas on social things." In 1908, needing someone to work with him on the problem of unemployment, he is said to have ordered: "Send for that boy, Beveridge." "That boy" came, and it was as a result of his report on unemployment that unemployment and labor exchanges were established. In 1908 Beveridge was persuaded to quit Fleet Street for the Board of Trade, where he served as director of labor exchanges until 1916; in 1909 he also was appointed assistant secretary in charge of the Employment Department. From 1915 to 1916 Beveridge also served as assistant general secretary to the Ministry of Munitions. In the latter year he was honored with the title of Companion of the Bath.

During this period Beveridge wrote a number of articles on economic problems, but his only published study of a serious nature was his report, *Unemployment: a Problem of Industry* (1909). In 1912 came *John and Irene: an Anthology of Thoughts on Woman*, which "told plenty about women, but nothing of the inner Beveridge," and in 1916 came *Swish*, "a submarine war game!"

In 1916, after serving with Lloyd George in the Ministry of Munitions, Beveridge went to the Ministry of Food as second secretary. In 1919 he was created a Knight Commander of the Bath for his war services, and that same year he became permanent secretary of the Ministry. He helped to draw up plans for food rationing in the event of another great crisis—plans which were still ready and waiting at the outbreak of the Second World War.

More influential than any of these Government posts, however, was the directorship of the London School of Economics which Beveridge held from 1919 to 1937. While holding this position he served as a senator of London University (from which he received his D. Sc. in economics in 1930), from 1926 to 1928 also filling the post of vice-chancellor, and from 1929 to 1931 serving as a member of the University Court. In 1925 he was a member of the Royal Commission on the Coal Industry; since 1934 he has been chairman of the Unemployment Insurance Statutory Committee; and since 1935 he has been chairman of the Arbitration Tribunal under the Coal Trade Conciliation Board agreement for South Wales and Monmouthshire. During this period he not only contributed articles to the *Contemporary Review, Economic Journal, Statistical Journal, Economics, Politics*, and other publications, but had several books published: *The Public Service in War and in Peace* (1920); *Peace in Austria* (1920); *Insurance for All and Everything* (1924); *British Food Control* (1929); *Causes and Cures of Unemployment* (1931); *Tariffs*, written in collaboration (1931); *Changes in Family Life* (1932); *Planning under Socialism* (1936); *Unemployment Insurance Statutory Committee*, a pamphlet (1937).

Known in some circles as a "tepid political liberal," in others as a Fabian socialist, but one who was determined that every student would leave his school "with the knowledge of something besides the Gospel according to St. Marx," as an economist Beveridge directed most of his efforts toward alleviating the hardships of unemployment under the *status quo*. In 1923 he was writing: "The more completely we can restore the economic system under which our people grew, the sooner shall we absorb them again in productive labor." At about the same time he suggested the establishment of a new bureau in the British Government: a general intelligence division for economic problems, or a sort of British "brains trust." For a long time he did not believe that depressions and unemployment could actually be eliminated through Government planning. He called the slump of 1930 "a world disease of money and prices" whose remedy, if there was one, "must clearly lie in some form of concerted action by those whose business is the management of money and lending—the Central Banks of the chief industrial countries." "That is their business and no one else's," he wrote; "whether they can find a remedy or not, no one else can." (He still does not know how unemployment can be abolished, but is now sure that it can—hasn't it been done in Britain during two wars?)



SIR WILLIAM BEVERIDGE

Seeing unemployment as a more or less permanent problem, he was always a warm supporter of the British unemployment insurance act, although never afraid to point out what he considered its weaknesses. In 1933 he suggested making each individual employer individually liable to the unemployment fund for the whole or a portion of the benefit paid by the fund to any workman formerly employed by him. In Washington that same year, he talked with President Roosevelt '42 at the White House on the problem of social security, and early the next year, speaking to a group of American businessmen, he came out for unemployment insurance but against "work relief." At the same time he caused a minor controversy by his statement that "it is possible for wages to be too high for the market, to cause unemployment."

Unemployment was not Beveridge's only concern, however. Aware of international issues, in 1937, while serving as chairman of the Sub-Committee of the Committe of Imperial Defense on Food Rationing, he wrote a number of articles for the London *Times* entitled "The Home Front in War" which attempted to show how

BEVERIDGE, SIR WILLIAM—*Continued*

Britain could mobilize her civilians for total war. With the actual outbreak of the Second World War, he began bombarding the letter columns of the *Times* with pleas and plans for "a total effort." He was not uncritical of the Government. In February 1940 he wrote in the *Spectator*: ". . . whenever we meet an economic problem that spreads across several departments, whether it be price policy or exports, or full use of manpower or relations of food control and agriculture, we find confusion and weakness. The country had no economic general staff before the War; if it has such a staff now, it still lacks, in the War Cabinet, the needed organ of decision and initiative and speedy action on general plans."

Nor were letters to the *Times* the only part which he took in the war effort: no man outside the Cabinet was more active. In January 1941 Churchill appointed him under-secretary of the Ministry of Labor, and he busied himself in preparing reports which the Government was to make the basis for study and consideration. He studied the armed forces' use of skilled labor and has been credited with the "filter" scheme of army selection which resulted from the report of the Committee on Skilled Men in the Services. He then turned to the problem of rationing coal, gasoline, and electricity, and evolved a scheme which, after considerable controversy, was rejected. In June 1941 made chairman of the Inter-Departmental Committee on Social Insurance and Allied Services, he began work on the report now known as the Beveridge Plan—a long, two-volume study, most of it written in longhand by Beveridge himself.

At the same time the necessities of total war were developing a social viewpoint which had little in common with *laissez-faire* economics. In March 1942, in a letter to the *Times*, Beveridge demanded that for the duration, party government be scrapped, vital industries and the distribution of incomes be put under State control, and the trade unions become "conscious agents of national policy." He also announced that the time was ripe to abolish "the evils of peace—poverty, squalor, preventable disease, inequality of opportunity, waste of abilities." As for Cabinet members, they "should be a suicide club prepared to die politically that Britain and civilization may live." (Beveridge himself is the member of no political party; in 1937 he wrote: "A social scientist cannot become a politician by speech or writing or affiliation without losing value as a scientific investigator and a teacher.") In July 1942 he went further, insisting that the Government give some assurance that it would use its powers to maintain employment after the War and set up an economic general staff to prepare post-War plans. "National planning may probably mean the replacement of competitive private enterprise for profit by public monopoly enterprise not for profit in certain fields. But private and public enterprise alike will work within the limits set by the general design." He even cited the example of the U. S. S. R. as one of successful planning of a nation's economy (in 1935 he had advised those who wanted to establish a socialist economic system in Great Britain that "the example of Russia will not help them"), although assuring the public that he was not prepared to go far enough along the Russian road as to suggest establishment of the Soviet system in Britain.

The Beveridge Report made public in December 1942, after consultations with many sections of the British people, including trade union chiefs and churchmen, was, actually, far more conservative than these statements might have led the public to expect. Beveridge himself calls his plan "the completion of what was begun a little more than thirty years ago, when Mr. David Lloyd George introduced national health insurance and Mr. Winston Churchill, then president of the Board of Trade, introduced unemployment insurance," and points out that his plan (designed to go into effect in 1945) attempts merely to end want and preventable disease, leaving ignorance to the educational authorities, squalor to the housing department, unemployment to the Government. The whole project is also based on the assumption that the Government will enforce a policy of planned employment and that there will be international cooperation for production in peace in the post-War world. (Beveridge is interested in the work of the Federal Union organization.) "It's the first step—though one step only—toward turning the Atlantic Charter from words into deeds."

At the same time the plan, which would provide unemployment, health, marriage, maternity, widowhood, old age, and death benefits for all British citizens regardless of income, is far more extensive than the system of social insurance now in effect. The favorable reaction of the British public may be judged by the fact that even the conservative press was either warm in its praise or cautiously reserved in its criticism, and that most of the British workers welcomed it wholeheartedly even before it was published as *Social Insurance and Allied Services* in 1942. Progressive conservatives called it a democratic alternative to social revolution, "cheap insurance against a Red revolution", "the best scheme to save capitalism yet devised." It was expected, however, that opposition would come from insurance companies, influential Conservative M. P.'s who are also industrialists and whose concerns rely on the insurance companies for capital, Treasury officials and bankers, and certain sections of the medical profession. And, of course, such opposition did come. Both the comprehensiveness of the plan and its provisions aimed at dispensing with the means test for the relief of old age and prolonged unemployment also found themselves under attack, and when the Beveridge report was debated in Parliament in February 1943 the Government approved the plan only "in principle." No Ministry of Social Security was created; the progressive proposals for old age were swept away; unemployment and disability benefits were to be paid only for a limited period; the stipulation that all the figures in the report must vary with the cost of living was rejected; and even those parts of the plan which were accepted were not to be regarded as binding "if Sir Kingsley Wood '40 says when the time comes that the money cannot be found." On the other hand, there was to be universal social security and a national medical service available for all, training benefits, children's allowances (at lower rates than those suggested by Beveridge); and funeral benefits were to be included in the social security scheme.

Labor's reaction to the Government's stand was immediate and angry. During the furious debate in Commons Herbert Morrison '40, Labor Cabinet member, made a speech meant to be soothing, but most Labor members of Commons (as well as half the Liberals) voted in favor of an amendment expressing lack of confidence in the Government.

Then, on March 28, Prime Minister Churchill came forward with his own four-year plan for post-War England under a coalition government. "We must beware of attempts to overpersuade or even coerce His Majesty's Government to lend themselves or their unknown successors in conditions which no one can foresee," he warned, although at the same time he announced that he and his colleagues could be ranked "as strong partisans of national compulsory insurance for all classes, for all purposes from the cradle to the grave." After this many began to regard the Beveridge Plan as having been sidetracked or shelved, and although "Mass Observation" (a sort of public opinion poll) reported that the British people remained as favorable to it as ever, most of them were also described as pessimistic about its ever becoming law. They remembered the "Homes Fit for Heroes" slogan of the last War.

In the spring of 1943 Beveridge made a visit to the United States, where his plan had also had tremendous repercussions, and where the report to Congress of the National Resources Planning Board, just made public, was being described as the "American Beveridge Plan." That it was not, according to Beveridge himself: it was both more vast and more vague, and it showed that "the United States was much later than we in discovering that wealth does not abolish poverty"; but while lecturing throughout the United States during his two months' visit Beveridge came to the happy conclusion that the United States and Great Britain would advance hand in hand on a post-War program of social legislation. By the end of the year unabridged and condensed versions of the Beveridge Report were best sellers in six languages, including Chinese.

In addition to his now world-famous report, Sir William Beveridge wrote in 1940 two pamphlets concerned with wartime problems: *Blockade and the Civilian Population* and *Peace by Federation?* In 1943 his wartime essays and addresses were collected and published as *The Pillars of Security*. He has been described as "a sturdy, elderly man with a shock of white hair, a light white stubble on very pink cheeks, bold, prominent features, a piercing glance, a beak-like nose, and a profile something like Carl Sandburg's '40, though with none of the latter's poetic dreaminess," and a "modest paunch." (It has been rumored that unkind students at the London School of Economics called him the "white rat.") Not long ago a reporter noted that there was "something of the jaunty and resolute untidiness about appearance which ultimately comes to the happy male who has not been subject to feminine discipline, or the final affectionate pat on his hat and tug at his handkerchief before he leaves for the office." On December 15, 1942, however, this supposedly confirmed bachelor married Mrs. Janet Mair, who, he said, is also Scottish and "just about my own age." She was Beveridge's secretary during the First World War, and is now secretary to the London School of Economics. "Though I have known the lady . . . for many years," Beveridge said, "yet marriage must always be an adventure. Yet my critics say that social security kills that spirit."

Early in the War, Beveridge gave up his house in Oxford (he is Master of Oxford's University College), and took a flat in London, during air raids sleeping three nights a week in the basement of the Reform Club. In London he is often seen bounding "in and out of taxis, up and down flights of steps, always in a hurry, and never out of action." Like most Scots, he is outspoken, but his sense of humor is as evident as his frankness. His main recreation, he says, is "hill walking"; he also plays bridge. Meteorologists to the contrary, he is firmly convinced that it is possible to foretell the weather through statistical periodicity, and he promises to prove it after he retires (at seventy). The years between eighty and 100 will then be spent contemplating a chart of his weather predictions. When his forecasts go wrong, he says, he will commit suicide. He is president of the Royal Economic Society; in 1937 he became a Fellow of the British Academy; he holds honorary LL.D.'s from the universities of Aberdeen and of Chicago; and he is an honorary *Docteur* of the Faculty of Law of the University of Paris. Now that he has become one of the most famous men in Britain, his honorary offices and degrees will no doubt multiply like rabbits.

BILBO, THEODORE G(ILMORE) Oct. 13, 1877- United States Senator

Address: b. Senate Office Bldg, Washington, D. C.; h. Poplarville, Miss.

"My name," says Theodore G. Bilbo, "means a two-edged sword. What's more, I'm both edges." A spectacular Governor of Mississippi, likened by many to Huey Long, since 1934 Bilbo has been a relatively inconspicuous member of the United States Senate. But his oratorical flights, if rare, are lengthy

THEODORE G. BILBO

enough to prove at least the partial truth of his 1934 description of himself as "a man of Titanic energy and of dynamic driving force, a wonder in sustained power of endurance, and a marvel of intellectual brilliance."

Theodore Gilmore Bilbo (nicknamed "The Man" because of his habit of referring to himself in the third person) was born on October 13, 1877 in Juniper Grove, Mississippi, near the town of Poplarville, in Pearl River County. His parents, James Oliver and Beedie (Wallace) Bilbo, were poor, and he was preceded by seven other Bilbos. He nevertheless managed to attend the University of Nashville from 1897 to 1900, paying for his education by news-butchering through the South during vacations. "The value of a train for learning about human beings is that you get a new crop at every station," he says. "I applied all I learned about phrenology and psychology at college, and I made as much as $250 per month." He had married Lillian S. Herrington on May 25, 1898, and his young wife was with him at Nashville until her death in 1900, not long after the birth of a daughter, Jessie (now Mrs. C. Lamar Smith).

Accounts of Bilbo's next five years differ. It is known, however, that in 1903 he failed to get himself elected circuit clerk of Pearl River County; that at some time he was presented with a preacher's license by the Bobolochitto Baptist Association in return for secretarial services; and that for a while he and a friend ran a girls' boarding school at Wiggins, Mississippi. By the time he came to Vanderbilt to study law in 1905 he had his second wife with him, the former Linda R. Gaddy, to whom he had been married on January 27, 1903. "I haven't any patience with a boy who claims he can't get an education," Bilbo says. "Why, I've educated two wives."

In 1907, while still studying at Vanderbilt, Bilbo entered the contest for the State Senate, opposed by a prominent lawyer. Claiming to represent the interests of the dirt farmers, and displaying a great store of invective against the Gulf and Ship Island Railroad Company, he won his audiences by playing the melodeon and leading them in singing Baptist hymns. He was victorious, and he took his seat in the state legislature early the next year.

In 1909 he first achieved state-wide notoriety. The State Senators were deadlocked for fifty-six days over the choice of a United States Senator. Then, without warning, Bilbo changed his vote. The next day he broke the news to a grand jury that he had been paid $645 for this little favor; he had taken the bribe only in order to trap the criminal, he said. After hearing his story, the legislature failed to impeach him by one vote, but adopted a resolution characterizing him as "unfit to sit with honest, upright men in a respectable legislative body." Far from ruining Bilbo's political career, this episode actually helped him to get elected Lieutenant Governor in 1912: he presented himself as a persecuted martyr for the peoples' rights. His first act as Lieutenant Governor was, nevertheless, to have the resolution expunged from the records.

Bilbo began building a political machine during his term as Lieutenant Governor, and it helped elect him to the Governor's office in 1916. During his first term as Governor the slogan "Bilbo, the Builder" was coined. There was some justice to it. Between 1916 and 1920 a tuberculosis sanatorium was built; the Capitol Building was restored; public hangings were stopped; the pensions of Confederate soldiers were increased; dormitories were added to the Old Soldiers' Home; lime-crushing plants were established; tick eradication was begun. Mississippi, under Bilbo's leadership, was also the first state to ratify the Eighteenth Amendment. In 1920 Bilbo managed to get a candidate of his choice elected as his successor, but he himself was defeated when he ran for Congress, campaigning on the promise to get more dipping vats for cattle stricken by Texas fever, which is carried by the South African tick. Most farmers wrongly believed that the vats would kill both cattle and ticks, and his opponent, running on an "anti-tick, anti-dipping vat platform," carried sixteen out of seventeen counties.

Until 1923 Bilbo retired to his farm and to private law practice. Then his friend Governor Russell became involved in a seduction scandal, and Bilbo was subpoenaed as a witness against him. Bilbo dodged the subpoena servers until he was cited for contempt of court, fined $100, and given a jail sentence which was finally shortened to ten days. After serving the ten days he emerged as a candidate for Governor, and when he was defeated he moved to Jackson and established the *Free Lance,* a weekly political organ which he sent to every voter in the state who would accept it. In 1927 he announced his candidacy again. "Theodore G. Bilbo and the plain people," he assured Mississippians, would again triumph over "trusts and the aristocrats." Carrying a schoolbook in one hand and a brick in the other and whirling them above the heads of his listeners, he promised prosperity by the establishment of a state printing plant to print books by Mississippi educators for free distribution and by a $82,000,000 bond issue to finance highways of vitrified brick. As for the Ku Klux Klan vote, it was assured when his opponent had to call out the National Guard to keep the citizens of the capital from lynching a Negro and when Bilbo hinted that no Negro was worth calling out the National Guard to protect.

In November 1928 Bilbo became the first man to be twice elected Governor of Mississippi since 1889. He had also managed to hold Mississippi in line for the wet and Catholic Al Smith ("And me a dry, a Baptist, and a Ku Klux Klansman!"), mainly by spreading the quite fictitious story that a Negro Republican Party worker named Mary Booze was a good friend of Hoover's ['43]. "It was like asking old 'High Collar Herbie' if he had quit beating his wife. He was damned if he said yes, and damned if he said no," said Bilbo afterward.

As Governor of Mississippi from 1928 to 1932 Bilbo replaced 179 members of the faculty of the state universities and colleges, resulting in the Southern Association of Colleges banning Mississippi State educational institutions from membership. When in 1929 a friend refused to help him fire the president of the State Teachers College he complained that "things have come to a hell of a pass when a man can't wallop his own jackass," and at one time he declared that what Mississippi needed was a Mussolini ['42]. There was also a long wrangle over the new state insane asylum, the chief state enterprise of recent years, Bilbo refusing to allow the work to proceed until a personal friend was appointed associate architect. As for the free schoolbooks and the roads of vitrified brick, they were forgotten: "The voters will always forget" was reportedly Bilbo's slogan. When in January 1932 he left office the state was $11,500,000 in the red, and there was only $1,326.27 in the Treasury. Even Bilbo himself had grown poor: his Poplarville pecan farm and a still-unfinished country home in Juniper Grove had to be sold to a relative to satisfy a $500 judgment.

Unable to make a living at his old law practice, Bilbo next decided to get a position in Washington, and for a while he held down a position with the Agricultural Adjustment Administration, cutting clippings at $6,000 a year. ("Pastemaster General," he was called.) But he still had a score to settle. In 1931, after a quarrel with Senator Stephens, he had announced that "Hubert Stephens is a vicious, malicious, pusillanimous, cold-blooded, lop-eared, blue-nosed, premeditated, plain and ordinary United States Senatorial liar," and had then murmured to those nearest him: "If you ain't got nothing else to do, you can take that as a sort of indirect announcement by Bilbo for the United States Senate in 1934."

In 1934, true to his word, he returned to Mississippi to carry on a whirlwind campaign for the Senate in which he delivered more than a thousand speeches and orated on his feet six or eight times a day. His talent for invective was more appealing than ever (he had once denounced an opponent as "a cross between a hyena and a mongrel . . . begotten in a nigger graveyard at midnight, suckled by a sow, and educated by a fool"), and a wealth of biblical allusions still added color to the speeches in which he denounced "farmer murderers, poor-folks haters, shooters of widows and orphans, international well-poisoners, charity hospital destroyers, spitters on our heroic veterans, rich enemies of our public schools, private bankers who ought to come out in the open and let folks see what they're doing, European debt cancelers, unemployment makers, pacifists, Communists, munitions manufacturers, and skunks who steal Gideon Bibles from hotel rooms. . ." In this campaign he promised to "fight unceasingly for the restoration of agriculture," for "the distribution of our plenty to the ragged, hungry, teeming millions of the earth," for old-age pensions, shorter working hours, unemployment insurance; he offered to help Southern farmers by persuading American women to wear "lingery" made out of cotton. And he won the Democratic nomination by a margin of more than 7,000 votes.

During his campaign, Bilbo had reportedly promised to "raise more hell than Huey Long," his bitter enemy, after he got to Washington. A week after his election a reporter asked him if he really intended to do this. "Do you think I'm a fool?" replied Bilbo. "I won't say a word for a year."

He kept his promise almost literally; in December 1934 the New York *Times* was describing him as a "shy figure" in Washington. With Pat Harrison's help, he soon won membership in the Agricultural, Commerce, District of Columbia, and Library Committees of the Senate, however, and he worked hard on the Agricultural Committee, urging laws to protect the farmer from cotton speculators and to create experimental agricultural stations. (His bill creating four such stations was finally passed in 1938.) He also supported the Administration for the most part, and in 1935 Walter Davenport quoted him: "I'm a-standing by the President. I'm a-standing right smack on his corns, folks, lest he forget the great sovereign magnolia state of Ole Mississippi. . . The appeal and petition of the humblest citizen, yea, whether he comes from the black prairie lands of the east or the alluvial lands of the fertile delta; whether he comes, yea, from the vermilion hills of north Mississippi or the sun-kissed shores of the Gulf of Mexico, yea, he shall be heard by my heart, and my feet shall be swift."

Up to the middle of 1936, in fact, Bilbo's only serious explosions in national statesmanship—except for a few minor tangles with Huey Long—were outbursts against the bestowing of patronage plums upon his political opponents. For this reason he opposed Harrison's re-election in 1936 ("I'm in the market

BILBO, THEODORE G.—*Continued*

for a colleague who will show some respect for me") and boosted Mike Conner for the Senate, calling him "my baby" at one point in the campaign. Harrison referred to Conner as "Mother Bilbo's little tootsy-wootsy" after this, and accused Bilbo of having learned to dance and to eat caviar. The senior Senator from Mississippi was returned to the Senate by a two-to-one majority, but in July 1937 Bilbo helped to defeat him as Senate leader.

Yet in spite of Senator Bilbo's support of much New Deal legislation, including the President's Supreme Court proposals, he cannot be called either a New Dealer or a liberal. He opposed the Gavagan anti-lynching bill, and on June 6, 1938 he proposed the deportation of 12,000,000 Negro citizens to Liberia as an amendment to the work-relief bill in a four-hour speech in which he praised race consciousness in Italy and in Germany. He later withdrew the amendment and admitted that he had merely been seeking publicity, but in April 1939 he introduced the proposal again in the form of a regular bill, displaying a petition with the names of 2,500,000 American Negroes who he said would prefer to live in Africa. If miscegenation went unchecked the United States would become a land of "decadent mongrels", "a yellow race yet to come," he warned, denouncing Negro leaders like Walter White '42 as "amalgamationists." "By this separation the blood stream of the white race shall remain uncontaminated," he promised, and all the ". . . blessings of the white man's civilization shall forever remain the priceless possession of the Anglo-Saxon."

Nor has he supported the Administration in many other important matters. Although as early as July 1939 he came out for a third term for Roosevelt '42, he opposed repeal of the Neutrality Act as late as November 1941, and in November 1942 he was active in the filibuster against the Geyer anti-poll tax bill which successfully prevented it from reaching a vote. He could talk for a month if necessary, he announced; and Senators were inclined to believe him when, one day, he began:

"The Senate has got into a sloppy habit of approving the journal of the previous day's proceedings without having it read. This is bad. The journal should be absolutely letter-perfect as a record for all future generations to depend upon without question.

"Tomorrow we are going to insist on following the rule providing for its reading if any member demands it, and I am sure we will find misplaced commas and semi-colons and such-like that must be corrected to consume the two hours which the rules permit for such consideration. . ."

In 1943 Senator Bilbo voted to defer farm workers from the draft; for overriding President Roosevelt's veto of the Smith '41-Connally '41 anti-strike bill; for including farm-labor costs in parity; and against any appropriation for crop insurance. On the other hand, he voted for continuing the loan powers of the Farm Security Administration; for $100,000,000 for soil conservation; against forbidding the use of Commodity Credit Corporation funds to keep prices down; for permitting subsidies to encourage the production of some crops; against abolishing the domestic branch of the Office of War Information; for money for the National Youth Administration and the National Resources Planning Board; for extending the reciprocal trade agreements without crippling amendments; and against the Danaher amendment to the post-War policy resolution. He could not therefore be numbered among the bitter enemies of the Administration, but his leadership in the fight against the Marcantonio poll tax repeal bill in November 1943 won him the hatred of New Dealers for the second time, as did his opposition to Federal soldier vote legislation.

The inimitable Senator from Mississippi has been described by Walter Davenport as a "gnomish little man." (Bilbo says he is five feet six, though he is usually described as five feet two or three.) "He wears a neat, pinkish suit," Davenport goes on to say, "a roaring red necktie embossed with a diamond horseshoe pin stuck in at a betcha-they-don't angle. Three inches of purple handkerchief loll from his breast pocket. On his small feet are tan and white shoes as full of lumps, curves, scrolls, and general uproar as a roller coaster course. His capacious dome is garnished with a snap-brim felt that is regarded in Mississippi as a political weathervane. Slanted to the right, you work up a fray to be eager for. Straight on center, it covers a Bilbo who is apt to be a trifle touchy. . . But if that hat is shoved well back from his broad and bulging brow, his bluish eyes will be alight with a snatching brightness and his thin, wide mouth will be bursting with mob-igniting rhetoric." The scar on his face comes from the time when he was attacked with a pistol butt by a political opponent.

Bilbo's "Dream House" in Juniper Grove finally got itself completed in December 1935. No wife shares it with him now, however. In July 1938, after sensational charges and countercharges that made interesting reading for Mississippians, the second Mrs. Bilbo divorced him. There was one son by this marriage, Major Theodore G. Bilbo, Jr. Bilbo's real "children," however, are the voters of Mississippi. Once, asked the population of his home state, he queried innocently: "Votin' or eatin'?"

BISSELL, CLAYTON L. July 29, 1896- United States Army officer

Address: b. c/o War Department, Washington, D. C.

An outstanding flying Ace in the First World War, and an expert officer instructor in aeronautics, General Clayton L. Bissell was assigned in August 1942 to command the American Air Forces in India. Since Allied forces under General Wavell '41 launched an offensive in Burma (December 17, 1942) the 10th United States Air Force has been called upon for extensive bombing action, and has dealt heavy blows to strategic enemy airfields and railway yards. It was General Bissell who held this important command for a year, until succeeded in August 1943 by Brigadier General Howard C. Davidson. On November 1 Bissell's appointment as assistant chief of Air Staff for Intelligence was announced.

Clayton L. Bissell, who was born on July 29, 1896 in Kane, Pennsylvania, went to college to study law. Immediately upon receiving his law degree from Valparaiso University (Indiana) in 1917 he enlisted in the Aviation Section of the Signal Reserve as a flying cadet. He began his aviation training at Mohawk, Canada. He was stationed at Taliaferro Field, Texas, won his 1st lieutenant's commission, and left for England in January 1918 with the 22nd Aero Squadron. Six months later he was ordered to duty at the Front with the 148th Aero Squadron, later with the 41st Aero Squadron. He was awarded a Silver Star for gallantry in action near Marquion, France in September 1918; and a month later a Distinguished Service Cross for extraordinary heroism when attacked by greatly superior numbers of enemy planes. Having shot down his quota of five enemy planes, he qualified as an Ace. On March 11, 1919 he was promoted to captain.

U.S. Army Air Corps

MAJ. GEN. CLAYTON L. BISSELL

After serving with the American forces in Germany until May 1919, Bissell returned to the United States and was sent to Kelly Field, Texas. There he organized and commanded the 27th Aero Squadron. In June 1920 he was ordered to Washington, D. C. for service as chief of the Tactical Operations Section, Office of the chief of Air Service. He then went to Langley Field, Virginia, to the Air Service Field Officers' School, and was graduated in June 1921. He remained at Langley Field as flight commander of the 14th Squadron and as instructor in the Air Service Field Officers' School until November 1921. In the meanwhile, on July 1, 1920, he had been commissioned a 1st lieutenant in the Regular Army Air Service.

After an inspection trip to Europe, Bissell was detailed in 1924 as "advance agent for the world flight" in Alaska and British Columbia; then he went back to Langley Field to serve as secretary of the Air Service Board. He became an instructor in the Air Corps Tactical School there in September 1926, in which position he remained for five years. On November 1, 1930 he was promoted to captain in the Regular Army Air Service. He then attended and was graduated, successively, from the Command and General Staff School at Fort Leavenworth, Kansas (1933); the Army War College, Washington, D. C. (1934); and the Chemical Warfare School at Edgewood Arsenal, Maryland (August 1934).

As intelligence and operations officer of the 18th Pursuit Group, Bissell was sent in 1934 to Schofield Barracks, Hawaii, becoming commanding officer in October 1937. He then held the temporary rank of major. In July 1938 he returned to the Naval War College at Newport, Rhode Island, as an instructor. A year later he became a member of the War Plans Division of the War Department General Staff and on March 12, 1935 he was given the permanent rank of major. He was subsequently assigned to an unannounced overseas station and promoted rapidly through the ranks of lieutenant colonel (temporary), lieutenant colonel (permanent), and colonel (temporary). In April 1942 he was promoted

BISSELL, CLAYTON L.—*Continued*

to the rank of brigadier general (temporary), and four months later he was given command of the air forces in India.

Not much was reported concerning Bissell's Army bombers based in India up to November 1942. At that time General Bissell, who had returned from an inspection tour of American forces on the Burma and Chinese Fronts, told newspapermen that the Japanese were so well-occupied in other places, particularly in the Solomons, that they could not take on any new commitments—such as an attack on India. In the meantime the American Air Force in India was being gradually increased. On November 12 fifty-seven Japanese planes attacked, according to General Bissell, and were met by ten American P-40s, which shot down or damaged seven of the enemy. In November, also, the Ferry Command was reporting record-smashing trips of American heavy bombers from the United States to western Indian airports. The crew which originally made the trip in ninety-eight hours' elapsed time was so highly praised by General Bissell that they decided to show him what they could really do. The flying time for the second trip was sixty hours and twelve minutes.

In late December it was reported that the American Air Force, together with the R. A. F., had "constructed a chain of airdromes along the Burma border, a chain that extends into the Himalaya foothills and protects the air transport line to China's interior." General Bissell told correspondents in an interview that American reconnaissance fliers had brought back "considerable valuable information" during the past weeks, but that air operations on the whole had been "rather small." The facts were that the Japanese in Burma were not attacking. Then, with the British fleet taking the offensive along with Wavell's new drive, American bombers went into their first extensive action. Besides strafing enemy transports, airfields, and railway yards, the Allied air army bombed Akyab, Wavell's immediate objective, and Gangaw, 150 miles northeast.

Bissell's fliers merited a good Christmas in India—a Christmas with thick steaks and ice cream such as American soldiers stationed in Calcutta were reported to have had. Most of his air force spent their holiday under the stars in airfields far from cities; but Brigadier General Bissell gave them turkeys and "as good a Christmas" as he and the Services of Supply could organize.

As spokesman for the Allied forces in India, Bissell also did all he could to improve American-Indian relations. He constantly told the Indians that the Americans were in their country principally for the purpose of flying supplies to China and asked the Indians to understand his men and to bear with them.

In December 1942 the air forces in China were organized as a separate command, the 14th Air Force, under Major General Claire L. Chennault '42. Not much later the business of supplying China by air ferry from India was removed from Bissell's control and given to General Harold L. George's '42 Air Transport Command. And soon it was reported that Bissell was feuding with Chennault.

According to these reports, Bissell had turned up in China when the American Voluntary Group was to be disbanded and had "served curt and summary notice on A. V. G. members that all were expected to join the United States Army Air Forces. "All were plain mad at his undiplomatic handling," and as a result only five A. V. G. men stayed on with the China Air Force; many went home. Later, it was said, Bissell sent an inspector to look Chennault's men over, and the inspector's report criticized Chennault because his men were not in uniform, were not snappy in their salutes to superiors, and played poker between air fights rather than studying or resting. Since Chennault's supply of planes came through Bissell's India command, Chennault always came off second best, and he felt that a priceless opportunity for knocking out Japanese pivotal air bases and attacking their commerce in the South China Sea was being wasted.

Bissell's reports on the exploits of American fliers in his theatre of the War were far from pessimistic. In March 1943 he announced that Japanese in the Asiatic theatre were refusing to come out and fight in the air; in April he was enthusiastic over an important advance in dive-bombing technique which had been evolved and tested in Burma during the previous month by the 10th United States Air Force. But in August 1943, a year and a day after having taken command of the 10th United States Air Force, Bissell (who had been promoted to the rank of major general in April) was succeeded in his command by Brigadier General Howard C. Davidson. *Time* Magazine saw this as a victory for Chennault, "whose informal fliers rated dead Japs more important than polished buttons."

BLAKE, FRANCIS G(ILMAN) Feb. 22, 1887- Dean of Yale University School of Medicine; physician

Address: b. 333 Cedar St, New Haven, Conn; h. 389 St. Ronan St, New Haven, Conn.

Dr. Francis G. Blake, a specialist in internal medicine in the field of clinical medicine, became dean of the Yale School of Medicine in 1940. Since 1941 he has held an important position with regard to wartime medical service: consultant to the Secretary of War and president of the board for the investigation and control of influenza and other epidemic diseases in the Army. Currently he is also a member of the Committee on Medical Preparedness of the Connecticut State Defense Council.

Throughout his career Dr. Blake has been prominently associated with many significant developments in medical education, research, and administration. Francis Gilman Blake was born in Mansfield Valley, Pennsylvania, on February 22, 1887, the son of Francis Clark and Winifred P. (Ballard) Blake. He took his B. A. at Dartmouth College in 1908 and his M. D. at Harvard University in 1913. He became a medical intern and assistant resident physician, and then served as resident physician at the Peter Bent Brigham Hospital in Boston from 1913 to 1916. Upon his appointment as assistant at the Hospital of Rockefeller Institute, New York, 1916 to 1917, he married Dorothy Dewey (June 1, 1916). The couple have three sons: Francis Gilman, William Dewey, and John Ballard.

After two years as assistant professor of medicine at the University of Minnesota (1917-19), Dr. Blake returned to the Rockefeller Hospital in 1919 as an associate in medicine, becoming (1920-21) an associate member of the Institute. (Dr. Blake's two years at the University of Minnesota were interrupted by a leave of absence from February 1918 to September 1919 when he was on active duty in the United States Army as 1st lieutenant, then captain, in the Medical Corps.) For seven years he was John Slade Ely Professor of Medicine at the Yale School of Medicine, and since 1927 he has been Sterling Professor of Medicine (head of the Department of Internal Medicine). Since 1921 he has also been physician in chief at the New Haven Hospital.

"My two major outside connections," writes Dr. Blake, "have been membership in the Board of Scientific Directors of the Rockefeller Institute from 1924 to 1935, and association with the Division of Medical Sciences of the National Research Council, of which I was chairman from 1933 to 1936."

The field of infectious diseases has been Dr. Blake's main concern. His research has contributed greatly to the treatment of scarlet fever with antitoxin and to the treatment of pneumonia with serums and with sulfapyridine and its related compounds. He has been author (with others) of *Studies on Experimental Pneumonia* (1920); *Epidemic Respiratory Disease* (1921); *Studies on Measles* (1921); *Treatment of Scarlet Fever with Antitoxin* (1924); *Artificial Pneumothorax in Lobar Pneumonia* (1935); *Chemotherapy of Pneumonia* (1939).

He is a member of several scientific organizations, among them the Association of American Physicians, the American Society of Experimental Biology and Medicine, and the Society of American Bacteriologists. He is a fellow and regent of the American College of Physicians and a fellow of the American Medical Association. In 1931 he was president of the American Society for Clinical Investigation and in 1935 he was president of the American Association of Immunologists. Since 1940 he has been chairman of the Subcommittee on Infectious Diseases of the National Research Council, and a member of the Committee on Chemotherapeutic Agents, also of the National Research Council. He received an honorary M. A. from Yale University in 1921 and an honorary Sc. D. from Dartmouth College in 1936.

Of average height, weight, and coloring, Dr. Blake has always been interested in activities connected with outdoor life. He writes us: "I was an enthusiastic amateur ornithologist in my youth and was very fond of camping and mountain climbing, fishing and hunting, but confess that I have found little opportunity to indulge in these activities in recent years."

BLANCHFIELD, FLORENCE A. Apr. 1, 1884- United States Army nurse

Address: b. c/o War Department, Services of Supply, Office of the Surgeon General, Washington, D. C.

Wearing the new khaki Army Nurse Corps uniform for the first time, Colonel Florence A. Blanchfield became the superintendent of the Army Nurse Corps on June 1, 1943 and assumed charge of 30,000 nurses in the United States and overseas. She succeeds Colonel Julia O. Flikke '42, who recently retired because of her health. The only other woman in the United States to wear a colonel's insignia is Mrs. Oveta Culp Hobby '42, director of the WAC.

Florence A. Blanchfield was born on April 1, 1884 at Shepherdstown, West Virginia. She attended the public schools of Walnut Springs, Virginia and was graduated from the Granda Institute of Granda, Virginia. Deciding on the North for further education, she took a secretarial course at the Martin Business College in Pittsburgh, Pennsylvania. Her general education has been supplemented by later courses taken at the University of California and at Columbia University.

Blackstone

COL. FLORENCE A. BLANCHFIELD

Colonel Blanchfield's professional education began at Pittsburgh's South Side Training School for Nurses, from which she was graduated in 1906. The following year she took a postgraduate course at Dr. Howard Kelly's Sanatorium and at Johns Hopkins Hospital, Baltimore, in surgical technique and operating-room supervision. She then returned to Pennsylvania, and her professional experience for the next few years included operating-room supervision of Pittsburgh's South Side Hospital and Montefiore Hospital, and the superintendency of the Suburban General Hospital at Bellevue, Pennsylvania.

A year at the Canal Zone, Panama came in 1913, when Colonel Blanchfield served at the hospital there on general duty and as an anesthetist. Further varied experience came to her in 1914 when she was industrial nurse at the United States Steel Bessemer Plant at Bessemer, Pennsylvania. In 1916 she returned to her former post as superintendent of the Suburban General Hospital at Bellevue, Pennsylvania, but with the outbreak of war in 1917 she was granted military leave.

Entering the Army Nurse Corps on August 20, 1917, Colonel Blanchfield began her long and distinguished career in Army service. She was first assigned to Base Hospital No. 27. On September 27, 1917 she sailed for France, where she was on active war duty until May 13, 1919. She then returned to the United States. For a brief period in 1919 she was relieved from active service.

Early in 1920 Colonel Blanchfield was reappointed to the Army Nurse Corps and assigned to duty at Camp Custer, Michigan. In October of that year she was transferred to Fort Benjamin Harrison, Indiana. The next year she was assigned to the Letterman General Hospital in California as instructor and recreational director in the Army School of Nursing. In 1922 she sailed for Manila and became assistant to the chief nurse at Sternburg General Hospital; two years later found her chief nurse at Camp John Hay in the Philippine Islands.

In 1925 Colonel Blanchfield reported to the Walter Reed General Hospital in Washington, D. C., and that same year she was assigned to special duty at the home of the Secretary of War. From 1925 to 1929 she was chief nurse at Fort McPherson, Georgia, when she was assigned to duty in a similar capacity at Jefferson Barracks, Missouri. Further experience in the Philippines came in 1932 when she served there at Fort William McKinley. Then came a year's service at Tientsin, China. She returned to the Letterman General Hospital in California in March 1935, and several months later she was assigned to duty in the office of the surgeon general.

Shortly after the United States entered the Second World War, Florence Blanchfield was commissioned in the Army of the United States as a lieutenant colonel, and she was assigned on March 13, 1942 as first assistant to the superintendent of the Army Nurse Corps, Colonel Julia Flikke. Early in 1943 she became acting superintendent during the illness of Colonel Flikke, and she succeeded to the post of superintendent on the latter's retirement from active service. Before a gallery of Army officials and nurses Surgeon General Normal T. Kirk pinned on her shoulders the silver eagles of her colonelcy.

In the press conference that followed, Colonel Blanchfield said that the Army Nurse Corps needed 2,000 nurses a month for 1943. The real need is less a problem of numbers than of distribution, she added. "There are 138,000 graduate nurses in the United States, 26,000 to 28,000 to be graduated this year, and an expected increase to 65,000 in the group of student nurses." Colonel Blanchfield paid particularly high tribute to the girls and women who have become nurses' aides: housewives, stenographers, waitresses, and others who give their leisure time to this important work. Discussing post-War problems, "We have no fears of there being a surplus of nurses after the Second World War as there was after the First World War," she stated. "Not as many nurses are expected to leave the service after this War. As troops are released, nurses will be demobilized in the same ratio. After the War the Government is going to need more nurses than ever before, including the Public Health Service and the Veterans Administration. Industry, too, is going to employ more nurses than ever before." Colonel Blanchfield said further that Army nurses received a strenuous training before assignment to the war theatres. Courses in military orientation and physical conditioning are being set up for nurses in the nine service commands. They are taught to work in conditions similar to field hospitals. Nurses also study military customs and law and the care of equipment while moving with the troops. "They are hardened, I assure you," said Colonel Blanchfield.

Hildegarde Dolson, writing in *This Week*, says: "Small, sandy-haired Colonel Blanchfield is that dazzlingly rare combination: a woman who can take a car apart, make her own clothes, and work through a hectic twelve-hour day with phenomenal calm. After twenty-five years as an Army nurse in posts ranging from France to Panama, the Philippines, and China, she'll cheerfully tell you, 'I've had the itinerary of a traveling salesman."

Miss Dolson goes on to say: "The lively little Colonel spends a big slice of her nights reading reports from nurses overseas. Their account of anything from climate and clothes to emergency cases gives her a vivid newsreel to study and profit by. When designers were called in to plan sturdy new field uniforms for nurses, Colonel Blanchfield had an efficient finger in the pie. Waving photographs of the finished results, she proudly points out the practical virtues of a dust-colored field uniform with huge, catch-all pockets, or the Alaskan nurses' boots with a felt shoe inside."

Before the War, Colonel Blanchfield could be found early in the morning at work in her garden. Nights she liked to stay up reading historical biographies. These strenuous days find her at her Washington desk at 8 a. m. Military hospital reports now comprise her bedside reading.

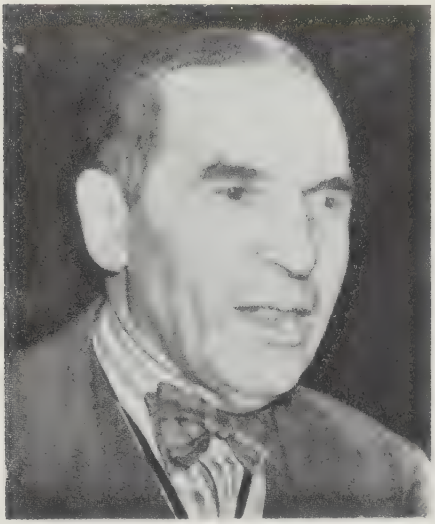
BLOOM, SOL Mar. 9, 1870- Member of the United States House of Representatives
Address: b. House Office Bldg, Washington, D. C.; h. 310 Riverside Drive, New York City; 1930 Columbia Rd, N. W., Washington, D. C.

Sol Bloom, chairman of the House Foreign Affairs Committee, is a member of the inner circle of House leaders who have been in constant touch with President Roosevelt '42 since the beginning of the Second World War. In February 1943 he was one of eleven Democratic and Republican Congressional leaders to whom the President gave a confidential elaboration of the offensive war plans of the United Nations mapped at the Casablanca conferences. In April 1943 he attended the British-American Conference on the Refugee Problem in Bermuda as one of the representatives of the United States. Former showman, theatre owner, promoter, and real estate operator, since 1923 he has represented in the House one of the wealthiest Congressional districts in the United States: the 19th New York District, or the Riverside Drive section of Manhattan. He himself is both a millionaire and a New Deal Democrat.

Sol Bloom was born in Pekin, Illinois on March 9, 1870, the son of Garrison and Sara Bloom, poor Polish Jewish immigrants, and he moved with his family to Peoria when he was five. His father reportedly could hardly earn enough to feed and clothe his family. Young Sol had almost no formal education, although his mother, who was something of a Hebrew scholar, taught him as much as she could. He sold newspapers on the streets of Peoria, and when his family moved to San Francisco he found a job in a brush factory there. He was only eight years old.

At the brush factory Sol reportedly worked twelve hours a day for a weekly wage of $1.25, punching holes in frames. According to one story, the factory hands were paid on a piece-work basis, and the little boy committed to memory the amounts paid for the various operations. According to another story, he memorized the numerous brush specifications. At any rate, one day his employer apparently realized that this child prodigy's memory worked faster and was more reliable than the computations of any bookkeeper, and he promoted Sol to the bookkeeper's job. From then Bloom's fortunes flourished. When he was thirteen Mike de Young, publisher of the San Francisco *Chronicle*, gave him a position in the business office of his newspaper; and not many years after that the enterprising adolescent became head of the ticket office of de Young's newly built Alacazar Theatre at a salary variously reported as $15 a week and as $3,500 a year. Long before this, according to some stories, he had been working in a theatre at night distributing programs and, finally, playing child roles: David Belasco had hired him as a boy actor in *Under the Gaslight*.

Evidently young Bloom became producer of plays, too, for he remembers with pride that the mother of Maude Adams frequently took parts in his stock company, and that



SOL BLOOM

her daughter was sometimes brought on the stage as an "extra girl." At seventeen, while still head of the ticket office of the Alacazar, he also began taking part in many independent business ventures, all of them profitable. He says he built his first theatre at that age; and later he bought willow furniture and other merchandise from the East and distributed it at a handsome profit to San Francisco merchants. "When I was nineteen," he says, "I had so much money invested and so much money coming in that I really didn't know where it was or where it was coming from. So I retired to take a trip around the world."

His plans for a world tour were soon shelved. De Young had a hand in the amusement features of the Chicago World's Fair, and Bloom went to Chicago "to straighten out these temperamental fellows" for him. The first night he called the concession seekers together and sketched the plans he had in mind for the Midway Plaisance. The "temperamental fellows" voted him a bonus of $1,000, and elected him secretary and manager of their group.

For the pleasure of visitors to the Midway Plaisance in 1893 Bloom imported glass and scorpion eaters and exotic belly-dancers from Algiers. He also gave the first Dance of All Nations in native costume, and he helped George Ferris to make the Ferris wheel feasible. Perhaps the cultural contribution of which he is most proud, however, was the "Hootchy Kootchy" dance. At a preview of the dancers for the benefit of the press he hummed an extemporaneous tune to show the pianist the rhythm that the dancers required. He never thought of a copyright, but it was not long before everyone in the country was singing or humming his tune, with or without wiggles.

Bloom remained in Chicago, building up a chain of eighty music stores and making a fortune as a publisher of sheet music. During this period he wrote *Coon, Coon, Coon*, one of the forerunners of modern jazz, and based on the principle that "if you repeat a melody four times in the chorus, a man remembers it." With his staff he also composed *The Heroes Who Sank the Maine*, which was finished and distributed twelve hours after the news of the sinking of the *Maine* swept the country. "It sold up into the millions of copies." He did not confine his business ventures to music, however: at one time he was engaged in not less than twenty-five enterprises. Among other things, he boasts of having matched Gentleman Jim Corbett with John L. Sullivan in their first exhibition match.

Until 1903 Bloom divided his time between Chicago and New York, but in that year he transferred his headquarters to Manhattan. In 1910 he sold out his music interests and concentrated on real estate and construction. He built apartment houses, introducing many innovations into them, and he built and operated theatres with improved acoustics, among them the Apollo and the Harris. He is said to have been responsible for the first theatre without a "peanut gallery," and he is credited with designing the modern theatre seat. He also made at least one contribution to real estate tactics: after buying a piece of land he made a practice of telling reporters about his "strategic" purchase. He could then resell it at an immediate profit, for his reputation for canny business deals was such that almost anything he bought automatically jumped in value. (Once, however, he dropped $3,000,000 on one deal.) By 1920 he was again ready to retire—this time "to devote his life to public service."

Tammany was willing to help him in this, for he was a liberal campaign contributor. The 19th New York District had been a Republican stronghold for many years, but in January 1923 Sol Bloom accepted the Democratic nomination as candidate for the House of Representatives from that district. There was a "whirlwind and rather confused campaign, so far as the issues were concerned," but Bloom, who had been endorsed by Governor Al Smith, was elected by a majority of sixty-seven votes. The Republican candidate, charging that the election had been fraudulent, contested his election, and the decision was thrown into the House, which had a Republican majority of twenty-six. "I changed that Republican majority of twenty-six into a Democratic majority of eleven long enough to get my seat," Bloom says. In April 1924 the House passed the resolution declaring him entitled to a seat.

Even in Congress Bloom's entertainment background remained evident. He spoke against radio broadcasting of advertising and tried to get funds for the Radio Commission. In 1927 he had a fist fight in the House with Representative Blanton of Texas over the "blue Sunday" law for the District of Columbia. He advocated placing baseball under Federal control and fought the tax on boxing bout admissions. Particularly concerned with the new Federal copyright law and its effect on the theatrical business, in May 1928 he represented the United States at the International Copyright Conference in Rome.

Nor did he forget that his parents had been poor immigrants. He urged the removal of the Government Immigration Station from Ellis Island and the erection of new buildings on Governor's Island. He advocated the lifting of immigration restrictions for cooks and housemaids "in order to solve the servant problem." He denounced the proposed Alien Registration and Deportation Bills of 1926. His own Americanism more than militant, he introduced a bill making the salute of the American flag by civilians compulsory, spoke for government aid to recondition the frigate *Constitution* ("Old Ironsides"), and on one of his annual visits to Europe saw to it that a Berlin theatre removed the American flags used to advertise the play *Nass Oder Trocken*? (Wet or Dry?).

More general issues concerned him, too, of course. He introduced a bill for Federal intervention in the hard coal strike of 1926 and similar emergencies, and more than once urged Coolidge to intervene in the strike. He introduced a resolution for a House inquiry of Henry Ford's charges in the Dearborn *Independent* that Jews were in control of the financial centers of the Government; he denounced the McNary '40-Haugen farm aid bill; he spoke for modification of the Volstead Act. But, although for a long time he was an avowed admirer of Mussolini '42 and had had several audiences with the Italian dictator, his speeches on foreign affairs had been few when he was appointed to the House Foreign Affairs Committee. This was reportedly after his wife (the former Evelyn Hechheimer, whom he had married in 1897) told Bascom Timmons, the Washington correspondent, that she wanted her husband on the Committee. "We like the parties here, and that would mean more of them," she was quoted. It is said that Timmons took the matter to Garner, who was agreeable, although he allegedly remarked: "Why, good God! He might be chairman some day!"

It was not until the George Washington Bicentennial celebration of 1932 that Bloom became nationally known. In December 1924 Congress adopted a resolution creating the George Washington Bicentennial Commission, but practically nothing happened until 1930, when Bloom had himself appointed associate director. A second associate director was appointed, but resigned shortly afterward, and Bloom was made director of the Commission and given a free hand. In the fall of that same year, following a trip to France, he projected a scheme for a nine months' celebration to begin February 22, 1932 and not to close until Thanksgiving. After receiving Congressional approval for his $338,000 budget he gave up his annual European vacation in 1931, stayed in Washington through the Congressional recess, and began putting in twelve hours a day with a staff of 125, which occupied the larger part of a floor in the Washington building. Soon millions of pieces of printed matter about our first President were being mailed; pages of "news" about the Father of His Country were being printed in the newspapers; the air waves were vibrating with the Washingtonia; and thousands of plaster-of-Paris busts, pictures, and other Washington novelties, put out by commercial houses, were being sold in every corner of the country. Some accused Bloom of "cheapening" Washington, and Congress cut the Commission's 1932 budget, but the pageants and plays put on that year, and the literature distributed, undoubtedly did much to popularize American history.

Even after Roosevelt's election Bloom was for a long time better known for his connection with America's first President. He was in demand as a speaker every February 22; he occasionally received mail addressed to George Washington; and he himself encouraged publicity by such stunts as offering twenty to one that Walter Johnson couldn't throw a coin across the Rappahannock at the point where Washington was supposed to have exhibited his superior pitching talents. He was therefore the inevitable choice for director general of the Constitution Sesquicentennial Commission, particularly since he had long been known as a specialist on the Constitution. (In 1926 he had attempted to get Coolidge to endorse a bill to appropriate money for filming the story of the Constitution, and in 1927 he had presented to the House the plan of the United States Patriot Society, Inc., for the instruction of aliens in its principles.)

But the methods which had made Bloom known as "Washington's press agent" aroused more criticism this time. Acres of printed material had already been released on the Constitution when in the summer of 1937 the House refused funds to provide every naturalized citizen with a free booklet, *The Story of the Constitution,* by Sol Bloom, copyrighted by Sol Bloom, and when the New York *World-Telegram* charged that Commission activities were helping Bloom's Tammany friends to make handsome profits through the articles which were to be sold by the Commission to schools, colleges, and individuals. "It is evidently an attack on Tammany Hall, through me," Bloom said, sadly. He is still convinced that through his chairmanship of these two Commissions he "taught more real American history in the last twenty years to more students than anyone in the United States."

In 1938 came another blow. In March President Roosevelt persuaded veteran Congressman Sam McReynolds of Tennessee, chairman of the Foreign Affairs Committee, not to leave the House in order to run for the Senate. It was rumored that he had given this advice because only McReynolds now stood between Bloom and the chairmanship of the Committee. In spite of the White House denial of this rumor, Bloom, who had also advised McReynolds to remain in the House, was wounded. The President's alleged fears proved quite unjustified, however. In November 1938 Bloom was re-elected to Congress in spite of the opposition of the American Labor Party (in 1936 he had had 50,000 votes to spare), and early in 1939, with McReynolds' illness, he became acting chairman of the Committee. As such he led the fight for the revision of the Neutrality Act that year, drawing up a joint resolution embodying the Administration's proposals that would have reassured

BLOOM, SOL—*Continued*

the democracies of United States' aid in the event of Axis aggression. After a bitter fight, however, the House adopted the Vorys arms embargo amendment, which nullified the purpose of Bloom's resolution, and the Senate declined to endorse the resolution in any form. When, following McReynolds' sudden death, Bloom was elected permanent chairman of the Foreign Affairs Committee, criticism of his chairmanship of the committee came only from isolationists.

After the beginning of the Second World War, Bloom continued to side with the Administration on matters of foreign policy, speaking in favor of revision of the Neutrality Act and for the Selective Service Act, and in January 1941 helping to push through the lend-lease bill. He regarded the hearings on lend-lease legislation that year as the most important of all the patriotic occasions he had known, and he was indignant because the Military Affairs Committee had tried in vain to get jurisdiction over the legislation. In May 1941 he lauded Secretary of War Stimson's '40 speech in favor of convoys. Before Pearl Harbor he voted for the eighteen months' extension of the draft term, for repeal of the ban on arming merchant ships, and for lifting the belligerent-port and combat restrictions of the Neutrality Act. More than a year after Pearl Harbor he was in charge of the bill to renew the Lend-Lease Act, which in March 1943 was passed without debate by a vote of 407 to six. When the Ball '43 resolution to initiate an organization of the United Nations came before the House later that month, Bloom's criticism of it was that it "didn't go deep enough."

On matters of domestic policy Bloom has also been found among Administration supporters. He has voted against investigation of the National Labor Relations Board, against the Hatch Act, against any drastic Labor Act amendments, and against extension of the Dies '40 Committee. He has voted for the anti-lynching bill, for CCC appropriations, for recommitting the drastic wage-hour amendments, and for price control. Before Congress adjourned in the summer of 1943 he supported the President's veto of the inflationary Bankhead '43 farm price bill; voted against the Carlson-Ruml '43 bill; against the dismissal of Watson, Dodd, and Lovett '43; against the prohibition of food subsidies; for the anti-poll tax bill; against the Smith '41-Connally '41 bill and for sustaining the President's veto of it; against cutting OPA's appropriation; against the McKellar bill; against the Hobbs so-called anti-racketeering bill; against opposing the $25,000 limit on salaries; for more money for soil conservation; against liquidating the Home Owners Loan Corporation; against abolishing the domestic branch of the Office of War Information; and against continuing the Dies Committee, Practically his only votes against the Administration were for the Smith resolution, against funds for crop insurance, against more money for rural electrification, and for the modified Ruml tax collection bill which became law. In July, however, he was attacked by another New York New Dealer, Representative Celler, for having expressed himself fully satisfied by the work accomplished by the Anglo-American Conference on the Refugee Problem at Bermuda which Bloom had attended as an American representative. Bloom, charged Celler, "lacked the compelling passion that stirs men to action" as well as a full "appreciation of the extremities of suffering and need for imperative action."

When Congress reconvened in the fall of 1943 Bloom worked for the prompt repeal of the Chinese exclusion act, helped to steer the Fulbright '43 resolution through the House, and voted against the anti-subsidy bill. In November he introduced a joint resolution authorizing Federal appropriations to the United Nations Relief and Rehabilitation Administration. He was also active as chairman of the Emergency Committee to Save the Jewish People of Europe.

The chairman of the Foreign Affairs Committee has been described by a writer in *PM* as a man of "somewhat less than average height, with a lively, mobile face. He looks something like George Arliss. He is a natty dresser, features white vest edgings, complete color ensembles, and a pince-nez with a broad black ribbon." He lives in a beautifully appointed home in Washington's best residential district and works in a private office on the top floor of the Capitol which is a miniature museum—full of pictures of George Washington, originals of newspaper cartoons in which Bloom is the central figure, and framed letters and autographed pictures from famous people. Bloom has met almost every famous personage of two generations and, of course, today he shares reception duties for visiting potentates with Chairman Connally of the Senate Foreign Relations Committee. When Churchill '42 addressed the joint session of Congress in May 1943 it was Bloom, sitting next to him on the rostrum, who saved the British Prime Minister from an embarrassing fall by pushing his chair into place just as he was about to reseat himself on nothing.

This New York Congressman has never played golf or cards and he doesn't much like sitting through a play, but he is an enthusiastic "short snorter" and victory gardener, willing to enter his garden against Vice-President Wallace's '40 as the finest in Washington. He is also something of an inventor. He sleeps on a spartan bed, but with a satin-covered pillow shaped like an hour glass which hugs his neck and forms a figure-fitting support. This, he says, gives him complete relaxation, and he buys the "Bloom headrest" in dozen lots and hands them out freely to friends.

Sol Bloom was a director and United States commissioner of the New York World's Fair of 1939, and he was also chairman of the Committee on Celebration of the 150th Anniversary of the United States Supreme Court. He is almost as well known as an art collector as he is as an authority on American history. His wife died not long ago. His daughter, Vera, lives with him in Washington, and they lead a quiet but enjoyable social life. Bloom is an honorary member of the Veterans of Foreign Wars, a thirty-second degree Mason (or Shriner), and a "Kentucky colonel."

BOISSON, PIERRE (FRANÇOIS) (bwä-son′) June 19, 1894- French Government official

Address: b. Governor's Palace, Dakar, French West Africa

While Governor General of French West Africa, Pierre Boisson, like so many of his fellow Governors in the French colonies, switched from side to side in the Second World War—of choice, say his enemies; of necessity, say his friends. Originally for the Allied cause, he changed his allegiance to Vichy upon the fall of France, but, in answer to the appeal of Admiral Darlan '41, his personal friend, he gave Dakar to the Allied forces in the fall of 1942 without the semblance of a struggle. This surrender, however, took place only after the Allied invasion had been completed and there was no other choice; and de Gaullists, pointing this out, continued to agitate for Boisson's removal as Governor General until his resignation from that post in the summer of 1943.

PIERRE BOISSON

As a youth Pierre François Boisson continued with his career despite a major physical handicap which resulted from his experiences in the First World War and might have made a permanent invalid out of another man. He was born at St. Launec (Côtes-du-Nord) in Brittany on June 19, 1894, the son of two schoolteachers who together gave the little Bretons the rudiments of a liberal education. If Pierre's parents made any plans for his future, undoubtedly the height of their ambitions was for him to be a schoolmaster like themselves.

Pierre grew to be "a strong, dark boy, well-knit and erect, with a brown face and heavy eyebrows overshadowing candid eyes." He attended the normal school at Saint-Brieuc, was graduated, and became a teacher like his parents. If there had been no interruption to his pedagogical career, he might have continued as an obscure country schoolmaster for the rest of his life.

The First World War broke out, however, and the young man was sent to the Front. He fought at Artois, at Argonne, and at Verdun. He was wounded twice before a grenade tore off his leg, and seemed at the time to have wrecked his career. He was a chevalier of the Légion d'Honneur, he had two citations, and he was a permanent cripple—at the age of twenty-three. It was impossible for him to return to his school, he felt, with such a terrible physical handicap. Yet he would not avail himself of the sinecures which the Government offered to those of its soldiers who had been seriously mutilated in the War. He chose instead the most difficult course that a cripple could take, one that made use of all of a man's physical forces: a career in the colonies.

(Continued next page)

BOISSON, PIERRE—*Continued*

After recovering from his wounds, young Boisson entered the Colonial School. He came out first in the final examinations; and was, therefore, according to custom, entitled to choose his own post. He chose French Equatorial Africa and accordingly was appointed assistant administrator at Brazzaville in the Congo in 1920. At that time that colony enjoyed the most unsavory reputation of all the French possessions—it was the furthest, the most desolate, and the most uncivilized. An article in the Nazi-controlled *Revue des Deux Mondes* (April 1941) found the explanation for this apparently strange choice in the fact that Boisson was the kind of man "who goes straight to the most difficult tasks, because he has the taste to dominate." At Brazzaville he and his comrade, another wounded war veteran, were not welcomed too heartily by the white residents, who felt that their prolonged residence in the Congo, with its attendant risks, entitled them to the high positions which the two young men had received only as compensation for their war wounds. Boisson and his friend, however, soon overcame this feeling—their real problem was the question of governing the natives.

Much later, at the height of his career, Boisson wrote: "I lost no time in discovering the true character of the native in spite of all the legends, stories, and books about him. I saw immediately that I had to deal with what was essentially an agricultural people. The earth models those who cultivate it, and gives all of them the same characteristics, no matter what the color of their skin. I treated my first natives as peasants—Breton peasants. Later, when I became more experienced, I modified my practices to a certain extent. But I have proved hundreds of times that my first policy was essentially correct."

The climate of Equatorial Africa could not but have its effect upon a cripple. Boisson succumbed and was sent back to France on leave, at the expiration of his first term in the Congo. So thoroughly, however, had Africa fascinated him that, at the end of his leave, he requested and was granted another term in the Congo.

With the schoolmaster's thirst for information, Boisson's real ambition was to travel over the whole French colonial empire, studying the peoples of the other French possessions, in Asia as well as in Africa. There was only one position which would fulfill his requirements; and in June 1924 he became a colonial inspector, third class. The colonial inspectors are envoys of the Colonial Minister, who delegates them to study in detail various individual colonial problems, ranging from the construction of a road to the administration of a campaign. "These independent officers go wherever they are sent, and live in seclusion in order that no one may influence them. . . People pretend to despise them, but actually they are feared and respected." The colonial inspectors were constantly being accused of trying to usurp the Governor's prerogatives, and their critics maintained that it was impossible "both to control and to govern." The *Revue des Deux Mondes*, however, regarded the inspector's controlling duties as the best preparation for government. Boisson rose to second class inspector in 1924, and to first class inspector in 1926.

The young man still lacked the expert knowledge of politics and politicians that would fit him for the position to which he aspired. Charged with a mission from the Colonial Minister in 1931, he soon became chief of his Cabinet (1932), however, and quickly learned to play politics. That same year he became chief of the Cabinet of the Colonial Under-Secretary of State, and was appointed third class Colonial Governor.

Boisson's next post, that of secretary general to the Governor of French Equatorial Africa (1934) could be very important or merely a routine job, depending upon the Governor. M. Brévié, the pro-consul, was not jealous of his prerogatives, and saw in his subordinate not merely his representative, but his "collaborator." He delegated much of his power to Boisson, who "served him," according to the *Revue*, "with Breton fidelity."

Finally, in 1936, Boisson was appointed commissioner of the Cameroons, and there the *Revue* says he worked "to further the prosperity of the natives," creating a "bourgeoisie of native planters." In 1938 he returned to Dakar, temporary Governor General of French West Africa, charged with the "painful mission" of setting to rights what the *Revue* called the "excesses of the Popular Front." (These "excesses" included rights for Negroes and their inclusion in trade unions.) A year sufficed for this; then he was sent back to the Congo where his career had begun. He was there when the Second World War broke out, and remained there until the news of the fall of France came to Africa. It was then found necessary to appoint a new high commissioner for all French Africa, and in July 1940 Pierre Boisson was appointed to that post at Dakar, the most strategic position in Africa because of its close proximity to Brazil (a six or eight hours' flight) and its excellent harbor and landing fields.

Boisson announced, according to Emil Lengyel '42, that his colony wanted to fight the Nazis, but "neither the Free French nor the British took advantage of this opportunity, and they have been overwhelmed with blame." Boisson then changed over to Vichy, swearing to resist any attack on Dakar "no matter from what quarter." The Vichy Government, wrote Lengyel, "exerted strong pressure on Governor General Boisson, who now went so far in atoning for the dangerous thoughts he had entertained in the past as to conceive the plan of an armed attack on Gambia, the British wedge in French Senegal. Boisson's plan turned out to be a failure; his heart may not have been in the job." In the fall of 1940, however, he successfully resisted a British and Fighting French attempt to wrest Dakar from Vichy forces.

The natives of French West Africa have been conquered only after a long series of wars and punitive expeditions and they are exploited with quiet efficiency by businessmen. Albert Londres describes the economic position of the Negro laborers of French West Africa as a contest between "two teams, always the same, both white. One wears the colors of the Government and the other the colors of the businessmen. The Negro is the ball." Rates of pay for Negro laborers are extremely low—lower than in the British colonies; and, according to the latest available figures, in French West Africa there are only 67,347 school pupils out of a population of more than 14,000,000.

Yet, although the French regions of Africa, like all colonies, "were run on the basic principle of buying cheap and selling dear," the pre-Vichy picture was not entirely dark. The natives had to be relied upon for the defense not only of the French Empire but of metropolitan France itself, and so the French sought to build up a native elite from which to draw their soldiers. In the four administrative areas of Senegal around the port of Dakar natives were therefore not only admitted to French citizenship but for many years they also sent deputies to the French Chamber. The conscription of natives vastly depleted the labor supply, slowed up the economic development of the territory, and deprived the mass of natives of leadership, but at least French rule was not a rule based upon racial supremacy. "Its conflicts were more often economic and class conflicts than those of ruling vs. subject races."

The fall of France changed all this. Senegalese soldiers repatriated to Dakar after the armistice, considering themselves Frenchmen, discovered that the France of the New Order drew the color line, even though unofficially. (The only official "racial laws" in French West Africa, introduced in December 1940, affected the Jews.) Furthermore, after the battle of Dakar martial law was declared, many arrests were made, many municipal authorities were dismissed. Boisson, in suppressing de Gaullist and pro-Ally groups, reportedly condemned 115 persons to death.

In 1940, too, the Vichy Government started to build a trans-Sahara railroad between Dakar and French North Africa, using semi-slave labor (anti-Nazi refugees, shipped from France to French Africa, were used for this purpose) under the supervision of Nazi engineers and technicians. The trans-Sahara railway would at this time have been useless to France, since her African armies had been demobilized; but the Nazis were eager to see it built, for it would supply new Nazi submarine bases on the Atlantic coast from which to attack Anglo-American shipping, and would enable the Nazis to bring goods from West Africa directly to Nazi Europe by a short and safe route.

Governor Boisson, according to *PM*, made Dakar into an armed camp. "German engineers built new airfields and set up coastal defenses. The French garrison was strengthened." In September 1941 Boisson returned to Vichy, ostensibly to report on the situation in Dakar and other parts of the West African colonies and to submit plans by which he hoped to organize a general cooperative effort in support of and in keeping with "renovated France." Asked if there was any expectation of an American attack on Dakar, he replied: "We can't assume anything of the kind, but our duty is to be prepared for anything that may happen." At this time he also declared that there were no Germans in West Africa. "For the native populations, France is represented by Marshal Pétain '40, and there is no question of any other authority." By October 31, 1942 he was announcing that he had decided to evacuate women and children from Dakar "to permit us to resist with all means of defense" against any attack. "It is not a question of fighting to preserve our honor," he declared, "but of defending French West Africa with the firm intention of keeping it."

In November 1942, Allied Armies invaded North Africa and occupied Algeria and Morocco, but Dakar, strongly fortified, remained untouched. Admiral Darlan broadcasted an appeal to his friend, Pierre Boisson, Governor General of French West Africa, to change his allegiance to the Allied side. Later in that month the following was broadcasted by the Dakar radio in Boisson's name: "Frenchmen and Frenchwomen: In view of the situation in France, I have taken the decision as commander in chief of the French armed forces in French West Africa to rally to Admiral Darlan as the commander in chief of all French forces." The message then said that the French Army would "defend the colony against any aggression," asked Frenchmen to be "calm and disciplined" and to obey the orders of their commanders, and said that the Dakar Governor was "not denying" his oath of allegiance to Marshal Henri Philippe Pétain, but that rallying to Admiral Darlan had become necessary because of the "situation in France." The Allied forces took Dakar "without firing a shot or losing a life." Possession of Dakar, with its three commercial docks and its naval dock and torpedo basin, according to Raymond Daniell, "means control of the whole West Africa and South Atlantic shipping routes." Dakar is large enough to harbor the whole French Fleet. It alone of all the French colonies was strong enough to hold out against the Allied forces had it chosen resistance instead of cooperation. Its surrender at Darlan's request, therefore, was felt in many quarters to be almost enough to justify the much-criticized "Darlan deal."

In December 1942 Boisson announced that "Dakar and the rest of French Africa intend to intervene against Germany with their full strength as soon as we have received materials and equipment from America." *PM* declared that there had been no official announcement of a military commission of Allied officers moving in either to administer the base or to cooperate with Governor Pierre Boisson, however. "A newspaper correspondent was balked in an attempt to cross the border into Senegal. . . It may be that with Dakar safely removed as a menace to our Atlantic shipping or land operations on the African continent, details of the occupation will be deferred until windup of the North African campaign." At the same time it was reliably reported that Allied naval vessels already were making use of Dakar as a base from which to operate against submarines, and on December 14 the United States State Department was informed that all disputes between the British and former Vichy officials at Dakar had been ironed out and British internees in North Africa had been released.

(Continued next page)

BOISSON, PIERRE—*Continued*

General Boisson was made a member of the Imperial Council to assist Admiral Darlan and later, upon Darlan's assassination, was one of those who elected General Giraud '42 as his successor. Blamed by liberals as responsible for the arrests, the concentration camps, and the enforcement of Vichy's anti-Jewish laws in "his own bailiwick," his importance in the new North African setup did not meet with universal approval. ' The Fighting French were particularly hostile. When Boisson denied that Dakar had been used by the Germans for any purpose, they accused him of telling "a brazen-faced lie." "What is important to know," they announced, "is whether French West Africa supplied [German] submarines or kept them informed; whether they were ever supplied at sea by trawlers; or whether French airplanes flying over West Africa did not fly over the British port of Freetown, and whether these flights over British territory were not every time followed by the torpedoing of a British vessel off Freetown; whether, when the Freetown garrison decided to use its antiaircraft defenses and thus brought those flights to an end, the torpedoings did not miraculously cease." Furthermore, General de Gaulle '40 privately published excerpts from Boisson's intercepted pre-invasion reports to Vichy showing the Governor General's distrust of the British and his resolve to combat any British occupation. More than once unity meetings between Generals Giraud and de Gaulle were apparently broken off because of the latter's insistence that such men as Marcel Peyrouton '43, Auguste Noguès '43, and Boisson should be eliminated from the proposed French National Council.

For a long time both Giraud and the Americans continued to defend Boisson. In the spring of 1943 the American consul at Dakar during the months of the crisis asserted in an article in the *American Foreign Service Journal* that the Germans had not infiltrated there, and that this was largely because of the stubborn resistance of French officials, including Boisson. No German submarines had put into Dakar or other French West African ports, he said, and no naval vessels based in French West Africa had put to sea to supply German submarines or raiders. Boisson was both a "Pétainist and an anti-collaborationist." "Inevitably I saw much of General Boisson in an official capacity," he wrote, "and I think we came to know each other well. He and I were in disagreement sometimes, and I was not always successful in persuading him to do what I wished. I always found him a square shooter. He never double-crossed me. From my personal knowledge of the man, I am skeptical about the stories concerning him. Perhaps it is worth mentioning that, as soon as our country found itself at war, General Boisson sent for me and, during a cordial conversation, he wished my country well and expressed confidence that we should win the War." Yet this same General Boisson, in June 1943, was said to be still exhorting his officers to remain faithful to Pétain.

Late in June 1943, apparently yielding to Fighting French pressure in spite of efforts of the Giraudists and the Americans to retain him, Boisson resigned his post as Governor General of French West Africa. (Peyrouton and Noguès had already gone by this time.) His resignation was hailed as a victory by liberals, but the loss of "one of the ablest colonial administrators on this continent" was reportedly mourned over by the Allies. In November of that same year Boisson was summoned to appear before the Purge Commission of the French Committee of National Liberation. Since his resignation he had been a captain in a minor army post near Oran. In December he was charged with treason and jailed.

The Vichy radio announced in December 1942 that Pierre Boisson had been deprived of French citizenship. The former Colonial Governor holds the Croix de Guerre, was made an officer of the Légion d'Honneur in 1931, and became a commander of the Légion d'Honneur in 1938.

BOWLES, CHESTER Apr. 5, 1901-
United States Government official
Address: b. Office of Price Administration, Washington, D. C.

"No sensible person would seek a job of this kind," said Chester Bowles when he "strode bravely into Washington" on July 27, 1943, to begin work as the new administrator and general manager of the Office of Price Administration. Two weeks before, Lou R. Maxon '43 had resigned under considerable pressure, "muttering and muttered at," from the post first held by Leon Henderson '40. Chester Bowles, who had done a good job as OPA director in Connecticut, was approved by businessmen and also "welcomed by labor" to his new position, although it was thought in some quarters that "the assignment is not likely to change labor's decision to press for the removal of Price Administrator Prentiss M. Brown '43." Already experienced, Bowles had no illusions, but promised to be both reasonable and tough. He allowed himself a bit of optimism: "We should make real progress in the next six weeks." At this a reporter is said to have sighed: "All right, give him six weeks." On October 25, 1943 Bowles was nominated by President Roosevelt '42 to succeed Prentiss Brown as OPA administrator; on November 4 the appointment was confirmed by the Senate.

The Coast Guard was sent out to hunt for Bowles, who was "somewhere off the coast of Maine" vacationing in a sailboat, to tell him that he was the new general manager of the OPA. This recalled to old salts a similar—if less happy—hunt for Bowles some years ago. He is a sailing enthusiast and was skippering a seventy-ton tub up from Bermuda, with his wife and other passengers. For five days he was reported lost. He then came sailing into his home anchorage in Long Island Sound insisting he had never been in any danger. "A gale had left him with only three small sails, and once he had to lash the wheel and lay to for three days. But there had never been anything to worry about."

Chester Bowles, who is "pleasantly horse-faced, and tall and gangling," was born on April 5, 1901 in Springfield, Massachusetts, the son of Charles Allen and Nellie (Harris) Bowles and the grandson of Samuel Bowles, noted liberal editor of the Springfield *Republican*. After his graduation from Yale in 1924 Bowles began his career as a newspaperman by working on his grandfather's paper. He then went to New York to engage in merchandising and marketing research (1925-29) for the George Batten Company, advertisers. In 1929 he helped organize the advertising firm of Benton & Bowles, of which he subsequently became chairman in 1936.

His first marriage was in 1925 to Julia Mayo Fisk of Springfield, Massachusetts. She obtained a divorce from him in Reno eight years later. Bowles then married Dorothy Stebbins of Newton, Massachusetts (February 22, 1934). He is the father of five children: Barbara, Chester, Jr., Cynthia, Sally, and Samuel.

His name did not appear often in the news between 1929 and 1939; Chester Bowles was busy with his successful advertising career.

CHESTER BOWLES

By 1932 the two-man advertising team for which he was idea man had become a corporation. Bowles induced Maxwell House to slash the price of its coffee and to aim for mass sales, and he recommended the same treatment for General Foods products and for Palmolive soap. After 1936, as a matter of fact, when his partner became vice-president of the University of Chicago, Bowles almost worked himself into a nervous collapse.

In 1940 Bowles became linked with the isolationist group in the United States. On October 3, 1940 a full-page advertisement appeared in the New York *Times* urging America to stop sending aid to England. It had been inserted by the America First Committee, of which Chester Bowles was listed as a member. According to Bowles, however, his relationship with the organization was very informal and was largely connected with Douglas Stuart, the America First director, for whom he "had always had the greatest admiration and respect."

After taking office as OPA manager Bowles was questioned by one reporter concerning his original membership on the America First Committee. His explanation was that he was afraid the United States' participation in the War would lead to a greater wave of isolationism than ever, and the development of native Fascism. "He said he did little work on the Committee, kept his name on because he was bulldozed so much to make him take it off." Now he is ready to "stump the country for international collaboration." When the United States entered the War he was prevented from entering the Navy only by a bad ear.

It was not until former Governor Robert A. Hurley of Connecticut appointed him to head the state tire rationing board of Connecticut in December 1941 that his name again came before the public. At the time he "planned to stay only a month as a volunteer

BOWLES, CHESTER—*Continued*

worker," but in May of that year the state price and rationing organizations were merged, and Bowles became state director of the OPA at a salary of $6,500. He severed active connection with the firm of Benton & Bowles to devote his full time to his new job.

An excellent administrator whose experience in private business was an asset, Chester Bowles made a good name for himself in OPA as far as Connecticut was concerned—not only with conservative business, but with labor groups. He is reported to have had "149 labor men on price and rationing boards. This is in contrast to forty-nine in Massachusetts and fifty-two in New York, neighboring states with far greater laboring population. Labor spokesmen here point this out as concrete illustration of Bowles' practical collaboration with labor. Moreover, these spokesmen say that while he was still active with his advertising firm of Benton & Bowles, Bowles became concerned with the consumer point of view. He is reported to have supported latterly the principle of grade-labeling and to have tried some consumer-interest educational work with his clients, among whom are a number of important food industries." He also gave educational talks over a four-station local radio hookup from Hartford.

Since it was the antipathy of Lou Maxon, then deputy administrator under Prentiss Brown, toward grade-labeling which had stirred up the greatest opposition to his policies, New Dealers and labor circles looked upon Chester Bowles with an increasingly favorable eye. OPA's Labor Policy Committee demanded Maxon's dismissal for the second time in May 1943; but it was not until July that the Detroit advertising man handed in his resignation. Prior to this, it was reported that Prentiss Brown had offered Chester Bowles the job of OPA general manager—on condition that he share authority with Maxon. Bowles at the time rejected the bid "because of the Maxon angle." He laid down his own terms, "stipulating that he should have full authority over all branches and field offices of the OPA and be answerable only to Mr. Brown."

According to Prentiss Brown, Bowles would have "full authority to hire and fire." Brown expected that several high-ranking authorities of the agency would have to be dismissed "under Congressional mandate," to be replaced by those "who have had business experience." Maxon had complained bitterly about the young lawyers and professors—the "slide-rule theorists"—in OPA.

It was on one of Washington's hottest midsummer days that Chester Bowles, fresh from a cool cruise on his yacht, arrived in Washington. His first job was to meet the press. "How many will there be?" he asked. About fifty, he was told. "My God!" he said, "How long will it last?" They told him about half an hour or so. "How do I end it?" he asked next. "Do I fall over in a dead faint?" Apparently, however, Bowles made a rather good impression on the newspapermen. According to Washington correspondent Peter Edson: "He revealed himself as an unassuming, well-proportioned gentleman, tall and broad, with a fine large head and engaging smile. He runs to browns. . . He has a manner of raising his eyebrows when he talks, wrinkles up his forehead. He talks a little bit out of the lower right-hand corner of his thin-lipped mouth, but it isn't John L. Lewis '42-like toughness that spills out. He might get tough if he had to, but on first acquaintance he's mild-mannered and soft-spoken, though without a marked New England accent."

In his interview Chester Bowles promised that he would not turn the OPA "into an advertising club." He also said that the world in general had been "a little too hard on professors." He said businessmen had been using college economists for a long time and could scarcely get along without them. But he added that he wanted businessmen and industrialists "with practical experience" for advisory aides and as heads of various OPA divisions.

The new administrator declared that the "snooping Gestapo" approach of OPA officials must be avoided, that a "friendly manner" could bring about price enforcement more quickly. He said he was in favor of subsidies, adding that everyone had been "concentrating on their faults rather than on the chaos resulting if we do not use them." He promised that black markets would be cracked down on at once; OPA wasn't going to be "a door-mat" for the farm bloc or any other group. "The OPA must be willing at all times to stand up against selfish pressures," he stated. "When you think of government regulation in wartime, always remember this: every industrial profiteer, every farm product speculator, everyone who wants a bigger share than his neighbor, would like to see the OPA wiped out tomorrow. . . When such pressures are applied unfairly to the OPA, the American people have the right to know the true facts, and we shall tell them these facts in language that is clearly understandable."

The Bowles statement that made the biggest headlines was that concerning the end of A-card pleasure-driving curbs for motorists. "Depriving people of the right to use their 'A' gasoline as they see fit is like giving a lollipop to a baby and preventing him from sucking it," said Bowles. He indicated that the ban on pleasure driving might be relaxed after the issuance of a report being prepared by the Office of War Mobilization. The only catch to allowing unrestricted use was "the available supply. . . The Byrnes '41 report will decide that." The ban was removed at the end of August 1943.

Earlier that same month a total of some 121 executives in the OPA were asked to submit their business experience in order to determine whether they were eligible to remain in their posts. Messrs. Brown and Bowles, however, would be final judges as to whether "an executive possesses practical business experience." A formal division of powers between the two men was also stated, in which Brown was to be "mainly concerned with general policy" and Bowles with "the operating job."

Organized black markets in gasoline, meats, and poultry presented the most serious problems for OPA officials. The worst of these was said to be that in poultry. So one day, in early August, without warning, a crackdown came on the "Delmarva"—Delaware, Maryland, and Virginia—poultry growing district. "Trucks were halted and their loads of live chickens seized for use by the Army. The owners got the ceiling prices for the fowl, but no more. In the first two days of the procedure not one truck stopped by officials was able to prove that the owners of the poultry had complied with the OPA regulations in full. A week of such enforcement, and the back of the black market in that area was broken, OPA officials said." Thus in less than two weeks after becoming the OPA general manager, Bowles had made good on at least one of his promises—to make real war on black markets. He was on his way toward building up respect for the Government's most disliked agency. "But we've got a lot to learn," he said. "It's a long, educational job."

In the early part of August OPA Administrator Prentiss Brown went back to Michigan, leaving Bowles virtually to take over his job. *Business Week* commented approvingly on August 28 that the latter was filling policy-making positions with businessmen as fast as he could find them, drawing a sharp distinction between enforcement and compliance, giving field administrators more authority, and attempting to simplify regulations. But labor and consumer groups did not remain so happy. In September, when OPA announced its first set of price rollbacks since June, no over-all rollback through farm subsidies was indicated. In October it was revealed that the next Bureau of Labor Statistics cost of living figure would show a one per cent rise, wiping out the slight reduction since Bowles took office, and an over-all seven per cent increase for the rest of 1943 was predicted by the Commerce Department. Bowles' own desire to enforce price ceilings was not questioned, however.

On October 25 Bowles was nominated to succeed Prentiss Brown as OPA Administrator, and on November 4 the appointment was confirmed by the Senate. By this time Congressional criticism of OPA was more difficult, for Bowles had gone even further than Congress had suggested in appointing businessmen to OPA posts—particularly in the price division, which had been the main Congressional target. At the same time, however, Congress' fight against subsidies threatened the main purpose of Bowles' organization: price control. According to Bowles, who is in favor of "limited subsidies," there was "no alternative to subsidies if the cost of living is to be held at, or anywhere near, its present levels." If subsidies were withdrawn, he warned, the increased cost of living would amount to a straight ten per cent sales tax on all consumer goods and services, and food prices were already ten per cent above wages. Labor in its fight to force down living costs was pitted against "an almost terrifying pressure" from businessmen to raise price ceilings—and every price rise led to another. Even the businessmen recently brought into OPA who originally opposed subsidies had learned to favor them for these reasons, said the OPA administrator.

BOYER, CHARLES (bwä-yā') Aug. 28, 1899- Film actor

Address: b. c/o Universal Pictures Corp, Universal City, Calif.

Idolized by millions of American women, Charles Boyer is said to be the greatest foreign motion-picture star since Rudolph Valentino captured feminine hearts in the days of silent films. The voice of the French-born actor—"warm, intriguing, intimate," and probably his greatest asset—has made his radio career as successful as his work in pictures. When the Second World War came to France that nation considered Boyer's personality so potent an influence for propaganda in America that he was "mysteriously mustered out of his regiment" and sent back to Hollywood. "Since I have been instructed to return to my career as an actor, and since that lies in Hollywood, I have returned to America to resume work before the cameras," Boyer explained. Since then he has taken out his American citizenship papers (February 1942) and has also signed a three-year contract with Universal as a producer-actor. Feminine admirers may be disappointed to learn that under the agreement he is to make nine pictures and to appear in only four of them.

Before Hollywood producers "discovered" him, Boyer had won great popularity in his own country on stage and screen. He was born in Figeac, a village in southwestern France, on August 28, 1899, the son of a well-to-do dealer in farm machinery. As a small boy he had a remarkable memory, could recite entire poems at the age of three, and was soon learning lines from plays. At eight he gave "one-boy" performances at school theatricals, playing all the characters in many plays. His father gave him the granary of the Boyer barn for a dramatic workshop, so young Charles wrote plays and got the neighborhood children to take part in them. His family's ambition was for him to become a doctor or a lawyer, but by the time he was sixteen he had definitely made up his mind to be an actor—a decision made after seeing on ten successive nights Lucien Guitry's performance in *Samson* in Paris. His mother held out against a stage career until a motion picture company came to a near by town to film some exterior shots of *Travail.* Boyer became acquainted with one of the players, Raphael Duflos, who was so much impressed with his natural ability that he persuaded Mme. Louise Boyer to let the boy follow the theatre. She consented on condition that he first finish his education. After attending the

CHARLES BOYER

lyceum of Figeac young Boyer went to Paris to study at the Sorbonne, and was graduated with a degree in philosophy.

But "I still want to be an actor," Boyer said, and he immediately enrolled in the Paris Conservatoire du Drame. Opportunity came theatrically to him within a year (1920). M. Gemier, producer of the play *Les Jardins de Murcie*, told him that his play was due to open in twelve hours, and the leading man was ill. He had heard of M. Boyer's remarkable memory—could he, in twelve hours, learn the lines and give a performance which would not disgrace the Conservatoire? The young student did memorize the role; and when the curtain came down that night he was greeted with waves of applause. Paris—feminine Paris, at least—had discovered a young actor of twenty-one, "charming, well-mannered, and with a flair for mystery," and Paris was delighted. Gemier, the producer, a few days later offered him a part in his *Brande Pastorale*. The role drew praise from critics, and Boyer was cast in other plays. At the same time he continued his classes at the Conservatoire.

When he had finished his studies Boyer was starred in *L'Insoumise* and became the most talked of young actor in Paris. When the play ended he followed it with successful appearances in *L'Homme Enchaîné, Le Bien Aimé, La Marche au Destin, Le Secret*, and *Mélo*. He had worshiped the actor Guitry; and now Henri Bernstein, Guitry's producer and director, was writing for and directing Boyer. Boyer had become a frequenter of the best salons of Paris, and he had fallen in love with a very beautiful young Frenchwoman. Their romance suffered but endured for four long years under Bernstein's eccentric and exacting demands as a director. Then death came to the woman who had waited.

Until 1930 Boyer worked hard in the theatre: he led an "upside down, maladjusted existence" off stage, and there was also the constant pressure of starring in Bernstein's morbid psychological plays. Boyer found his only release in gambling. Soon, in spite of the large salary he was drawing, his bank informed him of an overdraft. He was then ready for his vacation, and decided to go on tour. The Company unfortunately played all the casino spas of France. Each night Boyer gambled, and usually lost. His interest in his career as an actor waned; he began to hate his audiences.

In 1930 he left "for a change of scene" on a repertory tour of Egypt, Turkey, and Romania. In Cairo, according to report, he met a famous surgeon, a man he had known and admired in southern France, and who now gave him some good advice. "It's a big thing to have lived one life by the time you're thirty and to have the courage to start another." Boyer returned to Paris anxious to find a new field for his talents. The motion-picture companies were highly interested in him, and he made his first talking picture at the UFA Studios in Berlin. It was *La Barcarolle d'Amour*, one of the first French sound films, and it was an immediate success.

Hollywood directors who saw it knew that they wanted a good French actor for the talkies—the Boyer personality and the Boyer voice. The personality and voice were willing, and Boyer, having succeeded in breaking his French film contracts by payment of a *dedit* (compensation), left for California. But the accent which, modified, has since become a major Boyer asset made producers hesitate to sign him. He was miscast as the chauffeur in Jean Harlow's *Red-Headed Woman*, was a failure, and "went home to France, his bitterness so intense his ears rang with it." Having made some more successful films for French companies, Boyer nevertheless determined once more to conquer Hollywood, and returned when Fox Films, having seen him in *La Bataille*, "thought they might make capital of a man whose eyes could look as if they mirrored all the sorrow in the world." But again the French actor was miscast (in *Caravan*, 1934, a musical), and again Boyer packed to go home. It was Walter Wanger who came to the rescue. He proposed starring Boyer with Claudette Colbert in *Private Worlds* (1935). Boyer's language difficulties were overcome after diligent study with tutors, and when the film was released "the delirious reaction to his superb performance made the piece the hit it was." Wanger gave Boyer a long-term contract.

From that time on feminine film-goers have found only one flaw in Boyer: the fact that he is married—and happily married, alas—to Pat Paterson, a young English actress whom he met in Hollywood in 1935. Previously the women he had met in Hollywood had interested him, but they lacked the important quality of "mystery"; Pat Paterson, European-bred, was different. Three weeks after meeting her, Boyer knew this was the woman he wanted for his wife. They flew to Yuma, Arizona, where they were married, then back to Hollywood, where Boyer went on with an increasingly successful film career. (The Boyers' first child, a son, was born on December 10, 1943.)

Boyer first played leading roles in *Shanghai* (1935) and *The Garden of Allah* (1936).

With such box-office hits as the French-made *Mayerling* (1937) and American-made *Tovarich* (1937) the young French actor became one of the top-ranking stars of both France and America. Some critics consider his role as the romantic French "supercriminal" in *Algiers* (1938) his best to date. Like many Boyer successes, the film was remade in Hollywood from a foreign original, *Pepe le Moko,* in which Jean Gabin '41 starred.

In 1939 Boyer was on one of his annual trips home, with a French film in production, when the outbreak of war caught him in Nice. He promptly threw away his make-up kit to join the 37th Artillery. For weeks military censorship prevented millions of devotees from knowing what had happened to the film star. Then, early in 1940, he was released from military duty and permitted to come as "a good-will ambassador" to Hollywood. It seems that Boyer had been assigned to switchboard duty behind the lines, where his fellow soldiers kidded him for having been demoted from general [referring to his role as Napoleon in *Conquest* (1937)] to 2nd class private. It was no stellar role for "France's gift to the women of America," who, by his mere continuance in motion pictures, could be an invaluable propagandist to millions of screen fans and radio listeners. Boyer's radio career was continued in 1940 with starring roles in Woodbury's *Hollywood Playhouse.* Since 1940 he has also been a frequent guest star on De Mille's '42 *Lux Radio Theatre* program, a recent appearance having been in the radio version of *Algiers.*

After his last return to Hollywood, Boyer's first two important successes were *All This and Heaven, Too* (1940), in which he co-starred with Bette Davis '41 in the screen version of the best seller; and *Hold Back the Dawn* (1941), in which he appeared as a scheming European refugee in Mexico who marries a trusting American schoolteacher (Olivia de Havilland) in order to gain United States citizenship. In 1942 he starred in the first episode of *Tales of Manhattan,* a series of separate incidents held together by a full dress coat and directed by Julien Duvivier '43, whose *Carnet de Bal* was structurally similar but was much more successful.

In 1943 Boyer was seen in *The Heart of a Nation* (a French film finished in 1940 just as the Germans marched in), delivering the long preface and narration in a "life's-but-a-walking-shadow tone." After giving a "thoughtful and romantically intense portrayal" of the Belgian composer-hero in *The Constant Nymph,* in which Joan Fontaine took the honors, he worked again with Duvivier on a film whose idea they had contrived together and sold to Universal. *Flesh and Fantasy,* a production made up of three separate episodes held together only by their underlying theme of the supernatural, was also released in 1943. Boyer, playing the role of a trapeze artist, starred in one episode. This production was received by most critics with remarkable coolness. Boyer then finished work on *Gaslight,* the film based on the Broadway hit, *Angel Street.* In *Gaslight* Boyer plays his first really villainous role on the American screen: that of a would-be murderer of his wife (portrayed by Ingrid Bergman '40).

When Boyer made his great success in *Private Worlds,* one critic prophesied that "on the basis of his work . . . it seems safe to say that this French actor is destined for a great success on the American screen, although the chances are that his Gallic romantic appeal, rather than his very real skill as an actor, is going to be his great asset in a Hollywood career." This prophecy proved accurate, for Boyer has been a victim of "type-casting," almost invariably playing the role of a sultry-eyed lover. His expert handling of such parts as Rudolf in *Mayerling* and Napoleon Bonaparte in *Conquest* (in which he stole the picture from Greta Garbo) always seems to surprise his public which, although it has been ably demonstrated, never seems to comprehend the fact that he can play anyone else than Charles Boyer. Equally adept at comedy or tragedy, however, "the doe-eyed, dove-voiced" actor always turns in an excellent performance. According to *Time* Magazine, he "has forgotten more tricks of acting—or just standing still—than many of his colleagues will ever learn."

Charles Boyer has been an ardent supporter of General de Gaulle '40 since the Germans entered Paris in June 1940. Although constantly busy with film productions, he has devoted all his spare time to the cause of Fighting France. He is president of the Hollywood committee of French War Relief and an active member of the coordinating council of French Relief Societies and of the advisory council of anti-collaborationist French citizens. At a meeting of the New York *Herald Tribune* Forum in November 1942 Boyer spoke on "The Fighting French." He said that he was now a fellow citizen who spoke "American with a Free French accent." After stating his allegiance to de Gaulle, Boyer expressed a hope for "total unity among Frenchmen abroad." He deplored the policy of the Vichy Government that drove thousands of French scientists, writers, and scholars from the land, but praised the founding of *L'École Libre des Hautes Etudes* in New York under the auspices of the New School for Social Research.

As every woman knows, Boyer (of average height and weight) has dark brown hair and eyes; the hair, off stage, has receded quite noticeably, which serves rather to emphasize a thoughtful, intelligent brow. In films, like so many leading men, he wears a toupee in order to preserve a "glamorous appearance." Much of Boyer's success is due to his genuine intelligence—he is an avid reader of the classics as well as modern literature, and an accomplished linguist. His favorite book is a French novel, *Two Men;* his favorite American author is Sinclair Lewis. He is also a musician, having studied the violin for nine years. His favorite composer is Chopin. Unlike many Frenchmen, particularly those with careers in the arts, he likes games and athletics, preferring golf, tennis, and winter sports. He doesn't like baseball or football, however—and he does like checkers and chess. He still has a passion for gambling, too, though he refuses to play cards with women. But his chief hobby is the French Research

BOYER, CHARLES—*Continued*

Foundation, a library housed in a two-story building which he founded in order to aid Hollywood studios to achieve authenticity in films dealing with France. Boyer earned $350,000 in 1941, but the Foundation must still take a good part of his income. He is an actor with a modesty and lack of vanity rare enough even among masculine stars: "I'm over forty," Charles Boyer says, "and I can see no reason for attempting to conceal it."

BRADLEY, OMAR N(ELSON) Feb. 12, 1893- United States Army officer

Address: b. c/o War Department, Washington, D. C.

Class prophets are seldom more omniscient than any other sort of peerers into the future, but they do enjoy occasional successes. In 1915, the year when Omar N. Bradley was graduated from West Point, *The Howitzer* (West Point annual) gave him the following send-off: "His most prominent characteristic is 'getting there' . . . and if he keeps up the clip he's started, some of us some day will be bragging to our grandchildren that 'Sure, General Bradley was a classmate of mine!'" In May 1943, when Bizerte fell to Lieutenant General Bradley's 2nd United States Corps, all available grandchildren were undoubtedly being told just that. In June 1943 Bradley was promoted to the temporary rank of lieutenant general "in recognition of his record in the Tunisian campaign," and awarded the Distinguished Service Medal. In October, after his leading role in the Sicilian fighting, President Roosevelt '42 nominated him for the permanent rank of brigadier general. (Action on the promotion was postponed because his name was on the promotion list that included General Patton '43.)

Omar Nelson Bradley, who commanded the 2nd United States Corps of General George S. Patton's '43 7th Army during the entire operation leading to the capture of Bizerte and during the Sicilian campaign, was born in Clark, Missouri on February 12, 1893 and named Omar because there were so many Bradleys in Missouri that his mother felt she had to do something drastic to distinguish him from the rest. He was the son of the former Mary Elizabeth Hubbard and of John Smith Bradley, who died when his son was thirteen.

At West Point, Bradley won his baseball and football letters as well as the citation already mentioned, and on June 12, 1915, upon graduation, he was appointed a 2nd lieutenant in the Infantry. Assigned to the 14th Infantry, he served at Fort George G. Wright, Washington, until May 1916, when he was ordered to border duty. He then accompanied his regiment to Douglas, Arizona. A month later he was sent to Nogales in the same state, but in July 1916, promoted to 1st lieutenant, he returned to his station at Douglas. There he remained until September 1916, when he accompanied the 14th Infantry to Yuma, Arizona. On December 28, 1916 he was married to Mary Elizabeth Quayle, an attractive brunette whom he had known since they both attended high school in Moberley, Missouri. Since that time his wife has uncomplainingly accompanied him to twenty-eight different posts.

The first of these moves was in May 1917, when Bradley, promoted to a captaincy, was sent with his regiment to Vancouver Barracks, Washington. In November 1917 he accompanied the regiment to Camp Lewis in the same state, but spent only two months at Camp Lewis before going to Butte, Montana. On June 17, 1918, while still stationed at Butte, he was promoted to the temporary rank of major, and three months later he was sent to Camp Dodge, Iowa. From December 1918 to September 1919, when he was made professor of military science and tactics at South Dakota State College, he was stationed at Camp Grant, Illinois. On January 22, 1920, while still at South Dakota State College, he reverted to his permanent rank of captain for six months; on July 1, 1920 he was, however, promoted to the permanent rank of major. In September 1920 he went from South Dakota to the United States Military Academy at West Point, where he served as an instructor in mathematics for four years. Following this experience he enrolled in the Infantry School at Fort Benning, Georgia, and after he had been graduated from the advanced course in May 1925 he was ordered to duty in Hawaii with the 19th Infantry, Schofield Barracks.

In September 1925 Major Bradley transferred to the 27th Infantry, also at Schofield Barracks, and he remained in Hawaii until May 1928, during the last year in charge of National Guard and Reserve Affairs for the Hawaiian Department, with headquarters at Fort Shafter, Hawaii. He then returned to the United States and enrolled in the Command and General Staff School, Fort Leavenworth, Kansas, from which he was graduated in July 1929. For the next four years he served as an instructor at the Infantry School, Fort Benning, Georgia, in charge of the weapons section. He then entered the Army War College, Washington, D. C., and after being graduated in June 1934 he was assigned as an instructor in tactics at the United States Military Academy at West Point. On June 26, 1936 he was promoted from major to lieutenant colonel. He became plans and training officer at the Academy in July 1937, and continued in this capacity and as an instructor until June 1938.

In June 1938 Bradley was called to Washington, D. C., for duty on the War Department General Staff, of which he became assistant secretary in July 1939. In February 1941 he was assigned to serve as commandant of the Infantry School, Fort Benning, Georgia, and, at forty-eight, he became the first of his 1915 class to be appointed a brigadier general. A year later, with the United States at war, he was promoted to major general (temporary), and was designated as commanding general of the 82nd Infantry Division, Camp Claiborne, Louisiana. In June 1942 he was assigned to the 28th Infantry Division at Camp Livingston, Louisiana as commanding general. He is said to have shown great physical endurance during army maneuvers in the southern states: he ran through obstacle courses and swung across ravines and streams and dangling ropes while enlisted men much younger than he were dropping out.

In February 1943 Bradley was given an unannounced overseas assignment. Soon afterward he wrote to his wife: "It is an interesting assignment. Only temporary, but I hope to make it permanent." During Bradley's first few weeks in North Africa as field aide to General Dwight D. Eisenhower '42 he learned to do without the conveniences (and also many of the necessities) he had been used to, counting himself lucky if he managed to wangle one bath a week. During those weeks he also became the eyes, ears, and feet of General Headquarters, spending much time making long reconnaissance trips by plane or jeep. At the time the Americans were fighting in the south under General Patton's command. Finally, on April 16, the battle moved into the northern hills. Since the new zone of operations assigned to the Americans made the northern drive essentially an infantry fight, and since General Patton was a tank expert and General Bradley an infantryman, Bradley became the new commander of the 2nd United States Corps, which began making its way to Bizerte. The infantry under him "unbuttoned the first button along the front," pushing through a German mine field to take Hill 609. The announcement of Bradley's appointment was not to be made by Eisenhower until May 8, however.

On May 7 the Americans and British captured Bizerte and Tunis, cutting the enemy forces in Tunisia in two. They then continued to fan out from the two cities and bear down upon the confused Axis troops wherever they tried to make a stand. Finally, on May 9 at 11 a. m., General Krause, artillery commander in the Africa Korps, sent word to Bradley requesting an armistice for the purpose of negotiating the surrender of the German forces. Bradley's terms were that the surrender must be both unconditional and prompt, and that all destruction by the Germans of their war equipment must cease immediately. His terms were accepted, and that day at least 25,000 thoroughly beaten Germans surrendered to the 2nd United States Corps. On May 10 Bradley's general order to his officers and men was: "This ends operations for the American 2nd Corps in North Africa."

U. S. Army Signal Corps

LT. GEN. OMAR N. BRADLEY

General Sir Harold R. L. G. Alexander '42 sent the following message to Bradley: "Well done, indeed. I and all the 18th Army Group are delighted at your wonderful success in the north, culminating in the capture of Bizerte. Your Corps has played a major part in this great victory, and I wish to express to every single officer and man in your command my gratitude and thanks." Lieutenant General Kenneth A. N. Anderson '43, who had devised and executed the plan by which the 1st Army completely smashed the enemy, announced: "Well done. Please give my warmest congratulations to the divisional commanders and to all ranks in the splendid finish to the three weeks of hard and unceasing fighting during which the 2nd Corps has grown to full stature as a magnificent fighting machine. I am indeed proud to have had your Corps cooperating so intimately with the 1st Army. You have fought with us so closely on a large and small scale since we landed in Africa six months ago that we all regard you as almost an integral part of the 1st Army, or certainly at least as blood brothers. I only hope that you reciprocate our feelings and that the ties between us will ever grow stronger."

Though promoted to the temporary rank of lieutenant general in June (Bradley's permanent rank was then colonel), Bradley would not pin on his third star until the official orders were actually in his hands. By that time he was taking part in the Sicilian campaign, again as commander of the 2nd United States Corps. Ernie Pyle '41, who spent some time with him in Sicily, had a good deal to say about the General in his daily syndicated column in August 1943. For one thing, Bradley insisted "on keeping his command post up close, sometimes distressingly close, behind the front lines." For another thing, he was the kind of commander whom all the general officers called "Brad" on informal occasions,

BRADLEY, OMAR N.—*Continued*

and who impressed the men who worked under him as the fairest man they'd ever known. His little official "family" (two young captain aids, a sergeant driver, a corporal orderly, and a brigadier general chief of staff) were particularly devoted to him. This did not mean, however, that Bradley was at all easy going: he remained mild and polite whatever happened, but with him one had to either deliver the goods or get out.

In Sicily, Bradley lived in an army truck fixed up inside like a tourist trailer, where he sat alone at night for hours studying the map of Sicily, thinking and planning out moves for the morrow. During vital periods of each campaign he would come to the newspaper correspondents' camp and give them as complete a picture of the situation as he could. Although a modest, soft-spoken man, so unpretentious that he didn't even own a Sam Browne belt or dress cap, Bradley didn't mind public speaking at all, and when in September he found himself back in the United States for a visit he spoke before the American Legion convention as frankly as he had spoken to the correspondents. He announced that since his return he had been most struck by the sentimental view many civilians seem to take toward fighting Germany, regarding it as "a sporting proposition like a football game." "I can assure you," General Bradley said, "that your soldiers fighting at the front have no such sentimentalism toward the Germans"; and he cited more than one instance of German treachery in battle.

In November 1943 London sources reported that Bradley would probably head the American field forces in the anticipated western invasion.

Tall and lanky, Lieutenant General Bradley is getting bald on the top of his head, and the rest of his hair is cut short and sprinkled with gray. He wears faintly tinted tortoise-rimmed glasses. He is, according to Delos W. Lovelace of the New York *Sun*, "a quiet gentleman who might pass for a professor. His wide forehead is cerebral; his long narrow face full of thought." He is, however, "good at everything": a champion skeet shooter, an excellent golfer and bridge player, and an ardent hunter and fisherman. His favorite book is *Ivanhoe,* and he reads it at least once a year. He never misses a big league baseball game if he can help it. He doesn't smoke, and he drinks and swears only in moderation. He doesn't speak any foreign languages, and the Middle West is still in his vocabulary ("fighting to beat the band", "horse of another color").

Besides being a master tactician on the battlefield, Bradley is the sort of man who remembers birthdays, who sends flowers on Easter and Mother's Day, and who is a faithful member of the Christian Church and a Mason. He is, in other words, a family man. Mrs. Bradley said, after hearing of the Bizerte victory: "Now I am so proud of him. It makes up for all the long months of waiting to hear what he was doing." As for his daughter Elizabeth, a student at Vassar, she was equally proud, but a little disturbed, too. For a while her fellow students, placing their trust in heredity, called on her to answer all their questions that had to do with the War—from its probable length to the proper tactics on mountainous terrain.

Who's Who in America 1942-43
Who's Who in the Regular Army 1925

BRERETON, LEWIS H(YDE) (brăr'tən) June 21, 1890- United States Army officer

Address: b. United States War Department, Washington, D. C.

An army officer who has seen action in nearly every one of the major theatres of operation in the Second World War, Major General Lewis H. Brereton, former American commander for the Middle East Area, has been mentioned in late 1943 as the possible chief of a totally reorganized American tactical air force in Europe. Brereton is a flying and fighting general who has tangled with both German and Japanese aircraft on numerous occasions. In the summer of 1943, as commander of the 9th Air Force, he directed the spectacular air raid on the Ploeşti oil fields in Romania, inflicting what was described as "a crippling blow at Germany's main source of oil." He believes that Allied forces must strike directly at the heart of Germany and once told an interviewer: "If you want to win the War, you must keep hammering at Germany itself from the air and . . . thrusting ever closer to it on the ground."

One of the youngest officers ever to attain the rank of major general in the United States Army, Lewis Hyde Brereton, the son of William Denny and Helen (Hyde) Brereton, was born in Pittsburgh, Pennsylvania, June 21, 1890. When Brereton was thirteen the family moved to Annapolis, Maryland, but, in spite of his surroundings, he was not prejudiced in favor of a naval career. After two years at St. John's College in Annapolis (1905-1907), young Brereton took the competitive examinations for both West Point and Annapolis. He had openly expressed his preference for the Army but, "coming out second best in the exams, he had to take 'what was left'—in this case the Naval Academy, which he entered in 1907." But Brereton's heart was not in the Navy. He confessed very frankly "that he was a natural-born landlubber; the sea made him, literally, very sick." Nevertheless, he remained at Annapolis, graduating in June 1911.

Brereton's career as an ensign was shortlived. Owing to "a peculiar military situation" which existed in 1911, the United States Army found itself short of its required number of 2nd lieutenants, while the Navy found itself with too many ensigns. It proved a happy turn of events for Brereton, for he promptly resigned from the Navy and on

August 17, 1911 was appointed a 2nd lieutenant in the Coast Artillery Corps.

The young lieutenant spent a year in the artillery and on September 3, 1912 was transferred to the aviation section of the Signal Corps. Flying was then in its infancy, and Brereton "became one of the pioneers of American aviation," even serving on the staff of the air-minded General Billy Mitchell. (Brereton was later one of the counselors at Mitchell's court-martial.) He learned to fly at the Signal Corps Aviation School in San Diego, California. By March 1913 he qualified as a military aviator and shortly afterward was relieved from duty with the Signal Corps.

Brereton's first overseas assignment was the Philippines. For a while he served in the 2nd Field Artillery there and in 1916, now a 1st lieutenant, he was re-detailed to the Signal Corps, 2nd Aero Squadron. He remained in the Philippines until March 1917. After a few months of service in the office of the chief signal officer in Washington, D. C., Brereton, eager to return to flying, took additional training in the Signal Corps Aviation School in Mineola, Long Island. His training completed, he was ordered to France in October 1917. There he saw both combat and staff service. In March 1918 he was placed in command of the 12th Aero Squadron, "one of the first American flying units on the front," and was in the thick of action in the Toul and Lunéville sections and in the attack at Vaux. For his work at the front Brereton was awarded both the Distinguished Service Cross and the Purple Heart. He is inclined to dismiss these honors lightly, saying of the first that he got it "trying like hell to get home when some Huns got in the way," and of the second, which he received after he was shot down over Saint-Mihiel: "You rate it for being dope enough to intercept an enemy bullet."

On October 26, 1918 Brereton was made operations officer on the staff of the chief of Air Service of the A. E. F., and when the Armistice was signed he became chief of staff in the Air Service of the 3rd Army, serving in Germany with the Allied Armies of Occupation. After a brief interlude as chief of the Operations Division, Training and Operations Group, in Washington, Brereton, then a major, returned to France as an air attaché at the American Embassy in Paris. He remained in Paris for two years, learning "to speak fairly voluble French with a good Parisian accent" and acquiring "a taste for fine wines and good food which has never deserted him."

The years between the two World Wars were fairly uneventful ones in Brereton's career. In 1922 he was assigned, as commanding officer of the 10th School Group, to teach flying at Kelly Field in Texas. In 1924 he was transferred to Langley Field, Virginia to teach at the Air Corps Tactical School. In June of that year he became commanding officer of the 2nd Bombardment Group there and he served in that capacity until August 1927, when he went as a student to the Command and General Staff School at Fort Leavenworth, Kansas. Upon his graduation a year later Brereton was assigned to duty as commanding officer of the 88th Observation Squadron at Post Field, Fort Sill, Oklahoma, where he instructed in the Field Artillery School.

MAJ. GEN. LEWIS H. BRERETON

Late in the summer of 1931 Brereton was sent to the Panama Canal Zone in command of the Panama Air Depot and of France Field, and as acting air officer of the Panama Canal Department. He spent four years in the Canal Zone, returning to the United States in 1935 as a lieutenant colonel, to serve as instructor in the school where a few years before he had been a student, the Command and General Staff School in Fort Leavenworth. Advanced to the rank of colonel (temporary) on August 26, 1936, Brereton remained at Fort Leavenworth until 1939. By this time, in spite of his outspokenness, his occasional "cockiness," and a tendency to laugh at rules and regulations, Brereton had come to be recognized as "one of the few highly qualified United States experts on aerial bombardment," and when the Second World War brought with it the realization that the Germans were planning to make air bombardment the dominant feature in their war against the Allies, Brereton was made a brigadier general (temporary) and placed in command of the 3rd Air Force in Tampa, Florida.

He remained in Florida until November 1941, just one month before the Japanese attack at Pearl Harbor, when he was sent to the Philippine Islands as commander of General Douglas MacArthur's '41 Far Eastern Air Force. In the few terrible weeks that followed the United States declaration of war, Brereton learned more about aerial warfare than ever before. In command of a flying fortress unit, he experienced the bitter discouragement of having "too little, too late." He remained in the hopeless fight for three weeks and by Christmas 1941, in order to save what was left of the fortresses and their crews, he flew to Java with his unit and joined Britain's General Archibald Wavell '41.

Here too he met discouragement and defeat. Although he sent his men into what *Time*

BRERETON, LEWIS H.—*Continued*

Magazine called "brilliant but unavailing raids and battles over the Indies, the Java Sea, the Strait of Macassar," he was finally obliged to withdraw with General Wavell to India and "there build a force to strike at Japan through China." In India General Brereton's struggle against the Japanese proved more effective. By April 1942 American planes were striking at Japanese bases in Burma and the Andaman Islands. Although he usually deplores "joy rides on the part of generals," Brereton himself led the raid on the Andamans, later receiving the Distinguished Flying Cross for his action. When the General stepped out of his plane at the end of the raid, he announced to his men: "Boys, bombing Japs makes me feel *damned* fine!"

As commander of the United States Air Forces in India, Brereton was faced with the gargantuan administrative task of "assembling, from 12,000 miles away, fighting, ferrying, and cargo-flying services under the American flag in India." Working in an air-conditioned office in New Delhi, Brereton impressed his British colleagues with his prodigious memory, his energy, and his ability to swear in at least four languages.

Unlike many other Army officers, Brereton's service has not been limited to one theatre of operations. He has struck at the Rome and Berlin as well as the Tokyo end of the Axis. By the winter of 1942 Brereton was in Cairo, Egypt at the head of the 9th Air Force, bombing the enemy through Libya and Tunisia. Then, on February 7, 1943, it was announced that Major General Lewis H. Brereton was to succeed the late Lieutenant General Frank M. Andrews '42 "as commander of the United States forces in the Middle East," in charge of all branches of operations in that area.

Brereton remained a flying general and received a citation from the War Department in the fall of 1943 for "meritorious achievement while participating in aerial flights between April 2, 1942 and July 11, 1943," flights which, according to the Department, "inspired his command to even higher levels of operational efficiency."

For months during the spring and summer of 1943 General Brereton was engaged in organizing and planning the raid on the Ploeşti oil refineries in Romania. He had to estimate how many planes were needed and whether the planes could fly at a level low enough for bombs to inflict the most damage. Upon the completion of the raid, Brereton stated with justifiable pride: "We are satisfied that Ploeşti has been seriously damaged. The enemy, therefore, may have been deprived of the major portion of the refining facilities through which passed one-third of his entire supply of oil products for his planes and mechanized ground forces on the Italian and Russian Fronts."

As the Allied advance penetrated deeper into Sicily and then into the Italian mainland, General Brereton urged that all Allied energies be directed against the heart of Germany. "Lopping off the arms," he said in an interview, "such as Italy and the Balkan peninsula, would be a process which in itself would serve to protract the war effort and delay our getting at the other job, because of the immense amount of shipping and manpower required."

In the fall of 1943 Brereton was relieved of his Middle East Command by Major General Ralph Royce. Informed circles revealed that Brereton was expected to head "an American tactical air force in support of large-scale European operations" from England.

Major General Brereton is known to his men as a tough but good-humored commander. "He is noted for his driving energy and his impatience at any sort of delay. He always seems to be in a hurry. . . His terse, clipped speech conveys the impression of energy held in leash by a supreme effort of will. . . As a commander . . . he is a disciplinarian and seeks respect rather than sentiment from those who serve under him. . . His prime concern is fighting the War, and he does not encourage any mollycoddling." Youthful looking, bespectacled, and slight in build, Brereton is firm in his ideas but, according to Erika Mann '40, completely lacking in "forbidding reserve" and pretension. He has been married twice. In 1913 he married Helen Willis, by whom he had two children, Lewis Hyde Brereton, Jr., and Elizabeth Denny (Mrs. Charles Lord). In 1929 the Breretons were "amicably divorced," and two years later, on February 20, 1931, he was married to Icy V. Larkin.

Brereton has received many decorations during his career. Besides the Purple Heart, the Distinguished Service and Distinguished Flying Crosses, he holds the Croix de Guerre with two Palms from the French Government, and he is an officer of the French Légion d'Honneur, a Commander, 1st Class, in the Montenengrin Order of Danilo, and a Chevalier in the Order of Albert of Belgium.

BRICKER, JOHN W(ILLIAM) Sept. 6, 1893- United States Government official

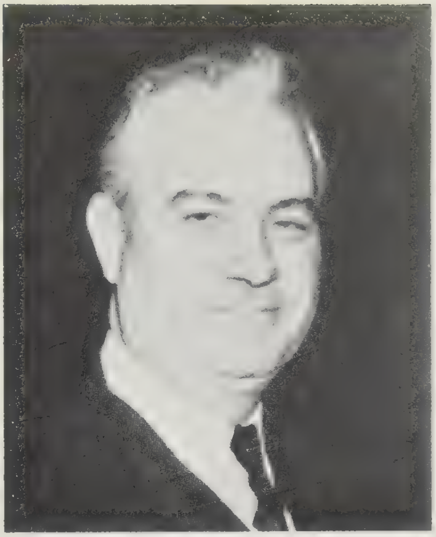
Address: b. State House, Columbus, Ohio; h. 1234 E. Broad St, Columbus, Ohio

Since the American Civil War there have been eighteen Republican conventions, and in eleven of them native Ohioans have been nominated for the Presidency of the United States. (Seven Ohioans have been President.) Many Republicans believe that after this War, like after the last, Americans will be in the mood to vote for "normalcy," and that in this case "normalcy" will again come in the shape of a gentleman from Ohio—"an honest Harding," as some call John W. Bricker. Bricker is the first Republican ever elected to three consecutive terms as Governor of Ohio and in November 1943 he also became the first to announce officially that he would be a candidate for the Republican Presidential nomination in 1944. Bricker's candidacy is supported by Senator Robert A. Taft '40 and his friends, and only Governor Thomas E. Dewey '40 seems to have aroused more enthusiasm among members of the anti-Willkie '40 wing of the Republican Party. Bricker "believes in American individualism, help for business, decreased costs in government, States' rights, more interest in local government, labor unions with greater responsibility to membership, and higher taxes, if necessary, to balance the budget." He is staunchly opposed to the New Deal and its "bureaucracy." He believes that "public money is trust money"; that "a candidate should be bound by his party platform"; that "if every man sweeps his own doorstep the whole world will be clean." As for our foreign policy, it "should be based on our traditional freedom of action at all times," though there should also be "responsible participation by the United States in post-War cooperative organization among sovereign nations."

John William Bricker's career has a reassuringly "typical American" sound. He was born on September 6, 1893 in Madison County, Pleasant Township, Ohio, the son of Lemuel Spencer and of Laura (King) Bricker. His parents lived on a medium-sized farm about twenty-five miles from Columbus, and he attended a one-room schoolhouse a mile and a half away. After being graduated from high school he taught school for a year in order to get enough money to enter Ohio State University, where he soon acquired a reputation as a debater and as a baseball catcher. During his first year there he commuted from the farm, where he continued to do the morning and evening chores. Already an accomplished politician, he was president of his class one year, led the YMCA, and knew everyone on campus by his first name. (He himself was called "Brick" Bricker.) He received his B. A. degree in 1916, and the following year he was admitted to the Ohio Bar.

America entered the First World War the same year (1917). Bricker was rejected by the Army, the Navy, and his draft board because of a slow heartbeat, and finally he volunteered for YMCA service. He was assigned to Camp Sherman, near Chillicothe, Ohio, as athletic instructor for the 329th Infantry, 82nd Division. When the "Y" failed to send him overseas he hopefully got himself commissioned a 1st lieutenant in the chaplain corps (he was certified for duty by the Congregational Christian Church), but he was sent to Virginia, not France, as spiritual adviser to influenza victims. After his discharge he returned to Ohio State University, where he acquired his LL. B. in 1920. On September 4 of that year he married Harriet Day, who had been graduated from his Alma Mater in 1919. He then "hung out his shingle and began courting invitations to speak at high school commencement exercises."

From 1920 to 1932 Bricker served continuously as a Republican bureaucrat—"an appointee, an organization man." (As a matter of fact, he has spent only three of his working years off the public pay roll.) From 1920 to 1928 he was solicitor of Grandview Heights, a suburb of Columbus, and in 1923 he was also appointed Assistant Attorney General. He resigned this last post and returned to practice in 1927, prosecuting a number of utility rate cases for the larger cities of the state, and in 1929 the Governor of Ohio appointed him to the Public Utilities Commission. In one rate case he voted against Columbia Gas and Electric's exorbitant schedule, and this later helped him considerably with the farm vote. He also helped Wendell Willkie put across a recapitulation plan for his Akron client, which became a member of Commonwealth and Southern. Altogether he participated in more than 150 cases, a number of which he argued before the United States Supreme Court.



JOHN W. BRICKER

In 1932 Bricker was elected Attorney General of Ohio, although Roosevelt '42 carried the state that year. He took office on January 1, 1933, the year of the Bank Holiday, and his office had a great number of suits to bring. In 1934 he was re-elected to this office against a heavy Democratic drift. By December 1935 he was being discussed as likely temporary chairman of the Republican National Convention and he was seeking the Republican nomination for Governor, his record not at all hurt by the fact that during his two terms as Attorney General he had collected more than $6,000,000 in delinquency claims for the various state departments. He was defeated in the 1936 gubernatorial campaign, a campaign which was devoted mainly to local issues, but by only 100,000 votes (Roosevelt carried the state by 600,000), and in 1938 he received the Republican nomination again. The Democratic candidate was backed by the C. I. O., and Bricker made much of his rival's "radical" support. He was easily elected in November 1938, and he almost immediately found

BRICKER, JOHN W.—*Continued*

himself being talked about as a possible 1940 Presidential nominee.

The previous administration of Martin Davey had been popular with almost no one. Before Bricker had been much more than a month in the gubernatorial mansion 2,000 of the state's 20,000 employees had been laid off as "useless," and Davey's first six months' budget had been slashed by $3,000,000. The former Attorney General also cleaned up many corrupt practices. Leading Republicans kept their eyes on him, nodding approvingly at his speeches that year. He talked of the danger of an increasing Federal tax burden. He told a *Newsweek* representative: "The paternalism of the New Deal has weakened the old homely virtues of initiative and self-reliance." He warned: "The citizen of America today is conscious of the fact that he is working one day out of every four for his government. It is too much. We must start back the road to economy and frugality in government if economy and frugality are to be the rule in the life of the individual citizen. America has been builded by work and thrift. America can be saved by the same sound principles of living." As for foreign policy, Ohio's Governor spoke of the desirability of a policy of non-interference in foreign affairs. "Greedy aggressor nations are at the throats of their neighbors. . . The Americans should stick together," he was quoted. When, in the fall of that year, neutrality legislation was being debated, he refused to take sides, merely saying that we should not be drawn into any foreign war.

In the fall of 1939 came the Cleveland relief problem, which made Bricker nationally known. The crisis arose after a tremendous reduction in the WPA rolls had almost doubled the state relief rolls. Cleveland grew short of money for its needy and asked Bricker to call a special session of the state legislature to vote more money. Bricker refused to do this, saying that relief was essentially a problem for the big unemployed centers to handle locally, blaming the situation partly on WPA political manipulation, and suggesting that Cleveland collect delinquent real-estate taxes and fire employees in order to raise funds. Meanwhile, there were similar relief crises in Toledo, Youngstown, Lima, Dayton, and other industrial centers. The Federal Government finally rushed in with food and allotments of WPA funds, Cleveland sold $1,000,000 worth of relief bonds, and the state put up $450,000 for relief; but not before there had been much name-calling on both sides. Raymond Clapper '40 said that Ohio owed Cleveland more than enough to pay her relief bill, attacked the state legislature for having restricted Cleveland's taxing power and then having refused relief, and charged that Bricker, backed by Joseph N. Pew, Jr. '41 (the Pennsylvania oil magnate), was manipulating the crisis in order to build himself up as a Presidential candidate for 1940 on an economy ticket. According to Raymond Moley, "to hear supposedly impartial commentators tell of that battle when it was at its height, you would have thought of Bricker as a kind of Silas Marner, gleefully fondling the state money while the hungry people of Ohio were dropping like flies."

In November 1939, in the midst of this row, a Chicago group once closely associated with Frank O. Lowden had formed a "Republican Volunteer Committee Sponsoring Governor John W. Bricker for President." (Bricker quickly disowned the movement, and the offices were soon closed.) According to Ludwell Denny, Bricker was also Pew's original dark horse candidate. Robert A. Taft, however, got a long start on him, and at the 1940 Republican Convention Bricker's friends subordinated his somewhat nebulous candidacy to that of Taft. Bricker returned to Ohio to run again as Republican candidate for Governor.

He quickly called a special session of the Ohio legislature. He asked for $1,400,000 for relief and another $1,000,000 to put 16,000 applicants for old-age pensions on the rolls; he asked that the monthly pension allowance be raised from $30 to $40; he demanded permission to use $800,000 in Federal funds for dependent children. Although his legislature had beaten every single labor bill, in the eyes of liberals this move helped to repair some of the damage to his candidacy done by his attitude in the relief crisis—particularly since this year the Democrats nominated ex-Governor Davey, who had broken the Little Steel strike, and whom the C. I. O. was anxious to bury politically. Bricker was already a national hero in the eyes of business and was the leader of the local farm bloc, and the total result was that in 1940 he was elected to the Governorship by a margin of 364,000.

Once more he received favorable publicity. He stressed the $25,000,000 surplus that had grown out of the $40,000,000 deficit he had inherited, pointing out that village and township taxes were also low. He continued to play safe on the international situation by saying little about anything happening outside Ohio except the danger of Federal assumption of State power. He made a number of liberal moves like the appointment of a Negro to a vacant judgeship in Cleveland. The Republican upsurge in November 1942 helped him, too, and he was elected Governor for the third time by a larger majority than ever before: 375,000 votes. That same month he was named in the Gallup '40 poll on Republican Presidential candidates in 1944, and the next month Taft announced that he was withdrawing from the 1944 competition in favor of Bricker. "John Bricker loyally supported my candidacy in 1940," he announced in his statement of December 4, 1942, "both in the primary campaign and in the Convention. I intend to do the same for him in 1944 if he decides to run for the Presidency."

To *Time* Magazine this all meant that there was an "anti-Willkie plot" afoot, "with most of the Party's top leaders firmly united (perhaps behind Bricker, perhaps behind someone as yet undisclosed) to stop a repetition of 1940's Philadelphia Convention." On January 28, 1943, as chief orator at the banquet which wound up the McKinley centennial in Canton, Ohio, Bricker addressed 600 guests from a replica of the front porch on which McKinley began his Presidential campaign in 1896. His keynote was that the world needed another leader like McKinley (who, like Bricker, was an Ohioan, a lawyer, and a Republican Governor of his state). In March Bricker and Jim Farley attended a luncheon given in their honor by a Cincinnati businessman and were photographed together, Farley's arm around Bricker's shoulder. The Republican editor of the Emporia *Gazette*, William Allen White '40, immediately snorted: "[Governor Bricker] is a man who is trying to capitalize the tremendous discontent among Republicans and Democrats who hate the New Deal. He is trying to use that discontent to rally a majority in the election of 1944. In that election he hopes to get by without saying anything, without getting on either side of the momentous questions of the hour—domestic and foreign.

"Surely the Republican Party ... cannot be so craven that it would conspire to sneak into victory with no issue but Bricker and a bellyache.

"Bricker is an honest Harding. Thumbs down!"

Much of White's anger had been directed against Bricker's ambiguity when speaking of international issues. By January 1943 he had made no statement on foreign policy more definite than that he didn't think any country could build up enough military power to remain entirely independent of other nations after the War. Two months later he urged "cooperation" in international affairs, but "cooperation without commitments." On April 7, when he addressed the Academy of Political Science in New York City, his statement that the United States "is not, never has been, and never will be an isolationist nation" was widely quoted in the press—sometimes to show that he was not an isolationist, sometimes to show that he was not an internationalist, but most often to show that he had the habit of evasion.

Bricker's idea of America's proper place in the post-War world did not become much more clear after the Midwest Council of State Governments' conference on post-War planning at Chicago later in April, for there he chiefly warned against the surrender of States' rights to the Federal Government, and pronounced himself optimistic about post-War employment. In a speech made in June he revealed only that "our position in the world depends upon policies and principles which we pursue within our borders," and that our domestic policy discourages foreign trade; but the day after the Governors' Conference at Columbus later that same month he finally plumped for American participation in an international organization to preserve peace. Since two months before he had announced that "no sane man would think of wiping out national lines or subordinating his own government to a foreign authority," even this did not satisfy the curiosity of Willkieites, however.

In the meanwhile Bricker's opponents were busy attacking his record as Governor, too. They complained that when the State legislature convened on January 11, 1943 Bricker had recommended scores of measures, but that few of them had been enacted. (The repeal of the tax on food was rejected, for example, although a bill to set Ohio back on Standard Time was passed after weeks of debate and later signed by Bricker despite protests from many cities.) They complained that the cost of State government had risen constantly since Bricker became Governor, his latest budget having been higher than that of New York State, which has nearly twice Ohio's population. They complained that although the condition of the feeble-minded in Ohio was worse than in any other state in the Union, and although many war workers were remaining at home to care for their children through lack of day nurseries, Bricker insisted on keeping intact the famous surplus. They complained that the liquor situation was so muddled that Ohioans had become bootleggers; they complained that the issuing of automobile licenses had been "farmed out" to Republican regulars, who received an extra fee of 25c each; and, as always, they complained of the three per cent sales tax as unfair to lower income groups.

By September, when a poll of the American Institute of Public Opinion revealed that only eight per cent of all Republicans would prefer Bricker as their Presidential candidate in 1944, the Ohioan Governor's candidacy seemed to have lost considerable ground. Nevertheless, in October 1943 Senator Taft formally declared himself out of the 1944 race and announced that he would support Bricker. On November 10 Bricker himself announced that he would enter the Ohio Presidential primaries on May 9, 1944, and five days later he revealed that he would not be a candidate for a fourth term as Governor. He later announced that he believed the nation's foreign policy a proper subject of debate in the forthcoming political campaign, saying that the Republican Party ought to take a "definite stand on foreign issues and let the country know what that stand is."

What are Bricker's chances? According to *Fortune* Magazine, "the Pews, the du Ponts, Cleveland's powerful Hanna interests (which are affiliated in business with Ernie Weir's '41 National Steel), the mighty and stormy Columbia Gas and Electric, and all the rest are for him as hard as they can be. Not only does Bricker make no secret about this; he is proud of it." According to *Fortune*, too, Bricker "has no more information or philosophy about world politics than the average small-town Ohio lawyer . . . he is not even expertly informed about Washington or national affairs. World affairs are even more remote. It is a point of pride with him that he has concerned himself with Ohio affairs and nothing else." Many commentators, however, think that both Bricker's powerful financial backing and his own provincialism will be assets when it comes to getting votes. Bricker himself says that he would welcome the support of the du Ponts, the Pews, Ernest Weir '41, and the Chicago *Tribune*. He also says that if he were elected, he would depend on "the best advice I could get" on international matters. (He has "a profound respect for Mr. Hoover's '43 advice.") In the fall of 1943 *Newsweek's* Raymond Moley was said to be helping him with his speeches, and

BRICKER, JOHN W.—*Continued*

it was hinted that Moley might also be responsible for the Governor's idea that the next G. O. P. nominee should commit himself to one term only.

Ohio's Governor has personal assets, too, when it comes to getting votes. He is the first American Legionnaire who has ever been elected to the Ohio Governorship. Even his enemies have not been able to accuse him of the slightest dishonesty in financial matters. The Ohio sales and liquor taxes as well as Federal spending, which he attacks so bitterly, have helped him to go in for "economy" with great success: on January 11, 1943 he could report that "there is in the general revenue fund of the state a net surplus after all bills are paid of $42,000,000." (By November 1943, with "snowballing tax receipts in wartime," this had grown to $65,000,000.) He is a dry. He is a devout churchman. He is a family man. He is a "joiner"—a thirty-third degree Mason, or a Shriner; a member of Delta Chi and of Delta Sigma Rho; a member of the Faculty Club at Ohio State University, and of the Torch, Athletic, Kit-Kat, University, Scioto Country, and Rotary Clubs; a member of the American, Ohio State, and Columbus Bar Associations. He is handsome "in a luncheon-club way," six feet two, with prematurely white-gray hair. He has a sonorous voice, and is a good speaker. And, as Raymond Moley put it in 1940: "Governor Bricker may not be a man of the century. But, after all, who is?"

BRICKNER, RICHARD M(AX) Nov. 20, 1896- Neurologist; author

Address: b. 1000 Park Ave, New York City; h. 555 W. 227th St, New York City

"The national group we call Germany behaves and has long behaved startlingly like an individual involved in a dangerous mental trend." This trend is a paranoid one, "the only mental condition that frightens the psychiatrist himself—because, unless checked, it may end in murder." Briefly stated, this is the thesis of Dr. Richard M. Brickner, distinguished neuropsychiatrist and author of one of the most controversial books on the present War that has yet been published, *Is Germany Incurable?* (1943).

A heated debate on "what is to be done with Germany after the War?" has been raging ever since 1939 when war broke out. Dr. Brickner's contribution to the debate is, in his own words, "an attempt to apply psychiatrists' and neurologists' understanding of human conduct to the world scene in an effort to make sense for the present and hope for the future out of 'German aggression' which, for the second time in most of our lives, is terrorizing the world."

Is Germany Incurable? represents Dr. Brickner's first publication of a medical subject for the lay public. Before its publication, however, he had already established a reputation for himself as neurologist, professor, contributor to medical journals, and author of one scientific study, *The Intellectual Functions of the Frontal Lobes; a Study Based upon Observation of a Man after Partial Bilateral Lobectomy* (1936).

Richard Max Brickner was born in New York City on November 20, 1896, the son of Dr. Samuel and Josephine (Hays) Brickner. He attended schools in New York, taking his Bachelor of Science degree at Columbia University in 1917. He received his medical training at the Columbia University College of Physicians and Surgeons, and was awarded his M. D. in 1923. For the next two years Brickner served as an intern at Mount Sinai Hospital in New York City. The National Research Council named him Fellow in Pathology in 1925 and he continued his studies in neurology, going to Amsterdam, Holland, in 1927, to study neuro-anatomy.

Upon his return from Europe, Dr. Brickner served in the neurological division at Montefiore Hospital, and as Associate Attending Neurologist at Vanderbilt Clinic and at the Neurological Institute of New York. Since 1928 he has been on the faculty of the Columbia University College of Physicians and Surgeons, first as associate, then as assistant professor of clinical neurology. In addition to holding these positions and to maintaining his private practice, Dr. Brickner serves as chairman of the Committee on Convulsive Disorders of the New York Commission on Mental Hygiene, and with several committees connected with neuropsychiatric aspects of the war effort.

On July 1, 1925 Dr. Brickner was married to Ruth Helen Pilpel, a psychiatrist. The Brickners have three children, Philip Walter, Richard Pilpel, and Marian.

The idea for *Is Germany Incurable?* came to Dr. Brickner in 1927, long before the Nazis had seized power. He was impressed by the paranoid trend which manifested itself, not merely under Hitler '42, but "throughout at least five generations of German history." As the Nazis grew stronger in Germany, Brickner began to ask himself whether the symptoms of paranoid trend which he had observed in his own patients could not be found in the German nation itself. He saw Germany as a case history, an example of group paranoid trends. Germany's symptoms, he writes, were those of the individual victim of that trend—megalomania ("an exaggeratedly high opinion of one's own importance"), the need to dominate (which explains Nazi theories of "superior" and "inferior" races), the persecution complex and projection (putting the blame for the country's misfortunes on "scapegoats"), and "retrospective falsification" (illustrated by the Nazi claim, "Germany never lost the First World War").

Delving back into German history, Dr. Brickner cites such varied figures as Fichte, Hegel, Richard Wagner, Houston Stewart Chamberlain (English-born German author and Richard Wagner's son-in-law), and Kaiser Wilhelm II as forerunners of present-day Germany's paranoid trend. He does not suggest that all Germans are paranoid, but that adherents to the cultural paranoid trend dominate German life—"Thus paranoid attitudes have increasingly been brought into the main current of German life, while non-paranoid attitudes—and individuals unable to conform to paranoid attitudes—have been pushed farther and farther into the backwaters."

In answer to his own question, "Is Germany incurable?" Dr. Brickner says that if the non-paranoid tending groups within Germany are put in positions of power, there is hope that Germany will cease to be a menace to world peace. The cure lies in the application of psychiatric methods to the German people. He writes: "The victors must cast Germany in the role of ward of the world and diligently lay the groundwork for reducing her paranoid tendencies to a point where she would become a reasonably safe neighbor."

The publication of *Is Germany Incurable?* brought forth a host of comments, favorable and unfavorable. Marquis James called it "one of the War's great books," and Wallace R. Deuel '42, writing in *Books*, commented, "Dr. Brickner writes remarkably clearly and simply and has a gift for vivid figures of speech and turns of phrase that make the most technical points easy for the layman to understand." The *Saturday Review of Literature* devoted part of its issue of May 29, 1943 to a panel discussion of the book. Among the participants in the discussion were Horace Kallen, who objected to Dr. Brickner's generalizations, saying: "There is ground for believing there survives in Germany a culture of the people . . . which is not only different from but opposed to the *Kultur* of the *Polizeistaat* (state ruled by the police)," Dr. Gregory Zilboorg '41, Frank Kingdon, and Erich Fromm, all of whom disagreed with some of Dr. Brickner's arguments, and Sigrid Undset '40 who hailed it as "the most important contribution that has appeared up to now to the solution of that problem that will have to be faced after Germany is defeated—what to do with the Germans." The controversy continued in the letter columns of the *Saturday Review* for months.

On the whole reviewers were critical of Dr. Brickner's conclusions, while admitting that his thesis was stimulating and important. His generalizations about the character of the dominant segment of the German people, however, met with some disapproval as being "non-scientific." But, as anthropologist Margaret Mead '40 wrote in the introduction to *Is Germany Incurable?* "Dr. Brickner has been unusually brave to write it. He has dared to come out of a field—that of neuropsychiatry—where he could have lived quite comfortably with all the trappings of conventional reputation, into a field so broad that no one today commands the details."

In September 1943 Dr. Brickner participated in a symposium on "How Must We Deal with Germany after the War to Win the Peace?" under the auspices of *America's Town Meeting of the Air*. He urged the identification of the true Nazis and their internment in institutions or placement in labor battalions to repair the damage of the War.

Dr. Brickner is five feet eight and one-half inches tall, weighs 180 pounds, and is fair complexioned. His hobbies are fishing and geology, but he cannot devote much time to them as his work in progress includes studies on the relation between the brain and thinking, studies on multiple sclerosis, as well as studies of Germany and the psychiatric aspects of war and peace.

BROADHURST, HARRY 1904(?)- British Air Force officer

Address: c/o Ministry of War, London, England

Air Vice-Marshal Harry Broadhurst, who succeeded Air-Vice Marshal Sir Arthur Coningham as commander of Allied Air Forces in the Western Desert, is a veteran fighter pilot with more than 600 operational hours to his credit. He is also the youngest air vice-marshal in the history of the Royal Air Force. Before his appointment to his present post he had not only led the first squadron of Hurricanes ever formed but had worked out much of the combat tactics of the R. A. F.'s Fighter command and had supervised the training of many of the squadrons which helped win the Battle of Britain.

Broadhurst was born at Frimley in Surrey, England, and he was educated at the Portsmouth Grammar School. A military prodigy from the beginning, as early as 1926 he had already made a successful start for himself as a 2nd lieutenant in the Royal Artillery. Despite parental objections he changed over to the Air Force in that year, becoming a pilot officer. Eleven days after his transfer he suffered the first and most serious crash of his career. His parents, whose opposition to the Air Force had been based on the fact that there was "no future in it," no doubt felt quite justified.

Broadhurst was first mentioned in dispatches in 1931 for his services on the Northwest frontier of India. In 1932 he was promoted to flight lieutenant. He served in Egypt in

British Official Photo

AIR VICE-MARSHAL HARRY BROADHURST

1934 and by 1937 he was a squadron leader. Before the Second World War broke out, however, he was chiefly known as an "aerobat." At a Hendon air pageant he led a flight in which three planes, roped together, performed daring aerial feats. After attending the Northolt flying exhibition in 1936 in which Broadhurst's exploits were featured Edward VIII is reported to have remarked that it was "the most wonderful flying exhibition I have ever seen." The daredevil flier had led three planes tied together with rope through intricate acrobatics.

Broadhurst took part in the Battle of Britain and in the air action over Dunkerque. In the Dieppe Combined Operations raid he was sent alone in a Spitfire to observe the operations at Dieppe. His sole mission was to report on the air battle, not to fight. In a "few odd moments," however, when the opportunity was his, he shot down one enemy plane and badly damaged three others. At that time he was only a group captain.

In January 1940 Broadhurst was awarded the Distinguished Flying Cross with the following citation: "This officer was on command with a squadron at an East coast aerodrome when informed that enemy aircraft were approaching. The weather was not fitted for formation flying, so despite rain and clouds at ground level, he took off alone, flying blind with instruments.

"Emerging above the cloud banks, he sighted an enemy plane and attacked it. The Nazi turned over on his side and dived vertically into the cloud bank. Broadhurst followed closely, and narrowly escaped crashing his own plane into the sea. When he returned to his home station he was fog-bound and had to make three attempts before he could finally land at the airport." Broadhurst was awarded the Distinguished Service Order for his services in the Battle of Britain. For his work in the battle over Bethune, France, he was decorated with the bar to his D. S. O., and for his part in the Dieppe raid he received the bar to his D. F. C.

Air Vice-Marshal Broadhurst is credited with the development of the air fighting tactics which saved England during the battle of Britain. He had charge of the tactical training of the squadrons that later played a big part in winning the battle. In 1941 he visited the United States and attended the American Air Corps maneuvers attached to the No. 1 Pursuit Group. While in the United States he flew what was then the only model of the Thunderbolt fighter.

In October 1942, with more than 600 operational hours and twelve enemy planes to his credit, Broadhurst was transferred to the Middle East, where he assisted Vice-Marshal Coningham, then commander of the Western Air Forces. In February 1943, when Coningham went to Tunisia, Broadhurst took over his command. Since his arrival in Cairo his attention has been directed chiefly to ground support tactics. He is a specialist in "the use of aircraft as mobile artillery." In the Tunisian fighting, for example, the new Hurricane 2-D tank busters ("can openers") under his guidance played a vital role in the defeat of the Axis armor at Hamma that led to General Montgomery's '42 break-through on the Mareth line.

Vice-Marshal Harry Broadhurst has been described as a "stocky-dark-complexioned Britisher, with a full, good-natured face . . . a fighting man, pure and simple." He has brown eyes, black hair, and "one of the happiest smiles in the Royal Air Force." His colleagues describe him as "the living embodiment of the first essential of a fighter pilot—the offensive spirit." His wife, who joined the WAAF as an aircraftswoman in 1941, has risen also in the military ranks and in 1943 is Assistant 2nd Officer Broadhurst, serving at a fighter command station. The Broadhursts have two children.

BROWN, PRENTISS M(ARSH) June 18, 1889- Former United States Government official

Address: h. St. Ignace, Mich.

On December 17, 1942 President Roosevelt '42 announced that he had accepted Leon Henderson's '40 resignation as administrator of the Office of Price Administration; Prentiss M. Brown, Michigan Senator defeated for re-election in November 1942, was to take his place the next month. This was the signal for rejoicing among those who had been criticizing Henderson for many months, and Brown was hailed as the "businessman's savior," as a "more lenient administrator," as a devotee of "voluntary methods." On October 21, 1943 President Roosevelt announced that he had accepted Prentiss M. Brown's resignation as administrator of the Office of Price Administration; Chester A. Bowles '43, general manager of the OPA, was taking his place. This was the signal for rejoicing for those who had been criticizing Brown for many months—

and the familiar Washington pattern started all over again.

The Washington *Post*, when it ran a series of articles describing various United States Senators, once called Brown "the most typical American." He was born in St. Ignace, Michigan on June 18, 1889, the son of James John and Minnie (Gagnon) Brown. Educated in the city schools, like many boys of his age he also had his share of odd jobs during the summers. He was a handy-boy in a local drug store; he worked in Detroit as a newsboy for several months during the Spanish War; he spent three summer seasons working as a bellboy at Mackinac Island. (It was there that Vice-President Fairbanks gave him such an ungenerous tip that, Brown says jokingly, he was encouraged to become a Democrat.)

Young Brown was graduated from the St. Ignace High School in 1906 and went on to Albion College. There he received his B. A. in 1911, after having played on the baseball team for four years and led his team in hitting. He then spent a year at the University of Illinois with a scholarship in political economy, and in 1914 returned to St. Ignace to practice law with his father, who had at one time been city attorney for the city of Detroit and later prosecuting attorney of Cheboygan and Mackinac Counties, Michigan. That same autumn Prentiss Brown was elected prosecuting attorney of Mackinac County on the Democratic ticket, and he was re-elected for each succeeding term until 1926, when he voluntarily retired to practice law privately.

In 1930, on the recommendation of the Supreme Court, Michigan's Governor appointed Brown a member of the State Board of Law Examiners, and he was reappointed in 1931. In the fall of 1932, however, Brown, who had been chairman of the Democratic State Convention in 1924 and again that year, was the first Democrat to be elected to Congress from Michigan's 11th District. He promptly resigned as president of St. Ignace's School Board, though continuing his membership on the Board, and in 1933 his wife (he had married Marion Elizabeth Walker of St. Ignace on June 16, 1916) and children accompanied him to Washington.

In the House of Representatives (to which Brown was re-elected in 1934, running approximately 10,000 votes ahead of his ticket), Brown was made a member of the Banking and Currency Committee during the banking crisis of 1933. He helped to draft legislation establishing such agencies as the Home Owners' Loan Corporation and the Banking Acts of 1933 and 1935, and if the latter included Federal Deposit Insurance it was because Brown circularized the House and collected signatures to an agreement by which the House would refuse to adjourn until the Senate adopted it. He helped force the Senate to accept the Federal Housing Administration, the Rural Electrification Administration, and amendments to the Reconstruction Finance Corporation Act; he was active in enactment of the legislation creating the CCC and several farm credit agencies under the jurisdiction of the Banking Committee.

In 1936, when Brown was again appointed a member of the Michigan Board of Law Examiners, he received the Democratic nomination for Senator. (In the primaries he carried the four counties of Michigan in which he was best known by a vote of better than ten to one.) Elected to the United States Senate for a full term on November 3, 1936, he entered his home to go into voluntary quarantine—one of his children had scarlet fever—against hordes of job-seekers. Shortly afterward, on November 16, the Republican Governor of Michigan, Frank D. Fitzgerald, named him to fill the unexpired Senate term of the late Hon. James Couzens, thereby giving him seniority rights over other Senators elected at the same time, who were not to take office until January 1937.

PRENTISS M. BROWN

No orthodox New Dealer, in the Senate Brown more than once opposed the Administration. In the summer of 1937, after wavering for a time, he announced his opposition to Roosevelt's proposal to increase the membership of the Supreme Court, and after a group led by him had advised the President that the bill could not carry, it was withdrawn. He also opposed the proposal to place the Civil Aeronautics Authority under the Commerce Department, and the first proposal to reorganize the Executive agencies of the Government, arguing that the latter gave legislative authority to the Executive. During the War he was to vote against the original Selective Service Act and the bill to extend the service of trainees beyond the one-year limitation.

That Brown is, however, a liberal Democrat was evident from his activities on the Finance, Banking and Currency, Commerce, and Manufacturers Committee, on the Special Committee to Investigate the Duplication of Executive Agencies of the Government, and on the Senate Committee on Claims, of which he was chairman. And it was evident from the legislation which he supported during his Senate term. From 1938 to 1940 chairman of the Special Committee on Taxation of Governmental Securities and Salaries, he sponsored legislation that made State and Federal em-

BROWN, PRENTISS M.—*Continued*

ployes subject to the same taxation as the rest of the people of the United States, and that made Government securities no longer tax-exempt. By this amendment to the Excess Profits Tax Bill of 1940 he tried unsuccessfully to make the income from State, County, and Municipal bonds also subject to taxation in the future, although he refused to go along with the Treasury Department's recommendation that taxation should be imposed upon such bonds already issued. He sponsored and acted as Senate floor manager for most of the legislation broadening the lending authority of the RFC; he sponsored the legislation continuing and broadening the FHA; and he was in charge of the legislation authorizing the issue of defense bonds, passed in 1941. In 1941, too, upon the death of Pat Harrison, he was made a member of the powerful Democratic Steering Committee, which decides and directs the legislative progress of the United States Senate and as vacancies occur selects Senators for appointment to regular standing committees of the Senate.

After Pearl Harbor, Brown worked for price control. In December 1941, as chairman of the six-man Banking and Currency Subcommittee, he announced that a price control bill "in substantial accord" with Administration desires had been approved, one which included proposals for a farm price ceiling. He acted as floor manager in the Senate for this bill, and emerged with a minimum of enemies. But there were more difficult battles ahead. By February 1942 the farm bloc was pressing a fight to forbid the sales of government crop surpluses below parity prices (the level of 1909-14 as compared with the prices of nonfarm commodities). Brown predicted that such action would add a billion dollars a year to the cost of living, and said that the average of all farm prices was actually 102 per cent of parity when government farm benefit payments were taken into account. Several months later came Roosevelt's demand that Congress act by October 1 to control inflation, and on September 14 Brown and Senator Wagner '41 introduced legislation specifically authorizing the President to stabilize wages and salaries as of August 15 and farm prices at levels not below parity, and giving the President broad powers to deal with all other factors involved in the cost of living.

This last bill brought farm lobbyists pouring into Washington demanding 112 per cent of parity, and it was not long before the House had approved an inflationary farm amendment. This seemed likely to pass in the Senate, too, until Brown took the floor. He recalled that practically every Senator had agreed to his own proposal for handling the problem before he had introduced his bill, and pointed out that this amendment reflected the influence of a small group of commercial farm lobbyists rather than that of the great mass of American people, or even the great mass of farmers. What is more, he said, the Senate would do a great disservice to the war effort if they should "force a head-on collision between the executive and the legislative body for power." This time the Senate listened.

Brown's opposition to the farm bloc was particularly courageous because he comes from a state which is agricultural as well as industrial. In May 1942 he had announced his candidacy for re-election, emphasizing that he was for Roosevelt's war policy. He secured the Democratic nomination with only nominal opposition, but in the November elections he was defeated by Homer Ferguson '43, the Republican candidate. This defeat greatly encouraged the farm bloc, and the same bill which Brown had risked his career to stop proceeded to go through the House and Senate Agriculture Committees without an adverse vote.

In view of Brown's record on price control, the support of Henderson's enemies for his appointment to the office of price administrator could only be attributed to the fact that he is less sharp-tongued than Henderson, that he had been active in support of such measures as the "Aid to Small Business Bill," and that in May 1942 he himself told Henderson that "indefinite, indistinct, and uncertain" reasons for including the Midwest in the gasoline rationing program were insufficient, if full cooperation was to be expected.

Perhaps Henderson's enemies were intuitive, however. In taking the oath of office on January 20, Brown announced: "I don't believe, and Congress never intended, that prices could be held at a flat level. We thought a slow, well-ordered rise of one-half per cent per month would occur under the most favorable circumstances." President of St. Ignace's First National Bank and part owner of one of its ferry lines and of a resort hotel on a nearby island, he also indicated that he himself tried to think in terms of the small businessman, and that, unlike Henderson, he did not believe that the regulation of profits was OPA's business. Lou R. Maxon '43, who opposed the grade labeling of canned food ordered by Henderson and for some time defended by Brown himself, was soon appointed deputy administrator in charge of information—a job which made him OPA's No. 2 executive. His viewpoint was definitely not that of the consumer.

None of this, of course, pleased the friends of rigid price control—particularly Brown's order late in March requiring that all matters be cleared through Maxon. The latter's powers were later somewhat reduced; but Henderson's appointees in OPA were soon being fired or resigning in droves, and toward the end of April a new plan for "floating" price ceilings was instituted. Labor spokesmen complained, moreover, that Brown was appointing assistantants who represented private business interests, was ignoring the protests of the labor members of his advisory council, and was trying to make OPA popular only with "the few thousand people who are today milking the common people of America."

Whether in answer to such complaints or to the rampages of John L Lewis '42 and his miners, on April 30 Brown disclosed a program to hold down the cost of living for wage earners, including the extension of price control to "every important commodity" and a "rollback of prices out of hand." The *New Republic* took these promises with a grain of salt. "First, Mr. Brown is going to grade label canned goods," it was pointed out. "Then he isn't. One day the OPA is going to hold the line on rents; another, it isn't.

In his first speech on taking office as price administrator Brown said he would have to let prices go up a little more. That is one promise he has kept to date. Now he tells us that he has changed his mind, that prices should not have been allowed to rise as they have in the three months since he took office, that those which have got out of hand must now be rolled back." On May 7, however, Brown announced that meat, coffee, and butter prices would be cut ten per cent in June, the Reconstruction Finance Committee making up the difference by subsidy payments to processors.

Immediately pressure came from the other side. Representatives of the food industry announced that profits would cease for them. Pro-inflation farm organizations and their friends in Congress joined in the attack, seeking to abolish OPA altogether. And Brown surrendered. The scheduled rollback on coffee was replaced by a rollback on canned vegetables; OPA's price-fixing divisions were soon being staffed almost entirely by businessmen; local and regional OPA officials were in many cases replaced with appointments suggested by Congressional representatives of the areas involved; and by June many OPA dollars and cents price ceilings were higher than the high food prices reached in the first week of May. The Labor Policy Committee of OPA promptly threatened that unless the promised price rollbacks were in effect by July 15 labor would withdraw its support from OPA altogether, for wages were already effectively frozen.

Now, more than ever, Brown was caught between fires. When he insisted on subsidies to keep prices down before the Senate Banking and Currency Committee he was unmercifully heckled by the Senators—and, because he had reversed himself on the outlay necessary, he received no sympathy from the other side. When in July Congress disallowed his request for 1,600,000 more investigators, required OPA to cut its expenses by $6,000,000, and saddled the annual appropriation with restrictive amendments, labor did not even credit Brown with having put up a good fight. When on July 8 the OPA raised the profit margin for both wholesale and retail grocers and notified the regional OPA offices to raise community ceiling prices accordingly, wails from consumers were louder and longer than ever. And when shortly afterward Brown sought to please at least motorists by announcing that he expected the ban on pleasure driving to be lifted soon (he had instituted an "honor system" before with such little success that the order had had to be rescinded), Harold L. Ickes '41 himself began to splutter. "We in the OPA are in the frontline trenches on the domestic front," Brown had announced, quite truthfully, even before this last incident. "I know of no group or class that we do not reach—and we please none. . . One takes the veil, politically, when he goes into this service."

On July 27, in a generally popular move, Chester A. Bowles '43 assumed the post of general manager of OPA. (Lou R. Maxon had resigned a week before.) On August 7 Brown went back to Michigan, and Bowles began reorganizing OPA. Finally, in October, Brown resigned from his administrative post to be officially succeeded by Bowles, the third man to accept the "difficult and thankless" job. In December it was announced that Brown had entered a law partnership, his firm to maintain offices in Detroit and Washington.

Mr. and Mrs. Prentiss M. Brown have seven children. Their eldest daughter, Mariana Frances, is now Mrs. Hugh Randolph, and has a daughter of her own. Ruth Margaret married Forest Evashevski, a football coach, in 1941; Barbara Jean was Michigan's cherry queen in 1940, while attending the University of Michigan; James John is a member of the University of Michigan's football squad. Of the remaining children, Patricia Jane, Prentiss M. Jr., and Paul W., only Paul is still at home. Their father therefore carries on a correspondence with the absent six by making one letter and five carbons.

Brown is typically American in more than one way. He is an inveterate doodler; he puts his feet on his desk when talking on the telephone; he did not take part in the social life of Washington; and he'll leave wife, work, and everything else when the Detroit Tigers come to town. Rather short and stocky, he has a thick shock of coarse, iron-gray hair, receding at the temples, blue eyes, and a solid jaw.

BROWNING, FREDERICK A(RTHUR) M(ONTAGUE) Dec. 20, 1896- British Army officer

Address: b. Ministry of War, London, England; h. Fowey, England

Great Britain's Air-borne Divisions, the enormous value of which is becoming increasingly recognized, are under the command of a handsome and popular major general, Frederick A. M. ("Boy") Browning. An eighteen-year-old hero during the First World War and a former Olympic athlete, Browning wears an aura of the dashing and romantic which is in no way dispelled by his present status, since the "old guard" still tends to consider air-borne forces as a somewhat spectacular rather than practical new arm of warfare. An added note of the romantic in Browning's career is his marriage to Daphne du Maurier '40, author of several best-selling novels.

Born in 1896, Frederick A. M. Browning went to preparatory school, then to Eton, and ranking high among his heroes are Lionel Hilbert, his prep schoolmaster, and Somerville, his housemaster at Eton. To these he later added Army associates—Field Marshals Rawlinson and Plumer. At the outbreak of the First World War, Browning went from Sandhurst Military School into the Grenadier Guards. He was eighteen when he went to France as a subaltern in September 1915.

British Information Services

MAJ. GEN. FREDERICK A. M. BROWNING

Unsparing work with and concern for his men in mud and wintry weather brought on trench fever and conjunctivitis, and he was sent home to recover.

He returned to France in July 1916, and was taken on the staff of Field Marshal Rawlinson for a short period as aide-de-camp. Because of Browning's recent illness, the post was intended as a rest cure. But Rawlinson used to keep in touch with his men in the firing line by riding horseback over the battlefield at 7:00 in the morning, and Browning had to accompany him. "Boy" Browning had once faced the prospect of being killed on foot; now, on horseback, he found the prospect in no degree lessened. He served with the Guards Division in all its battles, won a D. S. O. as a lieutenant, and marched with his unit into Cologne.

Returning to England in April 1919, Browning remained as adjutant until 1921, when he became officer in charge of Depot Companies at Caterham. In the spring of 1924 he took over the post of adjutant at Sandhurst. Many of his present Air-borne staff were his cadets during those years at Sandhurst.

It was at this period that Browning became well known as an athlete. He represented England in the 120-yard high hurdles at the Olympic Games. As a horseman, too, he competed in the jumping at the Olympics, and won the first pool of the King George V Cup. He hoped also to break a record bob-sleighing for England; instead, he broke a leg.

Amateur sailing later became his favorite sport. He owned a small boat, and on reading a book, *The Loving Spirit,* which captured the atmosphere of the Cornish port of Fowey, he sailed his boat to that port and cruised about there during the autumn of 1931. The boat was laid up for the winter, and the following spring he went to get it. It was then that he met the author of the book which had first brought him to Fowey. She was Daphne du Maurier, daughter of the late actor, Gerald du Maurier, and was herself well known as a playwright and novelist. They were married shortly afterward, and they now have three children.

Browning took up flying in 1931, but after his marriage he was not encouraged to continue until the coming of war forced a decision. Meanwhile, in 1936, he was sent to command the 2nd Battalion Grenadier Guards in Alexandria, Egypt. Among the tasks the Battalion undertook was a survey of the Qattara Depression. Following this careful examination, Browning pointed out that if trouble began in Libya, El Alamein, not Mersa Matruh, was the position that should and could be held. History has confirmed his judgment. Mrs. Browning accompanied him on his travels, and wrote her books at whatever place her husband happened to be stationed. *The Du Mauriers* was written in Alexandria. *Rebecca* was started there and finished in England.

The Battalion returned to England in 1938, and at the beginning of the Second World War, Browning, then a colonel, was commanding the Small Arms School. He was in France on a tour of inspection in 1940. Billeted in a house in Arras, he was awakened at 4:30 a. m. on May 10 by the bombardment which opened the German attack. Twenty-two years before he had been sleeping in the same street when the German barrage which heralded the great March offensive roused him at the same hour.

Browning was recalled to London to command the Hampshire Brigade, whose move overseas was made impossible by the German conquest of France. While the Army was being reorganized this remained as the sole reverse brigade for the defense of England. In February 1941 he was appointed to the command of a Guards Brigade Mechanized Group. Its function, Browning wryly recalls, was to play the role of the enemy in a series of defense exercises which lasted throughout a severe winter. In October 1941 Sir Alan Brooke '41 appointed Browning chief of the Air-borne Command. In this post, he believes, the real task of his life has begun.

It is no easy task. Major General Browning has to handle a good many problems of organization, supply, tactics, and training. Being the newest department of war, the Air-borne Command must still struggle for recognition: like the Royal Flying Corps in the last war, which had to fight for machines against the Admiralty and the Royal Navy Air Service, it has to battle for needed equipment and personnel. But Browning, along with other forward-looking British officers, is deeply convinced that in time air-borne forces, with their panoply of paratroops, air-borne infantry, artillery, tanks and supplies, will be the strongest of all instruments of war. Fortunately Browning has, besides imagination, a sense of humor that enables him to hurdle a good many obstacles. "Few more popular generals have commanded troops. He has boyish charm, good humor, and ability to make an acquaintance feel a personal friend; he completely lacks 'side.'"

A talent for innovation is one of the qualities of his leadership among Britain's younger men. In 1943 he instituted what is known as "the Padre's Hour," an obligatory, weekly religious instruction period for British Army units. An informal, club-like meeting of twenty to twenty-five men—they can smoke if they like—is held under the direction of an Army chaplain, with a question-and-answer session. While about seventy-five per cent of the questions are social-economic, "chaplains in general feel that the Hour is raising the religious interest of the troops."

Sailing continues to be Browning's favorite sport, though it is not likely that he will find much time for it for the duration. He owns a thirty-six-foot craft, which he himself designed before the War, and which is now serving as an admiral's barge. The story is told that, while Browning was on a secret mission to the United States in 1942, he paid a visit to Jacksonville's boatbuilder, Frank P. Huckins, with whom he had had a long correspondence. It seems that Browning had ordered Huckins to build him a boat—provided a book his wife was then writing turned out to be a success. To which Huckins had replied: "I never heard of your wife and I have never read any of her books. In fact, since I finished at Harvard some thirty years ago I have read no books at all and am practically illiterate." This so amused the husband of the author of *Rebecca* that he kept up the correspondence; and in all likelihood Browning will own a Huckins-built boat after the War is over.

Who's Who 1943

BROZOVICH, JOSIP *See* Tito

BRYANT, BENJAMIN Sept. (?), 1905-
British submarine commander

Address: b. c/o the Board of Admiralty, Whitehall, London, England

One of the outstanding figures of the Mediterranean campaign in the Second World War is Commander Benjamin Bryant, D.S.O., D. S. C., of the Royal Navy. Operating off the Tunisian coast with four other submarines, he spent the winter of 1942-43 patrolling the waters through which the Axis powers had been shipping supplies to their forces in North Africa. He succeeded in sinking many cargo carriers and anti-submarine vessels. The total damage is not, of course, known, but he had more than thirty craft to his credit in February 1943.

Benjamin Bryant was born in the year 1905. Until the Second World War his was the conventional life of the well-born Britisher, his favorite pastime being fishing in country streams. He received the equally conventional English naval education at Dartmouth Naval College and, had not the War intervened, would no doubt have become the typical gentlemanly athletic figure so well known in "the Queen's navee." (He is the tallest man in the service.)

Bryant's cool daring as commander of the *Sealion*, in the waters off Norway, soon attracted the attention of the public, his exploits there sounding like adventure "thrillers." Commander Bryant admits that he has had some close shaves—and he is not referring to the loss of the beard which won him the sobriquet of "Bearded Ben Bryant" early in the War.

COMMANDER BENJAMIN BRYANT

Once, when about to attack a German convoy, the *Sealion* was rammed by an enemy trawler. With both periscope standards smashed as a result of the collision, Bryant was forced to submerge and stay below the surface. The enemy continued the search for the *Sealion*, but Commander Bryant, safe in a pocket level forty fathoms deep and able to judge his distance from enemy noises, so maneuvered his craft that he kept them hunting him for hours. He eventually succeeded in shaking off the enemy and was able to rise to the surface again, but the danger, far from being over, was by this time more acute than ever. Upon opening the conning tower, he found that both loose periscope standards and their attached wires threatened to damage the hull of the *Sealion* in the heavy seas. To make matters worse, the wireless aerial was lost. He was still in the danger zone, but he set the crew to work rescuing the dangling metal and rigging a new aerial. It was four days before they were able to return to their base.

At another time, also off the coast of Norway, he was forced, because of enemy bombs, to stay submerged for forty-four hours and fifty-three minutes. His compasses had been damaged by the bombing and his batteries were low. There was nothing to do but get away from the scene of action and wait for an opportunity to rise and recharge. Without lights he waited forty-five feet below the surface. The air became fouler and fouler, but he could still hear the enemy. When there was barely enough oxygen in the air to sustain life and coming to the surface would soon have been imperative, the enemy suddenly gave up the search. Even then it was not safe to rise and refill with fresh air immediately.

(Continued next page)

BRYANT, BENJAMIN—*Continued*

Not many of Bryant's exploits, however, are concerned with avoiding trouble. In the Mediterranean he has successfully employed the technique of attacking and damaging Axis ships, a technique which he learned so dangerously off the coasts of Norway and Yugoslavia. Off the Tunisian coast, patrolling the Tyrrhenian Sea, in constant danger from enemy shore batteries, airplanes, and anti-submarine craft, he sank and damaged tugs and transports taking supplies and troops to the Axis in Africa. Upon one occasion a large vessel being towed through the treacherous Strait of Messina, which divides Sicily from the Italian mainland, was followed and sunk. "Because of the narrowness of this strait—it is but two miles wide at its northern end and eight miles wide at its southern end—and the exceptionally strong currents in it, the feat of the submarine is considered to be particularly daring."

Upon his return to England in the summer of 1943, aboard his vessel the *Safari*, Bryant was asked what he considered the best story of his experience. He looked thoughtful, then smiled as he recalled a scene which to him was most dramatic because of its grim, silent picturesqueness—the complete annihilation of a vessel within sight of its airship escort.

"Well, we torpedoed the schooner," said Commander Bryant, "and she went up on a monumental explosion. There seemed to be nothing left but powder. We went down and waited to see what the flying boat would do. It came back to circle round its charge—but not a sign of the ship remained. I can see that flying boat now, circling round in complete dismay, looking for the vanished schooner. We left it still going round in small circles."

This tall, lean figure, "unshaven, clad in an old sweater and older flannel trousers, with eyes clamped to the periscope" of H. M. Submarine P211, is a "happy blend of two widely different types—the daredevil commander with much of the heritage of the old swashbuckling sea rovers, and the quiet, coolly detached, scientific mathematician." When he goes into action he looks forward to sinking enough vessels so that he can return home for a while to his fishing, his dog Coxswain, his bridge-playing, and his family. Commander Bryant is married and the father of a daughter and a baby son, Jeremy Joseph.

BUCK, FRANK Mar. 17, 1884- Animal hunter; author; film producer

Address: b. 9 Rockefeller Plaza, New York City; h. Beverly Hotel, 125 E. 50th St, New York City

Animal entrepreneur extraordinary, Frank Buck, intrepid explorer, author, and film producer, is probably "the most glorified Boy Scout of our time." *Bring 'Em Back Alive* (1930), the title of Buck's first and best known book, has become an appendage to Buck's name, a title bestowed upon him by his admiring public for his great exploits in the field of animal hunting, and, although they may be unaware of this, for his great skill in publicizing these exploits. There have been animal hunters before, but none whose name echoes throughout the length and breadth of the land like Frank Buck's. Thousands of small boys vicariously experience the numerous hair-raising, blood-curdling, and spine-chilling adventures he unfolds for them in his books and motion pictures.

In twenty-five years as a gatherer of live animals Buck collected forty-nine elephants, sixty tigers, sixty-three assorted leopards, twenty hyenas, fifty-two orangutans, 100 gibbon apes, over 5,000 monkeys of different varieties, twenty tapirs, 120 Asiatic antelope and deer, nine anoas or pigmy water buffalo, one pair of seladang (or, as they are more popularly known, Malayan guar), five babirussa, rarest of wild swine, two African cape buffalo, eighteen African antelope, two giraffe, forty wild goats and sheep, eleven camels, forty kangaroos and wallabies, five Indian rhinoceroses, sixty bears, ninety large pythons, ten king cobras, over 100 smaller snakes, twenty-five giant monitor lizards, fifteen crocodiles, more than 500 small mammals of different species, and more than 100,000 birds, ranging all the way from the big ostrich-like cassowaries of the Panpan Islands down to Australian finches as small as hummingbirds. Clearly all this is no mean achievement, and when one adds to this record his seven books, numerous articles, and five motion pictures, it is obvious that Buck is not only a man of courage but a man of parts. His favorite among his books is not *Bring 'Em Back Alive* but *On Jungle Trails* (1937), a story-textbook that, Buck says himself, "is read in schools all over the United States. Wherever I go, children mention this book to me and tell me how much they learned about animals and the jungle from it."

Frank Buck was born in Gainesville, Texas on March 17, 1884, the son of Howard D. and Ada (Sites) Buck. His mother often warned young Frank never to tell anyone that he was born in a wagon yard, because it might not be understood that his father owned the yard. In his autobiography, *All in a Lifetime*, Buck reveals this fact, but is also careful to point out his father's ownership. "It was a good wagon yard," he writes, "furnishing feed and water for the horses and mules and repairs to all the wagons which came there." The Buck family, which included three other children besides Frank, lived in the wagon yard for five years. They moved to Dallas, Texas, then a small town of 35,000 inhabitants, which, it was hoped, would become a southwestern metropolis. In Dallas, Frank's father, a second or third cousin of the Studebaker family, later of automobile fame, had obtained a position in the Dallas agency for the Studebaker wagons and carriages.

"Geography," Buck says, "was the one school subject which fascinated me during the Dallas days. I loved the maps in the queer old-fashioned geography books we used, and pored for hours over the far-off, strange names—Ceylon, Borneo, Nepal, Sumatra, Java, Amazon, Mindanao, India, Siam—places to which the Texas wind blew. I think I never had any hope of going to these far-flung places on those pink, yellow, and green maps, but I certainly dreamed of them and studied the text to such an extent that, when I eventually completed my formal schooling (at the end of the seventh grade), I delighted my mother with a 100 per cent grade in geography to take away the curse of almost utter failure on all the other subjects of that limited Dallas curriculum."

While still in school Buck began collecting birds and small animals. He would have been allowed to pursue his hobby unmolested had he not extended his interests to include snakes. His mother discovered him one day in the role of an Indian snake charmer, placidly attempting to extract the poison fangs of a copperhead with his father's pliers. Mrs. Buck killed the snake with a pitchfork and then spanked her offspring. His career as an animal trapper would have ended at that point had not his father persuaded his mother to let the boy continue to collect birds, as long as he abjured snakes forever. Frank kept that promise for several years, but broke it some years later when he began to collect rattlesnakes for a "snake oil" manufacturer in New York.

Frank's first entrance into the world of business came when he and his older brother Walter decided they were going to become the cattle kings of Texas. They rented a piece of land from a neighboring ranchman (on credit), and bought a number of calves at bargain prices. "The scheme might have succeeded had we not become greedy. We decided, having so much land, that we might as well go in for raising hogs as well as cattle. We had heard there was money in hogs. We bought three good sows, bred them with a Berkshire boar, and, almost before we knew it, our hog population had grown to sixty hungry, feed-demanding animals." When their father's attention was called to this enterprise, he remarked: "You've done a good job, boys. However, your hogs will eventually eat up your cattle." What he meant, his sons inferred, was that the hogs constantly had to be fed, while the cattle would feed themselves from the land. "He was right. It took all we could earn, borrow, and beg to buy corn for those growing shoats." The hogs subsequently died of cholera, and "to pay for our now dead hogs' corn feed we had to sell our calves to make up the difference between dead hogs and live cattle." The venture was a complete failure.

Young Buck next chopped cotton or roped and branded cattle in various Texas ranches at the rate of 75¢ a day, but by the time he was eighteen he found the state of Texas too small to hold him. He appealed to his brother Walter, who was by this time a sort of assistant foreman on a ranch in San Angelo, Texas, and Walter got Frank a job as cowpuncher, accompanying a train load of beef to Chicago. His remuneration was to be $3 for food and a railroad pass back to Texas (which Buck refused). A cowpuncher's business, he writes, was literally one of punching cows. "Cattle in those days were packed into slatted railway cars so tightly that if any lay down en route on the long journey from the ranches to the stockyards —a trip which usually took from one to three days—they were inevitably trampled to death by the stronger steers. Consequently the ranches employed cowpunchers, men who . . . at each wayside stop for water or coal ran forward along the train and with a nail on the end of a pole 'punched' the reclining cattle to their feet."

FRANK BUCK

Buck arrived in Chicago without any money and without the least intention of returning to Texas. He got a job at the Hotel Morrison on condition that he rid himself of his ten-gallon hat and his silver spurs. From check-room boy at $2.50 a week, board and room included, he was elevated to the position of bellhop, but was prevented, he feels, from "rising by hard work and industry to the managership of my hotel," by his falling into what his mother would have called "bad company." Chief among his evil companions was one Al, who lured the youth away from the hotel and took him on tour with a machine designed to cure all human ills by electric shocks administered at random. The two made their way from town to town on freight cars and went hungry most of the time. Al showed his hopeful pupil how to "run out on boarding-house bills and cash rubber checks in barbershops." It nearly broke Frank's heart, however, he tells his readers, when they left two "sweet old ladies," who had treated the boy as if he were their own son, without paying for their room and board. Al's enterprises grew more and more daring, until he actually planned to blow up a hardware store safe. When they were in the store with the nitroglycerin all ready, Frank balked. He had a terrific struggle with Al, but young Buck triumphed over that force of evil. After his first victory he caught the first freight car for Texas. He was going home.

When, however, he had finally reached Texarkana in his home state, Buck met a section hand on the railroad who advised him not to return home, but to go on seeking adventure. Accordingly, the boy traveled to Pine Bluff, Arkansas, again by freight car, and got a job

BUCK, FRANK—*Continued*

at the state fair running a paddle-wheel game for 75¢ a day. The game, he hastens to assure his public, was honest. Never again would he embark on shady enterprises. He had learned his lesson. His six days of work at the fair netted him $4.50, and "I invested $1 of it with a freight conductor for an untroubled ride into St. Louis." In St. Louis he arranged with the landlady of a boarding house to paint and paper her walls in exchange for board and room. He did all right as far as painting the woodwork a dark green (so as not to show dirt) went, but, luckily for the landlady, he got into a fight in St. Louis ("I was a fighting fool in those days") and had to leave town before he made any attempt to paper her walls. Edward F. Allen —referring to the fight rather than the landlady—comments that Buck seems to have been in more peril during those days than during his jungle adventures.

An unprincipled freight conductor, to whom the young man had given $1 for the privilege of riding on the train, threw Buck off at Bloomington, together with an English remittance man named Danny Fairchild with whom Buck had had a previous acquaintance. The two boarded another freight car, but it was already occupied by a gang of desperadoes who proposed to throw the two young men off the fast-moving train. Fairchild put up a fight and was subsequently hurled off the top of the train, but Buck escaped. Some time later Buck discovered that Fairchild had not been killed but was permanently crippled.

Buck returned to Chicago and obtained a position as bellhop at the fashionable Virginia Hotel. The Virginia was "in those days . . . what was known as a 'family hotel' with a 'theatrical tinge.'" The Otis Skinners always put up there, and he remembers vividly the misery of pushing the infant Cornelia '42 in an elaborate perambulator along the street, while she "squalled inside the shuttered hood."

At the Virginia young Buck began to regret his lack of education. In a saloon he became acquainted with a defrocked Irish priest who agreed to impart learning to him in return for whiskey. The ambitious bellhop studied with the Irishman for a year and a half, providing him in return with whiskey and his room rent. As a result, perhaps, of this training, Buck has what appears to be a slight British accent.

Amy Leslie (her real name was Lily West), a prominent Chicago dramatic critic and an ex-actress, lived at the Virginia. Occasionally lacking an escort, she took Frank to the theatre with her, and the young man invested in formal attire so as not to disgrace her. She was thirty-five years old, while Buck was twenty. After they had known each other for some months she proposed marriage to him, and he accepted, on condition that he would be able to find a position which would bring his "station in life" closer to hers. When he found a position as a salesman for a music house with a salary of $25 a week attached, he and Miss Leslie were married. The ceremony took place in Benton Harbor, Michigan, the Gretna Green of Chicago, and Buck, not having reached his twenty-first birthday, was forced to lie about his age. "We stayed in Benton Harbor until Monday morning, then returned to Chicago to find glaring headlines staring at us from all the newspapers: 'AMY LESLIE MARRIES BELLBOY.'"

The Bucks not only managed to live down this unpropitious beginning but lived happily together for many years. Moving in theatrical circles as Miss Leslie's husband, Buck met a good many celebrities—including David Belasco, George M. Cohan, Fritzi Scheff, Billie Burke, Edna Wallace Hopper, and the two famous beauties, Mrs. Leslie Carter and Lillian Russell, with both of whom he frequently dined. Eventually Buck himself got a position in the theatrical world—he became general assistant to the owner of the Western Vaudeville Managers Association. The title of "general assistant," Buck says, embraced every capacity from office boy to head of publicity. As a side line Buck became the Western representative and correspondent of the New York *Telegraph*, then the great theatrical and sports daily of Manhattan, and he also opened a club booking bureau, personally booking acts and furnishing entertainments for hotel banquets, private parties, and clubs. His income from all these activities became fairly substantial, and he was able to purchase a home in the suburbs of Chicago on time payments.

At his Chicago home Buck started an aviary, and began once more to read books on animals. The wanderlust seized him again, and when he won $3,500 in a card game he decided to leave for South America. The Chicago house was already paid for and he knew that his wife's income from her work was ample, so he left her forever and sailed for South America in 1911.

Buck landed first at Bahia in Brazil, where he bought birds, hoping that he might be able to sell some of them in New York. When he came to New York the zoos and bird dealers quickly snapped them up at a larger profit than he had dreamed of getting. Buck immediately decided that he was in the bird business to stay, and, returning to South America, he gathered another collection of birds, which he took to London this time, disposing of them at an even larger profit than he had made on the first consignment. His next trip was to Singapore, where he bought animals and hired a native interpreter. Singapore was to become the permanent headquarters from which he conducted all his expeditions in search of assorted animals.

On his second trip to Singapore Buck really penetrated into the jungles and learned to trap the animals himself. The first animal he caught was a python. From then on he made a number of trips in quest of animals. (He does not actually catch all of the animals which he handles, however; that would be almost impossible because of their numbers.) The World War furthered rather than impeded his efforts, for it removed much of the competition in his trade—most of his principal rivals were Germans. In 1915 Buck returned to show business, but not very willingly, he says. He was placed in charge of publicity and special events for the amusement zone of the San Francisco exhibition. When the exhibition was over he became director of publicity and promotion for the Mack Sennett motion-picture studio in Hollywood. After seven months of this Buck returned to Singapore and animal trapping.

For eighteen years Buck pursued his calling, beset by many adventures. Some were in the line of work, such as knocking out an orangutan in a fair fight with his fists, trapping the only authentic man-eating tiger ever to be exhibited in the United States, and capturing a leopard that had escaped from its cage on a trans-oceanic passenger steamer. Other of his adventures were purely accidental: on one occasion he was locked in the refrigerator of a ship and almost frozen to death; on another he was accused of murdering the husband of a friend of his (the verdict was finally "death by misadventure"). Once he delivered to the city of Dallas one zoo, complete with 500 specimens of birds, animals, and reptiles. He met many prominent people, chief among whom was his good friend the Sultan of Johore, whom, Buck says, he now jestingly calls "H. H." (short for "His Highness").

At the end of the eighteen years an investment of Buck's collapsed and and he was virtually penniless. At this time he fell in love with a girl named Muriel Riley, but he was unable to marry her because of his poverty-stricken condition. His friends, however, lent him $6,000, with which he was able to recoup his fortunes and marry the lady. (They have one daughter, Barbara Muriel.) Floyd Gibbons, the war correspondent, suggested that Buck write a book about his experiences. Buck took the advice and, in conjunction with Edward Anthony, wrote *Bring 'Em Back Alive*, "a catchy title," he says, which "has been associated with my name ever since."

The book, which first appeared in 1930 and went into many editions, became a best seller, and Buck followed it with *Wild Cargo,* with the same collaborator, the next year. In 1933, however, Anthony sued Buck for part of the profits of *Bring 'Em Back Alive,* and almost all of Buck's subsequent books were written with another collaborator, "my good friend Ferrin Fraser." In 1935 both *Fang and Claw* and *Tim Thompson in the Jungle* were published. Two years later (1937) came *On Jungle Trails,* and, in 1939, *Animals Are Like That!* (with Carol Weld). Buck's latest book, an autobiography, *All in a Lifetime* (with Fraser), appeared in 1941. Buck has also contributed articles to various periodicals, including *Collier's* and the *Saturday Evening Post.*

Three of Buck's books have been made into motion pictures (in which the "keen-eyed, pencil-mustached" explorer himself appeared): *Bring 'Em Back Alive, Wild Cargo,* and *Fang and Claw.* Others, not made from his books, are *Jungle Menace*; *Jungle Cavalcade*, a compilation of scenes from three of his other pictures which was released in 1941; and *Jacare,* which appeared in the spring of 1943. He was to make another picture in the summer of 1943. At the "first-run" appearances of his pictures "ushers and usherettes [are] attired in sun helmets and tropical togs, big-eyed children [file] through a lobby filled with trunk swinging papier-mâché elephants and palpitating gorillas," and from the screen inside a "familiar voice" is saying: "Breaking camp at dawn, our safari moved ever deeper into the mysterious heart of Malaya."

In 1937 Buck established himself in a "permanent home" in Southern California, but, he wrote in 1941, except for one occasion in 1938, he never saw his "permanent home" again. In 1937 he joined the Ringling Brothers-Barnum and Bailey Circus and, after a year, returned to New York to negotiate for an exhibit at the New York World's Fair—he had already exhibited his animals at the Chicago Fair with success. His trips, in the spring of 1939 and 1940, to get animals for the Fair were, he says, his last until the War is over, for this War, more far-reaching than the last, has not only cut off all means of transportation for him, but has actually spread to the very jungles in which he used to trap animals. Half of the animals he shipped at that time were lost at sea.

At present Buck is living in New York, writing and lecturing. (In preparation is a new book, to be published by Random House.) He is as popular a lecturer as a writer. He has also done some radio work which has brought in substantial profits and as many as 125,000 fan letters in one week—he says he reads every one of them.

In the course of his career Buck has crossed the Pacific Ocean more than forty-five times, and has traveled around the globe a dozen times. "Medium-tall, dark, stocky, hard-muscled, and galvanic," he is a connoisseur of food as well as of animals. He has his own private zoo at Amityville, Long Island, which made the headlines in 1934 when 150 rhesus monkeys escaped and gleefully scampered all over Long Island. The papers, including the New York *Times,* followed their brief career breathlessly. They escaped on August 22. The following day thirty-nine had been captured, but the remaining 111 were still at large. On August 24 thirty-five of them, strolling about the public highway, caused an automobile accident and an editorial in the New York *Times.* By the last day of August all but four had been accounted for.

Although Buck's jungle adventures have not left him precisely unscathed, they have been no more perilous than the dangers he has had to encounter in civilization. From 1936 to 1938 while he remained in the United States he broke into the news four times as a result of personal misfortunes: he was taken to the hospital because of gastric disturbances, he was injured while mounting a horse, he was in an automobile accident (but, happily, escaped unharmed), and he was bitten by a python.

In his autobiography, which appeared in 1941, Buck wrote: "I was now Frank Buck, who had achieved fame in the jungles, in motion pictures, in literary circles, and in the show world. I was the Frank Buck whose position socially, financially, and professionally was secure—Frank Buck, the man who 'brought 'em back alive,' the man people wanted to see and obtain his autograph on a menu, a cuff, or a shirt tail. I was—I am—that Frank Buck. Yet in my heart I am still

BUCK, FRANK—*Continued*

the small-town Texas boy who loves birds better than anything else on earth."

BURDETT, WINSTON M. Dec. 12, 1913- Foreign correspondent

Address: b. c/o Columbia Broadcasting System, 485 Madison Ave, New York City

According to a fellow journalist, "The Richard Harding Davis tradition in war correspondence is being upheld by a young American newsman, Winston M. Burdett." Winston Burdett, in the summer of 1943 a CBS correspondent in North Africa, began his career in the newspaper field working on the Brooklyn *Daily Eagle*. In 1940 the *Eagle* sent him as roving correspondent to cover the war in Scandinavia. Although he had had no previous experience as foreign correspondent, Burdett managed to smash through rigid censorship with his dramatic, firsthand accounts of the opening clashes between Germany and the Allies. His exclusive stories, often obtained at the risk of his life, won him a reputation on both sides of the Atlantic and obtained for him contracts with the Transradio Press and the Columbia Broadcasting System.

Burdett has been on the scene of many major engagements in the Afro-European theatre of war. The manner in which he chases after news would make a good adventure story: since his arrival in Europe, he has, at various times, traveled by foot over ice-covered Norwegian mountains, raced furiously in battered cars, ducked bombs, and given the Nazis the slip all over the continent.

Winston M. Burdett, who is, among American newspapermen, one of those most genuinely hated by the Axis, was born December 12, 1913 in Buffalo, New York. He attended Trinity School in New York City and later went to Harvard where he specialized in romance languages. He established a brilliant academic record at Harvard by completing his studies in three years, graduating *magna cum laude* at nineteen. Later he took postgraduate work in Italian at Columbia University.

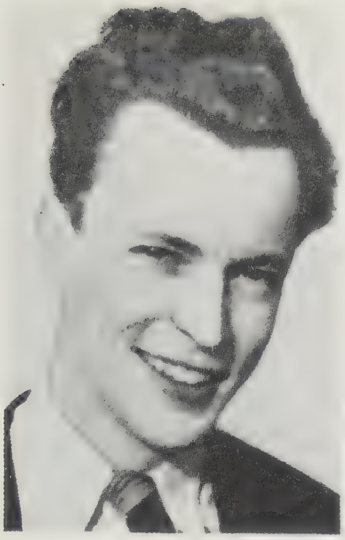
Burdett's entire career has been in the newspaper field. His first position was on the Brooklyn *Daily Eagle* where he worked for six years as reporter, columnist, and associate editor of *Trend*, the paper's Sunday supplement. In his *Eagle* column, "The Sound Track," Burdett aired his comments and reflections on the motion-picture industry. Unlike many Hollywood columns, Burdett's was devoted neither to film reviews nor to gutter gossip. Rather, Burdett was interested in analyzing and evaluating the Hollywood attitude toward contemporary issues and problems —from matters of literary composition to questions of social awareness. Typical of the tone of his column is his remark about the screen's social attitude, which, according to him, "can only be understood as the expression of a miraculously elastic liberalism which permits producers to pervert, evade, or ignore any issue on which they might possibly be expected to take a stand."

During his *Eagle* days Burdett served his colleagues in a number of ways. He was chairman of the Grievance Committee of the local unit of the Newspaper Guild, delegate to the Guild's Representative Assembly, chairman of the Guild Elections Committee, and a member of its Strike Committee. His friends on the *Eagle* recall the many times he defended them. "It's a hard job," said one, "to list all the things, all the hard work, the ability and devotion that Winston has given the *Eagle* Unit. For a guy who looked so quiet, he was a bundle of energy for our union."

Shortly after the outbreak of the War, Burdett was assigned to Sweden as a roving reporter to cover the war in Scandinavia. In February 1940 he sailed for the Finnish capital, whence he was to proceed to Sweden; he was supposed originally to remain abroad among the belligerents for only six months, possibly a little longer, depending on developments. He planned to mail his eyewitness accounts to the *Eagle*, thereby providing the paper with a new exclusive feature. Burdett's stories of the War in Norway won for him an immediate international reputation. Transradio Press made him head of its Scandinavian staff, after which the Columbia Broadcasting System snatched him as one of its foreign correspondents.

Burdett was the first American correspondent on the scene in the fighting zone south of Trondheim when the German and British troops engaged in their first decisive encounters there. The only other American newspaperman who succeeded in getting near the Front at the same time was Leland Stowe $^{'40}$, who was in a sector farther north than Burdett. The latter's position had compensating advantages: it enabled him to witness events which he described in some of the most exciting dispatches sent from any front.

He has to his credit a number of "firsts" or scoops. He reported the British defeat at Lillehammer hours before it was officially admitted. He made his way up the strategically important Gudbransdal Valley to Domlas and back to the Guadal Valley to Röros, sending messages such as the following, which dispelled the comfortable complacency of the Allies: "British forces amazingly inadequate. No field guns, no tanks, no planes, no antiaircraft.



WINSTON M. BURDETT

Unless receive antiaircraft and planes immediately, British in central Norway doomed defeat." Burdett was also the first American correspondent to learn that British troops were being landed at Andalsnes, south of Trondheim, and at Namsos. He was first to take a tour of southeastern Norway and give an eyewitness account of the German occupation of Kongsvinger and Elverum; he was the first to see German aerial bombers wipe a Norwegian town completely off the map, and the first to interview Mrs. J. Borden Harriman '40 after her escape from wartorn Oslo.

One of the most amazing stories to come out of the War to date was told to Burdett by a former Norwegian officer. It concerns the capture of the entire Norwegian town of Röros by a detachment of only seven German infantrymen. According to the witness, reports Burdett, "The seven Germans, armed with machine guns, dashed into Röros in a single armored car. Three hundred Norwegian defenders fled without firing a shot because they couldn't find a rifle with which to shoot."

Following his Scandinavian assignment, Burdett went to Bucharest, via Moscow. In Bucharest he met Lea Schiavi, an Italian journalist from Milan, and married her. (While on a photographic assignment for *PM* in northern Iran in April 1942 she was killed by a band of Kurds.) As foreign correspondent for CBS, Burdett used to broadcast to the United States every Sunday evening in the CBS round-up of foreign capitals. In October 1940, however, he was given five days in which to leave Romania. He was ordered out of the country by the Nazis because he had discovered and reported the Nazi infiltration into Romania. Since that time he has earned the hatred of the Nazis in one Balkan capital after another. His reports of unrest in Italy—such as the 1941 riots in Milan and in other northern Italian cities—next led to his expulsion from Yugoslavia. When the Nazis moved into Bulgaria, Burdett left in a hurry.

Burdett's job requires him to be on the spot wherever fighting is expected. He covered the news from Ankara and Cairo before going to North Africa. There he reported to CBS listeners on the details of the Giraud '42-de Gaulle '40 controversy. While Burdett's sympathies were obviously on the side of the Free French, he eagerly hoped for a *rapprochement* between the two generals. He optimistically hailed General Giraud's speech in March 1943 as "a fine speech in favor of democracy," and looked forward to an eventual union of French forces. In the summer of 1943 Burdett was busy covering the Allied invasion of Sicily. The autumn found him again in Algiers.

Little seems to be known of Burdett as a person, probably because he has thought it both unnecessary and ostentatious to have himself publicized. His associates on the *Eagle,* who are very ready to cite the generous help Burdett extended to them, recall that he was "a quiet sort of fellow, one whom you never expect to say much."

BURTON, VIRGINIA LEE Aug. 30, 1909-

Author; illustrator

Address: h. Folly Cove, Gloucester, Mass.

Although Virginia Lee Burton had always planned to be a ballet dancer, chance made her an author and illustrator instead. The success she has had as the author of children's books—she won the Caldecott Medal for the best picture book published in 1942—seems to prove that the change was for the best, but she might well have made an equal success as a ballerina. As a matter of fact, her publishers, anxious to prove her versatility, point out that she might today be dancing in the motion pictures with Fred Astaire. "Good artists," they say, "are always troubled with a confusion of talents."

Virginia Lee Burton was born in Newton Center, Massachusetts, on August 30, 1909, the daughter of Alfred Edgar Burton, the late dean of the Massachusetts Institute of Technology, and the former Lena Dalkeith Yates. When Virginia was seven the family moved to Sonora, California, and she later attended Sonora Union High School. At the same time she studied ballet dancing with Muriel Stuart, and art and design with Robert Hestwood and his wife. Beginning in 1925 she had a variety of jobs: she taught dancing in Sonora from 1925 until 1926; back in the East in 1929 she was a lifeguard at Woronoco, Massachusetts; from 1928 until 1930 she worked as an art teacher in the Harry E. Burroughs Foundation for Newsboys; and she taught also at a YMCA work camp in the summer of 1930.

In 1928 and 1929 Miss Burton studied art at the California School of Fine Arts. Ballet dancing, nevertheless, was her chief interest. Her sister was already on the stage and, in order to join her there, Virginia studied acrobatic dancing. When the family came back East she was about to go on a vaudeville tour with her sister. Unfortunately, however, just

VIRGINIA LEE BURTON

at that time her father broke his leg and there was no one else to take care of the household. She had to give up her contract and let someone else take her part in the show. At home she went back to drawing and soon secured a position as sketcher for the Boston *Transcript's* famous dramatic critic, H. T. P., in 1929. She did not give up her art lessons but continued to study at Saturday classes in the Boston Museum under the sculptor George Demetrios. On March 28, 1931 they were married.

Miss Burton's first book, the title of which has apparently been lost to posterity, met with no success. It was the story of a particle of dust. "More than half a dozen publishers," wrote Lovell Thompson, manager of the trade department of her publishers, Houghton Mifflin, "spurned it. Houghton Mifflin Company was one of them. However, our files show no record of the incident. One of the sins that publishers can commit and that other people can't is the destruction of early unfavorable reports of books or authors who have later become famous. Whether by accident or design there are no words of disdain about Miss Burton in all the company's files. The record begins with a report on *Choo Choo.*"

Choo Choo, which Miss Burton had written for her son Aristides Burton, then aged four, was her first published book and appeared in 1937. *Mike Mulligan and His Steam Shovel* (1939) was written for her son Michael Burton when he was about the same age. With respect to *Mike Mulligan* her publishers "almost buried themselves in the intricacies of a plywood steam shovel which was supposed to be for window display." *Calico the Wonder Horse* appeared in 1941, and *The Little House* in 1942. In 1943 Miss Burton was awarded the Caldecott Medal given to the author of the best picture book published in the previous year, for *The Little House,* which combined her talents as designer, writer, and painter. In her most recent books, particularly *Calico, the Wonder Horse,* Miss Burton has made an effort to appeal to her audience by using the more attractive features of the comic books so popular with modern children, but eliminating what she feels to be the undesirable elements. *Katy and the Big Snow,* the story of a crawler tractor which is a snowplow in winter, was published in the fall of 1943. Gathering material and sketches for it had kept Miss Burton busy all the previous winter, ploughing herself out of the Massachusetts drifts and skidding about the countryside.

Extremely attractive, Miss Burton has been described as "a small, slim person [possessing] a singular share of talent, imagination, and energy." "She and her husband and two sons," writes Grace A. Hogarth, "live at Folly Cove, Gloucester, where she manages to do housework, cooking, canning, raises chickens and pigs, supervises the reluctant piano practice of her two sons, and still puts in a major part of her day on her writing and drawing. She rises at 6:00 and works before breakfast, works from breakfast until it is time to prepare lunch, and again in the afternoon. Evenings are free for darning socks, wood carving for fun, or country dancing in the barn." Her favorite sport is swimming.

Miss Burton works out the text and pictures of her books together. Her theories on design, which she teaches to a small group in Folly Cove, are an integral part of all her work. She has illustrated a number of books besides her own, as well as magazine articles. Her group of students, formed in 1940, now call themselves the Folly Cove Designers and make linoleum blocks of their own designs.

Miss Burton's two children have modeled for many of their mother's illustrations. Aristides is on the dedication page of *Choo Choo*; Michael is in *Mike Mulligan.* "The Demetrioses," writes Lovell Thompson, "live in a rather small house which snuggles up to a rather small barn. There are apple trees around it that look like the apple trees around the 'Little House.' The barn has quite a menagerie in it, but the menagerie is mostly paint or plaster of Paris. The Demetrios' vegetable garden, which they weed themselves, is a model affair, with bean stalks big enough for Jack. If you go to the Demetrioses, you can be modeled in clay, carved in marble, or cast in bronze. You can be painted in oils or tempera or water color. You may be offered a sauna (that's a Turkish bath in Finland) or get a bedspread with 'Little Houses' printed all over it; or you may be given a part in a country dance. You can eat steak cooked over a fire in the barn. . . In short, if you go to the home of the creator of *The Little House* you will be in no way disappointed."

BYAS, HUGH (FULTON) (bī'as) 1875(?)- Journalist; author

Address: b. c/o Alfred A. Knopf, 501 Madison Ave., New York City; h. 440 W. 24th St., New York City

A leading authority on contemporary Japan, British correspondent Hugh Byas is one of the few foreigners who have been able to penetrate into the life and mind of the Japanese with any success. Byas spent some twenty-five years in Japan in various journalistic capacities, meanwhile acquiring a thorough command of the Japanese language and a knowledge of the Japanese. Called anti-Japanese by the Japanese, pro-Japanese by the Chinese, Byas, declares the New York *Times*, "cannot properly be called either." All of his writings on Japan are distinguished, the *Times* says, by "the quality of sound common sense" and seem to be "completely objective."

Hugh Byas was born on a farm in Glasgow, Scotland, the son of Thomas and Janet (Fulton) Byas. He hated farm life and, taking as a model Barrie's *Sentimental Tommy* who let his career be ruined rather than use another adjective in place of the *mot juste*, taught himself to write. His education was obtained from various Scottish schools. At the age of twenty-three the young Scotsman broke into journalism when his knowledge of shorthand won him a job on a Glasgow paper. After working on several "good, old-fashioned country papers in Scotland," he got a position on the Rand *Daily Mail*. His first foreign assignment as a reporter on the *Mail* was to the recently conquered Boer republics of Transvaal and the Orange Free State. In Johannesburg he watched the "ill-fated experiment of Chinese labor in the South African gold mines." According to *Asia Magazine*, "after he had seen at firsthand something of the complexities the white man has to solve when he sets out in the world of different races and civilizations," Byas returned to London in 1909 and joined the staff of the London *Times*.

In 1911 Byas married Joan Macmillan. (There are no children of the marriage.) Three years later, "having meanwhile linked himself up with American journalism in the Orient by becoming London correspondent of the China *Press*," Byas went to Tokyo to edit the Japan *Advertiser*, an American-owned independent English language newspaper, "the best-known American paper outside American territory and one of the most influential journals of the Far East." After twelve years as editor—"no bed of lotuses in the Far East," he says—he returned to Great Britain in 1922. In 1926 he was back in Japan, this time as correspondent for the London *Times*. The following year he became Tokyo correspondent for the New York *Times* as well, and he remained in both positions until 1941. Shortly before the outbreak of the War with the United States he left Japan together with his files, which he managed to get out by a ruse and which later proved invaluable in the writing of his two books on Japan. "When I left Japan by the second-last mail steamer," he writes us, "I was dean of the foreign correspondents in the capital and had seen their number grow from three to over sixty, half of them Germans and German satellites." Byas arrived in the United States in the spring of 1941, and, except for a vacation in the West Indies, has been living here ever since in semi-retirement, writing and lecturing to the graduate students at Yale University.

HUGH BYAS

"In the ordinary course of my duty," Byas wrote, "I was in continuous contact with Japanese government departments, and in twenty-three years I had come to know most of the men who, as Prime Ministers, Foreign Ministers, and Ministers of War and the Navy, directed the country. I have also been greatly indebted for such knowledge of the people as I may have gained to many Japanese friends, women as well as men, whom my wife and I got to know intimately in the long, pleasant years of peace."

Byas has written two books, *The Japanese Enemy* (1942) and *Government by Assassination* (1942), as well as one chapter, "The Land of the Rising Sun," in *We Saw It Happen* (1938). The first book, a serious study of the present conflict with Japan, predicts a long, difficult war, with success for America only if the country speeds up industrial production. The book was written immediately after Pearl Harbor and was published early in 1942, so that it was necessarily a hasty job. Critics, nevertheless, called this as admirable a survey of present-day Japan as can be found

BYAS, HUGH—*Continued*

anywhere. *Government by Assassination,* a later and fuller treatment, explains Japan's drift toward war in an analysis of the influence of the militarists on Japanese politics and was also well received by the critics. "This," wrote Wilfrid Fleisher in the New York *Herald Tribune,* "is the most erudite book on Japan that has been produced in years. For those who would seek the reasons underlying the present war in Asia, who would determine how the Japanese came to hatch their present plans of conquest, Mr. Byas provides the best answer available. The author sees three basic reasons for the present War: (1) the Japanese delusion of being a unique state with a special mission; (2) the constitutional vice which allows the fighting services to control the Government; (3) the possession of jumping off places for aggression and of the heaviest and best organized armaments in Asia. Here is a book that should be read by all those responsible for the conduct of our war with Japan, as well as by those who will have a hand in the peace to come."

Besides these books Byas has written a number of articles on Japan which appeared in various periodicals, particularly *Asia* Magazine. They include studies of the Communist movement in Japan, the Japanese family system, Japanese political conceptions, the Elder Statesman, the position of the Japanese Emperor, Japanese drama, and motion pictures in Japan. He has, he tells us, read quantities of Japanese fiction without spotting anything worth translating.

Byas finds the Japanese a pleasant people to live with, but he represents them as afflicted with a deep inner malady, "wandering between two worlds, no longer spiritually at home in the crude paganism of the official state worship, and unable to break with it without profound suffering." "The Japanese," he wrote, "have been great borrowers throughout their history. Their ideological debt to Nazi Germany is as plain today as was the earlier debt of the modern Japanese Empire to England and America." Patriotism in Japan "is not the last refuge of a scoundrel but the first." He believes Japan's spiritual malady to be the same as Germany's—a false philosophy. "It is a belief that the Japanese race and state are one and the same and that it has unique qualities that make it superior to its neighbors and give it a special mission to perform."

"The Japanese people in the mass are kindly and polite," Byas wrote, "and they have a natural social democracy of manner" which makes it easy to get on with them. "They are honest in the affairs of daily life; if you leave an umbrella or a coat in a train or a taxi you are almost certain to get it back. The country people—all the people—will trouble to set a stranger on his way. The beauty and culture associated with old Japanese civilization cannot be the expression of a brutal or barbarous people. They testify to fine traditions. . . It [Japan] is a country of strange and deep contrasts . . . a Jekyll and Hyde country."

In a symposium at Town Hall early in 1943 Byas declared that no peace concluded with Japan could endure unless the military junta dominating Japan is utterly defeated and Japan's military might broken beyond repair. "He warned against a peace maneuver by Japan, possibly jointly with Nazi Germany, in the near future, saying that acceptance of any compromise peace with Tokyo would serve only as a prelude to a new conflict." In an article entitled "The Japanese Problem," published in the *Yale Review* in the spring of 1943, he also pointed out that "we can expect little from psychological warfare against Japan," since "Japanese liberalism has obediently kept step with Japanese militarism since the first shot was fired in Manchuria in 1931." Yet, although believing in Japan's total defeat and total disarmament, he suggested that in dealing with a defeated Japan we follow the principle of non-interference in internal affairs, and aim at "drawing out the better qualities which the Japanese are capable of displaying in their own society."

Byas is blond, five feet ten inches tall, and weighs 170 pounds. His favorite recreations are reading and walking.

CAFFERY, JEFFERSON Dec. 1, 1886- Diplomat

Address: b. c/o American Embassy, Rio de Janeiro, Brazil

The United States Ambassador to Brazil, Jefferson Caffery, has been delineated as a "salon diplomat of the type acceptable to Latins." During his thirty-year career in foreign service, however, he has participated in everything except salon statesmanship. A citizen of the world, Caffery has learned the business of diplomacy in the capitals of Spain, Greece, Japan, Germany, Sweden, Persia, and the various countries of South America. Since the entry of the United States into the Second World War, he has been collaborating with the Board of Economic Warfare in helping United States agents in South America track down raw materials needed in the war effort.

Jefferson Caffery was born in Lafayette, Louisiana, December 1, 1886, the son of Charles Duval and Mary Catherine (Parkerson) Caffery. In 1909, shortly after graduation from Catholic University, he was admitted to the Louisiana Bar. Deciding upon a diplomatic career, he then successfully passed a qualifying examination on the basis of which, in 1911, he was appointed Secretary of the Legation at Caracas, Venezuela. An appointment to the Department of State in June 1913 was followed in October of the same year by an assignment as Secretary of the Legation at Stockholm.

In July 1916 Caffery was sent to Persia to assume charge of German and Turkish interests. Exactly one year later he was attached to a special Russian mission to the United States, after which he was assigned to Paris, where, in 1919, he constituted part of President Wilson's protocol detail. Later that year he was assigned to the Department of State in connection with the official visit of the King of Belgium to the United States; and he also acted as special representative of the State Department at the time of the Prince of Wales' visit to the United States in 1919.

After a short stay in the States, Caffery was ordered to Madrid in December 1919 as counselor of the Embassy. From Spain he went to Athens in 1922, acting as chargé d'affaires *ad interim*. While in Athens he cooperated with the Greek Government and the American Red Cross in assisting Greek refugees from Asia Minor. The next year found Caffery a counselor at the American Embassy in Tokyo; he remained there until 1925, when he was detailed to Brussels for the Congress of the International Chambers of Commerce. After the Congress, in 1925, he remained in Europe for some months in the capacity of counselor of the American Embassy at Berlin. From 1926 until 1928 he was Envoy Extraordinary and Minister Plenipotentiary to Salvador, and from 1928 to 1930 to Colombia. In 1930 he was sent to the inaugural ceremonies of President Herrera of Colombia as special representative of the President of the United States with the rank of Ambassador; in December 1931 he was made special representative of the Department of State in Salvador for one month.

At hearings of the Senate Committee on Finance in January 1932 it was disclosed that Caffery, while Minister to Colombia, had played an active part in promoting the granting of the great Barco oil concession to the Mellon-owned Gulf Petroleum Company and the Carib syndicate, controlled by the Morgans. The Colombian Congress had canceled the Barco concession, and so the National City Bank had promptly begun to find "technical" excuses for not proceeding with a promised credit of $4,000,000 to the Colombian Government. Caffery's participation in the negotiations with the National City Bank was seen by liberals as disturbing proof of "collusion of the State Department and bankers," and so there was some criticism of his appointment as Assistant Secretary of State in July 1933, and his appointment a month later as a member of the Personnel Board of the Foreign Service. The following December he was nevertheless sent to Cuba as representative of the President of the United States, succeeding Sumner Welles '40 as Ambassador Extraordinary and Plenipotentiary in 1934.

JEFFERSON CAFFERY

This was the signal for even more criticism from the same quarters. Welles had helped to overthrow the hated Machado as dictator of Cuba, but had then supported a Government headed by Carlos Manuel de Cespedes against which the Cubans themselves revolted very shortly. The United States refused to recognize the new Government, headed by the then-liberal Grau San Martin, and when Caffery came to Cuba his status was scarcely clear. He was, however, soon being accused of "meddling in Cuban internal affairs, especially in the interests of American capitalists," and with paving the way for the dictatorship of Colonel Batista Y Zaldivar '40. "Dr. Grau's last decree intervening in the 'Cuban' Electric Company, placing its administration under the workers, made Mr. Caffery jump and his hair stand on end," it was charged; and it was also charged that the United States-Cuba Reciprocal Trade Agreement which Caffery signed in August 1934 was not in the best interests of the Cubans. According to Carleton Beals '42, the agreement "jammed the island back toward its old one-crop tragedy," blocking the trend toward diversification in order to subordinate Cuban economy to the United States. (Beals even pointed out that American rice was among the favored items, and that Caffery's native Louisiana is a great rice-growing state.)

Unfazed by any of these accusations, or even by a terrorist attempt against his life in May 1934, Caffery remained in Cuba as Ambassador until July 1937, when he became United States Ambassador to Brazil. And in Brazil he has won general appreciation because of his success in swinging President Vargas '40 within the American orbit, even though it has meant American support for a non-democratic, military government. One of Brazil's major problems, for example, was caused by the absence of native steel manufacturing. When, in 1940, a steel industry was made possible in

CAFFERY, JEFFERSON—*Continued*

Brazil through the help extended by the United States, much of the credit should have gone to Caffery, who nevertheless declined to accept any of the glory. Caffery was speaking quite truthfully when in October 1940, sailing for the United States for a rest, he announced: "Very definite strides have been made in political, financial, commercial, and cultural Brazilian-American relations, which were never so good as at present."

In 1941 Caffery successfully concluded negotiations with Brazil whereby the United States obtained strategic air bases in that country; and his next important transaction, in August 1942, concerned an agreement stipulating that the United States buy certain surplus products from Brazil. In August 1943 no one was astonished when he received the Sign Las Americas Award for outstanding inter-American services. The Award was conferred by the Committee on Cultural Relations with the American Republics, sponsored by *Sign*, a national Catholic monthly. (Caffery himself is a Catholic by conversion.) On October 1 another proof of the friendly spirit existing between Brazil and the United States was given when Caffery received an honorary degree from the University of Brazil.

Known in official circles as a tight-lipped, shrewd negotiator, Ambassador Caffery looks very much the diplomat, and it is apparently true that no break in diplomatic punctilio can so much as "take the crease out of his trousers." "He was [and] still is lean, dark, and, even alongside Anthony Eden '40, distinguished." "Groomed to the minute, he speaks with a State Department accent, broadening many an 'A.'" For a long time he was considered one of the most eligible bachelors in the State Department, but on November 20, 1937, at the age of fifty-one, he was married to Gertrude McCarthy. His favorite sport is mountain-climbing. Before the War he boasted of having once climbed a volcano in Japan and of having come down unsinged.

CAMERON, BASIL (kam'ėr-ən) Aug. 18, 1885- British orchestral conductor

Address: h. Savage Club, London, England

Among the few young orchestral conductors of outstanding talent is British-born Basil Cameron, whose direction of symphonic music is almost as well known in America as in England. Prior to the outbreak of the Second World War, Cameron won high acclaim in the United States as the regular conductor of the Seattle Symphony Orchestra (1932-38) which under his direction became "one of the leading symphonic organizations in a country enviably rich in orchestral enterprise and achievement." On his return to England the young conductor became willingly active in "propagating the gospel of good music" under difficult war conditions, including the Blitz period of air raids on London. Largely through his energy and efforts the people of Britain will not have to give up hearing excellent symphonic concerts for the duration.

Born in Reading, England on August 18, 1885, Basil Cameron's early education was in the grammar school at Tiverton. His ambition was to be a musician, a violinist, so he went to Berlin to study the violin with Joseph Joachim and Max Bruch. On his return to England, Cameron became a pupil of Leopold Auer and was an accompanist at the master's classes. Then, in 1908, he became a violinist in Sir Henry Wood's Queen's Hall Orchestra, holding that position for four years. This experience as a player under a skilled director was excellent training for a future orchestral leader, as Cameron found when in 1913 he became first conductor of Torquay Municipal Orchestra (Wagner Centenary Festival, 1913, and Strauss Festival, 1914). At that time he assumed a German name because he felt that English audiences were "more friendly to foreign conductors." One year later, with Sir Thomas Beecham's '41 cooperation, he conducted a Richard Strauss Festival, also at the British coast resort.

Then came the First World War, abruptly interrupting an auspiciously begun career. Cameron at once discarded his German name and joined the British Army, seeing service in France with the 13th (Kensington) Battalion of the London Territorials. In August 1918, while leading his company over the top at Bullecourt, he was wounded.

Once home again and recovered, Cameron conducted an orchestra in Brighton, where he won attention "with his adventurousness in featuring new compositions by English composers." He then was appointed conductor of the Municipal Orchestra at Hastings (1923). For seven years he combined this task with that of directing the Harrogate Municipal Orchestra. At Hastings he inaugurated an annual Spring Festival, so successful that it began to draw pilgrims from London. George Bernard Shaw, who had discovered Cameron at Torquay, wrote an article about him which made him famous throughout England. Percy Grainger, also one of Cameron's admirers, wrote of him at this time: "He has a peculiar quality of excitement and exhilaration in his readings. I believe that it has roots in two outstanding qualities of his work: the normalness of his *tempi* and the beautiful tonal balance he keeps so scrupulously."

Larger organizations were watching Cameron's work, and in 1928 he was given his first engagement with the Royal Philharmonic Society. His initial performance was so successful that for two years thereafter he was the conductor of the Royal Philharmonic Orchestra in London. He conducted for the Liverpool Philharmonic Society, the Prague Philharmonic Orchestra, and the Budapest Symphony Orchestra in 1930. The next year he was engaged by the Scottish Orchestra as its conductor. He also became one of the conductors of the BBC Symphonic Orchestra.

Following a reputation made in the United States as guest conductor, in 1930, of the Los Angeles Philharmonic Orchestra and of the San Francisco Symphony Orchestra, Basil Cameron became conductor of the latter in 1931. He resigned that post in 1932 to become the regular director of the Seattle Symphony Orchestra, and during the next six years he placed that organization among the leading orchestras in this country. As guest conductor of famous orchestras in many other American cities also, his skill on the rostrum was generally acclaimed by music critics. Whitman College at Walla Walla, Washington, gave him an honorary degree in music, and the Columbia Broadcasting Company asked him to take charge of a special series of twelve symphony concerts transmitted over a nationwide hookup. Composers such as Malipiero and Sir Arnold Bax '43 honored him by entrusting to him the first world performances of some of their most important works: the former's Second Symphony at Seattle and the latter's Fourth Symphony at San Francisco.

On vacations during these years Cameron traveled abroad. He stayed for a time in Italy with Malipiero; and he went to Finland to meet Sibelius, for whose work he had a warm admiration, and of which he is said to be an outstanding interpreter. Sibelius himself had sent him a letter of congratulation following his performance of the Fifth Symphony at Queen's Hall with the BBC. Cameron has acted as guest conductor for several important European orchestras.

In 1938 Cameron returned to England and devoted himself to conducting orchestral performances in London and in the provinces. With the London Philharmonic he made several tours of England, often conducting two concerts a day. After England went to war he frequently did not know whether the next stage of his journey would be by rail or by road, or whether the concert itself would be possible. And during the weeks of the Blitz, there was even speculation as to the actual existence of the hall. During the bombing of London, Cameron did yeoman service conducting community singing at Queen's Hall at the close of the Promenade Concerts when the audience, not wishing to go home during alerts and raids, stayed behind to join in the singing. "These informal concerts were a great success, and Cameron's genial personality helped considerably in making the audience forget the quite unmusical goings-on outside."

British Official Photo
BASIL CAMERON

It has been said that Cameron, off the rostrum, "is a friendly companion, with the glancing humor of a man fundamentally shy. He is difficult to get to talk about himself; he does not 'produce' himself with histrionic flair; he concentrates on the music and lets showmanship go. Not that he is uninteresting to watch. He uses wide, open, sweeping gestures, and in climaxes his arms are a study in swift, emphatic, but controlled movement." He is always on the alert for new works, does much to encourage young composers, and is a sympathetic accompanist to young artists.

For recreation apart from music, Cameron likes to play squash, and enjoys also a good game of chess or billiards. He likes good food and wine, and at the Savage Club in London "he will vie with any Bohemian in talking of amusing incidents concerning music and musicians. He has met almost everybody who is anybody in the world of music today." Cameron is not married.

In 1941 Cameron became Sir Henry Wood's associate conductor at the London Promenade Concerts at Albert Hall—the first to hold such

CAMERON, BASIL—*Continued*

a position. He did so well that he was reappointed in 1942, sharing the associate duties with Sir Adrian Boult, and again in 1943. He was the personal choice of Sir Henry Wood, who spoke highly, in private and in public, of his work. With much to his credit for a conductor still comparatively young, it is thought by most critics that Basil Cameron will play an increasingly important part in music in the future.

CANNON, LEGRAND, JR. Dec. 1, 1899- Author

Address: b. c/o Henry Holt & Co, 257 Fourth Ave, New York City; h. 56 Laurel Rd, New Haven, Conn.

Critics agree that LeGrand Cannon, one of the freshest and most engaging of modern novelists, has, with his third novel, achieved what his friend David McCord, a "mildly inaccurate" poet (according to Cannon himself), calls "the old, sordid story of success." At the appearance of each of his two books Cannon was repeatedly "discovered" by the critics, but, despite excellent reviews, he attracted only a limited audience. With *Look to the Mountain*, published in 1942, he finally won popular approval. Although Cannon's three books technically are historical novels, most of the critics refuse to classify them so narrowly, for the author manages to keep the background in its proper perspective, and to concentrate on his characters. "Mr. Cannon," wrote the New York *Times* critic about one of the earlier novels, "has almost no idea of how to construct a novel. He merely happens to possess a much more valuable gift. By some stroke of luck he sees the world freshly; by some curious alchemy it is impossible for him to be dull. . . Presumably, being intelligent, he will some day learn his trade, but meanwhile the gifts which he has are priceless."

LeGRAND CANNON, JR.

Although he writes of New Hampshire, LeGrand Cannon, Jr., is Connecticut born and bred. He was born in New Haven on December 1, 1899, the son of LeGrand and Florence Atherton (Pond) Cannon. His destination in early life was not literature but business, and to that end he attended the Sheffield Scientific School at Yale University and received his Ph. B. degree in 1920. That year found him at the Grenfell Mission in Labrador, where he met Jeannette Peabody of Cambridge, Massachusetts. Two years later, on December 30, 1922, he was married to her. That same year he received his M. B. A. degree from Harvard's Graduate School of Business Administration.

For the next ten years Cannon was a businessman. The first five years he worked for a New Haven wholesale firm; then he spent several years with a fuel concern. In 1928 and 1929 his work for the fuel business demanded "his unprotesting presence in England." Meanwhile, wrote McCord, Cannon's "sympathy with Wordsworth's late-and-soon philosophy" was increasing, and he bid farewell to the fuel business. In 1932 "his friends suddenly became aware that he was working, simultaneously, it seems in retrospect, on a novel and two one-act plays. The plays were produced locally, but the novel in typescript grew sere and crinkled at the edges." That novel was *The Kents*, his second book published. Cannon's first published novel, *A Mighty Fortress*, appeared in 1937. Set in New Hampshire and in Boston, Massachusetts, it related the trials and tribulations of one Ezekiel Peele, a young clergyman of the mid-nineteenth century. Cannon was "discovered" by all the critics. The New York *Times* found the book "full of charm and humor," and "extremely engaging." The *Christian Science Monitor* considered it "one of the most entertaining and valuable novels of the year."

The Kents, the story of an American family, was published the following year (1938). The New York *Herald Tribune* called it "a fine, intelligent, and intelligible, realistic and engaging tale of around about fifty years ago." The *Times* critic was surprised to find that although "any tyro could rip *The Kents* to pieces structurally," it remained "one of the most pleasing stories" that he had read for some time.

Cannon's most successful novel, *Look to the Mountain*, a tale of pioneering days, appeared four years after the publication of *The Kents*. "*Look to the Mountain*," wrote Margaret Wallace in the New York *Times*, "tops Mr. Cannon's earlier work head and shoulders, as it is likely to top the season's fiction list. For that matter, it would be likely to top the list in any season when it chanced to appear. Novels of this intrinsic quality do not come along every year. The novel gets its special quality of vitality not from anything in its larger outlines, but from the truth and vividness of a thousand small details. Without doubt *Look to the Mountain* is a novel with a future. It is the kind of book individual readers fall in love with, re-read for their own pleasure, and go on year after year recommending to their friends." Most of the other critics were equally enthusiastic. John Chamberlain '40, however, considered that Cannon had chosen "to spend his great story-telling ability on a theme . . . essentially adolescent," and demanded a sequel to give balance to a book "which has every virtue save that of being fully mature." The novel was chosen as a Book-of-the-Month Club selection for November 1942.

The adjective that critics are most fond of applying to Cannon's works is "engaging," with "charming", "likable," and "pleasant" running close seconds. His books have also been praised for their quiet humor, their "earthiness," and their "homely, pithy tang." "His style at first may seem bare and unadorned," the New York *Herald Tribune's* critic commented, "but it quickly becomes obvious that he uses words subtly, and writes sensitively as well as selectively. He puts blood in people, too, and needs only a quick stroke or two to bring a character sharply and precisely into outline." Although they might at first question "his untrained hand in the mechanics of chapter building," and feel that his novels at times were a little scattered and aimless, still critics found that the books did live, and were written "with sharpness of imagery and an unforced distinction of style."

Several critics deny Cannon's books profundity on the ground that his characterizations are too simple, "the problems tend to be physiological rather than psychological," and his protagonists grapple "not with the problems of the spirit, but . . . with the dull weight of circumstance." On the whole, however, critics like Cannon's novels for the reasons that F. T. Marsh of the New York *Herald Tribune* lists in his appraisal of *The Kents*: "It's not burdened with historical data; it's not weighted with psychological profundities; it's not heavy with naturalism; there are no murders, great heartbreaks, smashing climaxes; no villains and no heroes; no propaganda and no formulated message."

Cannon seems to have done an enormous amount of delving into the history and customs of New Hampshire. For his last book, he says, he obtained most of the material from the Yale University library. The mountain in *Look to the Mountain* is Chocorua, in the vicinity of which he has spent most of his summers.

Cannon is something of a wit, and, McCord says, "reads Pepys, fewer poems than he ought to; loves the theatre; is devoted to the city of his birth; and appears to be a strong Congregational churchman. Saybrook College at Yale has made him an Associate Fellow. He writes in the summer in a barn, and in similar isolation during the winter. Regrettable note: When working, he throws cigarets on the floor." His friends call him Lee. The novelist is five feet ten inches tall and weighs 170 pounds, "more or less." There are four children: Jeannette; LeGrand, III; Winthrop; and Margaret.

CANTERBURY, HEWLETT JOHNSON, DEAN OF *See* Johnson, H.

CARLSON, EVANS F(ORDYCE) Feb. 26, 1896- United States Marine officer

Address: b. c/o Headquarters, United States Marine Corps, Washington, D. C.; h. Plymouth, Conn.

Lieutenant Colonel Carlson of the United States Marine Corps has had a long military career distinguished by personal bravery and independence of thought and action. One of the best-informed military observers in China and the author of two books on military operations there, in the Second World War he has put his knowledge of Chinese guerrilla tactics to practical use in the American Marine Corps. Carlson's Raiders proved themselves unsurpassed in resourcefulness and courage in the months before they were consolidated with three other battalions into a Marine Raider Regiment. Their fighting qualities were particularly well displayed in their surprise attack on Makin Island in August 1942 and in their thirty-six day raid behind Japanese lines on Guadalcanal in November of the same year. Carlson, their leader in both operations, was in the first boat to land at Makin and in the last boat to leave.

Evans Fordyce Carlson was born in Sydney, New York, on February 26, 1896. His father, Thomas Alpine Carlson, a Congregationalist minister, is of Norwegian ancestry; his mother, Joetta Viola (Evans) Carlson, is of Welsh, Scotch-Irish, English, and German descent. When he was fourteen Evans left home to work on a farm near Vergennes, Vermont and he attended the Vergennes high school. Not much interested in books, the following year he left school to work as an assistant freight master at New Haven, Connecticut and a year later he worked in New Jersey as a chainman. When he was sixteen he enlisted in the Army and, as Lewis H. Mattoon relates in the Waterbury (Connecticut) *American*: "His friend . . . had the papers ready to get him out, but his parents, who were deeply disturbed, nevertheless deemed it best for him to face the consequence of his own act. They felt it might be the school he needed."

He saw service in the Philippines and in the Hawaiian Islands. When he was discharged in 1915 he was a top sergeant "with high commendation." After working with an artesian well-digging outfit and a surveying crew, he was recalled to service during the border trouble with Mexico. When the United States entered the First World War, Carlson was given a commission and after serving at several camps in the United States he was sent to France. His work was largely administrative. He was discharged at the age of

U.S. Marine Corps

LT. COL. EVANS F. CARLSON

twenty-three with the rank of a captain, an Italian decoration, and a citation from General Pershing, and as a result of the latter he was awarded the Purple Heart when that order was revived in 1932.

After the War Carlson worked for two years for a canning company, but "the urge to the service was too strong" and he enlisted in the Marine Corps in 1922 as a private. Commissioned a 2nd lieutenant in the Marines in 1923, he saw service at Quantico, Virginia, Culebra, Cuba, and at various points on the West coast. In 1925 he applied for aviation training and was sent to Pensacola, Florida, for instruction. He did not complete his aviation training, and returned to line duty after four months.

From 1927 to 1929 he served as operations and intelligence officer at Shanghai, China. He was awarded a Marine Corps Expeditionary Service Medal for services in 1927, 1929, and 1933. In 1930 he served as an officer in the Guardia Nacional in Nicaragua when the American Marines were assisting in the organization of the Nicaraguan National Guard. By this time a 1st lieutenant, Carlson was awarded the Navy Cross for "extraordinary heroism." He had answered a report that approximately 100 bandits were looting a town by appearing in that area with twelve men. With no casualties on his side Carlson succeeded in recovering the stolen property and dispersing the bandits after two were killed and seven wounded. The following year, 1931, he was commended for his organization work following the Managua earthquake.

In 1933 having won the Second Nicaraguan Campaign Medal, the Nicaraguan Medal of Distinction and Diploma, and the Nicaraguan Presidential Order of Merit, Carlson returned to the United States. From there he went to Shanghai, where he served as intelligence officer of the 4th Marines from March to August 1933. He was post adjutant of the Marine Detachment at Peiping, China from August 1933 to July 1935. From August 1935 to July 1937 he was on duty in the United States—at Quantico, Virginia; as commanding officer of the Marine Detachment at President Roosevelt's '42 Camp, Warm Springs, Georgia; as commanding officer of the Marine Detachment at the Texas Centennial Exposition; and as a student at the Marine Corps Schools. Late in 1937 he was sent to Peiping to study Chinese and to act as assistant Naval attaché.

During all these years Carlson had acquired many ideas on how men should be handled. In Nicaragua he had been assigned to command a detachment of natives which had killed its two preceding Marine Corps officers. He had decided that there must have been good reasons for the natives' hostility, and had regulated his own treatment of them accordingly. ("My Spanish wasn't too good, but from the first I never used an interpreter. I never punished a man, either, until I had been able to make him admit he deserved it. I felt before I left that those peons were my friends. They were even bringing me their family quarrels to settle.") Later, while post adjutant of the Marine Detachment at Peiping, he had at first had to punish a hundred Marines a month for minor infractions of discipline. Then he had set up a school within the Legation, with classes in the Chinese language, art, history, literature, and customs—and the Marines became so interested in understanding the country that disciplinary cases were reduced to three or four a month! All these experiences had prepared Carlson for what was to come.

In 1937 Carlson (now a captain) began his epic journey of 2,000 miles through the regions where the guerrillas of the Chinese Communist 8th Route Army fought the Japanese. With his haversack slung over his shoulders he set out on foot to study the "pattern of resistance" which these Chinese were offering to the Japanese soldiers. The first American officer to accompany a Chinese force in a campaign, he was commended by the commander in chief of the Asiatic Fleet, who said: "Your duties as an observer with the Chinese military forces have required you to travel thousands of miles in the interior of China, often on foot and horseback over the most difficult and hazardous terrain, and under primitive living conditions similar to those encountered by native troops. During this time the nature of your duties not only subjected you to the immediate dangers of active warfare, but to those of pestilence and disease as well." Carlson stayed with the Chinese guerrillas almost two years, marching as many as sixty miles daily, seldom eating more than a handful of rice daily—and learning not only the basic principles of successful guerrilla warfare, but also the thing that made it possible for men to endure such hardships: "They knew what they were fighting for."

When Carlson returned from his trip he told newspaper reporters that the Communist fighters were doing a good job and that they were excellent soldiers. As the New York *Times* tells the story: "Some of his remarks irked Navy censors. Angered by their crackdown, the captain resigned his commission [April 30, 1939] and returned to America." He told his friend Agnes Smedley: "Don't talk about economic security! The only thing that matters is—am I right?" Now free to say and write what he pleased, Carlson lectured and wrote articles on his experiences in China and on the danger of Japanese expansion in the Far East, pointing out over and over again the dangers of sending scrap steel and other war materials to a future enemy. Two books, *Twin Stars of China* and *The Chinese Army,* appeared in 1940.

In *Twin Stars of China,* which Carlson dedicated to the memory of his mother, "who bequeathed to her children a rich love for mankind regardless of race, creed, or color," he describes in detail the workings of the 8th Route Army, its military method, and the personality of its leadership and personnel. In the book Carlson sets forth his conclusion that "it is an anachronism to continue to regard China as a vast but weak nation." The War, he contends, has hardened the people and united their leadership. Japanese brutality has stimulated the will to fight, and new ideas have educated the populace and improved the Army. What was holding China back, he pointed out, was to a large extent the selling of American supplies to Japan. The most effective force against Japan, Carlson found, was the Communist 8th Route Army which, more than any other unit in Chiang Kai-shek's '40 United Front, has the confidence and aid of the population. Because of the vast political education programs among civilians carried on by Chu Teh's '42 forces, the Japanese find their conquered areas increasingly difficult to hold: the civilians remember their lessons.

Although there were some critics who found Carlson more competent as a military observer than as a commentator on politics, with the result that his portraits of the Communist leaders seemed "suspiciously uncritical," on the whole *Twin Stars of China* was found to be mature in its judgments and well written. *The Nation's* critic wished "that the United States had more military men with the intelligence and breadth of interest with which . . . Carlson is obviously endowed," and Lewis Gannett '41 wished Carlson had told his readers more about himself, because "he sounds like a good sort."

Carlson visited China again in 1940 and 1941, primarily to study the Chinese cooperatives. After an extensive tour which carried him to eight east, southeast, and southwest Chinese Provinces, Carlson returned to the United States to write articles and lecture on the movement. "There is no question about China's ability to resist Japan's military invasion so long as China remains a united nation," he wrote. "But there is a real danger that Japan may achieve her ends by quiet economic penetration." Carlson saw considerable evidence of Japanese economic penetration; he saw streams of Japanese manufactured goods coming in and raw materials going out and came to the conclusion that the Chinese industrial cooperative movement was doing the utmost to keep China from becoming economically subjugated to Japan. Of his inspection of about 600 C. I. C. units in a 4,000-mile trip with Rewi Alley '43, then technical adviser of the cooperatives, Carlson said: "It is both heartening and encouraging in these days when democracy is being challenged on every hand to have concrete evidence that democratic methods are meeting this challenge in certain areas, especially in the field of economics. Democracy can survive the crucial test, but before it can do so its principles must be carried into every avenue of the individual and collective lives of the faithful." Carlson is on the permanent advisory board of the American Committee in Aid of Chinese Industrial Cooperatives.

Certain that war between the United States and Japan was inevitable, on his way home from China early in 1941 Carlson stopped off in Manila to warn General MacArthur '41 that the Japanese would attack. (He suggested that the mountains of Luzon be equipped for guerrilla fighting, but this was not done.) Carlson also conceived the idea of an American guerrilla unit and applied for recommissioning in April 1941. He was commissioned a major and in May was ordered to active duty. Raider training did not start until early 1942, however. Then two battalions were formed, one under Carlson (the 2d Marine Raider Battalion), the other under Colonel Merritt A. Edson.

Carlson's Raiders' first publicity came in August 1942 when they carried out a successful attack on Little Makin Island in the Pacific and wiped out a Japanese garrison and destroyed valuable radio and seaplane installations. Later the Raiders took part in the operations at Guadalcanal and received a citation as a unit besides Navy crosses awarded to the leaders, Carlson and Roosevelt. The Raiders' successes were the result of intensive training, however, under Carlson, now a lieutenant colonel, and his executive officer, Major James Roosevelt, the President's '42 son. The actual organization of the unit was completed in February 1942. The members were hand-picked. The officers were Marine Corps officers, the majority of whom, according to F. Tillman Durden, writing in the New York *Times,* were reservists "specially selected for their spirit, initiative, and democratic outlook. The men are volunteers for the Marine Corps and for raider work. Carlson picked them chiefly from states where outdoor life predominates. Many come from Texas, Oklahoma, Arizona, and New Mexico. Several have been soldiers of fortune in Latin America." Before final acceptance of the candidates, Carlson gave each man what he called a "psychological breakdown." "He told them in unvarnished terms of the hardships, dangers, and brutalities ahead of them and explained baldly what war with the Japanese meant. He told them that fighting without mercy and without quarter could be expected. If the candidates still wanted to be Raiders, he took them."

Carlson's Raiders could march forty miles a day with full equipment. They were skilled in fighting, and were expert swimmers and woodsmen. The Raiders carried automatic rifles and sub-machine guns in addition to semi-automatic Garand rifles and pistols. Utilizing his experience with the 8th Route Army in China, Carlson abolished officers' privileges and officers' mess. All wore the same clothes, carried the same equipment, and lived alike. "Discipline is firm, but informal, based on knowledge, reason, and individual volition."

(Continued next page)

CARLSON, EVANS F.—*Continued*

He also borrowed the 8th Route Army's *Kung-ho* (Work Together) or cooperation meetings where problems were threshed out and the men heard talks on democracy, freedom of speech, press, religion, and the like. The meetings were characterized by entertainment and group singing. The Raiders had their own songs, including a march, *Carlson's Raiders,* sung to the tune of *Ivan Shavinsky Skivar,* and some "lustily ribald" ones. In his letters to friends Carlson called his unit the Kung-ho (or Gung-ho) Battalion rather than Carlson's Raiders. He encouraged his men to paint, write, and compose if they wished to do so. He let them know that he was always available when any of them wished to see him about anything. Before every battle there was open discussion; after every battle, self-criticism. Morale was so high that only one case of traumatic war neurosis occurred in the Kung-ho Battalion.

Although they had won a citation for "consummate skill in operations", "high morale," and "aggressive spirit," it seems possible that Carlson's Raiders were not looked upon with complete approval by certain Army officials. In any case, after Guadalcanal the Raiders were consolidated with three other battalions into a Marine Raider Regiment, and Carlson was put second in command. The *Kung-ho* system was discarded. Then, sick with malaria, Carlson was sent home for hospitalization. After spending a few months in the peace and quiet of his Connecticut home and serving as official adviser to Walter Wanger's studios in Hollywood, which were making a picture about his Raiders on Makin Island (title: *Gung Ho*), he admitted to reporters that he was eager to return to active service. In the fall of 1943 he reportedly held a staff job at a base in the United States, but he was soon shipped out to the fighting front again, and in November he took part in the epic assault on Tarawa as official observer. "Guadalcanal was something," said Carlson, "but I never saw anything like this." Of the two or three thousand men who took part in the initial assault, only a few hundred escaped death or injury. Carlson himself landed on the beach thirty minutes after the first wave, in a storm of mortar and machine-gun fire. His verdict was: "If ever blood and guts were shown, it was right there on the part of the Marine division which did the job. . . The Japanese had more troops than we did. . . It was the toughest job the Marines ever had in their 168 years." Carlson was still wearing a bandage on his chest a few days later when he arrived at Pearl Harbor to be reunited with Major Roosevelt, who had served as observer on Makin Island at about the same time.

Tall and battle-scarred, Carlson is most frequently referred to as a "gaunt New Englander." (He makes his home in Plymouth, Connecticut.) He is six feet tall, fair-complexioned, and weighs about 165 pounds. He has a "long solemn face and a keen eye." Those who know him report that he has an engaging manner and a friendly and sympathetic personality. His appearance has been compared to Gary Cooper's '41, and his bearing has been described as more like the loose-jointed walk of a cowboy than that of a military man. His articles have appeared in many periodicals such as *Asia, Amerasia,* and the *China Weekly Review.* For the duration of the Second World War he has put aside his typewriter, but he is still making speeches. In his eulogy (quoted frequently since on radio and in newspaper editorials) over the graves of the members of his unit who fell on Guadalcanal between November 4 and December 4, 1942, Carlson said: "What of the future for those of us who remain? Our course is clear. It is for us at this moment, with the memory of the sacrifices of our brothers still fresh, to dedicate again our hearts, our minds, and our bodies to the great task that lies ahead. . . We must go further and dedicate ourselves also to the monumental task of assuring that the peace which follows this holocaust will be a just and equitable and conclusive peace. And beyond that lies the mission of making certain that the social order which we bequeath to our sons and daughters is truly based on the four freedoms for which these men died." At the Writers Congress in the fall of 1943 Carlson discussed "Democracy as a Factor in Military Action." "I have been strongly of the opinion," he said, "since first I began to reflect seriously on our way of life, that it is both incongruous and inconsistent for our armed forces to be organized and governed by aristocratic methods."

Carlson has been twice married. His first wife was Dorothy (Secomb) Evans, to whom he was married in 1917. He is at present married to Etelle (Sawyer) Carlson. His only child, Evans C. Carlson, who was born in 1918, is an officer in the Marines and served under his father at Guadalcanal.

CARLSON, JOHN ROY Apr. 9, 1909-
Author

Address: b. c/o Friends of Democracy, 137 E. 57th St, New York City

From 1938 to early 1943 a certain "George Pagnanelli" was variously an "organizer," an "official representative," and a member in good standing of some thirty-two Fascist organizations in the United States. He edited a mimeographed hate sheet called *The Christian Defender* which preached anti-Semitism and anti-democracy in the name of Christ and America; he attended mass meetings "where the fears and prejudices of listeners were played on by skillful orators"; he served as sales representative for George Sylvester

Viereck's ['40] publishing house which specialized in the production of anti-British and pro-German propaganda; he even visited lofts "where members met secretly to practice target shooting, rioting, and alley fighting." Among his friends and "business" associates were prominent Congressmen and social leaders and others who are at present in jail or awaiting trial for sedition.

In the summer of 1943 Fascist "George Pagnanelli," under the name of John Roy Carlson, published *Under Cover,* a sensational exposé of subversive activity in America and a faithful account of the author's experiences as a one-man investigating committee. During the four and one-half years in which he had assumed the disguise of Pagnanelli, Carlson had taken careful notes on his conversations with native Fascist leaders and had collected letters, documents, names, and addresses—all of which he turned over to the FBI and other groups "specializing in the gathering of data on subversive groups." Thus *Under Cover* is both a personal account of Carlson's investigations and a factual account of anti-democratic organizations in America.

When *Under Cover* was first published almost nothing was known of the author's identity. The publishers, E. P. Dutton, admitted that "Carlson" was a pseudonym, but due to the fact that many threats had been made on his life, his identity could not be revealed. Since that time more has been learned about him. John Roy Carlson is the pseudonym of Arthur Derounian, a young Armenian-American. The son of Paul and Elizabeth Aprahamian Derounian, he was born on April 9, 1909 in Alexandropolis, Greece. The first twelve years of his life were spent in Greece, Bulgaria, and Turkey. As a child he was the victim of racial bigotry and persecution, and when he came to the United States with his parents in 1921 he was fired with ideals about American democracy. Although in the years that followed he saw much to disillusion him, he can still say: "I never lost hope and never lost faith."

Carlson was educated in the grade and high schools of Mineola, Long Island, winning the Robert Cornwall Memorial Award for outstanding achievement when he was graduated from high school in 1928. He then enrolled at New York University, where he took a B. S. in Journalism in 1932. Carlson began his career as a reporter while he was still in college, working his way through by writing "for a string of Mineola, Long Island, and Nassau County newspapers." He was graduated from college in the midst of the depression and for the next ten months hitchhiked around America, "to see what my adopted country was like." He adds, in an account written especially for *Current Biography,* "[I] saw much to disillusion me, but also a great deal to give me hope."

After holding a series of jobs which included gardening, laboring, clerking in a grocery store, cooking "in a hash joint," chauffeuring, and peddling ice cream, Carlson went to work as a photographer. He had some success in this profession and managed to sell some of his pictures to the New York *Times* and *Herald Tribune* and to the *Saturday Evening Post.*

JOHN ROY CARLSON

In 1934 Carlson joined the staff of an Anglo-Armenian weekly, the *Armenian Mirror-Spectator,* as a reporter. A year later he became its editor "but left it shortly after to join various small American magazines in an editorial capacity." For a while he was managing editor of *World Digest* and he was later associated with the Farrell Publishing Corporation in New York City. Carlson's resolution to expose anti-democratic activity in America was conceived as early as Christmas Day 1933. On that day the Armenian Archbishop Leon Tourian was assassinated in his New York church by a group of Armenian Fascists. Carlson was a witness to the murder and later wrote, "I may say that I undertook the book [*Under Cover*] out of mixed feelings of hate and love; hate for the Armenian Fascists who cut down Archbishop Leon Tourian while he was celebrating Christmas mass in a New York Church and love for the Archbishop whom I knew personally and adored as a man of God." Several years later, when *Fortune* Magazine engaged him to do a series of articles on Fascist activities in the New York area, Carlson saw his opportunity to avenge the crime committed on that Christmas Day. Gathering material for these articles, Carlson "acquired a taste of native fascism at work in our midst." The projected series of articles for *Fortune* was not carried through, but he continued his investigations: "I wrote under various pseudonyms for small magazines, as the big ones would not touch the kind of stuff I wrote."

Carlson became affiliated with several prominent anti-Fascist organizations, including the Friends of Democracy, and remained associated with them even while he was posing as "Pagnanelli" among the Fascists. In 1938 he served as research worker and publicity director for the Service Bureau for Intercultural Education and helped promote a series of educational radio programs called *Americans All, Immigrants All.* sponsored

CARLSON, JOHN ROY—*Continued*

by the United States Office of Education. These programs, Carlson tells us, "went on weekly for a period of twenty-six weeks over a nationwide hookup and did a great deal to promote good will among old stock and new stock Americans."

Several of his articles "on themes involving our Americanization and interpretation of a New World on the part of a grateful citizen" appeared in *Churchman*, *Christian Herald*, *Liberty*, *Forum*, and *The Nation*, among them his exposé of so-called "educational" Nazi-made films. At the same time that he was listening "sympathetically" to Mrs. Elizabeth Dilling, Joe McWilliams, and others whom he exposes in *Under Cover*, Carlson was writing for the *American Mercury* the articles, "Inside the America First Movement" (January 1942) and "Our Fascist Enemies Within" (March 1942), and acting as adviser to *Life* Magazine for the feature "The Voices of Defeat" (April 13, 1942), all of which exposed dramatically post-Pearl Harbor anti-democratic activity.

"George Pagnanelli" is said to have been born in the fall of 1938, when Carlson found "a scurrilous anti-Semitic pamphlet" on a New York subway. He decided to call at the address given in the pamphlet and found himself at the headquarters of the American Nationalist Party, "the distribution point for a vast quantity of domestic and imported subversive literature." Realizing that his best opportunity to investigate this group and others like it was by working from within, Carlson assumed the name "Pagnanelli," modeled his speech, clothes, and gestures on what he thought was typical of a young Italian, and "joined up." His rise in Fascist ranks was swift. In a short time he was receiving mail from Berlin headquarters, attending Bund meetings, mixing with William Dudley Pelley, Gerald L. K. Smith '43, Lawrence Dennis '41 (who gave him a letter of introduction to Senator Gerald P. Nye '41 which won "Pagnanelli" a very friendly reception from the Senator), and numerous other leaders. Father Coughlin '40 requested two weekly copies of the *Christian Defender* which "Pagnanelli" published. Carlson had complete access to the membership files of many subversive groups, and he estimates that the rank and file membership of these organizations numbered close to 1,000,000.

The results of Carlson's four-and-one-half-year affiliation with such organizations are neatly recorded in five indices which appear in the back of *Under Cover*. These indices—one of names, one of sedition trials, one of special subjects, one of members of Congress, and "a Geographical Fever Chart"—have been hailed as the most valuable part of the book and "a practical working directory of the nationalist political movement in America today." *Under Cover's* success as a best seller, however, has been attributed primarily to the "startling" and "sensational" aspects of the book. One of its most effective publicists has been Walter Winchell '43, who gave it a radio boost "that had customers waiting for the doors of bookstores to open the following morning."

Still more valuable publicity was given the book when certain people "whose activities, in Mr. Carlson's opinion, entitled them to mention in his Who's Who of the Underminers of America," began to threaten booksellers with libel suits if they continued to distribute copies. It had been the fear of libel suits which had led eighteen different publishers to refuse *Under Cover* twenty-eight times before September 1942, when, Carlson writes, "E. P. Dutton went for it like a famished man and accepted it within one week." Threats of libel action have so far proved a boomerang to those who have made them. By September 17, 177,500 copies of *Under Cover* had been sold in the regular edition, and 8,000 in a cheaper edition put out by the Book Find Club; the publishers were receiving orders for 27,000 to 35,000 copies weekly and had printed 285,000, necessitating the dropping of plans for fall publication of sixteen other books; *Under Cover* was running as a serial in a number of newspapers, and had been awarded the "I" (for Imperative) of the National Council on Books in Wartime.

On October 20 the War Department confirmed reports that Major General William D. Styer, chief of staff of the Army Service Forces, had asked commanding generals of service commands for "reports on the extent to which soldiers are reading *Under Cover*," and also confirmed the report that the survey was being made, in army camps and libraries, at the request of a member of Congress. (*PM* asserts that this was Republican Representative Clare Hoffman of Michigan, "arch-isolationist and anti-New Dealer whose name . . . appears unflatteringly in the book.") On November 7 Senator Burton K. Wheeler '40, isolationist Democrat from Montana, asked the Senate to investigate "Arthur Derounian, alias Pagnanelli," to find out whether he had used "alleged facts" gathered as an FBI employe "as a basis for private profit." Meanwhile the profit grew: on November 19 Dutton announced that to date they had printed 500,000 copies of *Under Cover* and had sold and shipped 40,065 copies during the preceding week.

Reviewers of *Under Cover* agreed, almost without exception, on its merits. (As was expected, Colonel Robert R. McCormick's '42 Chicago *Tribune* struck a dissenting note.) Edward N. Jenks, writing in the New York *Times Book Review*, commented: "As an account of the author's personal experiences, it is sometimes hair-raising but those who turn to it as a source of additional information about the activities of subversive groups in the United States will find it disappointing." But Clifton Fadiman '41 enthusiastically announced: "It is the duty of every true American to read Mr. Carlson," and Louis Adamic '40 called the book "a tremendous sock in the jaw . . . to the wishful, comfortable assumption that all saboteurs of American democracy are spies or Fifth Columnists born in Axis countries and now safely interned." Other critics found fault with Carlson's literary style but concluded that the valuable information found in the book far outweighed its literary defects.

It was generally conceded that Carlson's ability to synthesize numerous little "crackpot" incidents (like the protest of certain groups against sugar rationing or the hysterical suggestions made at mass meetings for impeachment of the President '42) into the terrifying whole of the American Fascist movement and his persistent warning that "patriotic nationalism" can be carried to dangerous extremes made *Under Cover* one of the most important books of 1943.

Little is known about Carlson personally except that he is dark, slight, of medium height, a nervous "soft-spoken, pleasant, agreeable" young man with a very slight trace of a foreign accent. He "seldom sleeps more than three or four hours a night and never feels tired. . . It's not uncommon for him to stay up right around the clock. He eats lightly and often, sometimes seven or eight times a day. . . He doesn't drink or smoke. 'I had to guzzle a lot of beer with those bums when I was working under cover, but I've even dropped beer now. There's too much to be done in the world to sit around guzzling and gossiping.' "

Carlson writes that tennis and backgammon are his favorite recreations and that he likes roaming about the city—"which I used to do at night, but as Carlson must now do during the daytime. This is not out of sense of personal fear, but the result of a sense of responsibility toward my publishers and official agencies who must rely on my testimony and reports and information in case of libel or prosecution of alleged seditionists." His religion is Armenian Apostolic and he usually votes Republican.

Commenting upon his book, Carlson writes, "I am naturally pleased at the success of *Under Cover* and the good it might do in placing the finger on organized anti-democratic forces. The book proves once again that America is still the land of opportunity, where the old-fashioned precepts of hard work, etc., still achieve their just reward."

Obituary

N Y Times p13 My 29 '43

CARPENTER, GEORGE L(YNDON) June 20, 1872- Head of the Salvation Army
Address: b. c/o Salvation Army Headquarters, 120 W. 14th St, New York City; Salvation Army, International Headquarters, 101 Victoria St, London, E. C. 4, England

In his fifty years as a member of the Salvation Army, General George L. Carpenter has campaigned for salvation on four continents. When he was elected chief of the Army in 1939, observers generally interpreted his election as a shift on the part of the Army toward democratic leadership, and a reaction from the autocracy of the Booth family. Founded in 1878, the Salvation Army has, according to *Time* Magazine, consistently been practicing "street-corner soul-saving." "On the theory of its founder, hot-eyed, white-bearded General William Booth, that you cannot save a man's soul when his feet are cold and his stomach empty, it adds soup and soap to the salvation. Thanks also to Founder Booth, the Army's General long occupied the most autocratic throne of charity on earth, armed with a set of rules which gave him dictatorial powers, even to naming his successor. Son Bramwell was so named when General William Booth died in 1912."

Bramwell Booth was too much for the Army, however, and in 1929, after a bitter legal battle, his subordinates finally ousted him and elected Chief of Staff Edward John Higgins as general. In 1934, nevertheless, the Booth dynasty was revived, this time with the election of Evangeline Booth '41, Bramwell's sister, who "loved the Army more than any man she ever met." In 1938 she reached retirement age, and the High Council, dominated by progressives, sought a candidate who would rule it democratically. Since the High Council has no power to control the general, but only to elect him, this was effected by engineering a previous agreement with the candidates that "no changes . . . should be promoted by the general elected . . . without the fullest possible consideration of a consultation with the commissioners of the Army." George L. Carpenter was elected and promised that if he ever got to the stage of refusing to listen to advice, he hoped the Army would ask him to retire—and would see to it that he did.

George Lyndon Carpenter was born in Newcastle, Australia, on June 20, 1872, the son of the late Tristan d'Acunha Carpenter. He worked as a $1.25-a-week printer's devil in New South Wales before he joined the Salvation Army in 1892. Educated in the Army Training College at Melbourne, he rose rapidly, becoming a commissioned officer and an editor of Army publications in Melbourne. He moved up to be editor in chief in Australia; spent some time in social service and also in training students for evangelistic work in the same country; then shifted to London in 1911, and for twelve years (beginning in 1915) was literary secretary to the late General Bramwell Booth. After this Carpenter returned to Australia. Later he spent some time in Buenos Aires. In 1927, two years before Booth was deposed, the General demoted Carpenter for reasons which were not made public. Four years later, however, under a new regime,

Kaiden Kazanjian

GEORGE L. CARPENTER

Carpenter was placed in charge of the Salvation Army in Canada, Alaska, Newfoundland, and Bermuda.

In 1939, following the retirement of General Evangeline Booth, Carpenter was elected fifth general of the Salvation Army. He and his wife made a tour of inspection to various Salvation Army posts. "My sole program for the Army," he said, "is religion always hot, as General William Booth used to say he liked his religion and his tea." In Toronto, the Army *War Cry* reported that after the official welcome "brigades of Salvationists raided Toronto's sordid night-life haunts with dire results to enemy ranks. Scores of captured were escorted to the Temple, where hot coffee was served, drunkards were sobered, and repentant souls sought salvation." The Army's terminology is militant: a convert is a "prisoner of war," a service a "company meeting," a Salvationist's death "promotion to Glory."

General Carpenter commands one of the largest Armies in the world. It has 29,000 officers (an officer's commission in the United States is legally equal to a minister's ordination). Although primarily a religious body, its evangelism marches hand in hand with its social work. With posts in ninety-seven countries, it makes a practice of using native-born recruits whenever possible, and its officers speak 104 languages. A policy which shocked the Victorians practically everywhere when the Army was first founded is that of allowing women absolute equality of privilege, position, and dignity.

In speaking of the world situation today, General Carpenter declared: "I have sympathy with every rightful demand for freedom, for possible readjustments in the economic realm. I want to see modern culture and better standards of living more widely enjoyed. But any one, or all of these together, will prove disappointing, if they alone are the basis of hopes for the new order. . . I make no apology for asserting that the fundamental problem of life cannot be dealt with by any political developments or any adjustments in the realm of economics or in any mere human measures. That problem derives from the human heart, and can be solved by spiritual means only." In referring to the trend toward the establishment "of this new world with the old material," General Carpenter asserted that "surely it must be manifest that if we are to have a new world, it can only be brought about by new people. And new people can be produced only through the transforming power of vital religion."

General Carpenter, according to *Newsweek*, is an eloquent street-corner evangelist. "He often ends interviews by inviting the interviewer to kneel with him and pray. When he hears good news he asks others to join him in thanksgiving." "Kindly, graying" General Carpenter and his family have lived within the rigid pattern which the Army prescribes for its members—smoking, the use of alcohol, and going to the theatre are forbidden. The General has not read a novel for more than twenty years. He is fond of walking, fishing, and writing. Most of his family is also fond of writing: his "slight, smiling" wife, Minnie (Lindsay Rowell) Carpenter—to whom he was married in 1899—composes Salvationist biographies as well as directing much of the Army's relief work in England, and his daughter Stella works on the editorial staff for Salvation Army publications in Toronto headquarters. His son, Captain George, commands a Salvation Army Corps in England.

Who's Who 1942

CARPENTER, J(ULIUS) HENRY, REV.

Jan. 7, 1893- Expert on the cooperative movement; minister

Address: b. 285 Schermerhorn St, Brooklyn, N. Y.; h. 610 E. 38th St, Brooklyn, N. Y.

Work highly important to China's war effort—aiding her 2,400 industrial cooperatives in stepping up production and maintaining national economy—has been carried out under the direction of the Reverend Dr. J. Henry Carpenter, an expert in the cooperative movement. Dr. Carpenter is also chairman of the Committee on the Church and Cooperatives of the Federal Council of the Churches of Christ in America. At the invitation of China's Finance Minister, Dr. H. H. Kung '43, Dr. Carpenter in July 1942 went to China representing Indusco, the American Committee in Aid of Chinese Industrial Cooperatives, a participating agency of United China Relief. A recent appropriation of one hundred million dollars in Chinese currency for the Chinese cooperatives would be used, according to Carpenter, for training skilled personnel to work out ways of manufacturing drugs and other medical supplies formerly imported, and urgently needed for soldiers and civilians.

Prior to his work with cooperatives in this country and abroad, the Church had been Dr. Carpenter's career. Many forward-looking ministers and priests have interested themselves in the cooperative movement, a program based, as Dr. Carpenter has written, "upon the most advanced social thinking, and yet grounded in the deepest religious convictions."

The son of Edward Rush and Mary E. (Parker) Carpenter, he was born January 7, 1893 in Auburn, New York. As a young man he was interested in church activities, serving as superintendent of the Madison County Church and Bible Association from 1913 to 1917. He took his B. A. at Colgate University in 1917, and in 1924 he received the degree of Master of Religious Education at Boston University. Some years later (1937) he received an Ed. D. degree from New York University.

During 1917 and 1918 Dr. Carpenter was active in YMCA war work, and in 1919 he was with the Religious Education Department of the Inter Church World Movement. Until 1927 he was manager of the International Council of Religious Education Camp at Lake Winnepesaukee, New Hampshire. During this time (1920-23) he was also director of religious education of the Central Methodist Episcopal Church of Brockton and West Roxbury, Massachusetts and director (1924-25) of the Albany Division Council of Religious Education. From 1926 to 1932 he was director of Religious Education of the Brooklyn Federation of Churches (he was ordained in the Presbytery of Brooklyn-Nassau in 1933); from 1930 to 1936 he served as an instructor in education at New York University; and in 1932 he became executive secretary of the Brooklyn Church and Mission Federation, which position he still holds.. Since 1936 he has been executive secretary of the Brooklyn Bible Society.

As head of the Tour Committee of the Cooperative League of the United States, Dr. Carpenter has led groups of American cooperators in the study of foreign cooperatives, and has also conducted independent studies. His first active work in this field was in 1936 when he went to Norway and Denmark and made an extensive study of the cooperatives in those countries. In 1937, 1938, and 1939 he led groups of American cooperators in a study of the Nova Scotia experiments. Of these tour groups he has written: "They were composed of priests, ministers, social workers, college professors, schoolteachers, and cooperators. There were Catholics, Jews, and Protestants; Negro and white. Probably one of the most real experiences of the entire venture was to see this group, forgetting creed and color, amalgamating into a close fellowship of one purpose and interest as a result of living and studying together." In 1939 a tour of the cooperatives in Newfoundland was made. During 1940 Dr. Carpenter traveled to cooperative centers in the Middle West, and the following year he visited the cooperatives of Mexico.

From July to mid-December 1942 Dr. Carpenter was in China helping Chinese cooperatives in their important work of bolstering the home front. The trip was planned with government officials in Washington and sponsored by United China Relief. Dr. Kung's cabled invitation said that the visit would be "most timely at the present moment when we are trying to maximize cooperatives' contribution to China's economy." (En route to Chungking, Dr. Carpenter visited South Africa and reported on the race problem which exists there.)

Pinney

DR. J. HENRY CARPENTER

Following a 1,500-mile tour of cooperatives in Szechwan, Shensi, and Kansu Provinces, Carpenter reported that within the next few months thousands of new workers would be trained for industrial tasks. He said that hundreds of Chinese cooperatives manufacturing gasoline and steel as well as shoes and clothing would have an "enormous share" in winning China's war. Besides producing more than 100 sorely needed products such as cotton cloth, simple medicines, and shoes, the cooperatives were engaged in mining coal, making steel, and producing gasoline from different kinds of beans. "In one place in Shensi Province," said Dr. Carpenter, "I saw a group of Chinese youths making a fuel cracking plant out of an old marine boiler. The boiler was an inch and a half thick, and they had only one sledge hammer, two jacks, and some chisels. Yet before I left they had completed the plant and were producing thousands of gallons of gasoline." Dr. Carpenter returned to the United States in December 1942 and his extensive report to Dr. H. H. Kung on the Chinese cooperatives was published in the February 1943 issue of *China at War*.

Since his return Dr. Carpenter has continued his work as executive secretary of the Brooklyn Church and Mission Federation. From February to April of 1943 he also toured the United States speaking in the interest of the United China Relief. Since then he has lectured on China and India from time to time for various organizations, and he has written articles for numerous magazines, including

CARPENTER, J. HENRY, REV.—*Cont.*

Asia Magazine (November); *Christian Century* (May); *Collier's* (May); and the *International Petroleum News* (August).

Dr. Carpenter reported to the Lend-Lease Administration and to United China Relief on ways and means by which American assistance can be employed in increasing Chinese cooperative production. He conferred with Indian leaders and British officials in India in an attempt to obtain priorities for essential supplies and for their transport to China. "As far as can be discerned," he said, "the Chinese Government will be responsible for furnishing capital funds for the expenses of the cooperative movement, while training of skilled personnel will be done with funds from the United States."

Among Dr. Carpenter's various offices and connections in addition to those previously mentioned are memberships in the Field Department Committee of the International Council of Religious Education and of the Peace Education Committee of the World Sunday School Association. He is also a member of the board of directors of the International Association of Daily Vacation Schools, and was president of the Christian Cooperative Fellowship in North America in 1937. In August 1943 he was elected to the board of directors of the League of Industrial Democracy, and in December he was elected to the executive committee of the National Peace Conference. He is the author of various articles in such publications as *Religious Education, International Journal of Religious Education, Church Management,* and *Christian Century.* He has been New York correspondent for the last named since 1939. In 1941 he was given an award by the Flatbush Council for Religious Goodwill for his leadership in the cause of interfaith amity.

Dr. Carpenter was married to Erma Mary Hall on July 20, 1917. They had four children. Two, James David and Jean Caroline, are deceased; the two living are Erma Elizabeth, born in 1926, and Mary Bertha, born in 1931. Taller than average, the Reverend Dr. Carpenter is a corpulent, genial man with blue eyes twinkling behind spectacles and with a thin fringe of gray hair. He has a full resonant voice and speaks on the many subjects which interest him with a great deal of enthusiasm.

CASEY, ROBERT J(OSEPH) Mar. 14, 1890- Journalist; author

Address: b. Chicago Daily News, Chicago, Ill; h. 740 W. Hutchinson St, Chicago, Ill.

"If I were asked to name the most competent craftsman in the field of foreign correspondence," Linton Wells writes, "my unhesitating choice would be that amiable, redoubtable Irishman, Robert J. Casey, of the Chicago *Daily News.* . ." Casey, writer of "pithy prose abounding in good humor, horse sense," and, occasionally, horseplay, is (like most foreign correspondents) given to writing books about his experiences. In 1941 he produced *I Can't Forget,* concerned with happenings in the months that culminated in the fall of France and the Battle of London; in 1942 came *Torpedo Junction,* a sprawling eyewitness account of events in the Pacific after Pearl Harbor, written in diary form and full of hilarious anecdotes as well as sober reporting; in November 1943 *Such Interesting People* appeared.

Robert Joseph Casey, who calls himself a "100-to-1 shot" baby, was the son of a nomadic tinsmith, James W. Casey. In pre-Robert days the elder Casey was living in Sacramento, California, safely unmarried. He placed $300 on a horse named Marigold (odds, 100 to 1)—and won. With $30,000 in his pocket, he canceled a fishing expedition and went to Beresford, South Dakota, to see his sister. It was in Beresford that James Casey met Mary Agnes Wilson, to whom he promptly was married, and it was in Beresford that Robert was born on March 14, 1890.

As a young boy Casey wanted to be a concert pianist, and he studied harmony and wrote musical compositions. He was also interested in chemistry, and he took a chemistry course at the Armour Institute of Technology in Chicago before attending St. Mary's College in Kansas. At St. Mary's, however, both music and chemistry were almost forgotten. He won an intercollegiate contest for excellence in Latin prose and contributed less erudite prose to the Kansas City and Denver papers—sports items about the college baseball and football teams. Graduated in 1910, he married Marie Driscoll on September 24 of the same year, and experimented with such jobs as working in a saw mill and selling fly traps to restaurants before the sale of a short story to *Adventure* Magazine for $50 made him finally decide on a newspaper career. Casey became sports editor on the old Des Moines (Iowa) *Register and Leader,* where he remained until asked one Sunday, after a heavy week on sports, to relieve a police reporter. Giving two weeks' notice, he took himself home and began writing letters to other newspapers. He wrote thirty-one such letters, the thirty-first bringing him an offer from the Houston (Texas) *Post.* There were two years on the *Post* as night editor, then he went to Chicago to become telegraph editor of the old *Inter-Ocean.* When *Inter-Ocean* folded he became automobile editor of the Chicago *Evening Journal,* and he finally joined the Chicago *Evening American,* a Hearst paper, as rewriteman.

His career was temporarily interrupted when the United States entered the First World

War. Casey immediately enlisted as a private, and by the time the Armistice came he had risen to the rank of captain of the 124th Field Artillery and had won three citations for bravery under fire and the Silver Star Medal. Returning to Chicago, in 1920 he left the *American* to become rewriteman on the Chicago *Daily News*. It was with the *News* that his reporting career really began, for Casey, who had been holding various kinds of editorial positions for ten years, soon reversed the usual order of things and began going out for stories. "That's constant progress," he says dryly.

Actually it was, for Casey promptly became one of the *News'* star reporters. The paper ran a short human interest story every day on the first page under a "dinky head," and Casey began making the "dinky head" position with his feature stories, most of them about animals, and some of them leading off with a bit of humorous verse. (Some of Casey's verse was published in 1929 as the *Vest Pocket Anthology*.) Eventually he was given a regular position on the first page. "The value of laziness is a reporter's asset if he knows how to get away with it," Casey says, adding: "When you've got two details for a story, why look for a third?" Passively practicing what he preached, in his pursuit of news he made a point of not pursuing it into crowds, of never getting far from a telephone, and of never taking notes—a city editor had told him once that "if a guy says anything worth printing, you will remember it." But then Casey was a rare bird, a reporter who could make a story out of almost nothing—who could, in *Time* Magazine's words, "spin a whimsical three-quarters of a column about such things as Mrs. Murphy's backyard tiff with Mrs. Callahan," and make his boss like it.

Contrariwise, Casey was a reporter who could dismiss the highly melodramatic demise of a Chicago gangster with not much more than the bat of a weary eye—and get away with that, too. Called to the office one morning too early for comfort because of the unnatural death of one Hymie Weiss, he revolted against all newspaper tradition (it was the prohibition era) and pounded out the news that Hymie hadn't really amounted to anything, that there was nothing very exciting about him, but that for those interested, well, here were the facts. . . He closed his story with the announcement: "Next Week—East Lynne." It wasn't long before the managing editor was asking who had written the lead story. "I did. What's wrong with it?" Casey asked, expecting repercussions. "Nothing. It has always occurred to me that's the way to run a crime story," was the reply—and after that the Chicago *Daily News* made a practice of dusting the glamour off Chicago's much-romanticized gangsters and petty racketeers.

The versatile Casey was, at least when writing about exotic places and remote times, something of a romantic himself. He had written two unpublished novels while still on *Inter-Ocean*, and when he returned to the United States after the First World War he brought back with him a collection of photographs of Luxemburg, which he submitted to *National Geographic* with an article. When both photographs and script were rejected with the suggestion that readers of the *National Geographic* were "tired" of European scenery, Casey wrote a book about the pictures, published as *The Land of Haunted Castles* in 1921, and he followed it by *The Lost Kingdom of Burgundy* (1923)—"curious beautiful, sometimes shuddering, stories of aforetime places and people." In 1927 his war diary, *The Cannoneers Have Hairy Ears*, anonymously published, created much more of a stir than either of the earlier books; but that same year "a gay historical romance," *Gentleman in Armor*, telling "How René of Bar, Duke of Lorraine, Pursued My Lady of the Firelight, Found Joan of Arc and Led the Army of the Dead," was published under Casey's name. In 1928, following an exploration trip through Cambodia, came *Baghdad and Points East*, a "vivid account of travel in the Near East," interspersed with stories and legends; in 1929 came *Four Faces of Siva*, which told about the discovery of the hidden cities of Khmers and the story of the race that built them and vanished. These last two books particularly irritated the few critics who did not fall immediately under Casey's spell; they spoke of his "flowery style," his "gaudy style," his "facetiousness and self-conscious lyricism," accused him of keeping "one eye on the Sheikh Public." "Whatever he touches enters, as by magic, the category of the superlative," marveled one. Only with *Easter Island* (1931) did he succeed in winning the complete approval of even these hard-shelled souls both for his scholarship and his style. In 1930 Casey had "traveled 33,500 miles through two hurricanes and four full gales," leading an expedition to Easter Island, and in this book he told the story of the Island—its forlorn present, its known history, its legendary past. He also brought back 20,000 feet of motion-picture film showing the stone idols of the vanished race on the Island.

ROBERT J. CASEY

Casey's detective and adventure stories were unanimously received with almost as many

CASEY, ROBERT J.—*Continued*

superlatives as Casey himself had been accused of using, however. They were *The Secret of 37 Hardy Street* (1929); *The Voice of the Lobster* (1930), "a splendid piece of foolishness"; *The Secret of the Bungalow* (1930); *Cambodian Quest,* a mystery and adventure tale whose scene was laid in Indo-China; *News Reel* (1932), published also in the same year in England as *Secret of the Dark Room,* in which the murder took place in a news reel darkroom; *Hot Ice* (1933), which used the gangland of Chicago's underworld as its background; and *Third Owl* (1934), whose emphasis was on spooky atmosphere. That Casey himself is a rabid detective story reader is evident from an article published in *Scribner's* in 1937, "Oh, England! Full of Sin," in which he describes England and the strange habits of her inhabitants from the point of view of one who takes his detective fiction seriously.

Even before the Second World War Casey was sending frequent dispatches to the *Daily News* from other places than Chicago. In 1933, for example, he was in Cuba covering the revolution. (According to one story, at one time he watched the Cubans outside the National Hotel keep missing the establishment until his artilleryman's pride could stand it no longer. He then took over, and "scored a bull's-eye on his first shot.") Once, sent to cover a wolf hunt in Illinois on an expense account of $10, he submitted the following record of expenses: "To rent car Chicago to Springfield, 1¢; gas for same, 1¢; oil for same, 5¢ (it was an oil eater); to rent horse, 1¢; hay, 5 mills; to rent glasses to look at wolf, 1¢. . ." The last item in an account that triumphantly totaled exactly $10 was "Wolfbane, 10¢"—and on his most dangerous jaunts Casey continues to record Wolfbane as a necessary expense. "Only people with poor equipment and foresight have adventures," he says, and it is obvious that both his equipment and foresight are extraordinary.

The outbreak of the Second World War in September 1939 found Casey and Leland Stowe '40 flying the Atlantic together. Casey went immediately to France, and he was to remain in France until its fall. The first months of the War, the "phoney War," found him writing about the exploits of "Albert le Screwball," a French pilot "who thumbs his nose at death in frequent routine solo jaunts along the West Wall," and Casey himself performing such feats of *savoir faire* as making a leisurely solo trip past the Maginot fortifications and coolly taking a taxicab ride from Luxemburg through the German West Wall to Treves, headquarters of the German High Command, without any military authority at all. Writes Quentin Reynolds '41: "We saw the inimitable Bob Casey in France, whose fat fingers had the lightest touch on a typewriter I ever saw. Casey was so far ahead of us not only in reportorial ability but in sheer writing that, instead of being jealous of him, we were merely proud that he was a member of our profession." His dispatches were still "a strange combination of spot news, fantasy and feature material," full of the "lighter overtones of the bizarre and the hilarious . . . which many recognize as the Casey touch"; but there were ominous undertones. Casey forecast the German assault on the West Wall as early as April 15, and insists that no one was less surprised than the French when it finally came. In his May 10, 1940 dispatch he told the first comprehensive story of the fall of Luxemburg.

To the end Casey covered the fighting (if it can be called that) of the French Army. After the campaigns in the Low Countries and the collapse of France, he believed that he had seen on the French and Belgian roads "just about all the human suffering that one man can stand to look at." "The callouses I had built up in thirty-odd years of newspapering were wearing pretty sheer," he says in *I Can't Forget.* There was more wear to come—much more. Casey arrived in London just in time for the beginning of the Nazi Blitz. The spirit of the people of London during those first terrible weeks, as he describes it, was rivaled only by his own cablegram to his paper on September 19, 1940; "Hotel just blown out from under me. Filing tomorrow. Regards."

In England, as in France, Casey valiantly battled against censors, and once scored a kind of victory in reverse by refusing to mention even the name of the country that was being bombed. According to William Hillman in November 1940: "The American newspaperman writing the liveliest prose on the Battle of London is Robert Casey."

In December 1940 Casey left London and set sail for Africa. He covered the battles in Africa with the British forces, sending from the Libyan Front a dispatch on the fall of Bengasi which was "perhaps the most graphic description of the Italian rout to be filed." His leg crushed after a mob of excited Egyptians in Cairo pushed him from a train during an air raid, he finally set sail for home, writing *I Can't Forget* while en route. There had been twenty-two months on the battle fronts; he had visited Ireland, England, France, Germany, Luxemburg, Holland, Nigeria, the Anglo-Egyptian Sudan, Egypt, Saudi-Arabia, the Union of South Africa, India, and Trinidad, traveling light a large part of the time because he had lost all his possessions except one suit and a typewriter when bombed out of his London hotel. Back in Chicago on July 5, 1941, he commented on the "totally fantastic" feeling of security that America gave him. "I feel a little like Christopher Columbus," he said. "This is a very nice country you have here." But there was little time to enjoy it. Soon Casey was off again to Alaska, the first American newspaperman to explore and to report on the new air bases established there by the United States and by Canada.

The Pearl Harbor attack followed shortly after Casey's return from Alaska. Immediately Casey was off to Hawaii, where at first he found only bungling confusion. He sent back uncheerful eyewitness accounts of the United States Fleet's raids on Marshall and Gilbert Islands and Wake Island, with which he was not greatly impressed, but he soon was moved to enthusiasm by the highly efficient smashing of Marcus Island and by the great Midway Battle. He was the first American correspondent to report full on-the-spot details of the Midway Battle, which he called one of the greatest naval battles of all time. In August 1942, a month after his return to the United States, *Torpedo Junction,* the story of "the transformation of our Navy into a veteran fighting outfit," was in the hands of his publishers.

Both of Casey's books about the War received excellent reviews. "Mr. Casey has the eye for the significant details of the reportorial life, meaning for the humor and heartbreak of countless hours waiting in anterooms, or arguing with police and censors," J. B. Phillips wrote in *Herald Tribune Books,* reviewing *I Can't Forget.* "His eye and mind are as sensitive to women as to men, and some of his French and London chapters have the War's most vivid pictures of personalities on the home front." "All in all, this book is what any young student in journalism could study with profit," commented Russell Owen in the New York *Times.* "It shows what a man can do with the day-by-day material, the little conversations, the minor human contacts, as well as with the great tragedies and heartbreaks of a world struggle." As for *Torpedo Junction,* it was called "one of the best of the war books," although at least one reviewer suggested that it badly needed cutting.

Casey, "red-faced, balding . . . quick of mind and ample of girth," is five feet ten inches tall and weighs 190 pounds. (He calls himself a "big harp.") He lists his coloring as "oyster-white," his politics as "Whig," his favorite sport as "weight-lifting," and his religion (more soberly) as Catholic. He detests censors and, apparently, questionnaires, though perhaps not with equal fervor. According to the *Catholic World*: "Persons who have met Mr. Casey know that he talks as he writes, in a style that possesses unique, unvarying interest." His boss was particularly interested when, receiving congratulations about his series on the War with customary aplomb, Casey commented: "I'm glad you like them, because they cost you about $600 apiece."

In the spring of 1943 Robert Casey finished work on a book called *Battle Below,* the idea for which had been suggested to him by Secretary of the Navy Frank Knox '40. The book was an account of life on United States submarines, and Casey had spent months in undersea craft gathering material. But *Battle Below* and three other books on submarines were "indefinitely suppressed" by United States Navy censors because it was feared the books might reveal details about American submarines that would prove useful to the enemy. In November 1943 Casey published a book about newspaper life titled *Such Interesting People.* It proved to be a robust, hilarious, yet modest account of Casey's newspaper experiences, filled with stories of the "cockeyed, bibulous, erratic reporters and patient, softhearted editors he has known." Harry Hansen '42 wrote: "I was supposed to be convalescing from a throat infection when I began to read it, and I laughed so hard that I nearly strained all my vocal muscles out of place again." "Journalistic Bohemianism," added the New York *Sun* reviewer, "was never better portrayed." Casey has written of an era which produced some of the country's most brilliant newspapermen and of Chicago when journalism "was at its lustiest."

Casey came home from his seven months in the Pacific just "aching for a good murder story," too, but it doesn't seem likely that he will get around to writing another before the War is over. In October 1943 he went abroad again, first going to London. There he became attached to the British Fleet, and in the fall of 1943 his dispatches were appearing under datelines from the Mediterranean area.

CASSIDY, HENRY C(LARENCE) May 12, 1910- Foreign correspondent

Address: b. Associated Press, 50 Rockefeller Plaza, New York City; h. 21 Oakdale Ave, Dedham, Mass.

Two personal letters to an American reporter, signed in bold hand and purple ink, *J. Stalin,* made world headlines on October 3 and November 13, 1942. The first letter was an answer to certain questions on the Second Front, Allied aid to Russia, and the Soviet's ability to carry on the War; the second contained Stalin's '42 views on the Allied invasion of North Africa. The recipient of the letters—through whom Stalin addressed the American people—and who scored thereby "the two biggest beats of the War," was Henry C. Cassidy, chief of the Associated Press Bureau in Moscow. Several correspondents sent to Russia—among them Larry LeSueur '43, Maurice Hindus, and Walter Graebner '43—have felt themselves under compulsion to write books about their experiences and impressions. Cassidy, by virtue of his famed Stalin letters, could produce a first-class reporter's account with added special trimmings. His *Moscow Dateline, 1941-1943,* appeared in May 1943.

Henry Clarence Cassidy was born in Boston, Massachusetts on May 12, 1910, the son of Henry A. and Irene (Irwin) Cassidy. After his graduation from the Dedham High School he entered Harvard, where he received his B. A. *cum laude* in 1931. In that year also he began his career as a newspaperman reporting for the Boston *Traveler.* Within two years he became editor of the Associated Press in New Haven, Connecticut.

Following his marriage to Martha Stucklen (the Cassidys have one daughter, Constance) he went in 1934 to New York, where he was an editor of the Associated Press until 1936. It was in June of that year that he represented the Associated Press in Paris. He covered the days of the *Front Populaire* under Blum '40,

HENRY C. CASSIDY

and kept pace with the subsequent French coalition governments. He took time out to go to Austria to write the story of the honeymoon of the Duke and Duchess of Windsor.

Cassidy first became a war correspondent when he covered the Battle of the Ebro, on the Republican side, in the Spanish Civil War in 1938. Then, with the outbreak of world hostilities in 1939, he returned to Paris. He accompanied the French armies as accredited correspondent, covered the British Army and Air Forces in France, and stayed on in Paris during the German occupation. In the summer of 1940 he traveled by troop train to Berlin, and shortly afterward left by plane for Moscow.

His two and one-half years in Russia, during which time he covered the Soviet-German war from Moscow and Kuibyshev and made four trips to the Front, were recorded by Cassidy in his *Moscow Dateline.* John Chamberlain '40 called it "the best book I have read on the subject of embattled Russia." Harry Hansen '42 saw it as a "good will book," aiming "to calm Americans who fear the Russians will export Communism after the War." Most reviewers found it the report of a "plain, hard-working newspaperman who keeps his eye on the main task." High points of the book were Cassidy's descriptions of the successive Churchill '42 and Willkie '40 visits to Moscow, and the dinners given each, at which he was present. The atmosphere was pretty cool between Stalin and Churchill, since the latter had come to say why there wouldn't be a Second Front in 1942, and had further displeased the Russians by coming to a dinner that was a full-dress affair "in blue overalls with a zipper front, open at the neck, and with no tie." But "Willkie's energy and bluff heartiness" won the heart of Stalin and the Russian people. "He came to listen, whereas the others came to tell the Russians something. And the Russians were pleased." The fact that he was outspoken on the need for a Second Front clinched Willkie's popularity in the Soviet Union.

As for the famous letters, any credit for having succeeded where other reporters had failed is disclaimed by Cassidy. When he wrote the first letter to Stalin he was actually acting under orders from the home office of the A. P. Like other correspondents in Moscow, he had tried repeatedly to get an interview with Stalin; he had written other letters to him, with no answer. When the New York office had the bright idea that he try again, Cassidy did the best he could. Stalin did reply and no one was more surprised than Cassidy of the A. P. A month later, after the North African invasion, Cassidy again took his pen in hand, hopefully; and again Stalin sent a message to the American people through a newspaper representative rather than through the channels of diplomacy.

With regard to the Soviet political future, Cassidy (writing before the dissolution of the Comintern) said that the old bugaboo of world revolution had been killed by Stalin himself; that Russia is working toward "milder conditions," while remaining socialistic; and that after the War she will continue friendly relationships with the United States and Great Britain.

In answer to questions put to him on his return to the United States, Cassidy said that, in so far as he could determine, the facts and figures in Soviet war reports were accurate. Soviet censorship, once very strict, "is now among the most liberal." When Ambassador W. H. Standley '42 charged that Russia was withholding the facts of United States lend-lease aid from its people, Cassidy wrote in the Washington *Post*: "Since my return to New York I have heard some comment that the Russians do not seem to realize or appreciate the extent of our effort to aid them. They do realize it, for every statement President Roosevelt '42 or Prime Minister Churchill has made on this subject, complete with figures, has been reproduced in the Soviet press, and the Russians are avid newspaper readers. Those with whom I have come in contact also have made [it] clear that they appreciate it."

Henry Cassidy won the National Headliners Club Award in 1943 for foreign reporting, and in the winter of 1943 he was at the Front with the Red Army covering the news for the Associated Press. He is slim, blond, nervously alert, and keeps a keen reportorial eye always on the ball. When he has time for anything besides writing, he enjoys fencing and golf.

CATROUX, GEORGES (ka-trü' zhôrzh) Jan. (?), 1879- Governor General of Algeria

Address: Beirut, Syria

General Georges Catroux is the man who, as permanent liaison officer between the Fighting French and General Giraud '42, helped to work out the accord which now exists between the two French movements. A five-star general, ranking just below a Marshal of France, he outranks both de Gaulle '40 and Giraud (he has a year's seniority over the latter), but since the fall of France he has served willingly under de Gaulle's leadership as high commissioner of Free France in the Far East, commander-in-chief of the Fighting French Forces there, and Governor General of Algeria. He is considered not only "one of the best informed military men in Middle Eastern affairs," but also "one of the few Frenchmen now outside France who command the respect of both leaders." He is described as the "key man" of the French Committee of National Liberation, and in the fall of 1943 is a commissioner without portfolio.

Georges Catroux was born in January 1879 of a military family: his father was a general. He himself entered Saint-Cyr Military Academy at an early age after studying at the military school of La Flèche, and in 1899 he was graduated and posted to the famous mounted company of the Foreign Legion. From 1903 to 1905 he served as aide-de-camp to Governor General Beau of Indo-China and then, returning to France, he was sent to North Africa. Under Colonel Lyautey he took part in the operations on the borders of Algeria and Morocco which culminated in the installation of French authority in Morocco. In 1911, after seeing further service in Morocco under General d'Amade, he was sent to Algeria as aide-de-camp to Governor General Lutaud. He remained in Algeria until the outbreak of the First World War and thus became thoroughly familiar with the colonial problem.

Catroux left Algeria for France in 1914 at the head of a company of Algerian infantry, and before he was wounded and taken prisoner at Bailleul in 1916 he took part in the battles of Charleroi and Arras and in the operations on the Somme, earning the Croix de Guerre. He made many attempts to escape from his prison camp. Once, interned in a fortress at Magdeburg, he helped a French air ace to escape but was himself caught and confined to a dark cell for three months. At one time General de Gaulle was among his fellow prisoners.

Upon his return to France in 1918 Catroux was appointed military attaché in Constantinople with the rank of lieutenant colonel. After that he was sent to Beirut, Syria, with General Gouraud, first French high commissioner to that mandated country, which had been assigned to France at the Supreme Council of Allied Powers at San Reno in 1920. Soon appointed Governor of Damascus by Gouraud, he retained this post under General Weygand '40 during the Druse campaign. He was then recalled to Morocco by Marshal Lyautey to direct the Intelligence Bureau in Fez during the Riff campaign in North Africa. After Abd el Krim's defeat the great cleaning up operations were placed in his hands and in those of General Giraud.

Wide World
GENERAL GEORGES CATROUX

In 1926 Catroux returned to Beirut to serve under M. Henri de Jouvenel, then high commissioner, as head of the Political and Military Intelligence Section of the Army of the Levant. He served in a similar capacity under M. Ponsot, the next high commissioner. By 1928, however, he was back in North Africa, serving a period of command as colonel of the 1st Regiment of the Foreign Legion at Sidi-be-Abbès, in Algeria. Shortly after that he took the command Lyautey had made famous in the First World War, at Ain Sefra, on the border between Algeria and Morocco.

Returning to France once more in 1929, Catroux took a course at the Center for High Military Studies in Paris, known as the "School for Marshals." He was promoted to the rank of brigadier general and appointed to Morocco as commander of the district of Marrakesh. In 1934 he took part in the final pacification of this part of Morocco in the Anti-Atlas range. As he approached each village he would call for discussions with its chieftains. If the natives refused to open negotiations the territory around their villages would be bombed, although the village itself would be spared. Getting the idea, the natives would usually give in and open negotiations. Catroux followed through with purchases of native goods and set up medical centers and basic sanitary facilities, and it is said that there were only three French casualties during the entire campaign. For his services Catroux was decorated Grand Officier of the Légion d'Honneur, and shortly afterward was promoted to the rank of lieutenant general.

In 1936, recalled to France, Catroux commanded the 14th Infantry Division in Mulhausen until early in 1939, when he was given command of the 19th Army Corps in Algiers. He remained in Algiers only a short time, however. Although less revolutionary in his military views than General de Gaulle, he strongly urged a thorough shake-up in the

CATROUX, GEORGES—*Continued*

French military organization and criticized the conservative methods of the French General Staff. The result was that he was placed on the reserve by General Gamelin '40 until recalled to service in August 1939 by Georges Mandel '40, then Minister of Colonies. Made a full (five-star) general, he was sent to Indo-China to take charge before a new Governor General could be appointed. When War was declared he became acting Governor General.

In Indo-China General Catroux attempted to resist Japanese penetration, but in vain: the military forces were weak, France would not send the modern arms he requested, and a military mission he sent to the United States in 1939 returned empty-handed. In June 1940 the first Japanese military mission arrived in Hanoï. That same month Catroux refused to accept the decision of the Bordeaux Government not to continue the struggle against the Nazis, and appealed to Frenchmen to "prepare your fighting spirit for the day . . . when you will rise to overwhelm your temporary masters." A telegram from Vichy promptly relieved him of his post, and Admiral Decoux, who had formerly commanded the French Navy in the Far East, was immediately sent to take his place. In August 1940 it was first revealed that Catroux, the only major military Governor (aside from the Chad administration) who had refused to accept capitulation, had joined General de Gaulle's forces. Late that month a rebellion broke out in French Indo-China and French West Africa, following the action of French Equatorial Africa in going over to the British war cause, and the Indo-Chinese revolt was reported by the Colonial Ministry as being under his leadership.

The Indo-Chinese revolt was brief and unsuccessful, and in September 1940 General Catroux reached London. There he declared that the French Empire could be saved and the resurrection of France ensured only by a British victory, placed himself at the disposal of de Gaulle, and issued an appeal to his brother officers all over to carry on the fight. A number of those who had been serving under him in Morocco and Syria actually did succeed in joining the Free French.

Appointed a member of the Council of Defense of the French Empire (the body entrusted with the guardianship of the integrity of France's empire and the general policy of the Free French colonies), Catroux was now sent by de Gaulle to the Middle East as high commissioner of Free France and commander in chief of the Free French Forces there. This gave him a field of action ranging over Egypt, Sudan, Syria, Asia Minor, and the Balkans, and in November 1940 he began to broadcast regularly from Cairo urging Syria to break off with the Vichy Government and reiterating the belief that eighty per cent of the French in Syria were sympathetic with the Allied cause. Not long afterward he led a 300-mile camel dash from the Chad region in equatorial Africa to drive the Italian garrison out of the Fezzian oasis. The camel corps, supplemented by a covey of Model-T Fords, wrecked an airdrome and its complement of planes and destroyed the garrison, an operation that is said to have contributed greatly to British successes in Cyrenaica. It was after this exploit that General Catroux was condemned to death *in absentia* by Vichy. (He had already been deprived of his French citizenship.)

Very soon an even greater opportunity for service to the Allied cause arose. Syria was still under Vichy control, and could be used by Germany as a base for operations against the adjoining British territories the moment the German Armistice Commission so ordered. Such a situation came about in the spring of 1941, when German and Italian planes landed on Syrian airdromes to help the rebellion against the British in Iraq. Catroux broadcasted an appeal to the French in Syria to drive out the Axis forces and to support the British, and planes dropped leaflets on Syrian cities, but the Vichy authorities obeyed German orders. Catroux, appointed by de Gaulle as Delegate General and plentipotentiary in the Levant, promptly assumed responsibility for the conduct of operations on behalf of Free France. Announcing that no rewards or promotions would be granted for any deed accomplished in battle against their compatriots, he led his Free French into battle on June 8, 1941 together with the British. It was not long before the Allied forces were in control of important inland cities and threatening Beirut, the Lebanese capital, on the coast, and the Vichy French sued for an Armistice. Catroux ordered the same epitaph carved on identical crosses marking the graves of Vichy and anti-Vichy French who had fallen in the battle: "Mort pour la France."

On June 8 Catroux had proclaimed that Syria and Lebanon "henceforth will be a sovereign and independent people, able to form themselves into separate states or into a single united state." (In 1936 France and its mandate had signed a treaty granting autonomy to the latter, but the French high commissioner had remained, and France had continued to be the predominant power in affairs concerning Syria.) Independence was not granted immediately, however. Military law was proclaimed under the British Military Command, while Catroux, as high commissioner, exercised the same sort of civil authority as had the former French mandate officials, and the Syrian and Lebanese Governments carried on with their personnel unchanged. For a while many of the Vichy officials also were retained by the British authorities, and the Vichy troops were given their freedom until they could be transferred to France or to some other destination. In August 1941, however, the Vichy officials were dismissed, and Catroux placed those Vichy troops that still remained in Syria under his own command. In September, after consultations with Syrians of all parties, General Catroux, in the name of Free France, proclaimed the independence and sovereignty of Syria; and in November the independence of Lebanon was proclaimed. In the meanwhile war materials and food supplies had been arriving in both countries, and a war on the black market was being waged. Yet the situation was difficult. In September 1942, according to Wendell Willkie '40, authority was still split uncertainly between the French and British local governments, both of which were struggling for control of Syria and the Middle East, and there was still the prospect of a wheat shortage and starvation caused by "vicious hoarding, speculation, and profiteering."

After the American invasion of North Africa, in November 1942, Catroux broadcasted from Beirut, appealing to the Algerians, Moroccans, and Tunisians who had followed him in other days. They should "throw open their territories to the Allies" and give the Allies help for their armed forces, he said. Not long afterward, de Gaulle called General Catroux to London to report to the National Committee (of which he is a member) on the political, military, and economic situation in the states of the Levant, as well as to take part in the deliberations of the National Committee concerning the situation in French North Africa. On December 7, 1942 Catroux was quoted as advising the immediate expulsion of Admiral Darlan '41 from Allied war strategy. "I would recall the oldest war story in the world—the eternally instructive episode of the wooden horse of Troy," he said. With the "man who personifies Vichy collaboration with Germany" in power, he pointed out that dangers to Eisenhower's '42 lines of communication with the Tunisia offensive could not be ignored. "I have absolutely no trust in Darlan." General Catroux also said, however, that he did not believe Giraud had lost face by his association with Darlan, and he was ambiguous in his comments on such former Vichyites as General Noguès '43.

Darlan was followed by General Giraud, and with the importation of former prominent Vichyites like Marcel Peyrouton '43 into the North African setup it became apparent that more than "military expediency" was behind American policy. In Washington the Fighting French were soon being described as a political "faction," and de Gaulle being pictured unofficially "as an impossible person, a hysterical figure." General Catroux was, according to the New York *Times'* Raymond Daniell, "generally believed to hold more moderate views regarding the essentials of successful military collaboration against the Axis." What was meant by "more moderate views" is uncertain, since Catroux as well as de Gaulle had always been quoted as believing that a return to republican legality was the basic condition for a French resurrection. In any case, by February 1943 he was being mentioned favorably as a possible successor to General Bergeret as adjutant French high commissioner, or as Noguès' successor as Governor General of Morocco. At about the same time, however, Giraud assumed the title of "French civil and military commander in chief" and set up a War Committee without consulting the Fighting French, and de Gaullists in London promptly asserted that Catroux would not accept any post under Giraud.

On February 8 General Catroux arrived in Algiers to confer with Giraud and to lay the groundwork for a Fighting French military and economic mission that was to follow him. It was the first contact between Giraud and the Fighting French since de Gaulle's appearance at the Casablanca conference. On February 15, from Cairo, General Catroux reported that progress was being made "slowly but surely in the right direction," but that the working out of details would delay the achievement of a complete accord between Giraud and the Fighting French, possibly for several months. Four days later it was announced that he would act as permanent liaison officer between the two French movements. "I shall alternately be in Algiers and Beirut."

Back in Beirut, Catroux carried on his consultations relative to the re-establishment of a constitutional regime for Syria and Lebanon, arrangements for which were completed late in March. On March 20, after Giraud had finally made public his readiness to receive General de Gaulle, Catroux announced that he would return to Algiers shortly; that the points of view of Giraud and de Gaulle now nearly coincided. Upon his arrival there six days later he was quoted as saying that he was certain the forthcoming conversations between de Gaulle and Giraud would "bring about a complete union of the French Empire in this war with our faithful Allies," and on March 30 he announced that General de Gaulle would come to Algiers around April 20. Catroux said that some questions still remained to be ironed out, but that he hoped he would soon have good news. Apparently the announcement of de Gaulle's impending visit created alarm in some circles, however, for at the eleventh hour a message signed by General Eisenhower requested de Gaulle to postpone the meeting in Algiers in view of the "present critical stage of the Tunisian campaign." This was seen by de Gaulle as a new snub for the Fighting French. De Gaullists also hinted that the Giraudists had been trying subtly to get Catroux to abandon the Fighting French and join the North African Council as an independent.

On April 10 General Catroux arrived in London from Algiers and immediately reported to de Gaulle. On April 15 the Fighting French National Committee, after considering Giraud's memorandum containing his formula for fusion, decided to send him back to Algiers immediately to explain why Giraud's plan was not wholly acceptable and to argue the urgency of an immediate meeting between de Gaulle and Giraud. Both the Fighting French and Giraud reportedly agreed on the necessity for repudiation of the French-German armistice and the Vichy laws in favor of the laws of the old republic in North Africa. It was said, however, that the former were not ready to accept the Giraud formula for the creation of a council of colonial Governors to direct French affairs until a free election became possible, nor his proposal that metropolitan France, for a time after her liberation, should be administered by military authority. Members of the Committee insisted instead that as soon as France is freed military authority must be subordinated to the control of a provisional government including representatives of the underground anti-Nazi movement now active inside occupied France. A council formed primarily of colonial Governors and administrators would not, they said, represent

CATROUX, GEORGES *Continued*

the interests of metropolitan France. On April 20, shortly after Catroux's arrival in Algiers, Giraud's plan for French unity was issued in Washington. It included the proviso that "when the Allied armies enter France, the French High Command will insure order." This, according to Johannes Steel '41, meant that "General Giraud wants to do to France what Franco '42 did to Spain . . . namely, use French colonial troops trained in the French colonies for the political re-conquest of France by the reactionary elements that back him." According to Hans Jacob, it was "a clear definition of a military dictatorship."

Reports grew more optimistic, however, as Catroux hurried back and forth between London and Algiers. By late April 1943 basic accord was reached, although de Gaullist factions continued to object to the provision for military rule in the liberated territories. In a memorandum of April 27, General Giraud accepted the Fighting French leader's proposal that they share rule with each other and have equal status at the head of an executive council. A meeting between the generals was planned, and Catroux was assigned the delicate task of arranging the time and place. With General Giraud insisting that the meeting be held quietly, preferably not in Algiers, and de Gaulle equally determined that he enter that city publicly, Catroux's assignment called for extraordinary tact and diplomacy. He gave it all his time, and in his absence General Jean de Lavalade served as head of the Fighting French Forces in the Middle East. Jean Helleu became French delegate-general to Syria and Lebanon.

On May 30 de Gaulle arrived in Algiers, and a few days later "the political unity of all territories of the French Empire and the military unity of all French fighting forces not under direct Axis control" was achieved. The French Committee of National Liberation was formed officially; Catroux became Commissioner for Coordination of Moslem Affairs. At the same time it was announced that Catroux was to replace the ex-Vichyite Marcel Peyrouton as Governor General of Algeria. The appointment was interpreted as a move toward cleaning all Vichyites and collaborationists out of French North Africa.

But peace was still an ideal and not a reality. De Gaulle and Giraud were soon in deadlock again over questions of military leadership, with General Catroux as "the long suffering mediator." It was reported that even Catroux was beginning to lose patience with the leaders, and there were suggestions that he should assume greater authority, making leadership in the Committee "a triumvirate instead of a dual affair." Catroux, however, was more concerned with internal affairs in North Africa than with new honors. As Commissioner for the Coordination of Moslem Affairs he concentrated on the agricultural development of North Africa and on the difficult problem of Moslem relations. Catroux, who is regarded as "knowing the trend of Moslem opinion better than any other leader," is expected to play an important part in the reconciliation of Moslem and Jewish factions. His support of the Crémieux decree (abrogated in March 1943 by General Giraud and later, after numerous democratic groups had voiced their protest, restored by the French Committee of National Liberation) was interpreted as a liberal, anti-Vichy view. And early in November 1943 de Gaullists rejoiced when Giraud resigned as chairman of the French Committee of National Liberation, retaining only his position as commander in chief of all French forces. General Catroux remained as a commissioner without portfolio in the revised Committee.

The Lebanon insurrection which broke out in November 1943 sent Catroux off to Beirut to try to mediate the quarrel between Arab factions there and French colonial officials, brought about by the vote of the Lebanese Chamber of Deputies for immediate independence. The crisis was solved when the President and Ministers of the Lebanese Republic were restored to office and the decrees of November 1943 suspending the Lebanese constitution and dissolving the Lebanese Parliament were abrogated. Finally, on December 23, Catroux signed an agreement transferring to Lebanon and Syria all powers exercised over them, the transfer to become effective on January 1, 1944. There were indications that the Lebanese quarrel had actually been more between France and Britain (which supports the idea of an Arab Union) than between France and Lebanon.

The diplomatic General Catroux is a man well over six feet tall (like both de Gaulle and Giraud), wiry, deeply tanned, thin-lipped, with a small, neatly trimmed mustache. "Eyebrows black in the middle, frosty at the ends, add a theatrical touch to Catroux's face, which is otherwise contemplative." His voice is low and modulated; he is known for his tact; and he is a brilliant conversationalist. He is married to a Parisian, the former Marguerite Jacob, and his homes in peacetime, presided over by her, "were always examples of the best native taste in the territories in which he served." They have one son, a de Gaullist who served as liaison officer with the British Expeditionary Force in France.

CHAGALL, MARC (shə-gal') July 7, 1887- Artist

Address: b. and h. 4 E. 74th St, New York City

"To most gallery-goers," stated an art reviewer recently, "the art of Marc Chagall has always been a good deal of a riddle." A painter who defies the laws of physics and biology, whose sprawling canvases are peopled with flying men, speaking animals, human flowers, and "peasant-like people who invariably look ecstatic," and whose "original and exuberant color sense" leads him to paint in raspberry ice and flower blue, Chagall has been responsible for such fantasies as "a decapitated milkmaid floating in an emetic sky, while a pink cow is suckled by a pair of pea-green apes on a Russian rooftop." According to Maurice Raynal, Chagall "interrogates life in the light of a refined, anxious, childlike sensibility, a slightly romantic temperament influenced by the memories of a troubled youth." According to Manny Farber, he paints "nice-minded day dreams" wonderful chiefly because of "his ability to realize his great love for people." And others would have it that his is the work "of a deeply religious, idealistic young Jew who is merely recreating from his imagination the folk tales he had heard as a boy in his native Russia." Not very helpful is the painter's own comment: *"L'art est comme l'amour.* If your wife is ugly, you do not talk about looks. If she is beautiful, they speak for both her and you."

Marc Chagall was born in Vitebsk, Russia, July 7, 1887, the son of Zakhar and Ida (Tchernine) Chagall. One of eight children, he passed his early years in his native town observing with vivid interest the varied village types—peasant, merchant, and beggar—whose influence was later to be seen in his canvases. Another important formative influence on Chagall's art was his family's observance of the Jewish religious rites. Many of his paintings refer, often grotesquely, to peasant life or to local Jewish characters.

As a child Chagall had a lovely soprano voice. He became an assistant to the cantor of the neighborhood synagogue where, he claims, at Holy Day services, his voice could be distinctly heard above those of the entire congregation. His early aspirations were bounded only by the scope of his imagination. The desire to become a singer lasted until he heard a violinist play; thereupon he resolved to study the violin. The latter ambition was replaced by the determination to become a dancer, and so on. Although he manifested a natural aptitude for drawing at school, the possibility of becoming an artist did not occur to him for a long time. For one thing, the word "artist" had never been used in his presence until the day a school friend noticed the excellence of Chagall's drawings and remarked that he was a "real artist." Chagall vainly begged his companion to explain the meaning of the word. He finally remembered seeing a sign above one of the village shop windows which read "School of Painting and Design of the Painter Pènne," and coaxed his parents to allow him to enroll.

Since his parents could ill afford to pay for his art lessons (his father kept a mercer-shop), they saw to it that his training was directed to a useful end. Accordingly, he was apprenticed to a photographer who set him to work as a retoucher. Young Chagall's loathing for his duties was mitigated by his master's description of the splendid future awaiting him—provided, of course, that he work without wages for another year. In 1907, when the youth had saved all of twenty-seven rubles, he nevertheless ran off to St. Petersburg. There he was admitted to Baron Steglitz' School of Arts and Crafts. Soon becoming bored by the monotony of having to copy endless plaster figures, he failed his examination and transferred to the Beaux Arts School, where he was again confronted with plaster heads. After "wasting" some time there he left the school because an instructor had derided his work before the entire class. Armed with a letter of introduction, he then went to Leon Bakst, one of the leading lights of the Diaghilev Ballet and of the Russian Art Society known as Mir Iskoustva (The World of Art). He attended Bakst's classes several times, making friends with a fellow pupil named Nijinsky '40, but when his work did not meet with approval he had no hesitation in leaving again. Obviously Chagall always believed that he was right, and his instructors wrong. "I cannot be taught," he once wrote. "I can grasp things only by my instinct. . . Scholastic theory has no hold whatever over me."

When Bakst and the Ballet left St. Petersburg for Paris, Chagall persuaded his former teacher to take him along. Bakst asked him whether he knew how to paint stage *décors*; Chagall, who knew nothing at all about this technique, replied: "Perfectly well." Naturally, he was dismissed as soon as his work betrayed his complete ignorance.

Chagall arrived in Paris in 1910 when Cubism was in full swing. Whatever restraint he had previously had over his palette was discarded. The subdued grays and dull browns of his early canvases gave way to a carnival of spectral colors, the last ties of the real world were severed, and the creations of his individual fancy were given free rein. "Animals, men, and objects were dissected, made transparent, turned topsy-turvy, and sent flying about." He exhibited at the *Salon des Indépendants* and fell in with the poets and painters of the *avant-garde*—Guillaume Apollinaire, Max Jacob, Blaise Cendrars, and others. Apollinaire, who considered the artist's paintings "supernatural," became a Chagall enthusiast: he organized the first exhibition (200 pictures) of Chagall's work in 1914 at *Der Sturm* in Berlin, and he wrote a poem for the introduction to the catalog.

In 1914, after final arrangements for exhibitions of his work in Holland and Germany had been made, Chagall took what he intended to be a short trip to Russia. The outbreak of the First World War forced him to remain there for some time; but it was by no means an unproductive period. The young painter worked on "a magnificent new series of rabbi paintings" which included *The Jew at Prayer* and *The Green Jew* and which seems to have been the starting point of the revival of Jewish art in Russia and elsewhere. In 1918, following the Revolution, he founded the free Fine Arts Academy and the Art Museum in his native Vitebsk. Furthermore, the murals which he turned out for the newly formed Granowsky Jewish State Theatre in 1919 helped to determine the future course of that theatre and make it one of the best in the Soviet Union.

His other connections with the Soviet theatre were not so successful, however. The author of *The Dybbuk* suggested that Chagall create the settings for his drama, but the producer of the work and the painter soon arrived at an impasse, and the latter declined to do the work. On another occasion, when Stanislavsky invited Chagall to paint the settings for John Millington Synge's *The Playboy of the Western World*, Chagall withdrew from the undertaking because he would not paint realistic settings such as the director required. In the meanwhile his paintings were creating a great stir in Europe. While he was still in Russia a letter from a German friend informed him that he had become a celebrity in Germany and that his paintings had given rise to the Expressionist movement in art. They were, moreover, selling at very high prices.

Chagall returned to Paris in 1923 and became a French citizen. By invitation from Ambroise Vollard, the publisher and art dealer, he began to work on a series of illustrations for books. He did ninety-six engravings for an edition of Gogol's *The Dead Souls* and one hundred engravings each for La Fontaine's *Fables* and for the Bible. (Unfortunately, the printing of all three editions was interrupted by the death of Vollard.) And he continued to paint in his own way. "From my earliest youth," he has said, "I have been opposed to that artistic profession of painting which has no higher expression than to decorate the walls of an apartment. What I have wanted to do has been to give concrete and human form to Man's impotence in the face of Nature. I have not tried to revenge myself on Nature but to create an expression parallel to hers, if I may so express myself. We have each our own personality, and we must have the courage to exteriorize it. I like to remember that I come from the people. But, much as I like popular art, I am not satisfied by it, because I find it too exclusive, too restricted; I have a distinct taste for refinement of feeling, for culture. No single esthetic tendency satisfies me. I am convinced that in art one plus one do not make two, though that principle may apply technically and realistically, and have preferred to explore the more obscure and profound sides of my ego."

Although Chagall's art has been said to contain characteristics of Italian Futurism and German Expressionism, it belongs to no school. He writes: "I detected the realism that lay in the work not only of the Impressionists but also of the early Cubists: in the former taking the form of a landscape externally dismembered by the theory of light; in the latter that of a still life deformed in accord with the investigations of a third and fourth dimension. But all these conceptions seemed to me still too material. Nature had to be altered, I felt, not only externally and materially, but also internally, ideologically, without fear of what is called 'literature.'"

According to Jan Gordon, this painter "carries his symbolism so far that, if he wishes to show a horse which is in foal, he paints an image of the foal within the mare's womb; a cow which is being carried to the slaughterhouse he paints blue to indicate the emotional significance of the animal. Chagall's world can be considered as a world in which form and color are subdued to a mystical meaning, a world of dreams in which anything is reasonable and everything logical." And yet, in Waldemar George's words, "no painter has penetrated as deeply . . . into the holy communion of man with the earth"; and Chagall's is "a reality more profound, more intimate, more living than that of which our atrophied senses give us a fleeting glimpse."

Aside from brief visits to Italy, Moscow, and Berlin, Chagall lived in Paris until 1941. "I owe whatever I have done well to Paris, to France, whose air, whose men, and whose nature have been the true school of my life and my art," he says. (His painting is, however, completely alien to the Latin tradition—"as French as borscht.") Forced to seek refuge abroad after the fall of France, he arrived in the United States in June 1941 through the efforts of Alfred Barr, director of the Museum of Modern Art, and of a refugee aid society.

Chagall had already established a reputation in the United States, and it was soon reinforced. He spent the summer of 1942 with Léonide Massine's '40 Ballet Theatre in Mexico, collaborating with Massine on the ballet *Aleko*, which was to have its première the following season. (The painter not only executed the sets for the production, but actually helped his wife to sew sixty-four costumes after finding that no one else could make any sense out of his fantastic costume sketches.) The ballet and Chagall's "magnificent *décor*" were well received, but an exhibition of sixteen of Chagall's sketches that same month (October 1942) brought even greater critical acclaim. Of the exhibition *Time* Magazine wrote, irreverently: "First impression of so much Chagall in one room was like falling through space closely pursued by open cans of the three primary colors. Gradually the chromatic confusion resolved itself into nine paintings of Russian village life in Unoccupied France (painted after the Nazi invasion); three scenes of Russian village life in Connecticut (painted since Chagall's arrival in the United States); one scene of Russian village life in Russia; and one study of a cow in a high state of discoloration, the same animal Chagall painted thirty years ago from something he thought he saw in Paris." Even *Time* was, however, impressed with the "sensitive draftsmanship" of a new *Descent from the Cross*, and with the five and one-half by ten foot *Revolution*, which was having its first showing. The latter painting was called by Manny Farber, writing in the *New Republic*, "one of the best paintings I've seen in a long time, and the best pictorial expression of the Russian people to come out of this War. It is full of them. One flat triangular side is crammed with peasants at war, the other side with peasants at peace; both unrestrained. In the center is a moody rabbi, a samovar boiling in the snow, and a man standing upside down on one hand so he can hold up a flag with his feet. . . Its all-out vitality would seem pretty close to what we hear about the Russians today."

In appearance the bushy-haired painter, who won the Carnegie Prize in 1939, bears a strong resemblance to Harpo Marx. His own favorite film actor is Charlie Chaplin '40, however. He likes to compare himself with "Charlot" because he feels they have so much in common: Chaplin's art, like his own, is close to folk roots; each of them has a sense of the comic and grotesque, an appreciation of simple humanity, and a penchant for the whimsical and fantastic. And each of them is, perhaps, fundamentally tragic. Such Chagall paintings as *Escape*, *Village on Fire*, and *Between Darkness and Light*, exhibited in March 1943 in a show entitled "War and the Artist," can hardly be classed as "nice-minded day dreams."

CHANDLER, ALBERT B(ENJAMIN)

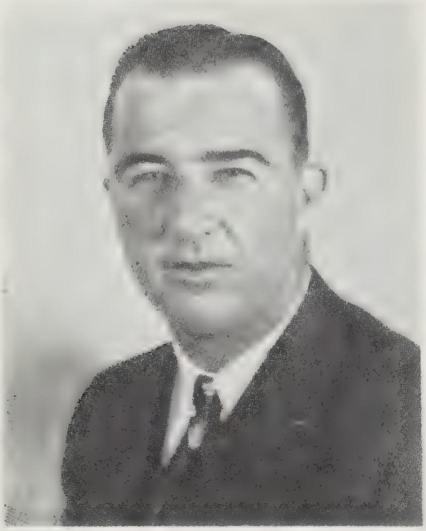
July 14, 1898- United States Senator
Address: h. Versailles, Ky.

Senator Albert B. Chandler of Kentucky, better known as "Happy" Chandler, has always made good copy for reporters. "The nearest thing to Huey Long since 'the Kingfish' was shot to death in 1935" is the way *Time* Magazine once described him. "A swift and educated brain, a vaulting ambition, and one of the sharpest instincts in the United States lie behind his automatic incandescent smile, his hot-palmed handshake," *Time* went on. "Prancy as a Blue Grass colt, 'Happy' Chandler is a natural politician. . . To him handshaking is not a nuisance but a passionate delight. He knows the first names . . . of nearly every person in Kentucky of voting age—not because it's good political business, but because he likes to know."

Collier's Walter Davenport corroborates *Time's* description. "He looks, talks, and enthuses like a radio announcer. He's as superstitious as a crystal gazer, is completely convinced that he is destiny's darling, doesn't drink or smoke, and thinks it's just dandy to slug several rounds with his bodyguard. . . [He is] as emotional as a valedictorian's mother at commencement, his laughter and tears being on twin hair triggers. He loves sentimental ballads, the gloomier gospel hymns, white horses, parades, raucous pajamas, and on all occasions plenty of noise."

This colorful politico who in the spring of 1943 emerged as the spokesman for the "Beat Japan First" bloc in Congress was born in the little town of Corydon, Kentucky on July 14, 1898, the son of Joseph S. and Callie (Saunders) Chandler. His mother left his father, who was the town's handy man, when Happy was four or five years old, and he grew up thinking her dead. (When in 1933 he went to visit her grave in Florida, however, he found her alive and remarried.) There was very little money, and the boy sold newspapers and did odd jobs after school to support himself through high school.

"When I entered Transylvania College I had only a red sweater, a $5 bill, and a smile," Happy told Kentucky's voters 816 times between May and November 1935. The smile was certainly the most valuable of his assets. At the little college in Lexington, Kentucky where he first acquired the nickname "Happy" he carried newspapers, waited on tables, had a job in the laundry, took minor parts in the dramatic organization, pitched baseball, and was a quarterback on the football team, running guard on the basketball five, a member of the track team, the glee club, and Pi Kappa Alpha social fraternity. For a year during the War he also drilled with the Students' Army Training Corps. In 1921 he took his B. A. from Transylvania; then, rejecting the ministerial career that his father had wished for him, he decided to become a lawyer. He



ALBERT B. CHANDLER

managed to attend Harvard Law School for one term (1921-22), but after that his funds ran out, and he returned home to finish his law course at the University of Kentucky. He was awarded his LL. B. in 1924, earning his way by leading a jazz band, playing the piano, and, after 1922, coaching the football team at Center College in Danville, Kentucky.

In 1924 Happy hung up his shingle in the little town of Versailles, Kentucky, although continuing to coach the Center football teams for three more years and going to Canada in the summers to pitch for a professional baseball team. On November 12, 1925 he was married to Mildred Watkins, one of the teachers at the Versailles high school, where he also coached athletics. For one of his talents a political career was almost inevitable, and when in 1928 he was appointed master commissioner of the Circuit Court of Woodford County that career was firmly launched. In the 1929 campaign for the State Senate he found *When Irish Eyes Are Smiling* and *Mother Machree* more effective than speeches on economic and political issues, and he continued to croon after he reached the Senate, regaling his colleagues with a heartbreaking rendition of *Sonny Boy.* Kentucky's boss decided that here was a young man who would go a long way, and in 1931 he pushed him for Lieutenant Governor. Fortified by past successes, Chandler gave the voters more *Sonny Boy,* and was not disappointed in the election results.

While in the State Senate Chandler had cultivated the friendship of Ruby Laffoon, then Kentucky's Governor. As Lieutenant Governor, however, he made a point of antagonizing the Governor, and with John Young Brown, speaker of the House, fought Laffoon's proposal for a State sales tax. He also applied the Governor's appointive power every time Laffoon crossed the State line, and finally, in February 1935, took advantage of the Governor's absence to call a special session of the legislature to consider a popular primary law in State elections. Laffoon, alarmed, returned and tried to rescind the order. It was too late to do that, but the law was passed with an amendment sponsored by the Laffoon forces requiring a run-off primary if no candidate polled a majority of the votes.

Actually this amendment helped Happy in the 1935 gubernatorial primaries. Chandler, as the New Deal candidate for the Democratic nomination for the office of Governor that year, wooed and won labor's support by blasting the policies of Laffoon's candidate and advocating repeal of the sales tax; but Laffoon's candidate, Thomas S. Rhea, polled more votes for the Democratic nomination than any one of his three rivals. Rhea did not have a majority, however, and in the run-off primaries Chandler beat him by 25,000 votes. In November, moreover, the former Lieutenant Governor won the Governorship by a record majority over his Republican opponent.

As Governor of Kentucky one of the first things Chandler did was to bring pressure on the legislature to repeal the State sales tax and to slap levies on liquor and incomes instead. He balanced the budget with the aid of Federal funds in his term as Governor, cutting Kentucky's debt from $25,000,000 to about $7,000,000; he caused his legislature to adopt a law making it illegal and punishable to assess any Kentucky public servant for campaign or other political purposes; and in January 1937 he called for a special session of the General Assembly to ratify the Child Labor Amendment. He boasts that he also boosted schoolteachers' salaries, put a free schoolbooks law through the legislature, razed the decrepit State penitentiary and had the convicts transferred to a prison farm, and built modern hospitals for the indigent sick and the State's insane. But in spite of his "Little New Deal" he lost the support of labor through his support of the coal operators in Harlan County, charged by the United Mine Workers with having instigated bloodshed and vigilantism.

Frankly ambitious, as early as 1937 Chandler had been quoted as saying: "There will be a new President in this country some day and I have as good a chance as anybody." The Senate was the logical first step. Chandler's term as Governor would expire in 1939, and under the Kentucky laws he could not seek re-election. Early in 1938, therefore, he reportedly went to Washington and suggested to President Roosevelt '42 that Senator Marvel M. Logan, who had been re-elected junior Senator from Kentucky in 1937, be appointed to a vacant Federal Judgeship so that Chandler could get himself appointed to Logan's seat in the Senate. This deal failing, there was nothing to do but to contest Alben Barkley's '41 seat—although Barkley had supported him for the Governorship in 1935.

The C.I.O. could not be won to Chandler's cause this time, however. And neither could Roosevelt. On July 18, 1938, in a speech at Latonia, the President was tactful: after all, Happy called himself a New Dealer. "I have no doubt that Governor Chandler would make a good Senator from Kentucky," he said; ". . . but I think he would be the first to acknowledge that, as a very junior member of the Senate, it would take him many, many years to match the national knowledge, the experience, and the acknowledged leadership of that son of Kentucky of whom the whole nation is proud, Alben Barkley." Afterward, Chandler was to use the first part of the President's statement, which he had recorded, in his own campaign.

This campaign was one of the hottest in Kentucky's history. Throughout the state Happy's sound truck blared *Happy Days Are Here Again*, and more voters than ever before were treated to his rendition of *There's a Gold Mine in the Sky* and *Mother Machree*. "So infectious is his gifted gab that the soberest observers have found themselves swaying to the roll of it," said *Time*, "while the Chandler fans yell, 'Tell it, Happy boy! Oh, tell it!' " His speeches were "an artful blend of politics, Holy Rollerism, and autobiography." What is more, his memory for first names far outrivaled Barkley's, and his handshake was many degrees warmer.

But it was impossible to be "all things to all men" with complete success. While calling himself a "one hundred per cent Roosevelt man," Chandler condemned most WPA projects as "silly boondoggles." While claiming that every Federal relief agency in Kentucky was operating for Barkley's benefit, he ordered old-age pension checks delivered by hand with his own blessing, and, according to Allan A. Michie '42, accepted "voluntary" contributions of two per cent or more of the salaries of nearly all of the 7,500 State job holders. While praising labor he also accepted the behind-the-scenes backing of the mine owners, it was whispered, and "support from Wilmington and Wall Street, the oil lands of Texas, and the steel areas of Pennsylvania" reportedly came later in his campaign. And for the first time in his career he was defeated in the primaries, after retiring from the active political arena in an ambulance with the claim that a drink of water served him at a hotel in Louisville had been poisoned. "Without Happy's song-and-dance on the stump, the campaign went into an anti-climax. . . Barkley received the nomination by a margin of some 50,000 votes."

During the rest of Happy's term as Governor he apparently gave up trying to regain labor's support. During a U. M. W. A. strike in April 1939 he sent National Guardsmen to help the Harlan County operators open the mines by force. He contended that sit-down strikes interfered with the possession of private property. He defended Vice-President Garner against the attacks of John L. Lewis '42. He continued to pay lip tribute to Roosevelt, but successfully opposed the New Deal candidate for Governor in 1939, his former political ally, John Young Brown, on the grounds that "Kentucky must not become a puppet State controlled by agitators and irresponsible radical elements directed by foreign forces and individuals." Yet his political luck held. In October 1939 Senator Logan died, and Chandler resigned as Governor six days later to take Logan's seat. In December 1939 he was sworn in as junior Senator from Kentucky, and in November 1940 he was elected to fill the remainder of the term to January 1943.

Up to the time when Chandler came out as spokesman for the "Beat Japan First" bloc in the Senate he was a supporter of Roosevelt's foreign policies. He backed the Pittman neutrality bill, the selective service act, lend-lease, the extension of service for those drafted into the Army. It was therefore with Roosevelt's support that he was re-elected to the Senate in 1942 after having made only one speech in his campaign for renomination in the August primary (in which the vote was unusually light). In this campaign Chandler's opponents had charged that there was something suspicious about the swimming pool in his Versailles back yard—the gift of a contractor who had built miles of Kentucky highways and who held lucrative war contracts—but the Senator had been cleared by the Truman '42 Committee.

In August 1942 Chandler headed a Military Affairs Subcommittee investigating Alaskan and West Coast bases and conferred with high-ranking officers, who undoubtedly complained that there were not enough men or supplies in the Aleutians. He said little at that time, however, and there was therefore a great deal of surprise when he emerged the next year as an opponent of the Administration's military strategy. Early in 1943 he was named head of another Military Affairs Subcommittee to investigate relocation centers for evacuated Japanese, and soon he began denouncing what he had seen in the camps in such strong terms that it was rumored that Hearst representatives had "offered him nationwide publicity and backing for a national office in return for constant harping on the Japs-First and Yellow-Peril-at-Home themes." In any case, Hearst front pages were devoted to Chandler's "exposés" of Japanese relocation centers for some time before the Senate Military Affairs Committee received the detailed report from his subcommittee in May 1943. Then, in mid-March, about the time when Chandler returned to Washington, pleas for additional planes and other equipment for the South Pacific began to come from MacArthur '41 and from Australian officials, followed by rumors of a coming Japanese invasion of Australia. Promptly Chandler made a speech (April 16, 1943) warning that the United States might be left alone to carry on against Japan and asking for more supplies for MacArthur and for the Alaskan theatre of war.

On May 17 Chandler followed this speech with a three-hour address in the Senate on the same topic which made the front page of nearly every newspaper in the United States and was particularly played up by the Hearst press and by the McCormick '42-Patterson '42 papers. This time Chandler advanced the thesis that with the North African campaign successfully concluded Germany had been put completely on the defensive and could not possibly knock out either Britain or Russia. Since he had "reason to believe that the American fighting men in all services would rather make this a war of attrition," he declared that from now on the job of defeating the Axis in Europe should be left to the British and the Russians with only lend-lease support from the United States, which should mount a major offensive against Japan. If the defeat of Japan should be postponed until Hitler '42 was vanquished, he said, the United States would find itself abandoned by Britain and

CHANDLER, ALBERT B.—*Continued*

Russia and left to fight alone against a strongly entrenched Japan in the Pacific. What is more, "I hate to think of the small amount of influence the President of the United States will have when Russia and Great Britain commence to have their spheres of influence on the continent of Europe."

The reaction to this speech was immediate, particularly since the next day Chandler gave a radio address in which he praised General Marshall '40 and expressed the hope that he would "continue to direct the military policies of our government," for it would be "a serious blow to our people if anything happened that would deprive the people of this country of his valuable services as chief of the General Staff." Since Chandler had said that he had been "encouraged" to make his speech, which expressed "the feeling of quite a number of military and naval men," the impression was left that Marshall disagreed with Roosevelt's strategy so strongly that he was encouraging attacks in Congress upon the Commander in Chief. Frazier Hunt, Arthur Krock '43, and David Lawrence '43 were among the news commentators who promptly came out in support of Chandler's views, as did Senators Wheeler '40, Tydings, Shipstead, Vandenberg '40, Clark (of Missouri), Bridges, and Brooks. The *Christian Science Monitor*, on the other hand, called Chandler the "spokesman for a bloc of Senators who are cloaking isolationism in this beat-Japan belligerency"; I. F. Stone pointed out that "the basic objection of the 'beat Japan first' group and the military-naval men for whom it speaks is not military but political"; and Walter Lippmann '40 devoted a column to attacking Chandler's logic, particularly emphasizing the difficulties of smashing the Japanese without the help of the British Army and Navy and the Russian air bases in Siberia, which could be released only by fighting the War through in Europe.

Churchill's '42 speech to Congress of May 19 also seemed to be partly devoted to answering Chandler. Among other things, Churchill repudiated the suggestion that "we British have not at least as great an interest as the United States in the unstinting and relentless waging of war against Japan," informed the public that the major part of the United States forces was already employed on the Pacific Front, and suggested that "lots of people can make good plans for winning the War if they have not got to carry them out." Chandler issued a three-page typewritten statement in reply to the British Prime Minister, questioning both his facts and his reasoning.

In the summer of 1943, along with Senators Lodge, Brewster, Russell, and Mead, Chandler left for a 41,000-mile flying trip around the world at war. With breathtaking speed the Senators toured England, inspected defenses and American troops stationed there, surveyed Allied activities in North Africa where they uncovered a crop "deal" in which the United States was reportedly buying surplus North African wheat "at about 60c a bushel more than the price at home," dropped in at Chungking to meet General Chiang Kai-shek '40, made a record-breaking flight over the Indian Ocean to Australia, and returned to the United States early in October "sleep-hungry and pounds thinner." According to the Chicago *Sun*, Chandler himself spent much of his time being photographed and wise-cracking with Bob Hope '41, whom he even tried to bring with him to a conference with Churchill '42.

While Chandler stopped off in Hollywood to visit his family, the other Senators hurried to Washington to make their eagerly awaited report. But hints of what the nature of the report would be had already reached the American public, for from Australia Chandler had made another pronouncement on military strategy. After Lord Louis Mountbatten '42 had been appointed Supreme Allied Commander in the Far East, the Senator began to urge the appointment of General Douglas MacArthur to that post, saying that the latter was on the offensive in the Pacific theatre and, "Our boys will be glad to work with Lord Louis Mountbatten '42. But Mountbatten and his men aren't on the offensive yet." On his return to Washington Chandler "reiterated his contention that the Japanese were United States enemy No. 1, that a major offensive should be launched in the Pacific, that the Administration should give General Douglas MacArthur more support or 'get rid of him.'" He advanced the opinion that an Allied invasion across the Channel would be "disastrous."

As could be expected, Chandler's statements met with an extremely favorable reception from the groups which had previously formed the "Beat Japan First" bloc. But other sources deplored the Senator's ideas on military strategy, and New York's *Herald Tribune* published an unusually bitter editorial on Chandler in which the writer said, "It would seem, indeed, that the high command as a whole might be spared the braying of this long-eared legislator equipped unfortunately with an official sounding board." Undeterred by such criticism, later in October Chandler charged that Churchill opposed equality for China in peace negotiations, and again blamed the British for not having mounted "a real offensive" in Burma. He denied being either anti-British or anti-Russian, but late in December, after it became evident that long-awaited Anglo-American invasion of Western Europe was definitely in the cards, he spoke of the forthcoming invasion as "a mammoth Tarawa" and "little short of mass murder." His opponents charged him with planning to make political capital out of the casualty lists.

On matters of domestic policy this ambitious amateur military strategist has also frequently opposed the Administration of late. In November 1942 he was one of sixteen Democrats from non-poll tax states who voted with the poll-tax Senators to prevent forcing action on the bill to abolish the poll tax in Federal elections, although he had "talked a good game" for the bill. In 1943 he voted for the modified version of the Ruml '43 plan passed by the Senate, for the Smith '41-Connally '41 Bill and for overriding the President's veto of the same bill, for the McKellar Bill requiring confirmation of most Federal employes making more than $4,500 a year, for the abolition of the domestic branch of the OWI, against an appropriation for crop insurance, against money for the National Resources Planning Board and the National Youth Administration.

On the other hand, he supported the Administration on other issues. He opposed limiting the National Labor Relations Board, including farm-labor costs in parity, forbidding the use of CCC funds to keep prices down, or dismissing Watson, Dodd, and Lovett '43. He favored continuing the loan powers of the Farm Security Administration, appropriating $100,000,000 for soil conservation, and extending the reciprocal trade agreements—and he supported the Federal ballot service men's vote bill.

The personable junior Senator from Kentucky is five feet ten and one-half inches tall, weighs 190 pounds, and has a short neck, a high forehead, blue eyes "with a steel-gray glint," a straight, pointed nose beneath heavy brows, hair that has been described both as red and as dark brown, and a grin that is "one of the widest and most captivating in the political arena." He is an Episcopalian, a captain in the Reserves, a Mason (Knight Templar, Shriner), and a member of the American Legion, the Forty and Eight, and the Democratic National Committee. He has four children: Marcella, Mildred, Albert Benjamin, Jr., and Joseph Daniel, all of whom he calls "sweetiepie." In December 1942 one of his daughters won a film contract with Paramount, and *Variety* commented that "industry has acquired a good friend where good friends are scarce." Mimi Chandler made her film debut in *Henry Aldrich Swings It* (1943).

CHAPIN, KATHERINE GARRISON

(chā'pin) Sept. 4, 1890- Poet

Address: h. 1669 31st St, Washington, D. C.

"Poetry is not an escape... Poetry does not make us forget. It helps us to remember. A great poem gives meaning and dignity, gives shape to events and fortitude to the heart. Through it we touch the eternal sources and are renewed and refreshed." So writes Katherine Garrison Chapin, one of America's outstanding woman poets, in her essay, "The Quality of Poetry." Miss Chapin (in private life Mrs. Francis Biddle) also believes that what the poet has to say is important—particularly when, "in a time of chaos, of social upheaval, or war, the arts suffer a neglect when we need them most." And, like the late Stephen Vincent Benét, Archibald MacLeish '40, and other American poets who have felt strongly that poetry should have a part in the lives of our people and therefore should reach a wider public, Miss Chapin has brought her work to the people not only through radio, but through music: public presentations with chorus and orchestra. Her three dramatic ballad poems have received high critical acclaim; the third, *Plain-Chant for America,* with music by William Grant Still '41, the noted American Negro composer, has also been micro-filmed and recorded by the Office of War Information for use on America's overseas radio stations.

KATHERINE GARRISON CHAPIN

Having studied both music and dramatics, Katherine Garrison Chapin has brought to her work as a poet those qualities that make it ideally adaptable to choric and symphonic form. She was born in Waterford, Connecticut, September 4, 1890, the daughter of Lindley Hoffman and Cornelia Garrison (Van Auken) Chapin. The Chapin family enjoyed the theatre and music: they went to all the new plays and walked to the opera from their home on West 37th Street in New York. Katherine Chapin was educated at private schools, among them Miss Eleanor Keller's school in New York, where her English instructor was the playwright Rachel Crothers. Miss Crothers used to stage Shakespeare with her pupils. Katherine Chapin became interested in writing poetry while at school, while her sister, Cornelia Van Auken Chapin, studied art. Cornelia later became a prominent sculptress, carving direct from life in stone; her work received second Grand Prix, Diplome d'honneur, at the Paris Exposition in 1937.

Taking several postgraduate courses at Columbia University, Miss Chapin studied writing there under Max Eastman. She also studied music with Kurt Schindler, founder of Schola Cantorum, New York, and acted for a time with the original Theatre Guild School (Washington Square Players). On April 27, 1918 she was married to Francis Biddle '41 of Philadelphia, now United States attorney general. Their son, Edmund Randolph Biddle, CHAPIN, KATHERINE GARRISON—*Continued*

who was born in 1921, is in 1943 in the Technical Training School of the Army Air Corps.

In the late '20's Miss Chapin's poems began to appear in various magazines. The *Yale Review* was the first to accept her work, and was followed by *Harper's, Scribner's, Saturday Review of Literature, North American Review, Poetry, Ladies' Home Journal,* and others. Miss Chapin's first collection of lyrics, *Outside of the World,* appeared in 1930; *Bright Mariner,* a poem in pamphlet form with woodcuts by Wharton Esherick, was published three years later; and her first major collection, *Time Has No Shadow,* was published in 1936. Reviewers found this collection "a thoughtful, well-written book," with a skillfully controlled form and "a fine distillation of emotion."

Plain-Chant for America (1942) contained a selection of lyrics, an essay, "The Quality of Poetry" (first published in *Poetry*), and two ballad poems for chorus. The majority of the poems were about America—an America for which Miss Chapin advised poets to

Lift your living speech
Against the weight of death.

Maurice Swan in the New York *Times Book Review* said that Miss Chapin "lacks a sufficient volume of texture in her technique to give her work the dualism of images and logical substance which makes for major poetry." Other reviewers, however, approved the deliberate simplicity of texture. Ruth Lechlitner in the New York *Herald Tribune Books* wrote: "From the formal, decorative, and 'poetic' manner she turns to the short, plain statement of fact; in the informal, muted staccato stanzas the rhymes are incidental, the whole emphasis upon clarity of communication." George Dillon, editor of *Poetry,* called her essay on the function of poetry "one of the finest poets' credos I have read."

In 1937 Miss Chapin did a series of radio broadcasts on contemporary poetry with readings from poets. Two broadcasts of her own poetry were given over WOR in 1937 and 1938. An anti-Fascist poem, *Virginia Woods,* was published in *Writers Takes Sides,* issued by the League of American Writers in 1938.

The main interest in Miss Chapin's work, however, has centered in her three ballad poems which have been set to music and given various symphonic performances. *Lament for the Stolen,* with a musical score by Harl McDonald, was first performed by the Philadelphia Orchestra under Eugene Ormandy '41, with a selected chorus of 250 women's voices, in December 1938. Of it Genevieve Taggard wrote: "The singing was very fine. Music and words seemed about evenly matched. What I admire most in this poem is the boldness and simplicity of the phrasing. A lighter touch or an oblique attack would have been mannered and silly—unworthy of the theme. Those who wish to do what Miss Chapin has done will have to learn the courage of this simplicity."

William Grant Still in 1940 set to music Miss Chapin's ballad poem, *And They Lynched Him on a Tree.* The poem tells of a Negro who has been lynched by a white mob, of the Negro men and women who take down his body, and of the grief of the victim's mother. Of it Miss Chapin said: "I turned to a subject which had occupied my mind for a long time, mob violence and racial intolerance, hated equally by the majority of people in both North and South, and to those instruments which I loved, the rich voices of the Negro people. . . It bears the American distinction of being the first piece of serious symphonic music written expressly for a chorus of white voices, and a chorus of Negro voices used first contrapuntally and later in unison." It was given its première by the Philharmonic Orchestra, Artur Rodzinski '40 conducting, at the Lewisohn Stadium in New York in 1940 before an audience of 13,000. Fine performances were given by Wen Talbert and his Negro choir, by Hugh Ross' Schola Cantorum, and by Abner Dorsey, narrator. Both Mr. Still and Miss Chapin were praised for the simplicity and deep feeling of the work.

A second Chapin-Still collaboration, *Plain-Chant for America,* for baritone and orchestra, was given its première by the Choric Players at Woodstock, New York in September 1939, and was later performed by the Philharmonic in New York and by the Philadelphia Orchestra in Philadelphia, Baltimore, and Washington. Miss Chapin's ballad was originally published in the *Ladies' Home Journal* (1939). The author was delighted when a girls' school in Philadelphia made it their commencement theme. The poem, whose music was dedicated to the President '42 and Mrs. Roosevelt '40, had its origin in the summer of 1938, according to Miss Chapin. "I had felt deeply about China and Spain. I thought I ought to say something affirmative about America. I thought it important that Americans get together to state their democratic faith and defy the rest of the world on it. The final push came when I spent some time with some Fascist-minded Americans. We had long arguments; I had to listen to them for three or four days. And by the time I got away I was good and mad." The poem is "not a woman's poem: I'm not sentimental and I don't like sentimental things." It says in part:

If we have failed—lynchings in Georgia,
Justice in Massachusetts undone,
The bloody fields of South Chicago—
Still a voice from the bruised and the battered
Speaks out in the light of a free sun,
Saying, "Tell them again, say it, America;
Say it again till it splits their ears:
Freedom is salt in our blood and its bone shape;
If freedom fails, we'll fight for more freedom—
This is the land and these are the years!

Miss Chapin is a member of the Authors' League and of the Poetry Society of America. She made her home in Philadelphia for a number of years, but on her husband's appointment as attorney general the family moved to Washington. "We have a tiny cottage on the last unspoiled Jersey beach, below Barnegat Light," she writes, "but do not get there very often." Since going to Washington, "my life now has in it many things not related to poetry. I work with my husband on his speeches and occasionally do some confidential writing for him." Miss Chapin, who is slim and vivacious, with dark hair and brown eyes, enjoys swimming and walking for recreation. She is currently at work "on a prose piece of which I cannot speak at present"; and in September 1943 she and her husband went to Mexico to be present at a performance of her ballad poems for music played by the National Symphony Orchestra of Mexico.

CHAVCHAVADZE, GEORGE (chäf"chä-väd'ze) Apr. 30, 1904- Concert pianist

Address: b. c/o Annie Friedberg, Concert Management, 251 W. 57th St, New York City; h. Claremont, Bernardsville, N. J.; River House, 435 E. 52nd St, New York City

A celebrated pianist of international reputation, George Chavchavadze is an expatriate Russian Prince, but prefers to be known professionally as plain *Mr.* Considered "one of the most promising of our virtuosos," the tall, handsome musician has received general approval from the critics. He is, commented Howard Taubman in the New York *Times*, "a sensitive, well-schooled pianist. He plays with a feeling for the poetry and color of a score, and with the sincerity and assurance of a man who has devoted the greater part of a lifetime to his music."

Chavchavadze comes from an eminent old Georgian family who were traditionally patrons of the arts. Included in their number were many distinguished soldiers, diplomats, and artists. His brother, Prince Paul Chavchavadze, a popular member of Manhattan's White Russian coterie, is in 1943 chairman of the War Prisoner's Aid Committee of the American Red Cross and chairman of the Russian War Savings Committee.

George Chavchavadze was born on April 30, 1904 in St. Petersburg, Russia, the son of Prince Alexander Zacharievich and Princess Maria Pavlovna (Rodzianko) Chavchavadze. The boy began his career at the age of four, picking out tunes on one of the family pianos. He showed such exceptional promise that his family placed him under the tutelage of one of the pupils of the noted Professor Leschetizky. By the time he was six he had already made his first public appearance. When the Russian Revolution broke out the Chavchavadzes were forced to leave Russia. Traveling on a League of Nations' passport, young Chavchavadze eventually found refuge in England (in 1919), which became more or less his permanent home, although he has lived in other European countries.

GEORGE CHAVCHAVADZE

In England the young Prince studied music under Mabel Lander, also a pupil of Leschetizky and founder of the Leschetizky School in London. He gave his first London recital at the Wigmore Hall in 1927 and he was well received by both the audience and the critics. Subsequently he gave many recitals in the leading cities and towns of Great Britain, and he also toured the continent, building up a reputation for himself in the leading capitals of Europe. A "citizen of the world," he took up residence in many countries and acquired at least four houses—in Florence, in Paris, in the Isle of Jersey, and in Venice. (The last was his favorite.)

Believing that no artist can devote himself consecutively to concert work, Chavchavadze made a break in his tours in 1936 and 1937 to study with the famous pianist Egon Petri '42, a pupil of Busoni. The following year the young nobleman returned to the concert platform, giving recitals in England and on the continent. While he was touring in Portugal he met the Countess de Bretenil, born Elizabeth Ridgway, a Frenchwoman who gets her Philadelphian name from an American ancestor, and he was married to her in Florence, Italy (1938).

When the War broke out Chavchavadze returned to England in order to offer his services, but he was not allowed to enter the armed services because "only British subjects are eligible to defend the country." He compromised by touring Britain for the British Red Cross, performing in bomb-splintered halls, air-raid shelters, hotel lobbies, and country manors, and, "despite bombs and black-outs," he raised over $40,000 from his twenty-two concerts. The last of his concerts was attended by members of the British Royal Family.

(Continued next page)

CHAVCHAVADZE, GEORGE—*Continued*

"Once," the pianist related, "he was asked to substitute for Mickey Mouse at an entertainment for a regiment of Tommies when the motion-picture apparatus broke down. The house was attentive until halfway through the concert a voice in the balcony yelled: 'Swing it, George!'"

Chavchavadze made his debut in the United States in Boston in the spring of 1941 and followed it with a Town Hall (New York) program. "Mr. Chavchavadze," commented the critic of *Musical America*, "has proved to be an excellently equipped pianist as regards both technical prowess and artistic understanding and taste. He displayed a sensitive touch and fleet fingers, and the power to color tone with subtle musical significance. And at all times a certain elegance of style was allied with the pervading refinement of his playing." Howard Taubman, writing in the New York *Times*, however, considered Chavchavadze an excellent musician, but not a great pianist. "His range is limited, and he has not the controlled power and the enkindling imagination that makes a musician outstanding."

The pianist next toured the United States and Canada, most of his concerts being for the benefit of various war relief funds. Critics were enthusiastic. C. J. Bulliet remarked of one of Chavchavadze's renditions of Liszt's *Après une Lecture de Dante* that "so perfect was the art of the pianist that he and the instrument were forgotten and only Liszt was there meditating the sublimities of the medieval poet." Reflecting over the fact that Liszt died almost a quarter of a century before the Russian pianist was born, the Chicago critic queried: "Can it be they communed in spirit in one of the higher circles Dante inscribed?" In the opinion of the Chicago *Tribune's* critic, the artist's "principal virtues are the delicacy of his imagination and the extreme beauty of his touch. Sometimes he conceived and executed tonal effects so exquisite and frail that the breath of a passing fly would have blown them away." The New York *Times'* critic considered that his work "possessed sweep and power. His technique was highly developed and all of his performances were admirable, clean-cut, and transparent."

Chavchavadze has also made several successful radio appearances. In the summer of 1942 he gave a series of open-air concerts in which he and other artists appeared for charity in the gardens of his New Jersey estate and raised a good deal of money besides exciting the enthusiasm of the critics. In his recitals during the 1943 season Chavchavadze impressed reviewers with two outstanding qualities—taste and technique. A recital in March of 1943 was described as "one of the most satisfying evenings of pianism in a long season of them." On that program Chavchavadze confined himself to works of the romantics and moderns, and one critic later wrote of that recital, "Mr. Chavchavadze's best assets as a pianist were revealed, particularly dynamic contrast and fine delineation of the structure of the work in hand." Other critics commented upon his "soft, singing tone of great beauty, solidity without ever a bang, spirit, and clean technique."

Although he includes modern music in his recitals—Prokofiev '41 and Shostakovich '41, for example—he prefers, in general, the classics. A conscientious musician, he usually practices at least six hours daily. He and his wife have settled down in the United States and, "little concerned with the tide of Continental society which has engulfed Palm Beach and New York," have taken a house in New Jersey. He came to the United States on a diplomatic passport issued by the League of Nations.

Several sculptors have made busts of the handsome young pianist, and the late novelist Ethel Boileau, a close friend of his, has used him as the prototype for characters in two of her novels, *When Yellow Leaves* (1934) and *Ballade in G Minor* (1938). In the latter she describes Ilarion Demianov as "a very charming young man, slim, tall, and dark, with an indefinable air of quiet self-confidence, and what is, I believe, known as 'a way with him!' . . He speaks rapidly, easily, and in perfect English. He has about him a look not only intelligent, but of superabundant vitality, both mental and nervous. . . Lary Demianov possesses the happy combination of a simple and natural manner with an almost transparent sincerity." Chavchavadze himself is dark-haired and light-eyed, so tall that his head "barely clears the stage door," and, according to Bulliet, "lean, spare, ascetic"—a character from *Death Takes a Holiday*. Along with his British accent, John Briggs wrote in the New York *Post*, the pianist shares the Englishman's self-deprecatory manner and ability to enjoy a joke on himself. "In character as a Russian, though, are the quick, volatile movements of his hands which emphasize important points in his discourse." Tennis and fishing are his favorite recreations. He owns a dachshund, Maximilian Superibus, who knows one tune, Liszt's *Twelfth Hungarian Rhapsody*. Partly as a gesture to Maximilian, Chavchavadze included the *Rhapsody* in the program at his Town Hall debut.

CHEVALIER, ELIZABETH PICKETT

(chev'ə-lēr) Mar. 25, 1896- Author

Address: h. 1065 Charles St, Pasadena, Calif.

Elizabeth Pickett Chevalier's first novel, *Drivin' Woman*, the Literary Guild's selection for July 1942, was a best seller almost from the moment of publication. Although *Drivin' Woman* was fourteen years in the writing, Mrs. Chevalier, whose career outside literature has been long, varied, and distinguished, has embarked upon a second novel which she hopes will outshine the first. Within six months more than 300,000 copies of *Drivin' Woman*, the Literary Guild's distribution, had been sold.

Mrs. Chevalier was born Elizabeth Pickett on March 25, 1896, the daughter of Montgomery and Alma Morgan (Osborne) Pickett.

Brought up on Chicago's North Side, she attended the Oak Park High School (which, she remembers, is also the Alma Mater of Bruce Barton and Ernest Hemingway) and cut her "literary teeth" on Freitag's *Technique of the Drama.* "One of my childhood memories," she writes in the Literary Guild's *Wings,* "is of my father sitting on the top step outside my door, behind which I was quarantined for scarlet fever, telling me of the progress of his play which later won the Chicago *Tribune's* first play contest."

Miss Pickett became interested in writing early and during her senior year at high school she completed a serial. During her youth, however, she was probably more interested in the country life at the home of her maternal grandparents on Tuckahoe Ridge in Mason County, Kentucky, the section of the country she used as the scene of *Drivin' Woman.* There, with her mother and her sister, she spent summers "in a big red brick house on the west end of the Ridge." Her father's parents' home was four miles up the pike on the east end of the Ridge. In *Drivin' Woman* she called this Timberlawn and made it the model for the Fant Annable place. Mrs. Chevalier today owns a 350-acre farm inherited from her grandfather. The Tuckahoe farm land was handed directly down from a Patrick Henry land grant issued to a forebear in Virginia for services as an officer in the French and Indian Wars. The land "descends on both sides of the family," and when someone declared that Elizabeth looked like her father, she reports that he replied: "Why not? My daughter and I are ninth cousins."

Miss Pickett entered Wellesley College, Wellesley, Massachusetts, in September 1914. There she wrote a great deal and did some acting for a club to which she belonged. In 1918 she was graduated with a B. A. degree and she returned to Chicago.

Deciding that "factory legislation" was to be her profession, she took a job with the Maywood Branch of the American Can Company's factory, where she worked for three weeks. Her starting salary was seventeen cents an hour, plus bonuses for piece work, but by her second week she "was running a gasket liner and was earning more in one week than a good schoolteacher gets in three." With the money that she had earned Miss Pickett bought a ticket to her grandfather's Mason County farm in Kentucky. Most of his farm hands had been drafted or had found easier or more remunerative work, and in return for a quarter interest in the tobacco patch she helped raise the crop. In mid-August (1918), however, she accepted an offer to become publicity representative of the American Red Cross Nursing Service. She promptly left for Washington to spend five years with the Red Cross.

While with the Red Cross, Miss Pickett wrote a great deal of the *History of American Red Cross Nursing* (1922) and was also the author of a primer, *The American National Red Cross, Its Origin, Purposes, and Service* (1922). While with the Red Cross she also learned to write, cut, edit, title, and direct propaganda films. "My first effort at directing," she writes, "was in the Joe Schenck studios over on the East River, where we did a scene of Florence Nightingale at Scutari. I knew exactly what I wanted for this big production scene to get girls into the Army School of Nursing, but did not have experience enough to whisper 'Camera!' when the scene was all rehearsed and set to shoot. My face still burns with embarrassment when I think of those actors, and especially the cameraman (now an ace one), looking at me and wondering why we did not shoot before the lights burnt out!"

Max Munn Autrey
ELIZABETH PICKETT CHEVALIER

In 1924 Miss Pickett started to work for the films. She was given a three months' trial by Winfield Sheehan in making scenics in the New York studios and learning "to write with a camera." Then in 1926 Sheehan took her to Hollywood, where she assisted on a number of Fox films, including *What Price Glory?* (1926); *Seventh Heaven* (1927); and *Sunrise* (1927). (She says that Sheehan called her his only woman producer.) She wrote and directed "scenics" from 1926 to 1928, and wrote outdoor stories for the films for Paramount as well as for the Fox Studios. Her story *Redskin* was made into a film starring Richard Dix and was supervised and codirected by herself. *Redskin* was also published as a book in 1929.

According to Miss Pickett, when in December 1928 David O. Selznick '41 of Paramount gave her as an assignment "to fill in a title called *Thunderbolt,*" she "recalled a childhood memory of the Kentucky Night Riders pounding down a moonlit limestone road in Mason County and, five minutes later, a barn aflame on the horizon." Intrigued by the idea of a social thunderbolt, she left Hollywood to investigate the literary possibilities of the idea and to gather material for *Drivin' Woman.*

"From January 1928 to October 1936," Miss Pickett writes, "I lived on a farm in Kentucky. These were the years when tobacco prices dropped from twenty-eight cents to an average of eight cents a pound. I learned at

CHEVALIER, ELIZABETH PICKETT —*Continued*

firsthand the story of tobacco and the elements making up the Kentucky communities including the native Irish, German, Scotch, and Negroes."

In October 1936 Miss Pickett was married to Stuart Chevalier, a tax lawyer. Chevalier's firm has offices in New York, Washington, Chicago, and Los Angeles, and since her marriage Mrs. Chevalier has lived in those cities as well as in Kentucky. (Stuart Chevalier is an author in his own right. His book of reminiscences, *A Window on Broadway*, appeared in 1936.)

"In the summer of 1940," Maxwell Aley says in *Wings*, six typewriter paper boxes "filled with as beautifully neat manuscripts as I had ever seen and each labeled *Drivin' Woman*" came to his office. For two weeks he refrained from reading it, stumped by the amount of labor and time involved in reading more than a half million words. When he finally read it he was impressed by the story as well as its length and invited the author to come to New York for a series of conferences about the book. Under Aley's direction Mrs. Chevalier set to work to revise and shorten the novel, and in six months she virtually rewrote it. Aley showed it to motion-picture representatives, and the story was sold to Metro-Goldwyn-Mayer for the largest sum ever paid for an unpublished novel by an unknown author. (It was accepted for publication at the same time, and since then has been serialized in the *Ladies' Home Journal.*) A British war edition of 25,000 copies was brought out early in 1943. Editions in Portuguese for Brazil; in Spanish; in German, ostensibly for Switzerland; and in Swedish were also published. A Russian edition was being considered.

Drivin' Woman covers the fifty years following the Civil War. America Collier Moncure, the central character, was eighteen at the War's end. "Her father was dead, her brother was a fugitive, the family mansion had been looted and then burned, but America succeeded in raising tobacco crops and teaching school to help out her family. Then she married her rascal cousin, a professional gambler, and through thirty years of hardship and disgrace was loyal to him. The part played by America in the great tobacco war between Kentucky planters and New York financiers fills the last part of the story."

The critics found the "real center of interest" of the book in the tobacco war in Mason County, Kentucky. Mrs. Chevalier was found to be thorough and sympathetic in her knowledge of the terrain and the traditions of the era and able to handle her material with "real mastery." Her narrative style, however, was found to be pedestrian. Although some of the critics felt that the merits of the story compensated for its faults there were some who, like the *New Yorker* critic, felt that it was "a long, super-romantic and stylistically atrocious novel" or who, like *Time* Magazine's reviewer, felt that it read "like an inspired high-school prize composition packed with cinematic moments. It revolves about a character who may turn out to be the most satisfying heroine since Scarlett O'Hara." But Fanny Butcher, in the Chicago *Tribune*, spoke for many other critics throughout the United States when she found the novel "exciting," and as "authentic as a source book."

In the fall of 1942 Mrs. Chevalier embarked on a lecture tour throughout the United States during which she filled radio engagements, attended autographing parties, and made appearances at the Boston and Philadelphia Book Fairs. "My father says I'd walk a mile to make a speech," she writes us. "How do I write a speech? I don't. I tell a joke to get the I. Q. of my audience, and then do as did the colored preacher when asked how he prepared his sermons: 'Ah jes' chooses a text, departs from it, an' nevah returns!'"

Although Mrs. Chevalier was asked by professional bureaus to lecture throughout the United States she went instead as a full-time volunteer for the United States Treasury Department. "I wanted to do some spade work for the Treasury," she says. At one literary tea alone $90,000 worth of war bonds were sold. Mrs. Chevalier sold bonds in thirty-one cities for fourteen weeks. She was instrumental in starting Books for Bonds Week throughout the States.

Mrs. Chevalier is five feet six inches tall and weighs 165 pounds. She has gray-brown hair and blue eyes. Maxwell Aley describes her as a "handsome, dynamic American woman whose spirit seemed to shine through her whole personality. Her vigor and directness were both charming and disarming." Mrs. Chevalier's interests are sports, secondary education and cooking. She is a member of the Democratic Party and the Presbyterian Church. "My greatest ambition," she says, "is to write a really good novel."

Obituary

N Y Times p9 D 26 '42

CHILDS, MARQUIS W(ILLIAM) Mar. 17, 1903- Journalist; author

Address: b. St. Louis Post-Dispatch, Washington Bureau, 1422 F St, N. W., Washington, D. C.; h. 501 Dorset Ave, Chevy Chase, Md.

The author of several best sellers on political and economic subjects, Marquis W. Childs is now best known for his "clear, trenchant analyses of events in Washington and their repercussions throughout America." As Washington correspondent for the St. Louis *Post-Dispatch*, he has had opportunity to get news hot from the griddle, to observe American administrators and legislators at work, in short, to be "on the inside" of the stories that make the headlines and of the gossip that filters through the Capital.

Marquis William Childs was born on March 17, 1903 in the Mississippi River town of Clinton, Iowa, the son of William Henry and

Lilian Malissa (Marquis) Childs. "My father," wrote Childs, "was a lawyer and his father was a farmer, as his forebears apparently had been since the time of Adam. Why I wanted, from the age of thirteen or fourteen, to be a newspaperman I've never quite understood. I should like to know the mental or emotional process that led up to that conclusion, for it must have been a curious one."

Childs received his B. A. degree from the University of Wisconsin in 1923. Following his graduation, he worked for the United Press "for a brief interlude" in several Midwestern cities, including Chicago. He then returned to Iowa and taught English composition at the University of Iowa for a year, receiving his M. A. there in 1925. Returning to the United Press that same year, he went to New York, where he shifted "from one assignment for which I was totally unprepared to another for which I was equally well equipped."

In 1926 Childs joined the staff of the St. Louis *Post-Dispatch*, serving as a feature writer covering special stories in every part of the country. In the spring of 1930 he took a leave of absence to attend a housing exposition in Sweden and he remained in Sweden to write a series for the *Post-Dispatch* on Sweden's social and economic advances. Subsequently he had an article published in *Harper's* called "Sweden: Where Capitalism is Controlled." In 1933 he again visited Europe, returning to the United States in June 1934 to take a position as a member of the *Post-Dispatch's* Washington staff.

Childs first came into literary prominence with the publication in 1936 of his best seller, *Sweden: the Middle Way*, an exposition of the cooperative movement in Sweden that affects all branches of production, distribution, and consumption. The author describes cooperation as applied to building and housing, various branches of manufacturing, and the like. He outlines the principles and practice of state ownership of forests and other natural resources. The final chapters touch upon the rise of the labor movement, Sweden's cultural interests, education, and the agricultural problem. The critics agreed that this was an excellent and informative study, showing "striking observation, faithful reporting, and vigorous journalism of a high order." The *Forum's* critic called it "probably the season's most useful publication." The book inspired President Roosevelt '42 to send a special commission abroad to study cooperative systems in Europe. Later that year Childs traveled 15,000 miles with President Roosevelt during his campaign for re-election, and briefly with candidates Landon and Thomas. That same year he wrote an article for *Harper's* Magazine called *They Hate Roosevelt* (1936). Later it was expanded into a campaign pamphlet which was circulated in large numbers throughout the United States.

During the summer of 1937 Childs returned to Europe to gather material for his book *This Is Democracy; Collective Bargaining in Scandinavia*, which appeared the following year. "In this book," it was said, "Childs continues the good work commenced in *Sweden: the Middle Way*. He is here giving more detailed information to the American public about how democracy works in 'the quiet corner' of Europe. . . Childs is more careful with respect to the information given; and, therefore, is less enthusiastic than in his former book."

MARQUIS W. CHILDS

Child's first novel, *Washington Calling*, was published in 1937. "A novel of Washington politics which follows the course of one shady deal from its beginning to its successful finish," the book was called "unquestionably the most intelligent novel of Washington since Harvey Ferguson's *Capitol Hill*. But, like even the best in the Washington novel business, he [Childs] poses type problems and situations, exhibits type personalities, describes mainly type amours and cocktail parties. In spite of its merits, such a performance rarely quite loses the flavor of the interpretive correspondent and the disillusioned editorial writer. The definitive novel of individual characters in Washington still remains to be written."

At the end of his Scandinavian visit, Childs went on to Spain to write a series of articles on the events of the Spanish War for the St. Louis *Post-Dispatch* (he was anti-Franco '42 and pro-Loyalist) and was in Madrid and Valencia while these cities were besieged. The following year he went to Mexico to write a series on oil expropriation and the social-economic status of that country for his paper. The series caused widespread comment and resulted in a demand for a Senate investigation of Senator Guffey and others. Senator Guffey, explains Childs, "made certain charges against me on the floor of the Senate, where his remarks were privileged. I found he had made the same remarks off the floor and therefore brought suit against him for slander for $100,000. After several months he made a formal apology on the floor of the Senate, retracting everything he had previously said. Sometime later I withdrew my suit."

In 1942 *This Is Your War*, information for Americans on what each one must do in order to win the War, was published. It discussed

CHILDS, MARQUIS W.—*Continued*

the probable effects of the War upon the average American family, its income, and its way of life, and told what we would have to give up, what volunteer groups could do, how youth could help, methods of preventing waste, and how to maintain morale. The New York *Times* called the book "succinct and stimulating."

Childs' *I Write from Washington* appeared the same year. In this book, according to the New York *Times*, Childs "has written not nearly so personal a book as the title suggests. Rather he has done a series of essays on various aspects of political life under the first two and one-half administrations of Franklin Roosevelt. Mr. Childs is decidedly more pro-New Deal than anti-, although he is by no means uncritical. . . It is . . . a shrewd and able discussion of such political matters as were of particular interest to that crack correspondent, Marquis Childs, of the St. Louis *Post-Dispatch*."

Childs has also written *Toward a Dynamic America* (1941) in collaboration with William T. Stone. He has written innumerable articles for the *Post-Dispatch* and such magazines as the *Saturday Evening Post*, the *New Republic*, the *Yale Review*, *Life*, and the *Reader's Digest*. He has also lectured on Washington and Sweden throughout the United States.

Childs' views on national, political, and economic problems, according to a release from W. Colston Leigh, Inc., the bureau which sponsors his lectures, are "sound and temperate, bolstered always with unassailable facts, with information gleaned from sources accessible to few outside official circles." Although Childs is no Pollyanna, his "outlook is nevertheless generally cheerful, his criticism always loyally constructive." "Childs," commented the New York *Herald Tribune*, "isn't much of a denouncer, though he is not precisely enthusiastic about Martin Dies '40, Jesse Jones '40, Senator Wheeler '40, Justice Murphy '40, Sidney Hillman '40, and the 'rococo rhetoric' of General MacArthur '41. He seems to like people and he likes, as he occasionally dislikes, with discrimination."

In the spring of 1943 Childs was one of six United States newspapermen who visited Sweden as the guests of the Swedish Foreign Office. The reports of these correspondents emphasized the pro-Ally sympathy which exists in Sweden and the ever-increasing friction between that country and Germany, particularly over the question of "the transport of Nazi troops over Swedish railways to Norway." (Several months later Germany agreed not to transport their troops on these railways.) Childs' interest in the position of neutrals in the present conflict led him to investigate conditions in Switzerland, and he reported in a *Saturday Evening Post* article (May 1, 1943) that almost the entire country is engaged in war work, arranging for the exchange of nationals, the delivery of mail to prisoners of war, etc.

Childs is fair, five feet ten and one-half inches tall, and weighs 165 pounds. He married Lue Prentiss on August 26, 1926. They have two children, Henry Prentiss and Malissa Marquis. His family lives, according to Childs, "in a pleasant house in an old neighborhood in adjoining Maryland." Childs' favorite sport is horseback riding. "Recently," he says, "I have taken up figure skating as a means of getting away from it all. And I find it very successful, for when you're trying to keep your balance in a backward eight, you can't think about either your own or the world's troubles."

Who's Who in America 1942-43

CHRISTIAN X, KING OF DENMARK

Sept. 26, 1870-

Address: Amalienborg Palace, Copenhagen, Denmark

In Denmark, a constitutional monarchy, the Crown and its wearer have always been regarded as "honored (but not sanctified or adulated) elements of a partnership in the business of national living." And King Christian X, the tallest monarch in the world, has always looked upon himself in much the same way. Although he has the most resplendent Guard in Europe, there has never been very much formal ceremony at the Danish Court. Christian preferred to live in Amalienborg Palace in Copenhagen rather than in the vast Christiansborg Palace, and "fishwives could, and did, walk into his palace and explode about their grievances." The King knew an amazing number of his subjects by face and name, for he liked to sail among the Danish islands, dropping in at villages unannounced; and for years it was his custom to ride his horse through the streets of Copenhagen every morning unescorted, taking his turn at traffic lights with his bicycling subjects. When in the fall of 1943 the Nazis interned the popular ruler of the country which had since 1940 been the show window of the New Order, it was, therefore, a confession that no country in Europe could be persuaded to accept Nazi rule by anything but force.

Born at Charlottenlund Castle near Copenhagen on September 26, 1870, Christian was the eldest son of Crown Prince Frederik of Denmark and of Louise, Princess of Sweden and Norway. (His younger brother is the present King of Norway, bearing the title of Haakon VII '40.) After attending Copenhagen's Metropolitanskole he served an eighteen months' term as private in the Army, often standing sentry duty on frosty nights outside the palace of his grandfather, Christian IX. In the famous Royal Guards of the great bearskin caps he was a popular and lighthearted figure. He was an all-round athlete—a strong hand at tennis and a daring rider—and, furthermore, he had a sense of humor. "At the period of the famous gatherings of sovereigns in the Palace of Fredensborg . . . he was among the troops assembled on the quay to greet the arriving Czar. The Czar . . . advanced along the files of the Guard, bestowing upon each man a gold piece. Recognizing his nephew, the potentate of Muscovy tried to pass him by with a smile, but the gay Prince

Christian extended his hand for a coin. 'This,' he cried, tossing it into the air and catching it deftly, 'is the first money I ever earned.' "

In the year 1898, when Christian became captain of the Guards, he added to his popular appeal by insisting upon marrying the girl he loved: Alexandrine, Duchess of Mecklenburg-Schwerin. Their homecoming from the Riviera, where the wedding was held, was made a public holiday throughout Denmark. The people of Jutland even built the young people a house in the woods and invited them to come and live with them. In 1899 the invitation could be extended to their first son, Prince Frederik; in 1900, to Prince Knud, their second child.

It was 1906 when Christian IX died. Crown Prince Frederik ascended the throne as Frederik VIII, and Christian became Crown Prince of Denmark. As his father was fond of travel abroad, he was also acting ruler of Denmark during part of every year, and it was reportedly his personal influence which defeated the diplomacy of the United States State Department, when, during the first years of the century, this country seemed on the verge of acquiring the possessions of Denmark in the Western Hemisphere. Frederik was to rule Denmark only six years. The old man was fond of going for an evening stroll alone, and one day in 1912 a heart attack overtook him while he was wandering around the streets of Hamburg, Germany. He was dead before he was even identified.

Since May 1912 Christian has been King of Denmark and the Wends and the Goths as well as Duke of Schleswig, Holstein, Stormarn, the Dithmarschen, Lauenburg, and Oldenburg. (He was also King of Iceland from December 1919 to May 1941, when that country canceled its union with Denmark.) Wrote one commentator, upon his accession to the throne: "There is no trace of Hamlet in him. . . He is a jolly giant, with a propensity to slap the comrades of his youth upon the back. He is disposed to a somewhat uproarious optimism and loud laughter. . . He is not even intellectual. . . He seems never to have had a mood in the poetical sense. His intimates are like himself in being average people, and if he has a motto it must be: 'Away with all this mystery and romance.' He loves to roar a barrack-room ditty at the top of his lungs with his former comrades of the Guards, to whom he gives a dinner every Christmas. His large, steel-blue eyes sparkle merrily. His vigorous appetite, his loud voice, his long legs, and his propensity to skip up a flight of steps on the run suggest the manner of a boy rather than the sedateness of a man past forty. . ." The same writer went on to tell how, at a dinner given by Christian for his Guards, there was much discussion about the probable fate of certain royal personages as the result of the spread of republicanism throughout Europe. "I would emigrate to the United States and go into vaudeville," Christian announced.

None of this can be interpreted as criticism, for a merry monarch with the tastes of an average man is sure to be popular. And Christian "does not cherish the precious in art after the fashion of the late King of Bavaria," this commentator continued. "He collects no coins like the King of Italy '43. He accumulates no postage stamps. Like the simple George V, King Christian interests himself in aviation contests, in motion pictures, in newspapers. His tastes are those of the crowd, and they lead him to theatres, to sporting contests, and even to celebrated trials in the courts. He resembles his father in a propensity to stroll alone through the streets, stick in hand, stopping now and then to gaze into shopwindows or to exchange a word with an acquaintance. . . He will stand with the throng assembled about some street fakir, taking in with an amused smile every detail. . . On one such occasion he was sent about his business with the rest of the crowd when a policeman objected to the blocking of the thoroughfare by a peddler of mechanical toys." Christian's patronage of the drama, which he was convinced was an essentially Danish art; his ambition to make his palace an intellectual and artistic shrine and his capital a commercial one; his "respectability," in a time when "the traditional 'fast' king with a mistress" had "gone completely out of fashion"; his perfect health—all these came in for a nod and a smile.

CHRISTIAN X, KING OF DENMARK

Even at this time Denmark was hardly known for militarism. Before the First World War, Denmark had pacts with twelve nations not to go to war but to submit all disputes to boards of arbitration. Dr. Peter Munch, the Radical Minister of Defense, was a "defense nihilist" who, together with his Social-Democratic colleague, the late Thorvald Stauning, advocated merely "sentry" duty or the policing of frontiers; and so the country was also ill-prepared to offend any of her more powerful neighbors in August 1914. On August 1, 1914 a royal proclamation declared Denmark's absolute neutrality in the conflict. Actually, however, this turned out to be a neutrality which favored the Central Powers. Germany was assured that the Danes would not fight even if she invaded Danish territorial waters, while the coasts of the Great Belt and the Sound were manned with all available

CHRISTIAN X, KING OF DENMARK —*Continued*

forces as if in preparation for an Allied attack. Finally, when Germany demanded that Denmark mine all straits leading from the North Sea to the Baltic which were under her sovereignty, Denmark acceded. This last decision was due to the intervention of King Christian, who then wired a personal message to his cousin King George of England making a strong appeal for understanding. Although later the closing of the straits proved of disadvantage rather than advantage to Germany, at the time the act might have brought about a British declaration of war.

But Britain did not even make a strong protest; and for Denmark the most notable events of the War were the friendly meetings of the three Kings of the neutral Scandinavian powers, of which the first was held at Malmö in December 1914, and Christian's signature of the new Danish constitution extending the franchise to women on June 5, 1915. (The Danish Parliament consists of a lower house, called the Folketing, whose members are elected for a term of four years, and a senate, or Landsting, whose members are elected for a term of eight years.) A year after the Armistice, on December 1, 1919, Christian put his name to another document of historical importance, the Federal Act whereby Denmark acknowledged Iceland as an independent kingdom. He was to visit Iceland and the west coast of Greenland for the first time in 1921.

The post-War period found a certain amount of social unrest in Denmark. Early in 1920, when Christian dismissed the Radical Cabinet then in office even though it had the confidence of the Folketing, the Radicals and Social-Democrats called a general strike, backed by the trade unions. There were some republican demonstrations, but apparently few people could think of any outstanding candidate for president but Christian himself, and so the affair blew over. The issue involved had been the fate of Schleswig, lost to Germany in 1864, which the Radicals had been willing to leave with Germany. The Treaty of Versailles had ordered plebiscites in Schleswig, however, and a great majority of the population of northern Schleswig voted to return to Denmark. On July 10, 1920, therefore, Christian rode over the border and took possession of the territory, which was renamed South Jutland.

Denmark was one of the first countries to join the League of Nations, and one of the few to really disarm after the War. "Defense nihilism" remained her policy even after the rise of Hitler '42, however, and so she passed more and more into Germany's orbit. This primarily agricultural country at one time shipped nearly one half of the world's exports of bacon and ham and one fourth of its exports of butter and eggs, and her economy is entirely dependent on foreign trade, for she has no other natural resources than her soil and the sea. Her only important customers, moreover, have always been Germany and Great Britain. In the early 1930's she was severely hit by the depression that caused Great Britain (probably most unwisely) to curtail imports. Denmark, therefore, turned to its other large neighbor consumer, and early in 1936 signed a highly disadvantageous trade treaty with Germany which made her increasingly dependent on that country. The Nazis' power to ruin Denmark's economy was such that the Danes hardly dared buy a new gun without first asking Berlin's permission, and Denmark's strongest defenses were set up not where Germany was likely to attack, but where Denmark's friends and potential allies might possibly come to her rescue. In March 1937 Prime Minister Stauning made his famous speech in Sweden against a prospective Northern Defense Alliance; later that same month King Christian passed through Berlin and visited Hitler; and in May 1939 Denmark signed a non-aggression pact with Germany.

In September 1939, at the time of the outbreak of the Second World War, Denmark's neutrality was once more proclaimed. "Our duty is to keep Denmark a free and independent nation," announced Christian in December 1939, at the same time assuring his people of his confidence that Denmark's non-aggression pact with Germany would be respected. By April 1940 Denmark had only 13,000 men under arms, of which only 6,000 had been fully trained. In August 1914 she had immediately called up 64,000!

Denmark's course is readily understandable from that point on. On the morning of April 9, 1940 Foreign Minister Munch was awakened by the German Minister and given one hour to accept a Nazi ultimatum asking the Danes to cease all resistance against the Nazis, who were already pouring into Denmark by land and by sea, and to yield all military facilities and control of communications. King Christian and his Cabinet agreed to its terms "under protest"; and at noon of the same day the Government informed its people of the decision, the King adding a personal message in which he urged dignified and levelheaded behavior upon them.

This easy surrender having greatly facilitated the Nazi invasion of Norway, Denmark was now rewarded by becoming a "show window" for Nazi generosity to the conquered. Parliament continued to function, and in July 1940 a coalition government was formed, built around the notorious reactionary Erik Scavenius as Foreign Minister. But, like many show windows, this one misrepresented Nazi goods. The Germans promptly began robbing Denmark of her cattle, hogs, dairy, and other farm produce. Articles requisitioned by Germany, moreover, were not to be paid for until Germany won the War; the Danish National Bank was compelled to "lend" money to the German high command; and when in November 1940 the Minister of Commerce hinted that his country might never collect a penny of the debt, he was forced to resign. In the meanwhile the number of unemployed multiplied, and when near the end of 1940 all unemployment insurance and relief payments were suspended at the "suggestion" of the German advisory board at Copenhagen, thousands of jobless Danes were forced to take work in Germany.

The aging King, however, did not lose his popularity with his people. He did not leave the capital during the German occupation, and he resumed his habit of riding his horse every day through the streets—still unescorted. The Danes were soon spreading stories about his successful snubbing of the Nazis. As a man who knew him said: "There's no doubt about it; he can say things that make even the Nazis blush for themselves." When asked why, the speaker replied: "Well, he's old, he's tall and straight, he speaks perfect German, he has a kind of bearing they don't know, and they're snobs. He may threaten to abdicate, but he must never do it; then the lock would be off the door." At one time, it is said, the Germans came to Christian to demand that something be done about the "Jewish problem." "Sirs, as we have never considered ourselves inferior to the Jews, we have no such problem here," the King was supposed to have told the Nazis; and when the Nazis later imported anti-Semitic policies he went in state to a service in a synagogue. As if to confirm these tales, shortly before the death of Stauning, who had remained Premier, Christian picked the former Minister of Finance Vilhelm Buhl, a staunch anti-Nazi, as Stauning's successor. It was little wonder that in November 1941, when the residents of Copenhagen demonstrated against Denmark's adherence to the anti-Comintern pact, most of them continued to cheer Christian. It was whispered that he had held out to the last against the pact and had obtained a secret clause providing that Denmark would not be forced to mobilize against Russia "except in extreme emergency."

By this time Danish suffering under the Nazis, particularly through fuel and food shortages, was acute. Sabotage was minor, and no Dane had as yet been officially executed, but thousands of Danish "Communists" had been jailed after the beginning of the Nazi-Soviet war. And the Nazis were chafing under Danish "passive resistance." In January 1942 Hitler demanded that Denmark adopt the Nuremberg laws. Only three Cabinet members were agreeable to that, and Christian, refusing to override his Cabinet without the unanimous consent of Parliament, threatened to abdicate if the Nazis insisted on the adoption. This crisis smoothed over, another promptly arose. In the fall of the same year Christian answered Hitler's telegram of congratulations on his birthday with a simple "Many thanks, Christian Rex," and Foreign Minister Scavenius was promptly summoned to Berlin by the indignant Nazis. Nothing drastic happened immediately, though some suspected foul play when the King met with a severe "accident" during his morning ride the next month, followed by an attack of pneumonia. But soon Hitler recalled the amiable Major General Lüdtke and appointed Major General Hermann von Hanneken, an associate of Himmler '41, as military commander of Denmark; on November 7 the Danish Government finally yielded to German pressure and handed its collective resignation to the Crown Prince (who had been named regent during Christian's illness); and the discredited Erik Scavenius now became Premier.

It was not long before the "family" men who had formed the Nazi garrison in Denmark were replaced by veterans from the Russian Front: Sweden had finally closed its borders to Nazi troop movements, and it was important to keep open the Danish route to Norway. These men behaved differently toward the Danes; and Danish resistance, in turn, became less "passive." In the general elections in the spring of 1943 only two per cent of the Danes had cast their votes for the Nazis, and in May 1943, in his first public address since his illness, Christian had been compelled to warn his people against growing sabotage of munitions works, railways, etc. But to this warning the Danes, inspired by Allied successes on every front, paid little attention. Finally, late in August 1943, the Nazis made new demands on the Danish Government, among them the death penalty for saboteurs. Even Premier Erik Scavenius now became unmanageable, and armed clashes between German and Danish soldiers and civilians and a four-day general strike at Esbjerg resulted in a Nazi declaration of martial law. In protest, Danish sailors began scuttling their warships or running for neutral ports, and bloody fighting continued between German and Danish soldiers until the Nazis forced Christian to intervene and order his people to cease firing. The entire Royal Family and Cabinet had by this time been interned by the Nazis.

Even after this, sabotage continued—and perhaps not against Christian's will. The story is told that when he paraded with the Queen through the streets of the capital under a Nazi guard, he ordered his car stopped in one of the suburbs in front of a cheering crowd of several thousand who had defied the Nazi order against the assembly of more than five people. "I am happy that the Danish language is still being spoken in my old fatherland," he reportedly told the crowd. "Continue!"

In a few days the Nazis had succeeded somewhat in "restoring order"—by the technique heretofore more familiar to the Norwegians. In the fall of 1943, however, they were seeking unsuccessfully to form an eighteen-man administrative council similar to that set up in Norway in 1940 that would enable them to step out of their role as military dictators of Denmark. The Germans were even forced to withdraw some troops from Norway to prepare for a possible Allied invasion of Denmark. As for Christian, he was quoted by a Danish refugee as requesting Bishop Fuglsang Damgaard to "tell everyone that peace is on its way. We have Allies in other countries fighting for our cause. Let everyone know that so long as the Germans are in this country I will sign no decree forming a new Danish Government. What I have signed so far has been forced. God protect you all. God protect our country."

CHUIKOV, VASILI (IVANOVITCH) (chwē'kôf vä-sē'lē) 1900- Russian Army officer

Address: b. c/o People's Commissariat of Defense, Moscow, U. S. S. R.

Long after the Stars and Stripes are borne triumphantly through the streets of Berlin and Tokyo and the smoke of the last battle has cleared away, the glory of Stalingrad's historic defense in 1942 will be remembered as one of the greatest epics of the Second World War. Prominent not only in the history books but also in the hearts of the stalwart warriors of all the United Nations will be the cherished memory of the Verdun of the Volga, the miraculous defense of the City of Steel, which for five months held the Nazi hordes at bay. Remembered also will be the gallant garrison of Stalingrad, the valiant 62nd Army and its stout-hearted commander, Lieutenant General Vasili Ivanovitch Chuikov, whom his men have nicknamed "General Stubborness."

There are reputedly some 2,000 Soviet generals. Most of them are unknown both outside and within the country. They remain virtually anonymous until they demonstrate their abilities. Typical of this new crop of Red Army commanders is Lieutenant General Vasili Ivanovitch Chuikov, chief of the 62nd Soviet Army. Born in 1900, he has been in the Army since he was eighteen. Chuikov was born in the Tula Gubernia (now Province) of Russia proper. His parents were peasants. He left his village and his home when he was twelve and went to work at a nearby town as an apprentice to a mechanic. At eighteen, inspired by the Revolution, Chuikov volunteered for the Red Army. His first baptism by fire took place in the same locale which a quarter of a century later was the site of his greatest military triumph—the city of Tsaritsin, since renamed Stalingrad.

Chuikov participated in several engagements against General Krasnov's White armies and distinguished himself in the fighting. In 1919 he won his commission as regimental commander and was sent to defend Siberia against the anti-Soviet troops of Admiral Kolchak. In the Russo-Polish war, the next year, he again led a regiment in Western Ukraine. After the Civil War he was admitted to the Frunze Military Academy, from which he was graduated in 1925.

Little is known of Chuikov's career until the Finnish war of 1939 to 1940. In that campaign he was in command of an army which fought north of the Karelian Isthmus. He was relieved of his post after the war to become a military adviser to Generalissimo Chiang Kai-shek '40 in China. At the outbreak of the War with Germany, however, he was recalled to assume charge of a division on the central front.

In September 1942 Stalin '42 placed Chuikov in command of Stalingrad's defense with the admonition not to retreat. Chuikov lived up to his pledge and it was because of this that he earned from his men in the 62nd Army the sobriquet of "General Stubbornness." During his twenty-five years of service with the Red Army the young general has been wounded four times and has twice suffered concussion. He has not been hurt in the battles against the Germans so far, but once had a narrow escape when a plane in which he was flying was shot down by the Nazis. He safely parachuted behind the Soviet lines.

General Chuikov's 62nd Army made its debut in the 1942 campaign on July 22, in the vicinity of the Don bend, south of the town of Kletskaya. At the time the Germans were advancing on Stalingrad but were making slow progress. According to Chuikov, his army, retreating at the rate of a mile a day, was serving as a "meat grinder." It was not until September 14 that the Germans succeeded in reaching Stalingrad.

Both the Nazi and Soviet troops received reinforcements. For ten days the battle raged, then settled down to a stalemate with little progress on either side. On September 30, Hitler '42 boasted in a speech that his 6th Army could capture the city any time it wanted to. This meant that heavier attacks were to be expected. To soften the German assault General Chuikov ordered an attack in the northern outskirts of the city near the American-built tractor plant. The battle seesawed from the 9th to the 12th of October. "For three days," Chuikov later reported, "there was a fight for the control of a hundred yards of land, and neither side got it."

Two days later the Germans renewed their offensive for the tractor plant, throwing in five infantry divisions and two tank divisions, totaling some 400 tanks. Against this formidable force, Chuikov could send only nine medium and thirty-one light tanks. Still he was unconcerned. "In street fighting," he explained, "tanks are ineffective. The Germans did not take that into consideration." The roar of explosion during that day, the General said, was so steady that an individual bomb or shell could not be heard. In this bombardment Chuikov lost sixty-one men from his own army staff. "It was the blackest day we had," he recently recalled. "But at the end the Germans, who had moved forward one mile and had entered the work shops, had suffered so heavily that they could not sustain the blow."

This battle was the turning point in the fight for Stalingrad. On November 19, General Chuikov launched his successful counterattack, striking at a hard core of Nazi resistance. From then on Chuikov's campaign became a sort of wearing-down process, a matter of dislodging heavily armed groups of Nazis from concrete bunkers, from tanks set in the soil as artillery emplacements, from trenches and dugouts. By the time the siege of Stalingrad was lifted, a few weeks later, the Germans had paid for their folly with some 300,000 Nazi lives.

On December 22, 1942 the victorious general granted an exclusive interview to Henry Shapiro of the United Press, the first American correspondent to visit the Stalingrad Front. Chuikov recalled how four months before—shortly after he had received orders to take command and defend the city with the life of every man in it—he had stood on a hill and looked at what appeared a flaming volcano, an inferno, thirty miles away. It was the burning city of Stalingrad. The "miracle" that saved it was the Red Army's refusal to retreat, the firm determination to assume the offensive at all costs. Another contributing factor, according to Chuikov, was the drastic shake-up he effected in the lower ranks of front-line officers which resulted in the elimination of all who were fainthearted. The Russian troops were outnumbered, outgunned, blasted day and night by thousands of Nazi planes. They were tiring and many were discouraged. General Chuikov's 62nd Army made their stand, week after week. They stood up under an almost unbelievable attack and broke it.

"The history of war," General Chuikov declared in his interview, "knows no precedent for such fighting." Not only, he said, has Stalingrad set a precedent for sustained ferocity, but it has proved that a great city can be defended house by house by determined men. He spoke of the "whining pessimists" in his army. "I threw these panicky people out right away and set to work. First of all we had to create the proper spirit of firmness. We were told we could not retreat beyond the Volga. We could see for ourselves there was no road."

"Hitler," he continued, "put the best he had against Stalingrad. He did not spare quantity or quality. It was a battle for life or death. We were continuously attacked by great masses of infantry, tanks, artillery, and planes. Our forces were not equal. The enemy had superiority at all points all the time. The German Command used its favorite method. It intended to smash us with a stunning blow. They thought we hadn't enough guts. They hoped to push us into the Volga. They did not carry out a methodical offensive. This was their method September 14. This is what they tried again to do October 14."

The German Command, according to General Chuikov, made an obvious but serious blunder. "Large columns and groups of German soldiers made wonderful targets for our artillery and infantry. We destroyed them in great numbers. I believe that nowhere in this War have there been such bloody hand-to-hand combats. Nowhere have bayonets and hand grenades been so widely used as at Stalingrad. The main characteristic of the battle of Stalingrad is close-distance fighting, and I don't mean the kind of fight we study at the military academies where enemies meet, engage in battle, and then separate. Here we hold each other in deadly grip. The distance between trenches is twenty to one hundred meters. The longest distance is 150 meters." (A meter is equal to about 39.37 inches.)

New methods had to be worked out, General Chuikov explained. "Our ability to maneuver was extremely limited by the narrow territory and by enemy aviation and artillery. The Germans usually attacked by day, when their planes and tanks were active and they could have precise artillery and trench mortar fire. We counterattacked usually by night. Our defense was active. At the end of every twenty-four hours we had to count up results. This was an exceedingly difficult task. Reconnaissance reports were always the same: 'Impossible to count corpses.'"

Although his army grew firmer daily, it became obvious, General Chuikov pointed out, that the Soviets could hold Stalingrad only by destroying Germans. "Heroism took the form of mass self-sacrifice. When an enemy group ten to fifteen times larger than one of our units attacked us our soldiers would send a signal to our batteries, ordering them to fire. They ordered the batteries to aim at them, so that while they would be killed by their own guns, they would take ten to fifteen times their number of Germans with them."

"German infantry," he went on, "are brave only when they are supported by planes, tanks, and artillery. If their infantry have to fight our infantry unaided, their attacks invariably fail. Our infantry are invincible under proper command and with clearly defined tasks. We knew no retreat in the Battle of Stalingrad. The Germans advanced only at places where no Soviet soldiers remained."

"I believe," General Chuikov asserted in concluding his interview, "that if the military machines used against us had been used against any army in the world, including the Germans, they could not have endured one-tenth what we endured."

A month after this interview, a junction of Lieutenant General Chuikov's garrison with Colonel General Rokossovsky's Red Armies of the Don succeeded in liquidating the remnants of the German forces outside Stalingrad. On February 1, 1943 the two youthful generals (Rokossovsky is Chuikov's superior) celebrated their victory by "taking the salute" as their joint armies paraded. The celebration was heightened, too, by the capture of several "trophies" in the august persons of the Nazi Field Marshal General Friedrich von Paulus and many other generals of the German 6th Army and 4th Tank Group.

Lieutenant General Vasili Ivanovitch Chuikov is described by American correspondents who saw him as "a large man, with thick black hair and a broad mouth that shows a line of gold teeth when he laughs."

COLDWELL, M(ICHAEL) J. Dec. 2, 1888- Member of the Canadian House of Commons; national president and Parliamentary leader of the Canadian Commonwealth Federation

Address: b. 612 Bank St, Ottawa; h. Regina, Saskatchewan, Canada

One of the phenomena of the Second World War has been the sensational growth of the Canadian Commonwealth Federation (CCF), of which M. J. Coldwell has been national president and Parliamentary leader since 1942. This federation of farmer, labor, and socialist bodies, which in the general elections of 1940 polled only about eight per cent of Canada's votes, is in 1943 the second strongest political grouping in Canada as a whole and the strongest in some of the western provinces. In the August provincial elections the CCF elected thirty-four deputies to the Ontario legislature, where it had not held a single seat before; in Saskatchewan it became the official opposition; in British Columbia it forced the Liberals and Conservatives into a coalition against it. Only in French-Canadian Quebec and the Maritime Provinces did it make little headway.

Karsh

M. J. COLDWELL

Coldwell himself has represented the farming constituency of Rosetown-Bigger in the House of Commons since 1935 and is generally recognized as one of its ablest members. If some have detected a flavor of academicism in his socialism, it is easily explained by his background. Born on December 2, 1888 at Seaton, in Devon, England, M. J. Coldwell is the son of English parents, James Henry and Elizabeth (Farrant) Coldwell. After being educated at Hele's School and at the Royal Albert Memorial and University College in Exeter, England, where he was for two years student editor of the Exeter University College magazine, he emigrated to Edmonton, Alberta, Canada in 1910. From March 1910 to June 1911 he taught in the Dowling School District of Alberta, and he was then offered the principalship of the Sedley School District in Saskatchewan. There he remained until June 1914, when he became principal of a Regina school—still in Saskatchewan. From 1914 to 1934 Coldwell served as principal of various schools in Regina.

Coldwell soon became active in local affairs. From 1922 to 1925 and again from 1926 to 1932 (after having been defeated in 1925 when he ran as the Progressive candidate for the House of Commons from Regina City) he served as an alderman in Regina. From 1924 to 1925 he was governor of the Regina General Hospital and president of the Saskatchewan Teacher's Alliance; from 1927 to 1928 he was president of the Canadian Teacher's Federation, and from 1928 to 1934 its secretary treasurer. In 1927 he was a member of the National Committee for Celebration of the Diamond Jubilee of Confederation, from 1927 to 1933 a member of the Library Board in Regina, and from 1929 to 1930 chairman of the Royal Commission of Inquiry into the Public Service of Saskatchewan.

Increasingly prominent in the progressive political movement, from 1929 to 1932 Coldwell also served as vice-chairman of the Saskatchewan Farmer's Political Association, and from 1930 to 1932 as president of the Independent Labor Party of Saskatchewan. Then on July 27, 1932 the Saskatchewan section of the United Farmers of Canada and the Independent Labor Party of Saskatchewan met together in Saskatoon after two days of separate sessions and agreed to unite in a joint farmer-labor movement in the province, with Coldwell as provincial leader of the coalition. Next, on August 1, farmer, labor, and socialist groups from four of the western provinces met in Calgary and formed the Canadian Commonwealth Federation, choosing the late J. S. Woodsworth as their leader. Coldwell was chairman of the Program and Policy Committee of this convention, which drew up a short statement demanding a "cooperative commonwealth."

The movement did not call itself a party, for the constituent farmer and labor bodies in each province wished to retain their local identity and autonomy, and it was announced that all organizations accepting the principles of the CCF would be welcomed to membership. These principles were more clearly defined at the first national convention at Regina in July 1933. At this convention more than 300 delegates were present from Canada, from Montreal westward. The movement had spread quickly in those sections of Canada hardest hit by the depression: the prairie provinces, where many farmers were "staggering under an almost hopeless accumulation of debt, piled up in 1929," and the larger cities, with their armies of unemployed workers.

At the Regina convention the CCF announced that it refused to accept the present capitalist system as ministering adequately to the needs of modern society, and proposed a planned economy. By this was meant, among other things, the gradual "socialization" of the banking, credit, and financial system; public ownership, development, operation, and control of public utilities and natural resources; the extension of social legislation, including insurance against accident, illness, old age, and unemployment; and the socialization of all health services. In the interests of farmers guaranteed minimum prices for farm products, debt adjustments, and marketing boards for primary products were also recommended. The Federation repudiated both violence and the outright confiscation of property in the achievement of these aims, and insisted that political and religious liberties must be respected. Coldwell himself had stated at the Calgary convention the year before that the CCF wanted power only when an intelligent electorate sought to provide the mandate.

Naturally the CCF soon found critics both on the Left and the Right. From the Left the program was attacked as middle-class, as reformist, as full of contradictions, as confusing "nationalization" with "socialization," as not concentrating enough on "jam today," and, even if it had been desirable, as impossible of achievement through the present Parliamentary machinery. From the Right it was seen as the work of a group of dangerous radicals or foolish cranks. Nor were all the members of the CCF itself completely in agreement. Some apparently dreamed of a self-sufficient Canada, and if the Manifesto talked of future public works by credit based upon national wealth it was presumably to satisfy "social credit" theorists, who also abounded in the movement.

In spite of all criticism, however, the Federation gradually gained strength, and it ran candidates in municipal, provincial, and Federal elections. When Coldwell ran for the Saskatchewan Legislature as a Farmer-Labor (CCF) candidate from Regina City in 1934 he was defeated, but in the general election the next year he was elected to the Canadian House of Commons, and he was to be reelected in 1940. In the meanwhile, in 1934, he had been elected national secretary of the CCF.

The CCF was not, of course, concerned solely with the domestic front. At the Winnipeg convention in 1934 the declaration on foreign policy read: "If the great capitalist powers drift into another world war, Canadian neutrality must be maintained whoever the belligerents may be. Canada must refuse to give military assistance to the League of Nations as at present constituted. We stand for the thorough reorganization of the League in order to make it an effective instrument for peace." At the Edmonton convention in 1938, when Coldwell was elected national chairman of the CCF, the national council resolution on foreign policy stressed Canada's right to neutrality and asked that that right be clarified so that it could be exercised in any future war with none but "imperialistic purposes." To many advocates of collective security both resolutions seemed weak and ambiguous, but they were consistent with the CCF position in September 1939, when Canada followed Great Britain into the War and Coldwell read the statement of the CCF national council into Hansard (an official report of proceedings in the British Parliament): "The CCF believes that the same struggle for trade supremacy and political domination which caused the last War and was perpetuated in the Versailles Treaty is again the primary cause of the present conflict. The CCF condemns the measures by which the Canadian Government has placed this country on a war footing."

By 1940, when Coldwell succeeded Woodsworth (who had become ill) as acting House leader of the CCF, the Federation was advocating full economic aid to Britain, but Coldwell insisted in Commons that "the conscription by nationalization of essential war industries and financial institutions" should precede the conscription of men. That same year he moved a CCF amendment to the budget resolution providing that standard profits be fixed by the Government so as to allow only a "fair return" on capital for the risk taken, and that the tax rate on excess profits be fixed at one hundred per cent.

Both resolutions were defeated in Commons, but by 1941 the CCF war program, with its emphasis on the home front—abolition of the profit motive, a total war effort with equality of sacrifice and recognition of the rights of labor, civilized living standards for the old, unemployables, widows and children, and a fair deal for the farmer—was winning an increasing number of adherents in Canada. Like many minority parties, the CCF had always wielded an influence out of proportion to the number of its members through the introduction of resolutions or bills which were sometimes introduced later by the Government itself because of the pressure of public opinion in their favor; but in December 1941 the Federation actually polled a larger number of votes than any other party in one province: British Columbia. Earlier that year the press gallery of Commons, voting upon the War Cabinet they would like to see established in Canada, had chosen Coldwell for the office of Deputy Prime Minister. ("Had such a Cabinet been formed," Coldwell says, however, "I would not have accepted such a position because I am of the opinion that it is essential, under our British Parliamentary system, to have a well organized and constructive opposition to the Government.")

In midsummer 1942 Coldwell was elected national president and Parliamentary leader of the CCF. Since that time he has been prominent in the news through his exposure of the financing of the huge Shipshaw power development in the hinterlands of Quebec which makes it "a virtual gift" to the Aluminum Company of Canada from the Govern-

COLDWELL, M. J.—*Continued*

ments of the United States, Britain, Australia, and Canada, and through his demands that the Government expropriate and nationalize it. But the phenomenal growth of the CCF itself has made him even more newsworthy. A Gallup '40 poll in 1942, when several conservative trade unions voluntarily associated themselves with the CCF, showed that the Federation had in two years almost tripled its supporters among the Canadian electorate as a whole; and the August 1943 provincial elections proved that the Liberals were continuing to lose votes to the Federation as well as to the revamped Progressive-Conservatives. One month later the Canadian Congress of Labor recommended union affiliation with the CCF, endorsing its political and economic program, and in October 1943 the Canadian Catholic bishops and archbishops removed the Church's ban on CCF, thus giving 4,750,000 Canadian Catholics free choice among the political parties. Coldwell meanwhile continued to deplore government aid to monopolies. In a prepared statement on October 19, 1943, he said it was his duty "to condemn the actions of our own Government in facilitating the building up of a powerful world monopoly" in regard, specifically, to aluminum production.

Coldwell, who seems to bear a slight resemblance to the late Woodrow Wilson in his photographs, is nearly always described as a "keen thinker and a hard worker." "I talked with him several times while I was in Ottawa," wrote W. H. Chamberlin in 1942, "and was impressed by his unusual grasp of foreign affairs and by his knowledge of the details of Canadian economic life and political administration." (Coldwell is a member of the Canadian Institute of International Affairs, of the National Executive of the League of Nations' Society of Canada, and of the American Political Association, and was a delegate to the Empire Parliamentary Conference in London in 1941 and to the eighth International Conference of the Institute of Pacific Relations in 1942.)

Coldwell is more than a hard worker. He is "by temperament undramatic, careful, clear-spoken, and given to a scrupulous precision of speech as well as an official and personal dislike of demagoguery." If he can be called a Socialist at all, he is a Right-wing Socialist: his "economic views are, in many respects, little different from those of a 'Left Liberal,' since he by no means subscribes to an all-out collectivist society. He believes in a substantial measure of private property, particularly in the fields of small business, while certain key industries and public services are either to be nationalized or put under administrative control in the public interest. At the same time, he will do nothing to damage the link between the farmer and his own land, but he would encourage the joint use of farm machinery among neighbors in order to get the maximum farming efficiency and the lowest unit cost." There is no evidence that he believes in the class struggle, and he believes that the present Parliamentary machinery could be used in the kind of society he and his party would like to build. "We do not plan a collectivist state," he says. "We look to a Canada where the socialist forms in government, in business and agriculture, rest on the cooperative principle." Perhaps his moderation is a political asset, perhaps not. According to one commentator, "There are many intellectuals and workingmen who are looking for the Canadian progressive leader of the future and do not find in Mr. Coldwell the striking moral and oratorical force which rising leaders sometimes need. . ." Certainly, however, it has helped to win the confidence of the Canadian middle class for his program.

On July 22, 1912 Coldwell was married to Norah Gertrude Dunsford of Somerset, England. There are two children: John Major, who is a member of the Royal Canadian Air Force, and Margaret Norah, a graduate nurse. Coldwell is a member of the University Club of Ottawa and holds a life membership in the Canadian Red Cross Society. By religion he is an Anglican, and during the First World War he was voluntary lay reader in the St. Albans Anglican Church of North Regina.

In the fall of 1943 Coldwell was writing a book, scheduled for publication early in 1944, which will survey the present and future in Canada, with particular emphasis on post-War planning.

COLLINGWOOD, CHARLES (CUMMINGS) June 4, 1917- Radio commentator; newspaper correspondent

Address: b. c/o Columbia Broadcasting System, 485 Madison Ave, New York City; h. 1234 Crittenden St, N., Washington, D. C.

As an ace correspondent in North Africa, "baby-faced" Charles Collingwood, radio war reporter, scooped his newspaper colleagues many a time via the microphone. "His broadcasts," according to *Newsweek*, ". . . created at least the illusion of uncanny insight, sometimes they . . . caught the turn of events days in advance of official releases." Although June 4, 1943 marked Collingwood's twenty-sixth birthday, he was already top man among radio reporters, teaming news sense with "a natural radio voice, mature and well-modulated." Both British and American newspapers have frequently quoted him.

Collingwood does not come from a journalistic background; his father is a forestry expert. Charles Cummings Collingwood was born in Three Rivers, Michigan on June 4, 1917 (draft registration day for the First World War), the son of George Harris and Jean Grinnell (Cummings) Collingwood. When his father was appointed to a professorship of forestry at Cornell, the family moved to Ithaca, New York, where the boy started kindergarten at the age of four. Evidently the Collingwood family was of a nomadic nature, for, before being graduated from Central High School in Washington, D. C., in 1934, Charles had attended grade schools in New York State, in Michigan, and in Bethesda, Maryland. He distinguished himself in his studies as well as in extra-curricular activities, and in high school he was president of the Student Council and a member of the National Honor Society. When informed by his high-school French teacher that, to judge by his behavior, he must be an only child and a spoiled one at that, the boy replied coldly: "I am one of *six*"! "The youngest," she inferred; whereupon he said with dignity: "I am the eldest of the six!" He has two brothers and three sisters, the oldest brother in the Navy and the rest at school. Always the leader of the family, Charles was invariably "grand" (his mother says) to his little brothers and sisters, but was embarrassed once when, leading his little flock to the library in the pursuit of culture, he was asked: "What are you doing—escorting an orphanage?"

After high school Collingwood attended the Deep Springs School, near Death Valley, California, to which he had won a scholarship, for three years. The school, a ranch school, was run more or less cooperatively and consisted of twenty students, taught by five professors under the Oxford tutorial system. While there Collingwood branded cattle, rode herd in the mountains, blasted a cattle shed out of rock, was responsible for milking five cows, and was placed in complete charge of all small animals. He next proceeded in 1937 to more orthodox education at Cornell University, where he majored in pre-law. During his summers Collingwood worked with the U. S. F. S. Reconnaissance Crews on Monongahela Forest and in North Carolina. He shipped as super-cargo on a freighter going from San Diego to Baltimore via the Panama Canal, and also traveled all over the United States and southern Canada. As an undergraduate he not only excelled in his studies, but continued to show marked leadership traits and was made a member of the Telluride Association, a special foundation which granted scholarships to outstanding students. He was also good at athletics. This well-rounded personality made him the recipient of a Rhodes Scholarship, which he was awarded when he received his B. A. degree (*cum laude*) from Cornell in 1939. Leaving Washington, where his family still lives, on July 1, 1939, he traveled first to Geneva, since he had also a summer fellowship in Switzerland with the Students International Union.

In Switzerland Collingwood met an American consul who suggested that when the young man got to England he look up Wally Carroll of the United Press in London. Collingwood did as he was advised, and, accordingly, was hired by Carroll that fall. He reported to New College, Oxford, but continued at the same time to serve as local UP correspondent. He was in France just before the outbreak of the European War. While he was at Oxford he attended a country party and, formally attired, returned to his college at a very early hour, climbed in the window, and found a stranger occupying his bed! He dozed uncomfortably on a settee until 7 a. m., when Oxford officials notified him that they had placed a guest in his room. "I already was aware of the fact by that time," he remarked.

CHARLES COLLINGWOOD

During the winter holidays Collingwood went to Amsterdam for the United Press, leaving the country just as the Germans were entering. With his dual career thus made conspicuous, Collingwood was notified by the Rhodes Committee that he must choose between the scholastic and the journalistic life. He chose Oxford temporarily. On May 14, 1940, however, he wrote to his family: "The immediacy of the War is beginning to work on me. I am finding it harder and harder to care about medieval law with Armageddon coming closer and closer. I never was a pure scholar. I have never wanted knowledge for its own sake. I have always wanted it for a purpose. Now the world in which I was going to use it is cracking up all around me, and it all seems so futile. I am becoming more and more convinced that my place is not in school. . . The world that comes out of this War is not going to be a world conducted by pale scholars, gorged with useless information, you can be sure of that."

Leaving Oxford in June 1940, therefore, Collingwood began working full time for the United Press in London. On his departure from the University, he was presented with a testimonial composed by his tutor, speaking highly of his qualities of "insight, intelligence, and industry." Had not Collingwood been forced to leave, it said in part, he would undoubtedly have secured a First in Schools and "been a credit to the college." Collingwood felt that this testimonial, although "quite unmerited," might be handy to have. "Please keep it in the safe deposit box for me," he wrote his mother.

In March 1941 Collingwood was hired by Edward R. Murrow '42, head of CBS correspondents in Europe, to broadcast news analyses. "This is the kind of job I like," he

COLLINGWOOD, CHARLES—*Continued*
wrote his family, "and I think I can do it. I will be entirely on my own, and can do a job of straightforward reporting, giving facts as they are—my own limitations and censorship permitting. I will be able to tell the truth as near as it is humanly possible to ascertain it." He broadcasted from London at first; then he was sent to North Africa. A poker enthusiast, he broke about even in the games on the transport enroute to Africa. In Africa he discovered that he was unable to cover the Front and broadcast too, so he stayed in Algiers, although he still took frequent trips to the Front. While in Algiers he became convinced that there was something wrong in North Africa. He managed, according to *Time* Magazine, to convey the idea by air to the United States when he finally got through. "I honestly didn't try to evade censorship," he says, "but sometimes I'd get so upset at the news that I guess my voice was affected." Collingwood scored a number of beats over his newspaper rivals: he gave the United States its first news of the Darlan '41 assassination and correctly predicted that General Giraud '42 would become the new High Commissioner; he was first with the news of the execution of Darlan's assassin; he broadcasted the report of the arrest of the twelve Frenchmen who had allegedly plotted Giraud's death, and he hinted Royalist participation in the intrigue.

In the spring of 1943 Collingwood was awarded one of the George Foster Peabody Awards, "the Pulitzer Prizes of radio." His was given him for outstanding reporting of the news. The Peabody Award Committee, in voting unanimously for the selection of Collingwood's dispatches, remarked that the young commentator, "with the tools of inference, indignation, and fact, has conveyed to us through the screen of censorship an understanding of the troublesome situation in North Africa." Collingwood was so overwhelmed by the news, commented *Time* Magazine, that he was unable to utter an appropriate "thanks."

For eight or nine months, until he was sent back to London, Collingwood broadcasted for two and one-half minutes twice a day (8 a.m. and 6:45 p.m.) from Radio Algiers over the CBS coast-to-coast network. His voice on the radio impressed his listeners as that of a mature man, and most of them were surprised at his youth. In North Africa he was irked at the preference given to newspapermen. "Somehow the Army always manages to give radio a back seat," he complained. "Generals think of radio as they used to think of the tank and dive bomber—an incomprehensible device to be looked on with suspicion and treated with caution." As a war correspondent with the British Army Collingwood had a captain's rank and uniform. Some of his newspaper stories have been published with by-lines. His reporting, both on the radio and in the press, is realistic and straightforward. In describing the temporary Allied setbacks during the landings on the Italian mainland at Salerno he commented: "There is no rout on the beaches of Salerno—there is no mad flight into the sea. Our men will hold on as long as they are asked to. And you can't ask more of a foot soldier than that."

After four years abroad Collingwood returned to the United States in October 1943 to report to officials in Washington. Praising the work of the OWI and emphasizing the importance of "invasion by ideas" as well as by armies, Collingwood made a plea for better understanding by Americans of British-American cooperation. In Europe and Africa, he said, the two allies were on the best of terms—"In the field the American and British soldiers work together. The Anglo-American feeling of fellowship has reached a high point in Italy." Late in 1943 Collingwood made a two months' lecture tour of the country.

The "youngest broadcaster" is fond of amateur dramatics and debates. His favorite sports are tennis, baseball, swimming, and punting. He possesses (says his mother) "humor, skepticism, and vigor."

Collingwood seems to excel in almost everything. Besides his intellectual attainments he is an athlete—in London he pitched the correspondents to victory over a Marine Corps baseball team and won the title of "the poor man's Bob Feller '41." He is a sportsman—in North Africa he was one of the bookmakers at what is known variously as "the Eisenhower '42 Cup", "the Camel Corps Stakes," or "the Poor Man's Futurity," a race among the correspondents of the press services at conferences to see who can get his communiqué from his typewriter to the wire fastest. He is a Beau Brummel—he is tall, blond, curly-haired, and good-looking, and a scrupulous dresser who even sets sartorial styles for Ambassadors. He was, remarked actress Kay Francis after her return from Africa, "the only man in Africa who knows where to get a suit pressed." And he is, moreover, unmarried.

COLMAN, RONALD (CHARLES) Feb. 9, 1891- Film actor

Address: b. c/o Metro-Goldwyn-Mayer Studios, Culver City, Calif.

Ronald Colman, "still going strong" after two decades on the screen, has revealed himself to be one of the most constant and reliable of Hollywood actors. Said "virtually never to have given a bad performance," Ronald Colman, as one of his critics wrote in 1930, "goes on being Ronald Colman, presenting a suave and impenetrable mask." "Fine, as usual" is the comment most frequently applied to his achievements. Besides his constancy of performance Colman's main asset is the fact that "there isn't another man his age still playing young romantic leads," an asset which should specially endear him to the motion-picture industry now that Hollywood has lost so many of its young actors to the armed forces.

Ronald Charles Colman was born on February 9, 1891 in Richmond, a small country town on the edge of a river in Surrey, England, the son of the late Charles and Marjory (Fraser) Colman. "There is," he says, "no proof that there ever was an actor in the family before my time." It has been said that he is descended from George Colman of eighteenth century theatrical fame, however. His father was a silk importer. To prepare for Oxford, the boy was educated at Hadley School at Littlehampton, Sussex, where he actively indulged in amateur theatricals, though at that time he dreamed of becoming an engineer. He took part in such productions as *The Admirable Crichton* and *Fanny's First Play*. At one time he contrived to get a member of Sir George Alexander's company to come and look him over. "He did," Colman recalls, "and looked right over me."

Colman was only sixteen years old when his father died and he had to give up all thoughts of further study. As office boy in a London steamship company he earned the "magnificent salary" of $2.50 a week. He worked his way up to the job of bookkeeper and finally junior accountant, receiving the highly increased amount of $12 weekly in his fifth year. To relieve the monotony of his office work he continued in amateur theatricals as a member of Bancroft's Dramatic Society. (He had already made his first professional appearance —as a banjo player at a Masonic smoker at the age of seventeen.) Moreover, he joined the London Scottish Regiment. When the War broke out he was among the first English soldiers to see service in France—with his regiment he crossed the Canal in September 1914 as a unit of Lord Kitchener's "famous contemptibles." He saw action at Ypres, then at Messines, "where an exploding shell caused me to stumble, fracturing an ankle." This "unheroic injury" led to his medical discharge in 1916. Today he is one of the few survivors of the original British Expeditionary Forces of the First World War who wears a Mons Medal with the 1914 bar.

Back in London, Colman made his debut on the professional stage in the summer of 1916. Now that he has come to represent to such an extent all that is most typically and characteristically British, it is strange to find that the actor's swarthy, "foreign" appearance gave him his first chance on the British stage as well as on the American screen. His first part was that of an Indian in a playlet by Tagore, with Lena Ashwell. His performance was confined to the tooting of a horn. Thereafter he succeeded to slightly more important parts, appearing in such plays as *Damaged Goods*, *The Live Wire*, and *The Great Day*. Moreover, he acted in several British films, including *A Son of David*, in which he played the part of a Jewish pugilist. His first picture was a two-reel comedy which, "to his great relief, was never released." A London casting office once listed him as "Does Not Screen Well."

RONALD COLMAN

Post-War depression in England in 1920 sent Colman "scouting for greener fields than the London stage." He took second-class passage to New York, arriving there with three clean collars, two letters of introduction, and a small amount of money, which has been variously described as $57, $37, or even $5. "His meager savings were almost gone" when he finally secured a part in support of Robert Warwick in *The Dauntless Three*, playing a chief of the Turkish police in act one and a Russian spy with a beard in act two. He continued in stock for some time, touring the country with Fay Bainter in *East Is West*, and appearing on Broadway with George Arliss and Ruth Chatterton.

In 1922 Colman was playing in *La Tendresse* in Henry Miller's company when film director Henry King noticed him. King needed a dark young man for the Lillian Gish picture, *The White Sister*, which he was to make in Italy. Colman seemed just right for the part and was only too eager to take advantage of his good luck. Afterward the young actor went on with King to Florence to make *Romola* with both Gish sisters and William Powell. There he accepted a cabled contract from Samuel Goldwyn, who had seen *The White Sister*. Goldwyn starred him opposite Vilma Banky, the

COLMAN, RONALD—*Continued*

"imported" Hungarian actress, in several romantic films, including *The Dark Angel* (1929). His first opportunity for really fine acting came, however, in the almost womanless *Beau Geste* (1929). Colman's "debonair air lent itself gracefully to the character," and he was as much an asset to the picture as the picture was to his subsequent career. With Vilma Banky again, but now in a more manly role, he appeared in *The Winning of Barbara Worth* (1929), the story of "an Easterner who only became a real man after months of struggle in the reclaimed West."

In 1929 the "talkies" came along, and Colman managed gracefully to adapt himself to the circumstances without any loss in popularity. His first talking picture was *Bulldog Drummond,* followed in 1930 by *Condemned* and by *Raffles.* Then he appeared in *Devil to Pay* (1930), a United Artists production written especially for him by Frederick Lonsdale. In 1931 he played in the Hecht '42-MacArthur adventure melodrama, *The Unholy Garden,* which he considers his worst picture, and with Helen Hayes '42 in *Arrowsmith,* a picture that he long considered his finest. Equally satisfied with this last picture was Sinclair Lewis, author of the book from which it had been adapted, who wrote Colman: "I want to thank you for *Arrowsmith;* it completely carried out everything I tried to do in the novel." Next came *Cynara* (1932), under King Vidor's direction, and in 1933 Colman played his first dual role, in *The Masquerader,* opposite Elissa Landi. Colman said some years later that dual roles were things to be avoided, since "if an actor is good, a doubleheader characterization will add nothing to his stature," but if he is bad (or even merely dull) he will appear twice as bad.

In the meantime, Colman's professional relationships had deteriorated considerably. In 1932 he sued Samuel Goldwyn, Incorporated, for libel, charging that the corporation had caused statements to be issued "which reflected upon his character and his ability as an actor." The statements in question insisted that Colman preferred to play his love scenes fortified by a considerable amount of alcohol. They also referred to the actor as being "drunk and dissipated." Thereafter Colman refused to work with Goldwyn any longer, a refusal which threatened to keep him off the screen for two years—until his contract ran out. In a gesture of defiance Colman left Hollywood and spent almost a year traveling around the world, visiting France, England, Italy, Spain, China, Japan, and other countries.

A solution was found when Joseph M. Schenck and Darryl F. Zanuck '41, who had just organized Twentieth Century Pictures, persuaded Goldwyn to release Colman from his contract so that they might sign him. The actor returned to the screen in 1934 with *Bulldog Drummond Strikes Back,* "the most enlivening film since *The Thin Man.*" The same year saw his first appearance on the radio at a broadcast celebrating the first anniversary of Twentieth Century Pictures Company with George Arliss, Constance Bennett, and others. Since that time he has done a large amount of radio work.

At the end of 1934 Colman was divorced from his wife, the former Thelma Ray, to whom he had been married in England on September 18, 1919. They had been separated for ten years. Colman continued to live his bachelor life in Hollywood. In 1935 he played the title role in *Clive of India,* a film mostly concerned with the domestic life of the hero. This was the first picture in which Colman appeared without his mustache. Although the critics thought that he managed "to impersonate Clive attractively," they yet contended that he had been "more at home in earlier and more hirsute dramas." The same year he was seen in *The Man Who Broke the Bank at Monte Carlo* and in MGM's production of *A Tale of Two Cities,* where he was "definitely at his best." At present he mentions *A Tale of Two Cities* as his favorite film and his performance in it as the best thing he ever did.

From 1936 on Colman has proceeded more slowly, on an average of one picture a year. First came *Under Two Flags,* a Twentieth Century-Fox production. During the making of this film Colman had to "suffer for his art." He received a slight injury when a knife thrower missed his mark, "for the first time in twenty years," and the heavy knife struck sideways on the actor's chest. In 1937 he played the part of "Glory" Conway in *Lost Horizon,* adapted from James Hilton's '42 "best-selling" novel. He also played in *The Prisoner of Zenda,* another double role. The next year he appeared in *If I Were King.*

In October 1938 Colman was married for the second time. The bride was the former Benita Hume, also English, who had been starring in British and American films. The ceremony was performed secretly with only a few witnesses on San Ysidro Ranch near Santa Barbara, California.

Among Colman's more recent pictures have been *The Light That Failed* (1939), with Ida Lupino '43 and Walter Huston; *Lucky Partners* (1940), with Ginger Rogers '41; and *My Life with Caroline* (1941), a "sort of polite, modern variation of *The Taming of the Shrew* theme." His most recent successes have been *The Talk of the Town* (1942) with Cary Grant '41 and Jean Arthur, "118 mirthful minutes making matinee idol Ronald Colman an Associate Justice of the Supreme Court," and *Random Harvest* (1942), with Greer Garson '42, which had a "record" run at Radio City Music Hall in New York. He considers these his best pictures in years.

Colman likes to make about one picture a year—around eight weeks' work—for which he receives an average of $150,000. He does not, however, remain idle during the other forty-four weeks. He appears frequently on various radio programs such as the *Radio Theatre* under the direction of Cecil B. De Mille '42. A member of the Hollywood Victory Committee and an ardent worker for both the British War Relief and the American Red Cross, he has donated his services to these organizations on many occasions, and has made a bond-selling tour for the Treasury Department. (Incidentally, his contributions to war causes and charities average twenty-eight per cent of his net income.) In 1943 he signed a contract with Metro-Goldwyn-Mayer to star in *Kismet*, portraying the role of the Baghdad Beggar which the late Otis Skinner created on the stage and played in the two previous screen versions of the Edward Knoblauch play. The picture was in production in Technicolor during the fall of 1943, with William Dieterle '43 as director.

"Stoically appealing" is the way a critic described Colman in one of his roles, and the words are apt. Even in comedy roles (which, by the way, he prefers) the British actor conveys the impression of a weary but whimsical sophisticate, fatalistically accepting everything from the scorn of his lady to death-in-the-desert with a self-effacing quirk of the eyebrow and a mocking gleam in his kind brown eyes. Colman is an actor who seldom needs directorial guidance, and who is therefore convinced that producers should leave the interpretation of a role to the discretion of the actor. This does not mean that he himself is not interested in helping and advising younger actors, however.

Dark and handsome, Colman "lacks an inch of being six feet tall and keeps his weight at 165 pounds by playing tennis." He has a scar parallel with his right eyebrow which he acquired in a fall at the age of four. He prefers wearing comfortable tweeds, and he is reputedly the best "careless dresser" in Hollywood. Shy, and seldom in "the Hollywood spotlight," he is known as "one of the most retiring of stars," and he intensely dislikes interviews. One year he was a candidate for the annual award of the Hollywood Women's Press Club for the least cooperative male player—an award that was finally captured by Fred Astaire. ("Can I help it if I'm dull?" was Colman's comment when he heard about his own candidacy.) He occasionally fishes and hunts, and he enjoys reading, particularly biographical novels. His early life was influenced by the essays and letters of Robert Louis Stevenson, and among his favorite novels are Remarque's *The Road Back* and Aldington's *Death of a Hero*, but he would solve the usual "desert island" problem by carting along the works of Dickens and Shakespeare. He speaks a smattering of French, German, and Italian, and he is extremely fond of French and Italian cooking.

COTTEN, JOSEPH May 15, 1905- Screen and stage actor

Address: b. c/o Universal Pictures Corp, Universal City, Calif.

An ex-member of the Mercury Theatre and still a part of the "Orson Welles '41 coterie," actor Joseph Cotten, who made his film debut in 1941, is, in 1943, a full-fledged star, appreciated at the box office both for his histrionic ability and for his pulchritude. Joseph Cotten was born in the famed peanut center of Petersburg, Virginia on May 15, 1905, the son of "solid-Southern, church-going people." His father was and is superintendent of mails in Petersburg, and Cotten started his career as a special-delivery expert, taking out the special deliveries on a bicycle. "I had," declares Cotten, "the best pair of legs in the world. I'll bet anybody on it. I pedaled a million miles if I pedaled a yard."

Cotten attended the Petersburg schools, where he made his initial appearance on the stage in the school plays. When he had finished high school he determined to be an actor. Although his parents would have preferred that he study engineering at the University of Virginia, they were easily prevailed upon to let him study acting in Washington for one year. The young man borrowed some money from a bank and journeyed to the capital to find that "Washington wasn't Petersburg in a financial way." For a while he was able to attend the Robert Nugent Hickman School of Expression regularly, but his money ran out and he was forced to take up various remunerative occupations during the day, which necessitated his attending classes at night. At first he sold vacuum cleaners, but soon he turned to professional football, in the course of which profitable occupation he received, writes Kyle Crichton, "a handsome sock on the puss in one game, with the result that he still wears a bridge on one side of his mouth, containing various teeth that never were there before."

After his year at the school Cotten spent a strikingly unsuccessful year in New York attempting to get a job in the theatre. Soon tiring of sitting in agents' and managers' offices, he got himself another job, this time as a paint salesman. This lasted two years. Then he met an impecunious African diamond merchant who "had cornered the market on a trick gadget for saving gasoline," and invited his young friend to go with him to St. Petersburg, Florida to "set up a profitable pitch." The merchant went ahead by car, and Cotten was to join him one or two days later, after stopping off at Petersburg to see his parents. At the end of his visit Cotten discovered that he had either spent or lost at poker all of his not very extensive capital. He was wondering how to get to Florida when an acquaintance of his, variously described as a policeman and as a mail carrier, offered to sell him half of an excursion ticket to Miami, Florida, on condition that Cotten give the other half to the civil servant's north-bound daughter, who was anxious to return cheaply.

Cotten agreed to the bargain and presently found himself in Miami, hundreds of miles away from his diamond merchant. He stayed,

JOSEPH COTTEN

said Theodore Strauss, because "he was a man for the slow life." Cotten got a job on the Miami *Herald* as an advertising salesman at a salary of $35 a week. The only apartment he could rent cost $150 a month, but Cotten easily made up the difference plus living expenses by barter. "In the morning," he said, "pick up an old wreck of a typewriter; sell it by afternoon for fifteen bucks profit. . . Otherwise you would starve in the midst of fantasy." Then came the financial crash and the subsequent hurricane! "Boom," says Cotten, establishing the chronology, "bust, and blow." "When it was all over the place was a paradise. Rents had gone down to nothing; merchants clamored for the opportunity of providing provisions on a lend-lease basis. Cotten had an advertising job that took only a few hours' work a week; days he spent on the beach getting a sun tan; nights he worked with the Civic Theatre." "Like a beachcomber," Cotten says. He spent five years in Miami and got married to Lenore Kipp, a divorcee with a small daughter. It was her ambition for her husband's theatrical success that took him back to New York, for he liked Miami. "Nothing," he says, "could be better than Miami."

Arriving in New York with a sheaf of letters of introduction, the actor first, relates Kyle Crichton in his version of the story, accosted Daniel Frohman as he was about to enter an elevator. "'A letter from a mutual friend, Mr. Frohman,' he said.

"'Yes, yes, I know,' said Frohman, pushing it away. 'You want to be an actor. . . They all do.' He paused, looked at Cotten grimly and then said in a hasty, confidential tone: 'I tell you what you do, young man; you go around and sit in the agents' and managers' offices. That's what you do, young man.' He patted Joe on the arm and disappeared into the elevator.

"After this slender start, Mr. Cotten took all his letters and distributed them to the seagulls on a ferry trip to Staten Island, which he took to cool off. Then, thinking to be hanged in an elegant cause, if in any, he broke in to see David Belasco. Mr. Belasco welcomed him as a lost friend.

"'Why, Mr. Cotten, it's a pleasure!' he cried. 'You come right with me. I'm just going down to rehearsal.'

"Joe trailed along in fear and bewilderment, thinking that his identity would soon be disclosed and he would be tossed out onto the pavement of West 44th Street. Belasco kept him by his side in the auditorium of the theatre as the rehearsal went on.

"'Now those costumes of the girls, Mr. Cotten,' said he, 'don't you think they would be better in yellow instead of red?'

"'Yes, sir,' said Joe meekly.

Belasco yelled to his stage manager.

"'Pete,' he cried, 'I have an excellent suggestion here from Mr. Cotten. He thinks the costumes should be yellow instead of red. Don't you think Mr. Cotten is right?'

"Pete thought it was nothing less than brilliant and Belasco turned to beam on Mr. Cotten."

Whether the anecdote is apocryphal or not, it seems fairly certain that Cotten did get a job as assistant stage manager and understudy with Belasco. He understudied the late Lynn Overman in *Dancing Partner*, and Melvyn Douglas '42 in *Tonight or Never*. Both of those two gentlemen remained in excellent health throughout the runs of both shows, and thus prevented Cotten from becoming an overnight sensation, but that was all right with the young actor, who used to worry every night for fear the star wouldn't appear. "I couldn't learn the lines," he says. "I don't know why it was, but I never did get them straight."

Cotten next set out for Boston where he played eight months in stock at the Copley Square Theatre, home of horror and gore. His part was always that of the young reporter or insurance man who solves the crime. "His last appearance there," says Theodore Strauss, "was in an item entitled *The Gray Shadow*, which had been written by the stagehand who for years had scribbled in a notebook the most effective gags and situations and finally put them all in one play."

After his work in stock Cotten found himself out of luck again. It was in 1931 or 1932, the worst of the depression, and he was unable to get any more theatrical jobs. He began acting in one-reel industrial films and modeling for photographers. From time to time he was given a screen test and invariably turned down. Then he drifted into radio work. While attending the Sunday broadcast of a "continued show," he found himself near a young man later identified as one Orson Welles. A mistake made during the performance caused both gentlemen to break into unseemly mirth, and they were promptly ejected from the studio by irate officials. This, of course, made them bosom friends, and when Welles joined the Federal Theatre (WPA) Cotten followed him and was prominently cast in several productions, including *Dr. Faustus* and *Horse Eats Hat.* Cotten was particularly fond of the latter.

Welles next launched his Mercury Theatre with *Julius Caesar*, in which Cotten was, of course, cast. He next starred in *The Shoemaker's Holiday*, and played in several non-Welles productions, including *Jezebel* and *Accent On Youth.* He was toying with the idea of appearing in Welles' ill-fated *Five Kings* when the Theatre Guild signed the handsome blond (his hair, however, apparently was darkened for the role) actor for Katharine Hepburn's '42 leading man in *The Philadelphia Story.*

Mindful of the axiom that "the show must go on," Cotten continued in his role in *The Philadelphia Story* for twelve weeks while suffering from a harrowing ailment he had caught from his stepdaughter—whooping cough. Despite the fact that he was treated as a pariah by his hygienic colleagues, Cotten performed manfully. He was delighted, however, when an agency representative, apparently, Cotten thought, discerning the fine qualities of the actor's voice underneath the rasp of the whooping cough, invited him to audition for a radio serial. Cotten put off the audition until his voice had returned to its usual bell-like tone. After the audition was over the agency man congratulated Cotten politely, then murmured with deep sympathy: "What's happened, Cotten—what has happened to your *voice*?" (Cotten got the role anyway.) The interesting "nodules" come back whenever Cotten roars himself hoarse at a ball game.

By the time the New York run and road tour of *The Philadelphia Story* had finished, Orson Welles was in Hollywood beckoning to Cotten, and Cotten came—despite the fact that two studios were dangling tempting contracts before his eyes. "You don't turn down Welles," Cotten explains. "He'd be around beating tom-toms under your window."

Cotten's appearance in Welles' *Citizen Kane* led to an RKO contract. After that everything was pleasant going. He appeared subsequently in a leading role in *Lydia* and as the villainous protagonist of *Shadow of a Doubt*, his first really big role on the screen. "Joseph Cotten," wrote Bosley Crowther of the New York *Times*, "plays with smooth, insinuating ease while injecting a harsh and bitter quality which nicely becomes villainy. He has obviously kept an eye on Orson Welles." Cotten also had a large part in Welles' *Magnificent Ambersons*, and the leading role in the Boy Wonder's *Journey into Fear.* In the latter Cotten not only played the chief part but, according to the picture credits, assisted Welles in what most critics considered a clumsy adaptation of the novel on which the film was based. Late in the summer of 1943 *Hers to Hold*, in which Cotten co-starred with Deanna Durbin '41, was released. His role was that of a daring young Flying Tiger, and he was cast not without some misgivings on the part of the producers, who feared "he was too old" for so romantic a role. The critics were of no such mind, however, and agreed that Cotten gave a delightful performance in this fairly innocuous comedy. Better roles were awaiting him. Metro-Goldwyn-Mayer assigned him the part of the Scotch detective in the thriller *Gaslight* (based on Patrick Hamilton's play running on Broadway under the title *Angel Street*), which is to co-star Charles Boyer and Ingrid Bergman '40. For David O. Selznick '41 he will play one of the leads in *Since You Went Away*, and in September 1943 it was announced that he will have the leading role in the film version of J. P. Marquand's '42 best-selling novel, *So Little Time.* By December two more pictures in which he will appear were scheduled: *The House of Dr. Edwards* (which Alfred Hitchcock '41 will direct) and *Double Indemnity*, a story of the problems confronting a returned American soldier, in which he will co-star with Joan Fontaine.

Meanwhile this busy actor has not confined his talents to the screen. In addition to numerous radio appearances, he has been helping Orson Welles in a super-colossal circus called the Mercury Wonder Show which is free to servicemen. Although it is primarily a one-man-Welles-show, Cotten gets a chance to do his share as Jo-Jo the Great, "the weird wizard of the South."

The Cottens are not socially inclined and rarely go out, except to ball games. Mrs. Cotten was formerly a magazine editor and is now a free-lance writer.

Cotten has a large and increasing feminine following which may be due in part to the fact that he is six feet two inches tall, slim, and has curly blond hair and blue eyes. He likes badminton and is also studying, by himself, to be a carpenter. His chief product so far is bookshelves, which he turns out incessantly in great quantities. He finds Hollywood almost as "soft" living as Miami.

COUSINS, NORMAN Magazine editor
Address: b. c/o Saturday Review of Literature, 25 W. 45th St, New York City; h. Wilton, Conn.

Although he now holds the sedentary position of editor of the *Saturday Review of Literature*, Norman Cousins in his youth aspired to be a baseball player, an ambition which persisted into his maturer years. Cousins was born some thirty-odd years ago in Union, New Jersey, the son of Samuel and Sara Barry (Miller) Cousins. His earliest interests were reading, writing, and baseball. English composition was his favorite subject in grammar school; arithmetic the subject most disliked.

At Teachers College, Columbia University (from which he was graduated in 1933), Cousins studied to be a teacher and played baseball on the side. During baseball practice one day he crashed head-on into a teammate while chasing a fly ball, and had to

NORMAN COUSINS

spend several weeks in the hospital in consequence. That did not cure him, however, of his taste for the sport. He did not give up baseball forever until, as education editor of the New York *Evening Post*, he received an injury that sent him into the hospital, this time for several months. Today, if he plays ball at all, it is a game he had always felt belonged to old men—softball. In 1941 he played "the cow-pasture circuit" for several games with James T. Farrell's '42 Studs Lonigan Softballers.

Cousins did not become a teacher, although his studies in the science of pedagogy aided him to secure an editorial position on the New York *Post* in 1934. In 1935 he left the *Post* to succeed John Chamberlain '40 as book critic of the magazine *Current History*. Later he was appointed one of the editors of that magazine. He held that position until 1940, when he resigned to become executive editor of the *Saturday Review of Literature*, a liberal literary weekly which had emerged out of the literary pages of the New York *Evening Post* as a weekly magazine almost twenty years before. Cousins continued, however, to contribute a monthly book review to *Current History*. "Fresh from *Current History's* editorial staff," according to *Newsweek*, "he began tying the *Review's* other worldliness down to the world of today. Editorials linked literature with current events; feature articles broke the monotony of straight book reviews. Then Cousins launched a series of special issues, each devoted to the literature and culture of a given region, and, on July 4, one on morale edited by Eleanor Roosevelt '40."

During his first two years as executive editor the circulation of the *Review* increased by almost fifty per cent. In 1942 J. R. Cominsky resigned a business and advertising position on the New York *Times* in order to take over the *Review's* vice-presidency and business and advertising direction. A staff reorganization took place at the same time, and Cousin's title was changed to that of editor. He is the fourth editor in chief in the history of the *Review*, the others having been Henry Seidel Canby '42, Bernard De Voto '43, and George Stevens. In addition to Cousins, the editorial board of the magazine consists of Canby, Amy Loveman '43, Harrison Smith, and Bennett Cerf '41. Dr. Canby and Miss Loveman have been editors of the *Saturday Review* from its inception. Cousins believes that there is a wide field in post-War America for a weekly that will relate the literary and cultural aspects of the country with the daily life and aspirations of intelligent Americans.

Cousins lectures extensively on books and world affairs, and writes articles and editorials on these topics for the *Saturday Review*.

His editorials are outspoken and realistic. He does not hesitate to criticize bitterly. In an editorial called *The American Folly*, published in June 1943, he condemned the American people, and, most particularly, the American Congress, for selfishness, lack of unity, prejudice, and greed: "Can it be that when it comes to a showdown we haven't got what it takes? Can it be that a nation born in the blood of freedom's battle has so far wandered from its heritage as to be ignorant of the bold requirements of continued freedom and self-preservation? Can it be that all these internal explosions will serve only to pave the way for the destruction, demolition, or overthrow of American democracy at home without a single enemy shell, bullet, or bomb touching our shores? If so, we had better call the boys home now, for there is nothing left for them to save."

Cousins spoke in a less pessimistic tone late in August 1943 when he said editorially: "Now is the time for high ideals. We've proved our skill in talking about things worth dying for. How about the things worth living for? Or are ideals something we think of only in moments of great desperation, when we realize how slim is the chance we actually may have them. . . There have and will continue to be mistakes, contradictions, untold mass suffering, and anguish. But these are inevitable considering the scope and nature of the struggle; to fail to look past these dark by-products into the larger needs and the larger ideals is to pass up the greatest opportunity for constructive thinking in history."

In 1942 he wrote *The Good Inheritance: the Democratic Chance*, and its companion volume, *A Treasury of Democracy. The Good Inheritance* is a study of the collapse of democracy in the ancient world, in which parallels are drawn between Athens' struggle for survival as a democracy, and the present fight for democratic values. Most critics found the first part of the book, which presented the history, lucid, informative, and well-written, but thought the latter portion somewhat confused. "Apparently," wrote the New York *Herald Tribune* critic, "Mr. Cousins' hope lies in some vague form of international organization, but it is too vague to be clearly comprehended by the reader. This is disturbing. The first half of the book showed the author to be an exceptionally clear, direct thinker. If the impact of war has thrown such a man into a confusion comparable to that of the Athenian populace after the death of Pericles, what has it done to the fuzzier minds of the majority? Fuzzy thinking sank Athens, and there is no convincing reason to doubt that it could sink us. It is this melancholy fact that makes *The Good Inheritance* a bit depressing."

A Treasury of Democracy, an anthology of aphorisms and short extracts pertaining to democracy, received little critical notice of an extended nature. Cousins has also edited an anthology, *The Poetry of Freedom*, together with William Rose Benét. It is scheduled to appear in the spring of 1944.

Cousins is a co-director of the Government's Victory Book Campaign, together with Franklin P. Adams '41 and Edward L. Bernays '42. He is a trustee of Briarcliff Junior College and a member of the executive board of P. E. N., the United States Treasury Books for Bonds Committee, the National Academy of Political Science, and the Council on Books in Wartime. In July 1943 he was appointed consultant to the Overseas Publications Branch of the Office of War Information, and he now divides his time between the *Saturday Review* and the OWI.

He is also an air raid warden in Wilton, Connecticut, where he lives with his wife, the former Ellen Kopf (whom he married June 23, 1939), and their small daughter, Andrea Barbara, in a hundred-year-old Colonial cottage. He commutes fifty miles to New York every day and "finds the hour ride indispensable for regular reading and writing." He is forum leader and moderator of the Norwalk Town Hall Association in Norwalk, Connecticut. When his work on the magazine demands it he spends the night in a New York hotel. His hobby is music: he has assorted musical instruments, chief among which is an eighty-year-old Beatty church organ, which he enjoys repairing himself, and which obliges him by breaking down at least once a week. He has composed half a dozen tunes, "one of them a semi-symphonic affair involving a wide variety of mechanical sounds." In reading, he leans heavily toward history, especially ancient Greece and the period of the Reformation. His favorite literary character in American history is Walt Whitman.

Cousins, according to his co-workers on the *Saturday Review of Literature*, has a "sharp, alert" face with "bright, brown eyes." He is slender, dark, and boyish-looking. He speaks fluently and rapidly and has an extremely active and inquisitive mind. The young editor has one passionate dislike—he hates women's "preposterous hats." This aversion led him to commit a sensational literary hoax, one which did no harm to the *Saturday Review's* sales records. One Gustave Lamartine, formerly of the French Academy of Design, carried on a lively debate with a certain Max Gerhardt in the letter columns of the magazine on the question—Could Gerhardt "design a preposterous hat and get women to wear it?" The debate grew more heated as Gerhardt's hat (with "decorations protruding from decorations, colors [clashing] wherever possible; long feather [bristling] out at least a foot over the head") brought forth letters describing hatpins as an "actual and potential hazard to the health of our female population," and such decorations as a menace to the war effort. Publishers and reporters were soon clamoring at Mr. Cousins' door for the whereabouts of M. Lamartine. At last the editor was forced to confess the truth. There was no M. Lamartine; there was no French Academy of Design. Amazed at the furor which his hoax had caused, all Editor Cousins could say was, "If the incident results in a single hat that looks like a hat, Old Gus will not have died or lied in vain."

Who's Who in America 1942-43

COWLES, GARDNER, JR. (kōlz) Jan. 31, 1903- Publisher

Address: b. Register and Tribune Co, Des Moines, Iowa; h. 50 W. 37th St, Des Moines, Iowa

On May 14, 1943 Gardner Cowles, Jr., resigned as deputy director of the Office of War Information in charge of its Domestic Division. "We hate to lose Gardner Cowles from OWI," said Elmer Davis '40, "but he has served a year and feels he must resign to give attention to his several publications." In any case, as vice-president of the Minneapolis Star Journal Company and president of the Register and Tribune Company and of *Look* Magazine, Cowles would continue to think up new ways of getting information about the War to the American public.

Generally known as "Mike," Gardner Cowles, Jr., was born in Algona, Iowa on January 31, 1903, the son of Gardner and Florence M. (Call) Cowles. He was the third son and the youngest child in the Cowles family of six. At about the time he came along Gardner Cowles, Sr., an Algona banker who had made a little money as a contractor in rural mail routes and who for a time had edited a local weekly, *Advance*, picked up the Des Moines *Register and Leader* for $300,000. The *Register and Leader* was the third and weakest newspaper in the community at the time, with $180,000 in debts and a circulation of less than 16,000, but Cowles thought he was acquiring a sheet with $160,000 in debts and a circulation of 33,000.

"Mike" Cowles therefore grew up in a newspaper atmosphere. His father set a high standard for the boys, and the only Cowles who refused to go into the newspaper business was the oldest son, Russell, who is now a top-ranking artist. As early as 1908 the *Register* gobbled the newly established *Tribune*, thus becoming the *Register and Tribune*, and by the time young Mike was graduated from Phillips Exeter Academy in 1921 the family newspaper was flourishing. At Harvard, where his good friend was Corliss Lamont, he himself was editor of the *Crimson*, and when he received his B. A. in 1925 he knew that there was a position waiting for him: as city editor of the Des Moines *Register and Tribune*.

By 1926 the youngest Cowles was news editor of the *Register and Tribune*. The next year he became associate managing editor, and he

GARDNER COWLES, JR.

was promoted within a few months to managing editor, a position which he retained until 1931, when he became executive editor. By this time the paper had crowded its rivals out of the field entirely. From the very beginning Gardner Cowles, Sr., had made circulation a fetish, putting the paper on a cash-in-advance basis and concentrating particularly on getting it to his subscribers at the same time every day. In 1924, with readers of the other two Des Moines newspapers diminishing in numbers daily, he had bought the Scripps-Howard *News,* and in 1927 the *Capital* gave up. Now the only newspaper in Des Moines, the *Register and Tribune,* also became Iowa's state newspaper for all practical purposes. Its real rivals, among them the Chicago *Daily Tribune,* are all outside the state.

Mike Cowles had no small part in making the *Register and Tribune* what it is today. As managing editor he instituted a technique of covering Iowa and the Middle West by airplane for news and pictures (the paper bought its first plane in May 1928) and he cooked up many features for the paper. He started George Gallup '40 on his career of polling public opinion at about the same time. Gallup was then an instructor in journalism at the University of Iowa, and Cowles set him to work measuring "reader interest" in *Register and Tribune* features. These surveys proved that newspaper readers preferred to look at pictures rather than to read type, bringing out the tremendous popularity of the picture story technique which was used in the *Register and Tribune,* and which Vernon Pope had instituted. Mike Cowles therefore began making further experiments with the Sunday rotogravure section, substituting for the usual rotogravure hodge-podge of pictures a headline and a series of related pictures with captions. It was he who decided that Laurence Stallings' pictures of the First World War would make good pictorial copy. In 1933 a roto-picture service was established by the paper, and rotogravure pictures were soon being syndicated to twenty-six large newspapers.

It was also the youngest Cowles who put the Cowles family into the radio business. They first bought a small station in Fort Dodge, Iowa, then another in another small Iowa town. They then moved both to Des Moines, and thus had two stations covering Columbia and Blue networks. Today the Cowles' chain covers all the northern Midwestern states, including a third station with joint studios in Waterloo and in Cedar Rapids, Iowa, and a fourth in Yankton, South Dakota. Mike Cowles is president of both the Iowa Broadcasting Company and the South Dakota Broadcasting Company.

In June 1935 Mike Cowles and his brother John purchased the Minneapolis *Star,* a liberal paper, for $1,000,000. (Today they control all the newspapers in Minneapolis as well as in Des Moines.) By this time another venture was already being contemplated, an outgrowth of the experiments with photographs: a weekly picture magazine. "As newspaper editors," Mike Cowles says, "we had long been concerned with the fact that the public, generally speaking, won't read long columns of type in any newspaper or magazine explaining heavyweight, important public problems. . . We decided to found a picture magazine and to try to develop a 'picture language' . . . that would interest the millions in subjects which they avoid when they see those subjects in long-winded type articles."

Look was ready for publication before *Life* was, but the Cowles decided to wait and see what would happen to *Life.* Henry R. Luce '41, a friend of theirs, had shown them the early *Life* dummy, and they in turn had shown him their dummy. *Life* was to be primarily a news magazine, while *Look* planned to run mainly feature photographs. The publishers of *Look* were after mass circulation, and Mike Cowles was convinced that pictures should be chosen because they are interesting in themselves, not because something had happened last week or the week before. In no sense, then, would their magazine be a rival of *Life.* "Don't look for coated paper or fancy printing. Do look for reader interest," the advertisement for their first issue announced.

The first issue of *Look* appeared on January 5, 1937, with Vernon Pope as its first editor. Only 400,000 copies of this issue were printed, but the demand increased the printing order to 835,000 ten days later. What the publishers had learned from *Life* was the danger of accepting advertising during the first year, and so *Look* carried no advertising for a long time. When it finally did accept advertising the rate was based on the actual circulation delivered.

This circulation grew tremendously from the first issue on. *Look's* basic "classification of human interest" was very much like that of the Hearst newspapers: personalities came first, then romance, beauty and fashions, self-improvement, child and animal interest, motion pictures and stage, religion, health and popular science, adventure and travel, social problems, sports, curiosities and oddities, and fiction. These classifications boiled down to sex and violent death, however, in the eyes of those who disliked "sensationalism." The *New Re-*

public called the new weekly "a morgue and dime museum on paper," and could "think of no reason why *Look* should not go to a circulation of ten million—if the supply of corpses holds out and people don't get tired of looking at them." When, however, the magazine was sure of success, it began to publish pictorial editorials on social questions, and the *New Republic* was the first to praise its pictorial study of the suppression of civil liberties in America and its exposure of the methods of "war propagandists." "We salute *Look* for its courage in showing the seamy side of American life as well as for the skill with which it has done its job," the editors of the older weekly commented.

In 1939 Mike Cowles became associate publisher of the Des Moines *Register and Tribune*, while retaining the title of executive editor. In April 1941, addressing the National Newspaper Promotion Association, he proved himself the son of his father by telling his audience that with advertising revenues lower and not likely to recover rapidly newspapers must look for more revenue from their readers through increased circulation at increased rates. Newspapers should therefore "modernize like any other product," become "more entertaining and friendly" (most of them were "too pompous and ponderous"), and make themselves a daily habit by delivery at the same time every day. All these were recipes which the elder Cowles had tested years before.

In the summer of 1942 Gardner Cowles, Jr., was brought into the Office of War Information as deputy director of the Office of War Information in charge of its Domestic Division. With about 1,000 employes, his domestic branch was the modern equivalent of the Creel Committee of the First World War—the Committee on Public Information. While Cowles was in charge many pamphlets were published by his branch of the OWI and widely reprinted in the newspapers. Among them were *The Unconquered People* (telling the story of resistance to the Nazis in the conquered countries); *Toward New Horizons* (speeches by Vice-President Wallace '40, Under-Secretary of State Sumner Welles '40, and Milo Perkins '42, executive director of the Board of Economic Warfare); *The Four Freedoms; The Thousand Million* (an introduction to the peoples fighting with us); *Negroes and the War;* and *Tale of a City* (the story of Warsaw under the Nazis). Cowles, however, felt that his branch of the OWI "should rely ninety-five per cent on newspapers for disseminating our information." The newspapers "have cooperated beautifully," he said, and he wanted "to see this office use regular channels, not try to develop new channels."

This attitude may or may not have had something to do with the resignation of fifteen writers from the domestic branch of the OWI in April 1943—an occurrence which resulted in the investigation of that branch by a Senatorial committee headed by New Dealer Joseph C. O'Mahoney. According to Cowles, the trouble grew out of those writers' opposition to the OWI's policy of restricting the number of its own publications. According to the writers themselves, they had quit because it was impossible for them to tell the "full truth"; the domestic activities of the OWI were controlled by "high-pressure promoters who prefer slick salesmanship to honest information." They implied that these "high-pressure promoters" (a term which they did not apply to Cowles himself, but to some of his subordinates) sought to sugar-coat government news for the American people, and they referred particularly to a report on food, prepared under the direction of one of their number, which was being held back. This report, according to Cowles, was being revised not merely because it would have had a depressing effect in its original form, but also because it was of doubtful accuracy. *Variety*, sympathizing with Cowles, described the fifteen as prima donnas who believed that everything they did should go down on slick paper.

The whole affair stirred up a great deal of controversy, particularly with the appearance of the *Information Guide* later that month. The preparation of the *Guide*, a set of rules governing all OWI writers in what they could say and how they should say it, had been directed by Cowles himself. In the *Guide* writers were forbidden to "crusade for social, political, or economic reforms" or to "engage in controversy or pleas for reformation" on our treatment of minority groups. Every OWI writer was merely to write "the facts," to stick to "the truth above all," and to concentrate on "the enemy." According to some commentators, if this policy had been in effect a few months before, the OWI would never have published its study analyzing the major reasons why employers had refused to hire Negroes and refuting each one. According to Gordon Cole of *PM*, "In the seven sets of instructions—or 'information sheets'—describing the enemy . . . the word 'Fascist' is mentioned just once. As a result, some officials inside OWI are asking whether this war is now to be sold to the American people as something other than a war against Fascism."

In a Washington rife with rumors, it had been whispered more than once that Cowles would quit the Office of War Information to become press agent for Wendell Willkie's '40 comeback, and when he finally resigned in May 1943 it was understood that he would associate himself with Willkie if and when Willkie announced that he would be a candidate for the Presidential nomination. Both Cowles and his brother John were among the early Willkie-for-President sponsors in 1940. The Washington rumors were evidently not without foundation, for, back at his job on *Look* Magazine, Cowles began to concentrate on the 1944 Presidential campaign with Willkie as the Republican standard bearer. In October 1943 the cover and several pages of one issue of *Look* were devoted to Willkie. Full-page advertisements were run in many metropolitan newspapers in which the magazine described the 1940 candidate as "Another Lincoln." The article in *Look* (which included Willkie's answers to questions posed by the editors) was interpreted as Willkie's announcement that he would be available for the Republican nomination. It pictured him as a man of the people, an authority on international affairs, and a crusader for domestic reform, concluding with: "Today Wendell Willkie retains the faith of

COWLES, GARDNER, JR. *Continued*

millions of Americans. Undaunted by past defeat, he looks to a time when his principles and ability will vindicate that faith."

Mike Cowles was one of the Willkie party in 1942 when Willkie went abroad, visted Russia, and had his famous interview with Stalin '42. Reporting on that visit in December 1942 at a dinner of the Russian War Relief, Cowles said that despite her terrific losses, Russia had today "what we used to have in the United States before the depression and still have in Texas and some parts of the Pacific Northwest. It is a great spirit of self-confidence, a firm and enthusiastic will to succeed." One of the tangible results of this visit was a plan for a Moscow bureau for the distribution of United States news. "There is a tremendous interest in America," Cowles said. "Particularly are the Russians curious about our engineering achievements, such as the Tennessee Valley Authority."

Slow-spoken, deliberate, "absent-eyed" Mike Cowles is slender and close to six feet tall. He has a florid complexion, blue eyes, and sandy hair which is growing a little thin on top. He is the sort of worker who can apparently get a day's work done in a few hours, and who can work at a twenty-four hour stretch if necessary. According to *Time,* he is not so invariably right as his brother John, but "the only office wager he is known to have lost was $1 each to five employees whom he bet that Kansas City was bigger than St. Louis."

Something of an athlete, Mike Cowles, coming home from Harvard, helped his brother introduce squash racquets to the Middle West. The youngest Cowles is a former squash racquets champion of Iowa, a first-rate golfer, and a trained pilot who has flown an autogiro as well as a standard plane. He is an inveterate cigaret smoker—any brand will do; and he likes Scotch. He has a good sense of humor and likes to tell anecdotes about well known people. He is sole owner and exhibitor of the original famous Cardiff Giant—the huge figure in gypsum found in Cardiff, New York, which had been buried and dug up and which for a time caused a sensation as the figure of a prehistoric giant before its exposure as a hoax.

His activities are multifarious. He is director of the Bankers Life Company and of the Iowa-Des Moines National Bank & Trust Company. He is president of the Gardner Cowles Foundation, a trustee of Drake University, a member of the Harvard Fund Council, and was treasurer of the Des Moines Public Welfare Bureau from 1931 to 1933. He is a member of the American Society of Newspaper Editors, on whose board he sits; he is a member of the Des Moines Chamber of Commerce and of the Greater Des Moines Committee, director of the former from 1930 to 1939; and he is treasurer of the Harvard class of 1925. His clubs are the Des Moines, Wakonda, Hermit, Pow-Wow, Harvard, University (New York), and Tavern (Chicago). Cowles has not completely severed his connections with OWI. On July 7, 1943 Palmer Hoyt '43, who succeeded him as deputy director, appointed him to the advisory committee of that agency.

Cowles has been married twice. His first wife was Helen Curtiss, his second, Lois Thornburg. His marriage to Miss Thornburg took place on May 17, 1933, after a typical newspaper office romance. She was a beautiful young graduate of the University of Iowa School of Journalism with her first newspaper position; he was executive editor of her paper, the Des Moines *Register and Tribune.* There are three children: Lois, Gardner, III, and Kate.

Who's Who in America 1942-43

COX, EUGENE Apr. 3, 1880- United States Congressman

Address: b. House Office Bldg, Washington, D. C.; h. Camilla, Ga.

Not for many years had the Southern bloc of anti-New Deal, anti-labor Democrats known such power in the United States House of Representatives as in 1943. They had always enjoyed strategic positions on important House Committees, but this year the influx of Republicans into Congress gave them also the opportunity to spearhead many successful legislative assaults on the Administration. Eugene Cox, who controls the majority of the votes on the all-important Rules Committee, is, says Kenneth Crawford, "fairly typical of the group that has come to be known by impatient New Dealers as the pellagra bloc."

Edward Eugene Cox was born in Mitchell County, Georgia, on April 3, 1880, the son of Stephen Edward and Mary (Williams) Cox. In 1902 he received his LL. B. degree from Mercer University, Macon, Georgia. Admitted to the Georgia Bar, he hung up his shingle in the small town of Camilla, where he still lives. He had married Roberta Patterson on January 19 of that year.

In 1912 Cox was appointed a judge in the Superior Court of the Albany Circuit, and he was later elected to the same office. In 1916, however, the year of his first wife's death, he resigned from that post to become a candidate for Congress. He was defeated, but was finally elected in 1924, and since that time he has served as a member of the Sixty-ninth to Seventy-seventh Congresses from the Second Georgia District. In the meanwhile, in August 1918, he was married to Grace Hill. There were two children by his first marriage—Lamar Patterson and Mary Bennet; and there has been one daughter, Gene, by his second marriage.

In his first years in the nation's capital, Representative Cox was far from conspicuous. According to *Time* Magazine, his "most notable efforts during twelve years in Congress were confined to peanut growers' legislation." Although he opposed the National Recovery Act he was not known as a foe of President Roosevelt '42 until late in 1936; as a matter of fact, he served as vice-chairman of the Democratic speakers' bureau in the Presidential campaign earlier that year.

It was inevitable, however, that eventually Cox would join the bloc of rabidly anti-New Deal Democrats in the House. He was a personal friend of John Nance Garner's. He was the representative of a district where "industrial ambitions hinge on attractively cheap labor," and, as *Time* put it, he was "industry's self-appointed House watchdog." The rise of the C. I. O. particularly alarmed him. By 1937 he was not only opposing the President's Supreme Court proposal but was charging him with taking orders from John L. Lewis '42 and was attacking the Administration's attitude in the steel labor troubles. "I warn John L. Lewis and his Communistic cohorts that no second 'carpetbag expedition' in the Southland, under the red banner of Soviet Russia . . . will be tolerated," he announced that year. He attacked Frances Perkins '40, Representative Maury Maverick, and Sidney Hillman '40 in terms almost as colorful, and he damned the Supreme Court nominee Hugo Black '41 as an "anarchist." Cox was already a powerful member of the House Rules Committee, which has the power to keep bills from reaching the floor (except through petition of half the House membership), to limit discussion on those bills which do reach the floor, and to sponsor nullifying amendments and riders. He could, therefore, be influential in keeping such legislation as the Black-Connery Wage and Hour Bill, which seemed headed for enactment, from reaching the floor of the House in 1937. Later, in the spring of 1938, he threw his weight against the Norton Wage and Hour Bill.

Cox was elected to Congress again in 1938 in spite of New Deal opposition. His foes have pointed out that in order to vote in Georgia a man must pay $1 admission to the polls, pay up all his taxes, have his color recorded on the election rolls, and either satisfy the examiners that he can read and write or be the owner of forty acres or of $500; and that Cox was elected by only 5,137 people, or by 3.8 per cent of the adult citizens in his district. His election made him second in line for chairmanship of the Rules Committee.

By 1939 the Congressional offensive against the New Deal was well under way. Cox helped. He supported the Smith investigation of the National Labor Relations Board. He promised that the House would have a chance on all and any amendments to the Wage and Hour Law, and he later threatened to keep other measures off the House floor until the Rules Committee ruled on the Barden Wage and Hour Law amendments. He also sponsored a bill for an inquiry into the WPA and a $30,000 grant for the task.

The year 1940 found Cox urging the immediate liquidation of the National Labor Relations Board, defending the Logan-Walter Bill (designed to "curb arbitrary and irresponsible actions of Federal agencies and bureaus"), attacking the SEC. In the spring of that year he forced the Rules Committee to bring to the floor an armload of anti-labor legislation never even considered by the standing Congressional committees. Samuel Grafton '40 called this "strong-arm stuff." "If the Nazis took the House of Representatives over, that is what they would do," he said. But what Cox was concerned about was whether or not the President was taking the House over. Asked his choice between the New Deal and a Republican victory in 1940, he replied: "I would like to see my Party win, but I put the welfare of the country ahead of Party."

EUGENE COX

The bellicose Congressman from Georgia was also concerned about the welfare of America's employers. In September 1940 he vehemently opposed the adoption of the Smith Amendment allowing the conscription of industry as well as man power, charging that it would help "reduce free citizens of America to the status of communistic proletarians or totalitarian vassals," and quoting approvingly from speeches made at the first Constitutional Convention in favor of a property qualification for voting. "The dictator at least proceeds by boldness, defiance, and daring," he warned, "while we are lured by subtlety and craft." In November he denounced the Vultee strike, which he called a strike "against the Government," as "treason"—"just as much sabotage as to seek to break down operations in times of emergency"—and he demanded that Congress pass laws against strikes in any plants related to defense activities. (Later he told a New York reporter: "If I have to have a change, I'd infinitely prefer a strong militaristic government of the type of Germany and Italy than of socialistic Russia.") In 1941 he supported the Vinson '42 Bill for compulsory arbitration of labor-management disputes and made threats about "the Army marching in and taking over" if it were not enacted. It was a disgrace, he said, that labor leaders were still organizing and demanding such things as time-and-one-half for overtime. "If conditions are as desperate as we are told they are, then this is not a question of carrying on business as usual—union business."

(Continued next page)

COX, EUGENE—*Continued*

What was more, it was "a waste of time to talk about whether or not the employer may be to blame. The employers of America are crushed."

At the same time Cox supported the Administration's foreign policy, backing the Lend-Lease bill, reoffering bills to ratify the destroyer-base trade with Britain and to set up joint committees to give the National Defense Committee statutory origin, and proposing immediate convoys for American goods. But opposition to the Administration's domestic policy was even more important to him, and in June 1941 a writer in the *New Republic* was moved to indignation. "The six-to-five vote of the Rules Committee," he wrote, "six votes admittedly in the vest pocket of Representative Gene Cox of Georgia, is the most important vote in Congress today. It is the legislative bottleneck." In November 1941 Cox threatened to block all future Administration legislation unless the Democratic leaders permitted anti-strike legislation to be brought to the floor of the House. Revision of the Neutrality Act was a "war measure," he said, and he had supported it, but he was through voting for bills that would endanger the lives of American boys while the Administration did nothing "to call a halt to these strikes which are depriving these American boys of the arms and supplies they need." At the time price control legislation was at stake, and it was actually held up for some time. Cox particularly opposed Leon Henderson '40 as price control administrator.

Since Pearl Harbor, Cox's main battle against New Deal reforms has been more aggressive than ever. In March 1942, at an open session of the Rules Committee, he announced, speaking of some remarks by Attorney General Biddle '41 earlier that month: "It is an insult to the nation, reaching out for further New Deal reforms while our boys bleed and die. My God, what will the country stand for?" "If we are not going Red outright, then why this continued coddling of the Reds and the inefficients?" he asked in an article written at about the same time. In the fall of the same year he was active in the fight against the Geyer Poll Tax Abolition Bill, which he and his colleagues had succeeded in keeping off the floor up to that time.

With Cox, helping to "keep guard over the inner sanctum of the Rules Committee," are Martin Dies '40 of Texas and Howard W. Smith '41 of Virginia. In January 1943 Cox became chairman of a committee to investigate the Federal Communications Commission with not a single Congressman speaking against his resolution, although at this time the FCC was investigating a $2,500 fee paid to Cox by the owners of a radio station for a broadcasting license which he had helped them to obtain from the Commission. Not long afterward, the Congressman from Georgia forced through a resolution for a two-year continuation of the Dies Committee. (The year before, speaking in the absence of and without consultation with Representative Sabath, chairman of the Rules Committee, he had taken time on the floor of the House allotted to lease-lend arguments to make sure that Dies received that year's appropriation in time.) Cox was also one of the strongest supporters of the Smith resolution which made that veteran anti-New Dealer chairman of a committee authorized to investigate any action of a Government agency which anyone charges is "beyond the agency's power or authority, invades the constitutional rights of citizens, or inflicts penalties without affording the accused a hearing before a fair and impartial tribunal." Like his colleagues, he supported the Hobbs anti-racketeering bill and the Smith-Connally '41 anti-strike bill, opposed the $25,000 limitation on salaries and the Marcantonio anti-poll tax bill and voted to dismiss Watson, Dodd and Lovett '43.

In March 1943 the Rules Committee granted an open rule for the Disney Bill, which combined an increase in the debt limit with a revocation of the President's salary limitation order. Of the latter Cox said: "If Congress is to tolerate a situation of this kind it ought to adjourn and go home."

But in the interim Cox's activities on the committee investigating the FCC had made him the center of one of the most bitter political controversies in recent years. No sooner had Speaker Sam Rayburn '40 appointed him to the chairmanship of that committee than numerous protests, petitions, and unfavorable newspaper editorials began to pour into the House. The *New Republic* called his appointment "a breathtaking breach of the most elementary moral sense," and pointed out that if Cox were found guilty of accepting the $2,500 fee for legal services, he would be liable to a $10,000 fine, two years in prison, or both. The Representative's furious attack on the FCC was seen as not merely an attempt to further discredit New Deal agencies, but, in addition, as Cox's effort to clear himself by destroying the FCC. In May, Clifford Durr of the FCC filed a paper with Rayburn charging that Cox "was unfitted to conduct it [the inquiry] because of a financial connection with a radio station which had pending business before the Commission." Durr's charges had little effect at that time. Cox continued to hold hearings which the *Christian Science Monitor* described as "a mockery of basic American traditions of fair play. It has been a star chamber; it has been black with bias; it has sought to terrorize those who opposed the chairman's own corrupt practices."

The more serious the charges hurled at Cox, the more bitterly he lashed back at the FCC. The victim singled out for the most furious attack was FCC's chairman, James L. Fly '40, who proved himself ready to engage in "a fight to the death" with the Georgia Representative. The Cox Committee accused FCC of trying to censor radio broadcasts; of "using its powers to reward political friends"; of misrepresenting budget facts to Congress; of "menacing national security." In return Fly cited the $2,500 matter and charged Cox with "conspiring with the radio monopoly and Wall Street interests on the one hand and the military on the other to wreck the Commission."

The controversy dragged on through the summer of 1943. According to Arthur Krock ['43] and numerous other commentators, "public confidence in the House itself was being diminished" by the unfavorable publicity. Finally, on September 30, 1943, Cox yielded to the demands of the public and his own colleagues and announced his resignation as chairman and as member of the Select Committee to Investigate the Federal Communications Commission, declaring that he was quitting "to free the committee from personal attacks against him" which, he said, "had obscured the business of investigation." While House members applauded and congratulated him for his act, he said dramatically: "For more than a year now I have been the object of bitter and scurrilous attacks. Day after day the poisoned shafts of slander have been driven through my heart. Every effort to tear down and to destroy a reputation I have spent a lifetime in building has been put forth. All this I have endured with silence." Cox was succeeded as chairman by Representative Clarence F. Lea of California, who promised to revise drastically the "star-chamber methods" of Cox's administration.

On a few issues directly involving the welfare of his own constituents Cox has voted with the Administration. In 1943 he voted for more money for soil conservation, opposed liquidating the Home Owners' Loan Corporation, banning incentive payments on certain crops, abolishing funds for rural electrification, and reducing funds for OPA enforcement. On the other hand, he opposed incentive payments for farmers, funds for crop insurance, and consumer subsidies, and he voted to limit policy makers on price regulations.

In spite of Cox's hatred of "bureaucracy," at one time his son, his brother Ode, two nephews, two sisters, his brother-in-law, and his son-in-law were all working for the Government, their combined incomes, together with Cox's $10,000, reportedly totaling $56,500. (In July 1943 Drew Pearson ['41] estimated the total as $30,170.) "Bushy-haired" and "tight-lipped," the Georgian Congressman has been described by James Wechsler (no admirer) as resembling "a paunchy, aging matinee idol" and talking "like a ham actor who has to use the world as his stage." Others have found him "handsome" and "affable." He has been nicknamed "Goober," but most of his friends still call him "Judge Cox." He is a member of Sigma Alpha Epsilon, a Mason, a Knight of Pythias, and an Elk, and he belongs to the Baptist Church.

Who's Who in America 1942-43

CRAWFORD, FREDERICK C(OOLIDGE) Mar. 19, 1891- Industrialist; engineer

Address: b. 2196 Clarkwood Rd, Cleveland, Ohio; h. 15120 Shaker Blvd, Shaker Hts, Ohio

An anti-Roosevelt ['42] industrialist and a foe of organized labor, lean, rugged-featured Frederick Coolidge Crawford was born in Watertown, Massachusetts on March 19, 1891, the son of Fred Erastus and Mattie Sturtevant (Coolidge) Crawford. His maternal ancestor, John Coolidge, emigrated from England to America in 1631 and was the forebear of all Americans with the Coolidge name, thus making Crawford a distant relative of former United States President Calvin Coolidge. At Harvard young Crawford won his Phi Beta Kappa key and still found time to augment his income by selling hot dogs at football games. After being graduated from Harvard University with a B. A. degree in 1913, *magna cum laude*, he entered the Harvard Graduate School of Applied Science, where he continued his studies for another year, taking an M. C. E. degree. During his postgraduate course and for two years afterward he taught school and tutored.

FREDERICK C. CRAWFORD

In 1916 Crawford joined Cleveland's Steel Products, Inc. (the name was changed to the Thompson Products, Inc. in 1926), as maintenance engineer. When the United States entered the First World War, Crawford left the company to enlist in the Navy Air Corps. The declaration of the Armistice found him studying at the ground school in aviation at the Massachusetts Institute of Technology. He returned to his position in Cleveland in 1919, and, rising rapidly, became manager of the Detroit (Michigan) plant in 1922, a director in 1926, vice-president in 1929, and president in 1933, following the death of President Thompson, after whom the company had been renamed. According to one source Thompson Products was a relatively small, local concern

CRAWFORD, FREDERICK C.—*Cont.*

until Thompson Aircraft Products came into being as a war industry. According to *Newsweek*, however, the company became an industrial factor in 1921 with its new silcrome (hard steel) valves (now in practically universal use), and it had built up a big automotive-parts market long before it converted to aircraft work because of the War.

Crawford not only took charge of the company's affairs in the United States, but frequently went abroad to look after its foreign interests. "I was in France each year before the outbreak of the War," he said. "I was there in 1938 and operated a plant outside of Paris, and had all the fun of trying to get some production while my workers experimented with the French abundant life and social reform of fifty hours' pay for a thirty-hour week and all the other things they learned from us. They always said to me: 'Oh, we have the Maginot Line! We don't need to fight! We don't have to work forty hours! We're safe!' The Maginot Line became to me a symbol of the crumbling of France. Today America says: 'We have 3,000 miles of water,' or we have a lot of this or a lot of that. Anything that gives you a sense of security undermines your will to do."

In 1937 came the Thompson Company's first major disagreement with the NLRB, and the two have been at loggerheads ever since. In 1937 the NLRB found Thompson Products guilty of "discriminatory firings, surveillance of unionists, vilifying of union leaders, and engendering fear among employees." In 1938 the LaFollette Civil Liberties Committee denounced the company for employing labor spies. A more recent brief filed with the NLRB by a local of the United Auto Workers charged Crawford with sabotaging the war effort by keeping machines idle because he could not find enough non-union men, and alleged that he fired men found to favor unions. The union maintained that Crawford is "un-American, pro-Axis, and an enemy of the United States." (Before the War, *PM* reports, Crawford had more than once expressed sympathy for the way Mussolini's '42 Italy was handling labor problems, and in his induction speech as president of the Cleveland Chamber of Commerce in June 1939 he "made it clear that he approved of the dictatorship in that country.")

"One of my forebears," Crawford is reputed to have declared in a round table discussion with Government leaders, "had a flintlock rifle with which he fought off the Indians and the representatives of the Old World from which these people had escaped. That rifle is hanging in my house, over the fireplace and before I will permit you, unhindered, to put into effect these plans for a regimentation of a free enterprise in this country, I will take that musket down and give you a battle."

"We in industry," said Crawford, speaking at a luncheon in his honor at the Union League Club of New York City, "have a grim determination to produce to win the War. But while we are cooperating in the winning of the War we will continue to exercise our right to constructive criticism. . . Recently an attitude has crept into the country that if groups honestly differ with certain circles they are classified as 'enemies' of the country. To criticize, to criticize constructively, and yet be able to cooperate fully at the same time, is real Americanism."

In May 1942 Crawford's employees in his Cleveland factory voted two to one to reject both the A. F. of L. and the C. I. O. in favor of an independent union in an NLRB poll. The United Auto and Aircraft Workers Union charged "coercion, intimidation, bribery, and other tricks"; the company credited its victory to a program of "education and enlightenment"; and it appeared to *Newsweek* that organized labor had lost the elections because of "aggressive company action to preserve the independents," because of "Thompson's practice of matching most organizing moves with pay increases," and because of " 'good treatment' of employees, such as steady work, a popular four-year industrial training program, and annual earnings per man said to be five to nine per cent above the parts-industry average. For all this the man chiefly responsible was Crawford." (But in April 1943 the United Auto Workers at Thompson's went out on strike over the dismissal of twelve workers. The strike, which lasted eighteen hours, was ended by a War Labor Board order.)

Also in May 1942 the honorary degree of Doctor of Engineering was conferred upon Crawford by the Case School of Applied Science, Cleveland, Ohio. The citation read: "Frederick Coolidge Crawford, engineer by training and experience, and admired exemplar of young engineers, pioneer in aeronautical industry, inspiring civic leader, and fearless defender of free institutions, I confer on you the honorary degree of Doctor of Engineering and admit you to all its privileges and responsibilities."

In December 1942 Frederick C. Crawford succeeded William P. Witherow '42 as president of the National Association of Manufacturers. He read the complete program (endorsed without a dissenting vote), which called for "an end to strikes, boycotts, jurisdictional disputes, slowdown, unnecessary absences, organizing activities which restrict production, and the practice of making workers pay fees . . . to work in American war plants. The program asked the Administration to stop imposing the closed shop or any other form of compulsory union membership on workers and industry; to lengthen the average work week by an unspecified number of hours; to reduce government costs and eliminate waste and red tape; and to reject proposals which seek to use the War as a cloak to socialize the nation."

The Cleveland *Plain Dealer* commented editorially that in selecting Crawford "the N. A. M. elevates one of its most eloquent spokesmen of traditional American individualism. . . He is an industrial statesman of the first rank. . . We extend our congratulations." Liberals and unionists were far less complimentary.

In reference to the Beveridge '43 report, which provides "for an inclusive system of social security in England after the War," Crawford questions the soundness of a plan "which anticipates every individual's need from cradle to grave and which persuades him that he need make no provision for his own protection." "Man," Crawford declares, "must have the right to work when he wishes, where he wishes, and at whatever trade he may desire without securing a working permit from either government or any private citizen. The fruits of his labor should not be denied him beyond a minimum in taxation for the essential purposes of government. This includes those whose services are worth more than $25,000 a year."

"The American workman," says Crawford, "is a good citizen. He is quite sure he loves his country. He considers himself loyal and hard-working. He is willing to make any patriotic sacrifice. He has, however, two outstanding American traits which often are his undoing. He is far too susceptible to any emotional appeal . . . and he likes a gamble. . . Because of these traits, the American worker can lead the world in productive effort, or can pull back selfishly on the traces with equal vigor, all largely depending on the quality of leadership. . . Our workman once believed this the land of opportunity. Pay and promotion were a reward for merit. Now he is told to slow down to an average, that seniority and security are what he wants. Once he took pride in the size and success of his corporation. Now he is filled with doubts about his company's honesty, and is he not told that bigness is bad in itself? Once he respected his boss—in fact, he was a hero worshiper. Now his leaders spread doubt about the integrity of his manager. . ."

As president of the N. A. M., Crawford devoted much time in 1943 to popularizing and publicizing private industry's place in the war effort. In an article written for the *Reader's Digest* in April 1943. Crawford told his famous parable of Joe, the umbrella-maker, a laborer who clearly profited when capital profited. Crawford's moral was this: "Profits mean increased investment. Increased investment means increased wages. Therefore, profits increase wages." That same month he told a group of California industrialists that jobs, freedom, and opportunity for all men are contingent upon one thing—the complete freedom of business from excessive government regulation. (Crawford has charged that although industry must accumulate funds for reconversion in order to insure full post-War employment and prosperity, the Government is at present taxing most of these necessary funds away and taking the rest of them through the renegotiation of contracts, which he opposes.)

Post-War problems were a special subject of Crawford's study. It was already apparent to observers that many of his ideas were "revolutionary," and not consistent with the N. A. M.'s traditional policy. (For example, Crawford favors free competition in the international market and has said, "If we want a market in China, Russia, India, and other nations for the goods we can produce best, obviously we must not bar those nations from our own market.") A special committee was formed in the N. A. M. to study these problems, and the committee reported that in the future "policies should be designed to benefit the whole population, not just one section or group." Crawford continues to urge, however, that business be given "the job of making the future." When the War has been ended, he said in an address on June 20, 1943, "We're due for a sustained period of prosperity unless there is excessive control of business by government bureaus and unless our tax policies are unwisely revamped." That prominent government officials were recognizing at least some of Crawford's ideas was clearly seen when, in the fall of 1943, his proposal for an industrial-economic conference of the United Nations was the subject of conferences between himself, Secretary of State Cordell Hull '40, and Under-Secretary of War Robert Patterson '41.

In December 1943 the N. A. M.'s second War Congress took place, and a 1944 program was adopted. Robert M. Gaylord was elected to succeed Crawford as president of the N. A. M., taking office on January 1, 1944. During the Congress, Crawford announced that from now on the N. A. M. would not stand for "free enterprise," but for "free, private, competitive enterprise . . . the absence of all uncontrolled monopoly and special privilege wherever they may have been found in the past." This statement surprised *Time* Magazine, which had been under the impression that "free enterprise," to most N. A. M. members, usually meant "freedom to restrain one's competitors in the interests of an 'orderly' market."

Even his enemies admit that Crawford has a strong sense of humor. For many years he kept two decorations on his wall: one was a picture of Roosevelt hung upside down, the other a cartoon showing a well-fed picket carrying a sign which says, "Don't patronize Blotz—he pays starvation wages," while behind him a ragged, hungry-looking figure bears another sign: "I'm Blotz." When he moved into the new war plant of the Thompson Aircraft Company, Crawford put his pictures away.

Crawford is almost six feet tall, with light brown hair and blue eyes. He was married to Audrey C. Bowles on October 17, 1932. They have no children.

In addition to his activities in the N. A. M., Crawford direct eight other companies and is identified with a number of associations. He is also active in many philanthropic and civic movements.

CROWLEY, LEO T(HOMAS) (krou'lē) Aug. 15, 1889- United States Government official; industrialist

Address: b. Office of Foreign Economic Administration, Washington, D. C.; h. Mayflower Hotel, Washington, D. C.; 1110 Edgewood Ave, Madison, Wis.

"Vested with more authority to use United States economic power in foreign areas than ever before granted to any government official," Leo T. Crowley was, in the fall of 1943, made head of the newly created Office of Foreign Economic Administration. Along with his other jobs as alien property custodian, chairman of the Federal Deposit Insurance Corporation, former chairman of the Standard Gas and Electric Company, and, until his appointment to the OFEA, chief of the Office of Economic Warfare, Crowley has been rightly called "one of the most influential executives in the nation's capital."

Leo Thomas Crowley was born in Milton Junction, Wisconsin, the son of Thomas Franklin and Catherine Elizabeth (Ryan) Crowley. He began work as a delivery boy in a grocery store. His father died when he was twelve and he continued at the grocery while attending the grade schools of Milton Junction and Madison, Wisconsin. Ten years later he had worked his way through the University of Wisconsin and had become owner of the grocery store. He then got a job with the General Paper and Supply Company, and a short time later, when he was twenty-one, was made president of the firm. Continuing his successful career, Crowley, wrote the late Lemuel F. Parton, "annexed a directorate now and then in insurance and banking, and, in Madison, Wisconsin, was president of St. Mary's Hospital."

Crowley rose to occupy an eminent position in the business and Catholic circles of Wisconsin. He became a Knight of Columbus and was decorated by Pope Pius XI with the St. Gregory the Great Order of Knight for his services to the Church. As president of the Bank of Wisconsin, he sponsored legislation to strengthen the State's banking system and himself bought up many other banks until the depression came along. Then he organized and became chairman of the Wisconsin Banking Review Board and, according to the New York *Times*, put the Wisconsin banks on a "firm foundation."

More than once there was talk of his running for Senator, but he took no public office until 1934. Then President Roosevelt '42 summoned him to Washington to head the newly created Federal Deposit Insurance Corporation and, as "a symbol of banking integrity," restore public confidence in banking. In 1939 Crowley was offered the lucrative position of chairman of the board of the "billion dollar" Standard Gas and Electric Company, in addition to his government post. "With apparent White House approval," *Time* Magazine commented, "Leo the Lion took the job," and, "with Mr. Roosevelt's apparent permission, he has assumed half a dozen directorates of other private companies." It has been said that Crowley owed his position with Standard to Jesse Jones '40.

In the summer of 1940 Crowley was mentioned to succeed Postmaster General James A. Farley as national chairman of the Democratic Party. It was reported that President Roosevelt tried to induce Crowley to accept the post, but that Crowley wished to retire from public office to private business. Crowley did not get the post but neither did he retire from public office. Instead, in the spring of 1942, he accepted the position of alien property custodian in addition to his other duties. He was chosen for this job, the press seems to agree, because of the President's confidence in his sound business integrity. The greatest scandal that had grown out of the First World War had been in connection with the alien property custodianship, for, it was later discovered, dishonest employees had been guilty of "feathering their nests with ill-gotten money."

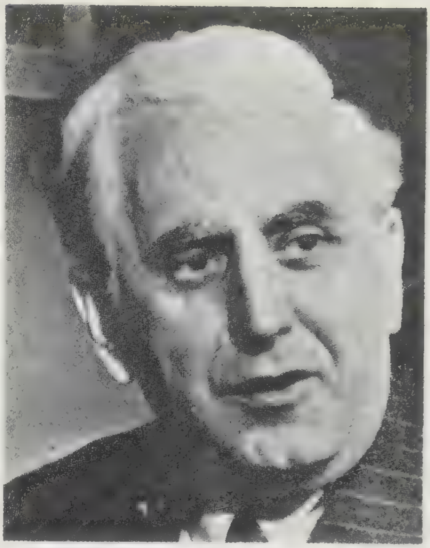
The activities of the Alien Property Office are carried on with as much secrecy and as little publicity as is possible. "From that sparsely furnished office of the alien property custodian in Washington's Press Building," wrote Sylvia F. Porter '41, "stretches a mystery organization that blankets the entire Western Hemisphere. Every day Crowley's agents trace tips of suspicious operations by supposedly patriotic Americans, find proof of enemy control in properties ranging from a German delicatessen to a multi-million-dollar corporation. Hundreds of highly trained investigators stationed in New York, Chicago, San Francisco, and other key cities take their orders from the custodian. Thousands of other agents stand on guard to make sure that Axis influences don't creep back into companies seized by the Government for the duration."

As alien property custodian Crowley has jurisdiction over enemy-owned or controlled businesses in the United States, foreign-owned patents, copyrights, and trade-marks, and foreign ships. He has already seized a large number of enemy-controlled businesses, including the Magnesium Development Corporation of New York, the General Aniline and Film Corporation, and the Luscombe Airplane Corporation. The seized properties are either sold to Americans and the cash held or they are administered by Crowley himself. He prefers the latter solution. The value of the enemy assets controlled by Crowley, not including the patents, is estimated as at least three billion dollars. The four billion dollar balance in cash and deposits of aliens is under the authority of the Secretary of the Treasury, who is supposed to work in cooperation with the alien property custodian.

The thousands of patents seized have been made available for American manufacturers on a licensing basis. The only cost for using the patent is a $50 fee, and Crowley appealed to American business to take advantage of the opportunity. These patents, he said, include "some of the finest research achievements of modern science, particularly in the production of dye-stuffs, plastics, pharmaceuticals, and electrical goods." Among the patents seized have been those for synthetic shellac, magnesium, the manufacture of aluminum, improved magnetic alloys, synthetic hormones, and slacks for women which adjust to various hip sizes. The patents are to be held as "a permanent possession of the United States," not merely for the duration, as was the case in the First World War, when the patents were returned to their owners (for the most part German), to the disadvantage of the United States in the Second World War. As a matter of fact, it has been reported that none of the Nazi-controlled chemical companies that have been seized will ever be returned to German ownership, German control of operations, or German influence. In addition to issuing licenses under foreign patents, Crowley republished certain foreign scientific and technical works whose copyright in the United States he controls.

In the summer of 1943 Crowley gave up a $50,000-a-year salary at Standard Gas and Electric to become chief of a new wartime agency, the Office of Economic Warfare. The OEW was truly a product of crisis and conflict. Liberal and conservative factions within the Administration had been at sword's points for months. A particularly bitter feud was going on between the RFC's Jesse Jones, Secretary of Commerce and conservative Democrat, and Vice-President of the United States Henry Wallace '40, head of the Board of Economic Warfare. The quarrel had been taken up by the press and received considerable unfavorable publicity. At length, on July 15, 1943, President Roosevelt abolished the BEW, sternly reprimanded both Wallace and Jones, and created a new office of Economic Warfare under Crowley. The President's move was interpreted as a particularly severe blow at Wallace, for it dissolved his agency and put a close friend of Jones' (Crowley has been called "a Jesse Jones protegé") at the head of the new bureau. Moreover, it made that office directly responsible to the State Department, which, in the summer of 1943, was much criticized for its conservative leanings.

Crowley's administration of the OEW was keynoted by his statement that his main objective was "to follow the foreign policy of the President and Secretary Hull '40." There were a few exciting developments among the personnel of the Agency. Milo Perkins '42, the executive director under Wallace, resigned on August 1, and for a while Crowley feared there might be a sympathy walkout of other personnel. More sensational was the dismissal from OEW of the Harvard educated economist John Bovingdon, Ph. D., who spends his spare time dancing "rhythmic" but unorthodox ballet. Bovingdon had been attacked by Representative Martin Dies '40 as having Communist sympathies, and Crowley's dismissal of him was seen as a direct concession to the demands of the Dies Committee. Several other dismissals followed, but Crowley continued to deny that there was any serious internal trouble in the Agency.



LEO T. CROWLEY

By early fall 1943 it was apparent that the numerous government economic agencies in the foreign field had to be coordinated. The State Department was admittedly planning to develop more efficient and effective control and integration over the Office of Economic Warfare, the Office of Lend-Lease Administration, and the Office of Foreign Relief and Rehabilitation Operations. The nature of that control was revealed on September 26, when the President merged these bureaus under Leo Crowley as head of the Foreign Economic Administration. In *Time* Magazine's words, he is "the czar of all foreign economic dealings, which are the guts of foreign relations." In less informal language the President said: "Leo Crowley is one of the best administrators in or out of Government, and I find great satisfaction in promoting him to a position which will centralize all foreign economic operations in one operating agency." The American share in the program for the relief and rehabilitation of the war-stricken peoples of the world was expected to be placed in Crowley's hands soon for disbursement on United Nations Relief and Rehabilitation Administration calls.

Ruddy, silver-haired, dignified Leo Crowley is unmarried and lives in the Mayflower Hotel in Washington, although he still calls Madison, Wisconsin, his home. His "mild voice," it is said, "still reveals traces of his Irish descent and his Midwestern boyhood." He has few diversions: once he owned a race horse, and occasionally he still visits a race track, but sports do not interest him to any great extent. For relaxation he plays rummy or poker. In his Washington office he has a "No Smok-

CROWLEY, LEO T.—*Continued*

ing" sign on the wall: he cannot stand the odor of tobacco, which troubles his sinuses.

CUKOR, GEORGE (kü'kôr) July 7, 1899- Film director

Address: b. Metro-Goldwyn-Mayer Studios, Culver City, Calif.

George Cukor, the noted motion-picture director, was born in New York City on July 7, 1899, the son of Jewish parents, Victor F. and Helen (Gross) Cukor. He was educated in the public schools of New York City and was graduated from De Witt Clinton High School there. When the United States entered the War in 1917 he joined the Students' Army Training Corps. After the Armistice he returned, one of the "post-War army of job seekers." He was more fortunate than most in managing to secure the kind of work he wanted through answering a newspaper advertisement. The position was as assistant stage manager for the Chicago company of *The Better 'Ole*. That was the beginning of his career in the theatre. Later he returned to Broadway to manage companies for Edgar Selwyn and for the Shuberts.

Since the summer of 1920 in New York was somewhat dull theatrically, Cukor decided that there were things to be done outside of Manhattan. He thereupon organized a stock company for the Lyceum Theatre Company in Rochester, and for eight years he guided the destinies of the company. The first director to introduce the tryout system for plays and also the visiting star arrangement, he has caused many an impecunious summer manager, unable to bring the Broadway bright ones to his barn, to call down curses on Cukor. During his work in stock Cukor directed such people as Billie Burke and Ralph Morgan and encouraged a number of young players, among whom were Bette Davis '41, Miriam Hopkins, Wallace Ford, and Robert Montgomery.

The fall season of 1926, however, found him back in New York, where he became associated with Gilbert Miller and with the Charles Frohman Company as stage director and manager at the old Empire Theatre. Even at that time young Cukor was beginning to handle "temperaments"—Ethel Barrymore '41 in *The Constant Wife*, Jeanne Eagels in *Her Cardboard Lover*, and Laurette Taylor in *The Furies*—as assorted a group of temperaments as was ever directed by one man. "From the beginning," wrote Cornelia Penfield in *Stage* Magazine, "his thoughtful, studied method of direction and his quietly encouraging manner won him the confidence of his players, especially among the high-strung and feminine." Cukor resents, however, being called "a woman's director." He feels that mere success in handling actresses should not cause him to be "labeled."

In 1929 sound came to Hollywood and so did Cukor. The stout, be-spectacled director's first Hollywood film was *River of Romance* (1929), for which he did the dialogue direction. Following this, he acted in the same capacity for *All Quiet on the Western Front* (1930). Next he was co-director of *Grumpy* (1930) and of *The Royal Family of Broadway* (1931). *Tarnished Lady* (1931) marked his first work as director in his own right. Chevalier's *One Hour with You* (1932) followed and then *Bill of Divorcement* (1932), during the making of which he waged his own private war with the studio officials, insisting that Katharine Hepburn '42 was the only actress for the leading role. Finally the producers, unconvinced but distracted, decided that it would be better to have Hepburn than no film at all. They relented and were not sorry.

Cukor's first major success, however, was with *Little Women* in 1933. All the critics were enthusiastic, and they did not fail to give full credit to the director. Many believed that, although the acting was excellent, it was the direction that had made the picture what it was. When *Dinner at Eight* (1933) also received critical approval, Cukor's success was assured. In 1935 he made *David Copperfield*, followed in 1936 by *Sylvia Scarlett* (again with Hepburn), and the next three years brought a succession of spectacular films: *Camille* (1936); *Romeo and Juliet* (1936); *Holiday* (1938); and *The Women* (1939). Cukor had been assigned to direct

Gone with the Wind, but he had quit after a reported altercation with Vivien Leigh, the leading lady.

Most of Cukor's pictures were favorably received by reviewers. In writing of the director's work on *Camille*, Frank Nugent, then of the New York *Times*, said: "George Cukor, the classicist of the Metro Studios, has retained the full flavor of the period . . . without drenching his film with the cloying scent of a hot house. *Camille* under his benign handling is not the reverentially treated museum piece we half expected to see. Its speech has been modernized, but not jarringly; its characters beneath the frills and ruffles of the '50's have the contemporary point of view, its tragedy is still compelling; for the Lady of the Camellias must eternally be a tragic figure." *Romeo and Juliet* also received some critical approval, although it was not, on the whole, a success. Howard Barnes of the New York *Herald Tribune* wrote that "under George Cukor's knowing and sensitive direction, the angularities of the plot have been shaped to a smooth-flowing narrative exposition." Cukor himself, however, was pleased with that picture. After it had received a "sneak" preview at Riverside, California, the director remarked to a friend that "the people of that town are genuine American people, unpretentious, entirely middle class in the best sense of the phrase. While the first reel rolled, they shuffled, coughed a little, wriggled in their seats. I sat there and stewed with fright. I knew that they were thinking: 'Good Lord, two hours of this!' I could feel the current of uneasiness through the theatre. Then quite suddenly the story was clear to them. They realized we weren't trying to declaim—that on the contrary we were bringing them a beautiful tragic love story."

The year 1940 brought *Susan and God,* a smooth and polished comedy, which, although it was expertly directed, did not get very favorable reviews. *The Philadelphia Story,* which appeared the next year, fared better critically: it was hailed as one of the best and wittiest comedies of 1941. *Her Cardboard Lover* and *Two-Faced Woman* which followed were failures, however. They were called "absurd" or simply "bad." Cukor's next picture, which was released in 1943, was *Keeper of the Flame,* starring Spencer Tracy '43 and Katharine Hepburn. One critic felt the film had "too much glamor girl direction by George Cukor"; another praised Cukor's direction in "sustaining a mood of mystery even when little exists." Most critics praised the direction as well as the film's anti-Fascist content.

In 1942 Cukor became a private in the Signal Corps and was stationed in Astoria, New York City, where the Army maintains a motion-picture studio. Cukor resided in a fashionable New York hotel and rose at five a. m. in order to get out to the studio on time. A short while later he received an honorable discharge from the Army and returned to Hollywood where, late in 1943, he was directing *Gaslight* (from Broadway's *Angel Street*) for MGM.

GEORGE CUKOR

Cukor's house is one of the famous show places of Hollywood. It has seven living rooms and only one bedroom, because, although the director was a celebrated host, he disliked entertaining anyone overnight. The furniture is a mixture of modern and regency. His small collection of pictures, "selected with meticulous taste and discrimination," ranges from Grant Wood '40 to Renoir. Cukor also collects Han dancing figures.

When he talks, whether it be of Greta Garbo, Katharine Hepburn (apparently his two favorite actresses), or his nine cocker spaniels, Cukor uses his mouth, hands, and "every terminal part of his body." The director is unmarried. He is six feet tall, bulky (he frequently goes on diets to lose weight), and he wears thick-lensed spectacles. He loves "food comfort, and opulence." Swimming is his favorite sport, and he attends motion-picture theatres incessantly.

The director has been described as "nervous, sizzling with energy, and eager about his work." He concerns himself primarily with dialogue and only after that with action and detail. "Give me a good script," he says, "and I'll be one hundred times better as a director." William de Mille once wrote of Cukor: "He is one of the few stage directors who really set out to study the motion picture as an art in itself." A great measure of Cukor's success in handling performers comes from his patience. As another director once said, however: "It ain't so hard to be patient on $5,000 a week." Cukor agrees.

CULLIS, WINIFRED C(LARA) June 2, 1875- Physiologist; educator

Address: b. Ministry of Information, American Division, London, England

"No democracy, even under the stress of a great emergency, can afford to neglect the education of youth." So said Professor Winifred C. Cullis at a meeting of the Women's Press Club of New York in 1942. Britain, having been forced to gear to a wartime schedule before the United States, naturally had a start over America in finding out this important fact, and, in her own words again, Professor Cullis had come to the United States "to put before American women the position of English women at war." For two years she was "the ambassador of British women in wartime." She traveled 44,000 miles in the United States, lecturing on all aspects of the contribution British women are making to the War. She was perhaps the first person to demonstrate to American women the great need for the Women's Voluntary Services as a liaison agency between the Government and the existing local social services in dealing with such problems as evacuation and the feeding and care of the local population.

British Official Photo

DR. WINIFRED C. CULLIS

Tall, strong, well groomed, Professor Cullis speaks with the poise and sureness that come from knowledge gained by experience and leadership. She was born in Gloucester, England, June 2, 1875, of yeoman farmer stock, the youngest daughter of Frederick John and Louisa (Corbett) Cullis. She wanted to make medicine her career, but she could not afford the long and expensive training for that profession, and when she was awarded a scholarship to Cambridge to work in physics and the natural sciences, she promptly entered that field. She took her degree in 1900 and went to the University of London (Royal Free Hospital) School of Medicine for Women as an instructor. Forty years of her life were spent as instructor, as professor, and finally as professor emeritus in her field, physiology. In 1913 she became the first woman examiner on the Board of Medicine of London University.

During the First World War Professor Cullis was sent on a mission for the British Government. After touring England for the National Council for Combating Venereal Disease, she went as far afield as Gibraltar and Malta. From this council grew the British Social Hygiene Council, of whose executive body Professor Cullis is still a member.

Another organization which came within the scope of this energetic British woman's interest at this time was the Industrial Fatigue Research Board. Professor Cullis rendered invaluable assistance in this post, and when the board expanded into a permanent body after the War—the National Institute of Industrial Psychology—she was made a member of its executive committee. This position she still holds.

In 1920 Vassar College invited Professor Cullis to give the Ellen Richards Memorial Lectures in the United States, and she accepted the invitation. Before her return to England in 1921 she also went to Vancouver to speak before the Canadian Council of Education. Back in England after this trip, for five years she made broadcasts on physiology and hygiene on the *School's Program* of the British Broadcasting Corporation and served as chairman of the BBC's committee on adult education.

Her Government again sent her on a mission in 1936 at the invitation of the South Australian Government, which was at that time celebrating its centenary anniversary. In India the following year she was the only woman member of a delegation of fifty chosen to celebrate the silver jubilee of the Indian Science Congress. Upon this occasion she was made an honorary member of the Indian Physiological Society. The Far East was to claim Professor Cullis' attention again in 1940, when she made a tour which included Shanghai, Hong Kong, the Dutch East Indies, Malaya, Singapore, and Japan.

Always combining her work in the field of physiology and hygiene with her other compelling interest, education, Professor Cullis has been honored in this profession as well. After the First World War she became president of the British Federation of University Women, and in 1929 this office led into one of even wider scope, president of the International Federation of University Women, which office she held until 1932. In her capacity as president she traveled widely on the continent. She has served as chairman of the Education Committee of the English Speaking Union and as a member of the Council of King Edward's Hospital Fund for London, the Council of the National Institute of Industrial Psychology, and the Central Council of Recreative Physical Training. When the educational value of films attracted her interest she became a member of the Advisory Council of the British Film Institute and chairman of its educational panel. She has also served as a director of the weekly review *Time and Tide*.

During her visit to New York in 1942, on her eighth trip to the United States, Professor Cullis' special interest was in showing the women of America the great need for cooperation with the women of Britain in furthering the war effort and in protecting the health of women in wartime. "You American women," she said in an interview when she was the guest of Dean Virginia Gildersleeve '41 of Barnard College, "are a potent force in influencing public opinion. Those wonderful household gadgets you have here give you so much more time to attend meetings, to listen, and to talk in the interest of this fight for freedom."

Professor Cullis also gave a bit of her air-raid experience. "Just before I left," she said, "I was conducting an examination of London University medical students in Cardiff. We were interrupted twice [by alerts], had to go to an air-raid shelter once in the morning and again in the afternoon. The second time we decided we couldn't waste any more time and went on with the examination in the shelter. The students made higher grades than in previous examinations taken under normal conditions. Something about the excitement of the raid minimized ordinary 'examination nerves,' released inhibitions, and resulted in really quite brilliant examinations—quite."

Speaking of conscription before an audience of the New York City League of Women Voters, Professor Cullis argued that "conscription is good because it means that the Government will select the jobs to be filled and the officials know what they want and what is needed." She warned against American women doing what British women did. Professional women in England "threw away their training" to go into any war work they could find. "Then up came the need for work in which they were specifically trained, and they were swallowed up in the other jobs [and were not available]," she added. "Wait until your Government wants you. Don't give up your present jobs. Train while you carry them on."

She then added a few words of caution on the subject of education. Young people in their enthusiasm, she pointed out, rush off to serve their country in the first job that is offered. What they should do, according to Professor Cullis, is to realize that in taking a quick and easy job they may not be giving the best they have to give. If possible they should keep on with their college training in order that they may be ready for "the growing demand for persons trained in the scientific field."

It would naturally be expected that honors would come to a person with such a record of ability and service as Professor Cullis has shown. In addition to the M. A. degree from Cambridge University and a D. Sc. from the University of London, she has received an honorary LL. D. from Goucher College in the United States. She received the order of the C. B. E. in 1929.

Professor Cullis has been too busy in active service to give much of her time to writing books, but in 1935 she was co-author with Muriel Bond of *The Body and Its Health*, and she has contributed many articles to scientific journals and other publications. Her recreations are reading and golf, and she belongs to the Overseas Club.

DEAN, VERA MICHELES (dēn vē'rə mi-she'ləs) Mar. 29, 1903- Author; lecturer; research administrator

Address: b. Foreign Policy Association, 22 E. 38th St, New York City; h. 1170 Fifth Ave, New York City

"Many an American still believes that sooner or later a bell will ring; then War will be over and peace will have begun. This is the burden of talks I have had from New York to Atlanta, from New Orleans to St. Paul." With this opening, Vera Micheles Dean, research director of the Foreign Policy Association, proceeds to outline her plans for solving the reconstruction problems which are the inevitable result of the Second World War. Their magnitude does not depress her, however. "On the contrary," she says, "we should feel peculiarly fortunate that we are living in a period of history which challenges the imagination, the courage, and the skill of each and every one of us."

Vera Micheles was born in St. Petersburg, Russia, on March 29, 1903. She was educated privately until she came to the United States in 1919 and entered Radcliffe College. She received her B. A. degree from Radcliffe in 1925; her M. A. from Yale in 1926; and her Ph. D. from Radcliffe in 1928. In 1928, too, she became an American citizen.

Upon receipt of her doctorate, Miss Micheles joined the Foreign Policy Association as a research associate. In 1933 she became an editor and in 1938 she became research director. In 1929 she was married to William Johnson Dean (who died in 1936).

Dr. Dean's work for the Foreign Policy Association has taken her through many countries—Russia, France, England, Belgium, Germany, Sweden, Denmark, Austria, Czechoslovakia, Italy, Greece, Turkey, Romania, and Switzerland, where she has gathered first-hand material for her reports. It has given her, too, the opportunity to lecture before many varied audiences throughout the United States.

Mrs. Dean's writings include two books: *New Governments in Europe,* in collaboration with R. Buell and others (1934); and *Europe in Retreat* (1939). She has written a number of pamphlets and reports for the Foreign Policy Association under such titles as *The Italian Corporative System; Industry and Agriculture in the U. S. S. R.; The New Constitution of the U. S. S. R.; Toward a New Balance of Power in Europe; The League and The Italo-Ethiopian Dispute;* and *Soviet Russia: (1919-1937).* Her books and some of her pamphlets have seen several editions. Mrs. Dean is also the author of numerous articles and book reviews in magazines such as *Survey* and *Survey Graphic, The Nation, New Republic, Current History,* the *Christian Science Monitor,* and *Yale Review.*

Although Mrs. Dean's subject matter includes all the countries of Europe, she writes more about Russia than any other one country. In "The Russian Bear in the Wheat Pit," an article which appeared in *New Republic* in 1930, she raised the question of whether "two such divergent economic systems as socialism and capitalism may be expected to exist peacefully side by side." "Today official Soviet spokesmen do not conceal their conviction that the two systems are essentially antagonistic, and that the result of the struggle between them will determine the fate of socialism not only in the Soviet Union but throughout the world." In 1940, writing on "Russia and the 'New Order' in Europe," Mrs. Dean commented that the "Russians believe that the time may come when the conquered peoples of Europe, resentful of Nazi rule and disheartened by the outlook for the future, may turn to the Soviet system as the one alternative not yet tried outside the U. S. S. R. With that end in view Russia, while preserving outward neutrality, remains true to Lenin's precept that the 'imperialist' war should be transformed into 'civil war'—a civil war in which Russia, given the right combination of circumstances, might assume the role of standard-bearer of world revolution envisaged for it by Lenin." In 1942, after Russia had entered the War on the Allied side and proved herself the strongest military power fighting Fascism, Mrs. Dean warned: "Those who do not like the Russian system will not be able to conjure it away by mere denunciation, or by witch-hunting of local Communists. If we do not like the Russian plans for a post-War order, that is all the more reason for formulating right now a post-War program in democratic terms that could rouse the enthusiasm and enlist the support both of Russia and of Europe's conquered peoples."

When in May 1943 the Soviet Union announced the dissolution of the Comintern (the Third International), Mrs. Dean hailed the act as making "Russia free to pursue its national interests untrammeled by obligations, however theoretical, to Communist groups outside its borders." In her article, "The U.S.S.R. and Post-War Europe" (*Foreign Policy Reports*, August 15, 1943), she pointed out that Russia's foreign policy has not been imperialistic but protective, and added: "In the future, the Soviet Government may be expected to use all means at its command to assure the security of Russia, and to give its support to those regimes emerging from Europe's chaos which show themselves genuinely sympathetic to Russia, or, at least, genuinely opposed to German Nazism."

For the achievement of world security Mrs. Dean has been from the beginning a supporter of collective action. In 1936, writing on the "Responsibilities of Peace," she commented that "if there is to be effective collective action, there must also be collective responsibility. . . If collective action presupposes collective responsibility for its application, it also presupposes the ultimate possibility of resort to force." The following year, in an article entitled "A Challenge to Pacifists," Mrs. Dean undertook to answer a number of questions on the topic. She pointed out that the experience in Spain showed that "a policy of non-intervention, unless strictly enforced, plays into the hands of potential war makers." In reply to the question of whether or not resisting the demands of the dictatorships would plunge the world into war she stated that there was always the danger of war in a world "armed to the teeth," and that "continued truckling to the threats of potential aggressors may temporarily avert conflict, but it fails to remedy the international maladjustments which eventually produce war." To the question: Would dictators carry out threats of aggression if they thought they would meet resistance on the part of democracies? Mrs. Dean replied: "Much of the bellicose atmosphere created by Fascist spellbinders is sheer bluff which succeeds only because the democracies are paralyzed by fear of war. . . . The real danger is that the democracies, ultimately goaded into resistance, will fail—as did Britain in 1914—to make their attitude known until the eleventh hour, thus encouraging the dictators to take up positions from which they cannot retreat." In 1943 Mrs. Dean voiced that warning in no uncertain terms, writing: "The great powers will have an opportunity, after this War, to turn over a new leaf in international practice. And unless we all turn the new leaf over together, undeterred by remaining mutual doubts about each other's political and economic systems, we all risk slipping back into the malpractices of the past, which can only lead us to further catastrophes."

Current News-Photo
DR. VERA MICHELES DEAN

On the subject of post-War reconstruction Mrs. Dean has had a great deal to say. She advocates sharing with the world "the privileges won for us by our political and industrial achievements, and she opposes dismemberment of Germany. "Assuming a military defeat of Germany," she wrote in the *Yale Review* for Autumn 1942, "it must be recognized in advance that post-War reconstruction would not be promoted—would, on the contrary, be retarded or jeopardized—by any organized attempts to wreak vengeance on the German people, or reduce Germany to a position of economic subservience, or isolate it from the rest of the world. At the same time, Germany's own progress toward national maturity and international cooperation would be retarded, with dangerous consequences for post-War reconstruction, if the United Nations accord it special treatment of any kind. The sooner Germans are treated like other people, and learn that neither threats nor self-pity on

DEAN, VERA MICHELES—*Continued*

their part will bring them special consideration, the sooner they will find it necessary to establish a workable relationship with the rest of the world. . . We cannot offer the Germans any more than we can offer ourselves, and that is equality in sacrifice and equality in the enjoyment of the fruits of sacrifice."

In *Europe in Retreat* (first published in 1939 and revised in 1940 and 1941) Mrs. Dean surveyed the factors "which paved the way for the Munich settlement" and drew some conclusions as to their probable effect upon the future course of events. The book was received with considerable critical approval. Walter Millis found the flavor, "as is likely to be the case with concentrated foods," somewhat "dry," but "the nutritive value is considerable. It's a short book, with a lot in it." Paul Hutchinson found that Mrs. Dean "not only possesses extraordinary resources in the way of information with the ability to present them succinctly and clearly, but she has written the coolest book of a hysterical period." The New York *Times* reviewer, too, found it an impartial, well-informed, and well-written book.

Mrs. Dean's academic honors include election to junior membership in Phi Beta Kappa in 1924 and the receipt of the LL.D. degree from Wilson College in 1940. She was the recipient of the Carnegie Endowment Fellowship in International Law in 1925 and she held the Oberlaender Fellowship for Study in Austria in 1932. She was an American delegate to the International Studies Conference held in Paris in June 1937 and she is a member of the Coordinating Committee for the International Studies Conference.

Dr. Dean is stately, dark blonde, and handsome, and somewhat brusque and direct in her manner. She is an Episcopalian and a member of the Cosmopolitan Club and of the American Woman's Association. Her hobbies, her publishers tell us, are dancing and the theatre. She has two children, William Johnson, Jr., and Elinor Gardner.

DE GRAFF, ROBERT F(AIR) June 9, 1895- Publisher

Address: b. Pocket Books, Inc, 1230 Sixth Ave, Rockefeller Center, New York City; h. Oyster Bay, Long Island, N. Y.

"The American public will not buy paper-bound books." For years publishers had been saying this: many had tried the cheap reprint idea (one or two even published original editions in inexpensive format), but with a discouraging lack of success. Yet the idea persisted, and one man was convinced that the American public would buy cheap, paper-bound books if, through adequate distribution, the books were brought to them. He was Robert F. de Graff, head of Doubleday, Doran's reprint department; and he decided to drop the work he was doing "to prove to himself once and for all that it was impossible." That was in 1938. It was not long before de Graff had his proof: 5,000,000 copies of his Pocket Books were sold in 1941, 20,000,000 in 1942, and an estimated 35,000,000 will be sold in 1943 "if paper rationing permits."

Back in the days before the First World War Robert de Graff was repairing automobiles in New Jersey. Today he sits in a Radio City office with a stuffed wallaby (a "pocket-size kangaroo," the trade mark of Pocket Books) behind his head and "directs an enterprise that puts books—good ones—in the hands of hundreds of thousands of readers who never bought books before." He was born at Plainfield, New Jersey on June 9, 1895, the son of James W. and Carrie T. (Milliken) de Graff. Obliged to leave school because of a nervous breakdown, he never went to college. But he had a talent for mechanics and he soon found himself in the automobile business. Then America entered the War, and he served as a lieutenant in the 311th Mobile Ordnance Repair Shop with the 86th Division.

On his return from service, and following his marriage on June 14, 1920 to Dorcas Bomann, de Graff wanted broader business experience. He therefore entered his father's business, the selling and distribution of notion specialties (combs, brushes, pins, needles, and shoe laces). After this concern was closed out in 1922 de Graff was invited by his cousin, Nelson Doubleday, to go to Garden City to learn the book trade. Following preliminary training he was put in charge of the Garden City Publishing Company, which had been formed for the distribution of lower-priced books than Doubleday was then selling. These included 15¢ paper novels sold to the American News Company and later through Woolworth and other chain stores; 25¢ paper novels, which were unsuccessful; and Star Dollar Books, which were reprints of non-fiction such as *The Story of Philosophy* and *The Outline of History*. The Dollar Books proved successful, selling some fifteen million.

In 1936 de Graff resigned from the Garden City Publishing Company to start his own reprint business. But he was persuaded to accept the presidency of Blue Ribbon Books, which published non-fiction at $1, odd-priced reprints, and the Triangle Books at 39¢. The concern later bought out the A. L. Burt Home Library 75¢ series and 50¢ juveniles. De

Graff still felt that these prices were not low enough, that quality books would prove acceptable to a larger public at 25¢. A cloth-bound book could not be manufactured to sell at such a price, and the question of the paper-bound book came up again.

De Graff determined to settle that question. In 1938 he left Blue Ribbon Books and founded Pocket Books, Inc., in which he owns the majority of stock and in which Simon '41 & Schuster '41 own a small interest. At a uniform 25¢ price, Pocket Books were made to attract the public—printed in good type on good paper with minimum margins, bound in vividly colored, semi-stiff jackets with a glossy sheen of laminated cellulose acetate called Perma-Gloss. Titles, too, were chosen to attract the public eye. They included reprints of original best sellers, such as *How to Win Friends and Influence People* (which alone has sold 1,400,000 copies), *Lost Horizon*, and *The Good Earth*, and such classics as *Wuthering Heights* and *Pride and Prejudice*. Mystery stories and non-fiction are staples; and the list includes also anthologies of short stories and poetry.

But it is to their methods of distribution that Pocket Books really owe their success. A huge market for cheap books is necessary; and Pocket Books are distributed not only through book stores, which handle only five per cent of them, but through news and magazine stands, railway stations, drug, stationery, and department stores, five-and-ten-cent stores, etc., throughout the country. They are even being successfully sold in cafeterias, supermarkets, and tourist camps. In Detroit, for instance, while there are only about a dozen outlets for a $2.50 book, there are 1,232 outlets for Pocket Books.

The enterprise was cautiously launched in June 1939 after extensive mail-order testing to see if the public were interested. "The answers," Peggy Wright quotes de Graff, "showed me two things very clearly: that people would buy more books if they were cheaper and that most people didn't have enough time to read. That's where I got the idea for the size of my books. I thought if I could make them of a size that would easily slip into a pocket or a handbag, people would carry them around and read them whenever they had a few free minutes. The trade name then came easy."

By February 1, 1944 Pocket Books was to publish 247 titles, 160 of them on the active list. All the books are "self-selling," requiring no publicity. After several experiments de Graff worked out a formula for the four books he publishes each month: two detective stories, a staple item which may be an anthology, a "Pocket Reader," or a classic, and one other book, either fiction or non-fiction. (Five books were published monthly before the wartime paper shortage.) According to *PM*, Pocket Books publishes its reprints as soon as it can get rights from the original publisher, "usually from three to five years after original publication for detective stories and modern fiction."

Added proof of de Graff's success is the competition Pocket Books has recently aroused. Early in 1942 the newsstands serviced by the American News Company started distributing Avon Pocket-Size Books, printed on different stock and a fraction of an inch wider. De Graff filed suit charging unfair trade practices. But his biggest current worry is not so much competition as rising printing and paper costs. Production costs on Pocket Books range from 7¢ to 12¢ a copy. For the privilege of reprinting, the original publisher is paid 1¢ to 1½¢ for every copy Pocket Books sells, and the publisher pays the author half. Wholesalers pay de Graff 15¢ a copy; retailers from 16¢ to 19¢, depending on the size of the orders. Since billing, shipping, and other costs are little less for Pocket Books than for regular editions, with production costs up the profit margin is slim. Other publishers of inexpensive books have already raised their prices. But de Graff says that before he parts with his 25¢ price, he will cheapen his stock and take every available step to cut corners on overhead.

Morris Engel

ROBERT F. DE GRAFF

Among de Graff's post-War plans is a project for selling Spanish translations of Pocket Books in Latin America. (With several other American publishers he made a good-will tour of South America in the summer of 1943.) He does not plan to publish original novels, however, because the cost of publicity would prohibit a low price. "Whatever happens," Peggy Wright reports, "de Graff expects Pocket Books to reach a steady annual sale of 65,000,000 copies."

Big (six feet three, 190 lbs.), blond, and blue-eyed, Robert de Graff commutes from his Oyster Bay home to his office; and, like a number of other publishers, he is said to be too active a businessman to be much of a reader himself. Athletic, he likes golf, tennis, and swimming for recreation; and he is also a candid camera fan.

DELLA CHIESA, VIVIAN (del'la kē-ā'sə) Oct. 9, 1915(?)- Lyric soprano

Address: b. 711 Fifth Ave, New York City; h. 55 Central Park West, New York City

Vivian Della Chiesa is the American-born and American-trained lyric soprano who has been featured on several radio programs. Miss Della Chiesa has enjoyed a consistently successful musical career since 1935 when she won a nationwide contest sponsored by the Columbia Broadcasting System. Since that time she has sung in opera and recitals as well as on the radio and can boast of two appearances as soloist with Toscanini '42. She hopes to be able to sing some day at La Scala, the famous Milan opera house, in order to prove that a singer trained exclusively in America can equal the achievement of those who have studied abroad.

VIVIAN DELLA CHIESA

This golden-haired songstress was born in Chicago, the daughter of Ettore and Dulia (Morelli) Della Chiesa. Vivian's mother was an excellent pianist whose father, in turn, had been a conductor in Italy. In a musical atmosphere such as the one provided by Vivian's early surroundings, it was only natural that she should have learned music at the same time that she learned to speak and walk.

Before she was three years of age her mother had already begun to give her piano lessons. When she was seven voice and violin instruction was added to her program; by her tenth birthday Vivian was training for opera. Her mother wisely prevented her from sacrificing a general educational background to her musical training, for together with her musical studies Vivian was taught languages, gymnastics, and dancing. Later she attended the Roosevelt High School in East Chicago, Indiana, and she then supplemented her musical training at the Chicago Musical College.

Vivian made her first public appearance at a country club musicale when she was only fourteen. A short time later she was awarded a scholarship to study with Marion Claire of the Chicago Opera Company. After three years of training with Miss Claire, Vivian was ready to work with an operatic coach and in 1934 she went to Forrest Lamont, with whom she studied until the time of his death in 1939.

By 1935, when she had been under Lamont's direction for one year, Miss Della Chiesa was eager to begin her public career. She learned of a contest sponsored by the CBS station WBBM to discover an "unknown singer" for the radio. Miss Della Chiesa was contestant 1,286 among 3,700 other aspirants. She had never sung professionally before in her life and did not expect to win at all; she entered the contest merely for the experience of singing once over the radio. It was more than a mild surprise to her, therefore, when she learned that she had won the contest by the unanimous choiçe of the judges. The prize of $1,300 which she received was in payment for thirteen weekly performances on the air. After her second broadcast Miss Della Chiesa had an offer of a sponsor for her program.

Since then Miss Della Chiesa has been booked constantly for engagements in radio, opera, and concerts. Although she has not "specialized" in any one of these fields, she has been so well grounded musically that she is able to cope successfully with all three. It was during one of her first broadcasts that Paul Longone, the late impresario of the Chicago Opera, heard her sing. He was so much impressed with her voice that he invited her to audition for him. The result of the audition was an engagement with the Chicago Opera Company for three years.

Upon becoming a member of the Chicago Opera Company in 1936 Miss Della Chiesa made her debut as Mimi in *La Bohème* on November 15 of that year. On that occasion the soprano says that she was paid the greatest compliment of her career by Tito Schipa, the noted operatic tenor. Schipa, it seems, had always refused to sing in the opera *L'Elisir D'Amore* because he had never heard a soprano whose voice was equal to the requirements of the heroine's role. When the Italian tenor heard Miss Della Chiesa's Mimi, he declared that he would gladly sing opposite her in *L'Elisir*.

Following her initial operatic experiences, Miss Della Chiesa appeared with the St. Louis Opera and the Cincinnati Opera Company and at the Havana International Opera, where she sang with Giovanni Martinelli in *Otello*. She has been the featured soloist with such important symphony orchestras as the Chicago Symphony and the Toronto Symphony Orchestra. At one of her appearances at Chicago's Grant Park an audience of 60,000 gathered to hear her sing. On the following day an enthusiastic press compared the quality of her voice to that of the late Claudia Muzio.

As a radio singer Miss Della Chiesa has always been a favorite with listeners. She has been the featured singer on such programs as the *Carnation Hour*, the *Magic Key*, the *Firestone Hour*, and Bayer Aspirin's *Album of Familiar Music*. The high spot in her radio career occurred when she appeared on two consecutive programs with Toscanini in the NBC Symphony concerts. She was the only singer ever to have enjoyed this distinction. In the summer of 1943 Miss Della Chiesa sang on Columbia's *American Melody Hour*, a half-hour weekly program of popular ballads and light classical music.

Whether she sings over the radio, in opera, or on the concert stage, Miss Della Chiesa is always praised and admired. *Musical America* once stated, "Miss Della Chiesa possesses one of the loveliest lyric soprano voices to be heard anywhere in America." A San Francisco *Examiner* reviewer remarked that her tone is "easy and poised" and that her singing has "taste, feeling, and magnetism."

Successful singing is not to be confused with merely correct singing, according to Miss Della Chiesa: correctness must be a means to an end, never an end in itself. "The object of public singing," she states, "is not to demonstrate an acquaintanceship with the rules but to give pleasure to one's hearers. That means that the connection must be so natural, so spontaneous, so real, that the listener is quite unconscious of the fact that tone production is the result of hard work."

Vivian Della Chiesa is a slender, statuesque young woman with gleaming blond hair, blue eyes, and classic patrician features. She is as agreeable and as affable as she looks; she is always smiling and likes to chat with the musicians during rehearsals. Much of her spare time is spent in collecting lipsticks, unusual hats, old music boxes, and historical information about the costumes she wears for various roles. She admits having only one superstition—knocking on wood.

In July 1943 Miss Della Chiesa terminated her work on the Bayer Aspirin program and the *American Melody Hour* to make guest appearances. She began a concert tour in the middle of September and will have about sixty engagements throughout the United States and Canada during the fall and winter of 1943.

DE MILLE, AGNES (GEORGE) (də-mil') Choregrapher; dancer

Address: b. c/o Theatre Guild, 245 W. 52nd St, New York City; h. 42 E. 9th St, New York City

"American folk dances have always been my passion; they're a lot wilder and more exciting than the dancing we do today. That's why *Oklahoma!* was fun to do. People in Oklahoma in 1900 enjoyed dancing; they went lurching and careening around the floor, throwing themselves about with wonderful enthusiasm and abandon. Just watching them, you feel the same excitement." Thus Agnes de Mille describes the background for her choregraphy in *Oklahoma!*, the Theatre Guild's phenomenally successful American operetta. As both dancer and choregrapher, Miss de Mille is one of the leading figures in the American ballet. John Martin, dance critic of the New York *Times*, has written, "She has a genius for capturing human people of whatever locale or social level in their simplest and most honest phases, ridiculing them sometimes, fairly devastating them at other times, and at still others making them seem like members of a mighty likable race."

Through her father, film producer William de Mille, and her uncle, director Cecil B. de Mille '42, Miss de Mille can claim membership in one of Hollywood's most distinguished families. Her mother is the daughter of the famous American economist, Henry George. Agnes George de Mille was born in New York City. Her background was largely that of the rising motion-picture industry, and in 1916 she played a small role in one of her father's productions, *The Ragamuffin*. Unlike many of her fellow-artists, Miss de Mille did not resolve in childhood to become a ballet dancer, although at the age of eight she wrote a book on costumes. Her interests were many and varied, and she chose English as her major at the University of California. Upon graduation, *cum laude,* she looked about for a career. Inspired by a chance visit to a ballet studio, she decided to make the dance her life's work and underwent thorough training in academic, classical ballet, studying under Koslov, Marie Rambert, and Karsavina in London. But the young ballet student was quick to realize that "the day of the great romantic solo dancer is unquestionably on the wane." Although she mastered the forms of classical ballet, and, according to John Martin, "has done quite the most tasteful and stylistically sensitive work of the sort that has been done in the American field," from the beginning Miss de Mille was far more interested in her poignant and human character sketches, which are so close to the theatre that they are considered "choregraphic acting."

Her first New York appearance was in MacKlin Marrow's production of Mozart's *La Finta Giardiniera* in 1927. In her concert debut at the Guild Theatre in 1928, when her work was hailed as "delightfully built from the standpoint of composition and choregraphy," Miss de Mille was anticipating themes which she was later to develop in her ballet *Rodeo*. Early in her career she devised an American dance, *'49,* which was full of vigor-

AGNES DE MILLE

ous Western spirit. Constantly adding to her repertoire, the young dancer created, almost simultaneously, the classic *Hymn,* danced to Bach's *Jesu, Joy of Men's Desiring,* and the lusty folk dance patterns of *Harvest Reel.* She was meanwhile winning fame for herself as a dance mime, "a dancer whose sense of characterization is as strong as her artistry is sensible and her technique is facile." Following Charles Weidman '42 Doris Humphrey '42, and Angna Enters '40, Agnes de Mille developed the solo character sketch. Comedy was her specialty in these sketches and, unlike Weidman, whose dancing was a satiric comment upon society, Miss de Mille showed, in her studies—*Ballet Class* and *Stage Fright*—"a wistful Chaplinesque humor", "deft juxtaposition of pathos and buffoonery."

The year 1929 marked her first professional success as a choregrapher when she staged the dances for the Hoboken revival of the melodrama, *The Black Crook.* Well established then as a director and dancer, Miss de Mille headed for London where she spent several years giving recitals, directing dances for musical revues, and helping to organize the London Ballet Company. In 1933 she was responsible for the dances in *Nymph Errant,* an English musical hit which starred Gertrude Lawrence '40. When she returned to America Miss de Mille's dancing was criticized by John Martin as being too full of "English reserve" which conflicted with her basic art. He wrote: "Her most persuasive creations are always those which deal with earthy people."

At the invitation of her uncle, Cecil B. de Mille, she went to Hollywood in 1934 to dance in his lavish production of *Cleopatra.* Miss de Mille was scheduled to do an Egyptian dance on a platform built on the back of a bull. She withdrew from the picture, however, feeling that the dance sequence was not being given sufficient importance in the film. In the following year she staged the dances for the Leslie Howard-Norma Shearer film version of *Romeo and Juliet* (1937) but did not appear in the production herself—and according to John Martin, the last person to see the dances "was the scrubwoman who cleaned the floor of the cutting room." Other discouragements were to follow. Meanwhile, however, she had won for herself the title of "the world's youngest choregrapher" by giving a large and very successful concert in Hollywood Bowl. Miss de Mille presented a series of folk dances and her own *Harvest Reel,* both of which were enthusiastically received by a capacity audience.

Called back to Broadway by the Shuberts, she staged the dances for the Ed Wynn musical comedy *Hooray for What* (though few of them reached Broadway intact), for Leslie Howard's *Hamlet,* and for *Swinging the Dream,* a jazz version of *A Midsummer Night's Dream.* In 1939 the newly organized Ballet Theatre invited her to join its staff as choregrapher. With its purpose of bringing to the American public "traditional and contemporary ballets, choregraphers, and dancers," the Ballet Theatre offered Miss de Mille an opportunity to create her dances, to direct them, and to dance in them herself. Under its aegis she presented three of her most famous ballets—*Black Ritual, Three Virgins and a Devil* (1941), and *Rodeo* (1942).

Black Ritual, which is danced to the music of Milhaud's '41 *La Création du Monde,* was an attempt to capture the psychological atmosphere of a primitive tribe engaged in ritualistic ceremonies. Miss de Mille has long been a student of tribal dances, and in 1931 she had written, "There is, of course, a difference between the primitive unconscious folk dancer and the creative artist, but it is one more of purpose than of form and content." In genuine folk dancing of any sort, Miss de Mille says, the dance and not the dancer dominates. *Black Ritual* put these principles into practice and was praised for its novelty and its moving presentation.

"A Daliesque-Italian-primitive trifle in which a monkey-like Satan deftly garners three damsels," *Three Virgins and a Devil* proved to be Miss de Mille's most sophisticated and most satiric work to date. Described by Edwin Denby as a "little satire on virginal vanity," the ballet is a fantastic combination of classical forms, country dances, the "Lindy Hop," and "Pecking." Danced to Respighi's music, it tells the story of three pious maidens. "The Devil interrupts their prayers with a hot musical number, and the girls find to their amazement that while their hands are properly prayerful their hips are cutting loose in swingtime." The choregrapher frequently dances the role of one of the virgins, winning John Martin's praise—"its humors are lusty and its performance is full of vitality when Miss de Mille is there to whip it up."

With *Rodeo* or *The Courting at Burnt Ranch* Miss de Mille returned to Americana and the Western spirit. From *'49* and *Harvest Reel,* from the dances of *American Legend,* a review presented by the American Actors Company in 1941, and from *Hoe Down,* a dance which she performed during an engagement at New York's Rainbow Room, *Rodeo* evolved rather naturally as an epic ballet of cowboy life. The story concerns a gauche cowgirl, "the tomboy of the ranch outfit," who triumphs over the jokes of the ranch-hands and the sneers of the local beauties and finally wins her hero, "the Champion Roper." With Aaron Copland's '40 score and Miss de Mille in the leading role, opening night audiences demanded twenty curtain calls. Burton Rascoe called *Rodeo* "the most original and interesting innovation in the ballet in modern times." Taking for its background simple aspects of ranch life—Saturday night square dances, riding, roping, bulldogging—*Rodeo* tells a plain story in the poignant and pathetic style which Miss de Mille developed in her early character sketches. John Martin wrote of it: "In nothing she has previously done has Miss de Mille exhibited so much pure choregraphic skill and resourcefulness."

Much as *Rodeo* was praised by critics of the dance, it was generally agreed that Agnes de Mille's choregraphy in *Oklahoma!* surpassed the earlier ballet in depth and in purely formal beauty. A Theatre Guild production, *Oklahoma!*, adapted from Lynn Riggs' *Green Grow the Lilacs*, opened in New York City in the spring of 1943 and was immediately hailed as "Broadway's gift to opera," a "striking piece of theatrical Americana." Miss de Mille's two ballet numbers, *Out of My Dreams* and *All 'er Nothin'*, danced to Richard Rodgers' '40 music, were pronounced "supreme esthetic delights," and Burton Rascoe, reviewing the production in the New York *World-Telegram*, announced that Miss de Mille's choregraphy was "the biggest hit of the show." Olin Downes '43, the distinguished music critic, took time out from concert-going to describe the dances in *Oklahoma!*: "You watch with excitement and delight, and a lump in your throat, for this is something more than admirably stylized choregraphy" Perhaps Miss de Mille's greatest achievement in *Oklahoma!* is the fact that she has made the ballet "not only acceptable to the average theatregoer who would be bored to death by classical ballet but something he can get excited and shout about." In popularizing the ballet without at the same time sacrificing any of its artistic qualities, Miss de Mille has proved herself "one of the richest and most indigenous talents the dance has yet uncovered."

"Choregraphy for us today," says Miss de Mille, "should deal with situations and emotions of daily life in whatever period, and not with children's dream fantasies. Even such a lovely thing as *Les Sylphides* belongs to an era in the ballet that is past."

Oklahoma! is Miss de Mille's first real financial success, recitals being costly and ballet pay comparatively meager. She has had several Hollywood offers since the show opened, and has already gone to the West Coast to stage dances for a forthcoming Danny Kaye '41 film. In the fall of 1943 she returned to New York to work on the ballet for the musical comedy *One Touch of Venus*, and also to resume her position as choregrapher and ballerina for the Ballet Theatre. She was planning to have another ballet, *Tallyho*, ready for the October 10 opening of the Theatre, but was unable to finish it in time.

"As in *Oklahoma!*," wrote a *Newsweek* reviewer, "Miss de Mille's imaginative and satirical dances are an indivisible part of [*One Touch of Venus*], and next to [Mary] Martin the de Mille troupe . . . furnishes the evening's surest reason for stopping the show. . . Miss de Mille . . . likewise has as much money sense as her grandfather, the economist Henry George. For *Oklahoma!* she got plenty; for *Venus*, she'll only say it's 400 per cent more."

In December 1943 Miss de Mille was working on a new ballet for the Ballet Theatre and was soon to leave with the group for a cross-country tour of one-night stands. She did not plan to dance herself during this tour, but to rehearse the company in her new ballet. Following this assignment she was to go to Hollywood to work on the dances for a motion picture.

Slender and five feet two inches tall, Miss de Mille has been described by Lucius Beebe '40 as "amiable and precise minded." On June 14, 1943 she was married to Lieutenant Walter Prude of the Army Air Forces. A hard worker, Miss de Mille does endless research on her folk dances. When composing a ballet, she says, "I think best when I'm on my feet, and I cover about ten miles just going back and forth through the two big rooms of my apartment. I play the piano—everything from Mozart and Scarlatti to George Gershwin and Dick Rodgers—till I find the feel of the rhythm I'm looking for. When I do find it, it's the most wonderful moment of my life!"

DEMING, DOROTHY (dem'ing) June 8, 1893- Public health nurse; author

Address: b. American Public Health Assn, 1790 Broadway, New York City; h. 302 W. 12th St, New York City

The author of the "Penny Marsh" books for girls on nursing as a career, Dorothy Deming, has been a public health nurse for seventeen years. Now consultant of public health nursing of the American Public Health Association, Miss Deming writes with accurate knowledge from her personal experience in this important field.

Dorothy Deming was born in New Haven, Connecticut, on June 8, 1893, the daughter of Clarence and Mary Bryan (Whiting) Deming. She went to Vassar College, where she received her B. A. in 1914. Then she entered Yale University for postgraduate study in American Colonial history. From this study later came a book, *The Settlement of the Connecticut Towns* (1933). With the outbreak of the First World War she became interested in nursing and left her postgraduate work hoping to serve as a nurse overseas. She entered the School of Nursing of the Presbyterian Hospital in New York City for training.

DOROTHY DEMING

The Armistice came before Miss Deming had a chance to serve as a war nurse. She finished the nurses' course, however, and for a time took up private-duty nursing. She then became a public health nurse; her first novel, *Penny Marsh: Public Health Nurse,* is based upon many of her own experiences and adventures during these early years of her work. She became general director of the National Organization for Public Health Nursing, editor of the *Public Health Nursing* Magazine, and was a director of the Holyoke (Massachusetts) Visiting Nurses' Association.

Miss Deming's first novel, *Penny Marsh: Public Health Nurse,* published in 1938, was well received. A vocational novel for older girls, the book told the story of Penny Marsh's experiences in public health nursing, including a flood and a blizzard as well as the more routine work of her profession. "The book ends with Penny's approaching marriage to a young doctor."

The sequel, *Penny Marsh: Supervisor of Public Health Nurses* (1939), found Penny Marsh in a large city, receiving additional training as an assistant supervisor. "A convincing picture is given of her experiences, and the plot has been successfully subordinated to the vocational intention. Sample report forms appear in the body of the text, and the reader is given a broader view of the work of the public health nurses." Critics thought the story "not so well motivated as the first," but agreed that it would be in demand "wherever the other is popular."

The last Penny Marsh book, *Penny Marsh Finds Adventure in Public Health Nursing* (1940), describes the adventures of Penny as a rural public health nurse, after her husband has been called to Brazil for a year of research. "The information," wrote the *American Journal of Public Health,* "is sound, the vehicle well chosen for this age group, and the total effect on the young reader such as to intrigue the better and more adventurous."

Miss Deming is also the author of *Ginger Lee, War Nurse* (1942) and of innumerable professional articles. Her enthusiasm for her profession and the adventures she puts into her pages have made Miss Deming's books most popular with girls who would like to be nurses, and the books have won high critical commendation. In 1942 Miss Deming worked on examination material for public health nursing at the American Public Health Association and she remained with that society in 1943.

Of her work Miss Deming herself writes: "There has never been a time when nursing was not a most appropriate and satisfying field of work for women, but today the opportunities in public health nursing bring a new challenge—the challenge of effective instruction of the public in ways to keep well and prevent illness. The public health nurse carries her message into homes, schools, colleges, and factories, as well as into hospitals and clinics. I hope that the story of *Penny Marsh: Public Health Nurse* will convince high school girls that a combined college and nursing course will prepare them for a job that holds all the human drama and excitement any girl could desire."

Devoted to her career, unmarried, when away from her writing and professional duties Miss Deming enjoys outdoor life, particularly swimming and hiking. She is taller than average, physically vigorous, brunette in coloring. She is a Republican, and her church affiliation is Congregationalist.

DENNIS, CHARLES HENRY Feb. 8, 1860—Sept. 25, 1943 Journalist; for sixty-one years associated with the Chicago *Daily News,* editor from 1925 to 1934; gave "their first journalistic 'breaks'" to John T. McCutcheon, Eugene Field, and George Ade; author of *Eugene Field's Creative Years* (1924).

DE SYLVA, BUDDY Jan. 27, 1896- Theatrical and motion-picture producer; song writer

Address: b. 551 Fifth Ave, New York City; h. 444 N. Faring Rd, Los Angeles, Calif.

BUDDY DE SYLVA

Composer and collaborator on some 500 popular songs, the first producer since Florenz Ziegfeld to have three musical comedies running simultaneously on Broadway and hitting the $1,000,000 mark in profits, screen writer and producer, and top executive at Paramount, Buddy de Sylva is living proof of the Horatio Alger formula. In less than a quarter of a century he has raised himself from a ukelele player, working his way through college, to one of the highest positions in the entertainment industry. His has been a success story all the way. "If fortune has her favorites," says Theodore Strauss, "put Buddy de Sylva in the front row."

George Gard ("Buddy") de Sylva was born in New York City on January 27, 1896. His father, Aloysius Joseph de Sylva, was a lawyer who had succumbed to the lure of the stage, touring in vaudeville under the name of Hal de Forest. While playing in Azusa, California, he met and was married to Georgetta Gard, the daughter of the town's sheriff. At the insistence of his father-in-law, the elder de Sylva gave up the stage and returned to his law practice. When Buddy was two his parents moved to Los Angeles, where two years later he made his stage debut at a benefit in the Los Angeles Grand Opera House. Complete in velvet suit and long blond curls, young Buddy was well on his way to being a child prodigy under the name of "Baby Gard" until his grandfather stepped in, ordered that the curls be cut off, and that all offers from the Keith vaudeville circuit be ignored.

His efforts to become, as he puts it, "the Shirley Temple of my day" having failed, young Buddy settled down to the dull business of acquiring an education. He attended the Citrus Union High School in Los Angeles and worked as a shipping clerk in the afternoons. He distinguished himself very little in high school except as the author of a play which was presented by the graduating class. A professor from the University of Southern California who was in the audience suggested, perhaps critically, that de Sylva should go to college, so the young man enrolled at the University of Southern California. His musical education had not been neglected. Although, after submitting to violin lessons for some time, he realized that he would never master the instrument, he did manage to learn to play the ukelele. "When de Sylva entered U. S. C. his proficiency as an entertainer naturally caused him to be elected to the best fraternity and enabled him to pay his way by singing at parties."

It was de Sylva's interest in poetry (he once thought of collaborating on a blank verse tragedy) which launched him on his song writing career. At the end of his freshman year at college de Sylva found a $60-a-week night club job in a Hawaiian band. He thereupon decided not to return to college but to devote his life to the entertainment business. "With the crucial matter of his life work settled, de Sylva's rise was meteoric." The first step was his meeting with Al Jolson '40, "the dean of mammy singers," who was so impressed with de Sylva's songs that he put one of them, *'N Everything*, into his show, *Sinbad*, and arranged for the publication of several others. At twenty-two de Sylva went to New York to collect his first royalty check—$16,000. "His income since then has never fallen below $25,000 a year and has averaged several times that." The Remick Music Company promptly signed him up as a song writer, and while working for them he met a young pianist named George Gershwin. They teamed up to write *La, La, Lucille*, a musical comedy which was produced in 1919, and one reviewer said of them: "Here are two newcomers who show more than average promise."

Since song writing proved so profitable, de Sylva proceeded to collaborate with other composers. He is particularly proud of his association with Victor Herbert which resulted in the song, *A Kiss in the Dark*. Working with Jimmy Hanley, he produced the

DE SYLVA, BUDDY—*Continued*

popular *Just a Cottage Small by a Waterfall.* Meanwhile de Sylva was writing the books for such successful musical comedies as *Sally* (1921) (in which he did the lyrics for Jerome Kern's '42 music); *Ziegfeld Follies of 1921*; *Greenwich Follies* (1921); six editions of *George White's Scandals*; *Queen High* (1926); *Good News* (1927); *Three Cheers* (1928); and *Follow Through* (1929). In 1926 he formed "the most successful trio in Tin Pan Alley history" with Ray Henderson and Lew Brown. Their greatest hit was *Sonny Boy* which the trio wrote for Al Jolson. The song, lyrics and music, was written in two hours. Over 1,500,000 copies were sold, and the first royalty check was for $78,000.

With the advent of talking pictures, Brown, de Sylva, and Henderson headed for the West Coast, under contract to Fox Films. Their first picture, *Sunny Side Up* (1929), was well received, but the trio split up in 1930 when Henderson and Brown returned to New York. De Sylva, however, "to whom six figures on a contract held, and still do, an irresistible glamour," remained in Hollywood, writing scenarios, collaborating on musical scores, and producing films. By far his greatest contribution to the screen was his transformation of Shirley Temple from "a mere child prodigy" to "a rival of Duse and Bernhardt." He produced five of her most successful pictures—*The Little Colonel* and *The Littlest Rebel* (1935); *Captain January, Poor Little Rich Girl,* and *Stowaway* (1936).

When Twentieth Century Pictures was merged with Fox, de Sylva went to work for Universal, where his outstanding picture was *The Rage of Paris* (1938), which introduced Danielle Darrieux, the French actress, to American audiences. In 1939 he transferred to RKO where he produced *Bachelor Mother* with Ginger Rogers '41 as the leading lady. De Sylva had taken time out from picture making for only one Broadway venture, *Take a Chance* (1932), which, like all de Sylva ventures proved a "bonanza," with Ethel Merman '41 singing *Eadie Was a Lady,* "as good as, if not a better solo than, *Frankie and Johnnie.*" But in 1939, when, in spite of the success of his films, he left RKO, "Hollywood said de Sylva was washed up."

In answer to any such charges, de Sylva produced in swift succession "three fabulously successful Broadway musical comedies"—*Du Barry Was a Lady* (1939); *Louisiana Purchase* (1940); and *Panama Hattie* (1940). The de Sylva technique represents, according to Richard Watts, Jr., "a splendid theatrical alliance" between genuine beauty and burlesque shows. His productions are lavish, full of chorus girls and raw humor, yet they have a robustness and vitality which distinguishes them sharply from the "ordinary girl-and-music extravaganza." De Sylva is careful to select the best stars and writers available for his productions. *Du Barry* combined the talents of Bert Lahr, Ethel Merman, Herbert Fields (co-author of the book), and Cole Porter '40, in "a saffron speculation on the true state of affairs between the lady and Louis XV." For *Louisiana Purchase* de Sylva recruited the talents of Irving Berlin '42, dancer Vera Zorina '41, choregrapher George Balanchine '42, and comedians Victor Moore and William Gaxton in a clever satire on Louisiana politics. And *Panama Hattie*, which, writes Richard Watts, Jr., "has everything important to a work of its type, and has them to a superlative degree," saw the return of the Fields-Porter-Merman combination. De Sylva was credited with inspiring a renascence in musical comedy. "The impresario has given a lift to musical Broadway it hasn't experienced in ten years." In spite of menacing war clouds, de Sylva insisted in 1940 that "it's going to be a big year for musicals," and the receipts on his three Broadway shows bore him out, each making over $1,000,000 in their Broadway runs, and more on film rights.

De Sylva's phenomenal success in New York convinced Hollywood moguls that they had underestimated his ability. In a surprise move early in 1941 Paramount appointed him executive producer, making him production head of their studio. De Sylva admitted that both mediums, stage and screen, appealed to him, saying: "The fascination of doing both screen and legitimate productions lies in the necessity for entirely different techniques, and the consequent feeling that you are something of a virtuoso if you can master both of them at the same time." He returned to Hollywood to produce *Caught in the Draft* (1941), a comedy which starred Bob Hope '41 and Dorothy Lamour, and a Bing Crosby '41 vehicle, *Birth of the Blues* (1941). In 1942 he signed a renewal of his contract with Paramount. He was executive producer of *For Whom the Bell Tolls* (1943), which Sam Wood '43 produced and directed. In September 1943 he was reportedly seeking the title *Stork Club*, and with it the Stork Club stars: Sherman Billingsley and Walter Winchell '43.

Although de Sylva's career is even at this early date a legend in the entertainment business, he has had very little personal publicity. Many people, according to *Life* Magazine, "take it for granted that de Sylva the song writer and publisher, de Sylva the playwright, de Sylva the Hollywood executive, and de Sylva the Broadway producer are several people, probably brothers." In private life he is married to Marie Wallace, a former Ziegfeld girl. They have no children. De Sylva collects paintings and does some painting himself, "in sloppy oils." A cheerful man, "his round, almost Mongoloid features are not marked by the lines of a man who has worried a great deal." He is of average height, swarthy, with a quick, easy smile. He used to be an enthusiastic athlete—an excellent tennis player, a professional diver, and lifeguard, but regrets that his work now prevents him from spending much time at sports. In the last few years he has done little song writing, "because it is more economical to have other song writers like Cole Porter or Irving Berlin work for him." But in 1939 his friend, film director Leo McCarey, discovered an old song de Sylva had written in 1924 and put it into his picture *Love Affair* (1939), which starred Charles Boyer '43 and Irene Dunne. The song was *Wishing*, one of the "most durable song hits" of 1940. In November 1943 it was reported that a new music publishing venture was being set up by Johnny Mercer, and that

Mercer, de Sylva, and Glenn Wallichs would probably become partners in it. They are already co-owners of Capitol Records.

Unquestionably the "No. 1 personage in his field," de Sylva's "Midas touch" has never failed him. But the profit motive is not his inspiration. He takes genuine delight in producing successful films and legitimate shows, saying: "I don't do this for money. I'm extremely proud. I work like hell to get a hit, because I've got pride in my work and I want everything I do to be good."

DE VOTO, BERNARD Jan. 11, 1897- Author; editor; educator

Address: h. 8 Berkeley St, Cambridge, Mass.

Few American writers can match Bernard De Voto's vigorous output and versatility in almost all forms of literary expression. Few are known to so wide and disparate an audience as is reached by his work. He has written essays and articles, light fiction and serious novels, important books on American literature and social history, biographical and critical studies, and miscellaneous pieces that have appeared in periodicals ranging from the journals of learned societies to *College Humor*. At the same time he has taught in American universities, becoming a potent force in educational circles; and he has held some important editorial positions, including the "Easy Chair" of *Harper's* Magazine and the editorship of the *Saturday Review of Literature* for two years. He is currently a member of the Writers' War Board and of the Writers' Guild Council.

BERNARD DE VOTO

An individualist out of the West, in the rugged Western tradition, De Voto has been seen in several guises, according to the backgrounds or credos of his varied audiences. To the readers of his light fiction only, he may appear as a pleasantly entertaining romantic; to social historians an outstanding interpreter of the making of America, particularly of the period of Western expansion; to highbrow critics, the authority in America on Mark Twain and his work. In the late '30's, when in literary circles it was necessary to be definitely of one socio-political complexion or another, De Voto was the target of considerable controversy and attack because he seemed to be non-committal. As Garrett Mattingly, a student of his work, has written: "The trouble was that he could be observed sniping cheerfully at both sides. He picked off the ideologues of Right and Left with equal gusto, but advanced no program of his own." While right-thinking conservatives had reason to regard his denunciations with touchy suspicion, "to the Levites of the Third International he was a reactionary Fascist, probably the kingpin of the whole movement." Edmund Wilson, no Stalinist himself, diagnosed "intellectual confusion" as De Voto's malady; and another liberal, Floyd Dell, shocked by some apparently reactionary social pronouncements, thought De Voto "unable to resist the temptation to expand himself into the papal void left by the recent collapse of H. L. Mencken."

The environment of his early years, it has been suggested, may account in part for Bernard De Voto's nonconformity and the heterogeneity of his convictions. He was born in Ogden, Utah on January 11, 1897. "I was the child of an apostate Catholic [Florian Bernard De Voto] and an apostate Mormon," he writes in one of his essays. The inheritor of two such divergent cultures might well test the understanding of critics, particularly those with a conventional Eastern background. His grandfather was a Piedmontese cavalry officer who had come to America to avoid the hostility of an aristocratic Roman family whose daughter he had married. Florian De Voto, a teacher of mathematics, was in Ogden in the service of the Church when he met and married Rhoda Dye, the daughter of a Mormon pioneer. Young Bernard's education was begun at a convent school but continued in the public schools; he was graduated from

DE VOTO, BERNARD—*Continued*

the Ogden High School in 1914. "His childhood oscillated between the poles of Rome and Deseret and found its own stability in adhering to neither."

His was the freedom of a frontier childhood. "By the time we were eight we went on day-long explorations of the foothills, miles from home, unsupervised by older people. Two or three years later we were beginning to climb peaks, and by the time we were fourteen we were camping out for days at a time, with or without tents, in canyons one hundred miles up the range." The book from which he was taught to read, he says, was Pope's *Iliad*. "Chanting the couplets while I played with the miners' children, I was a laboratory specimen of frontier relationships which no literary or academic formula could express." While in high school he became a reporter for the Ogden *Evening Standard*, recording church socials and baseball games.

De Voto went to the University of Utah for a year (1914-15), where he immediately helped organize a chapter of the Intercollegiate Socialist Society (which the college authorities promptly dissolved) and became the proud possessor of a copy of *Das Kapital*. When four faculty members of unorthodox opinions were dismissed De Voto felt disgusted with Utah, and in the fall of 1915 he entered Harvard University. There, although he studied writing under Dean Briggs, his chief interest was philosophy, and he continued to be an intellectual revolutionary. He was also a pacifist; but when the War came he enlisted. In 1918 he was commissioned a lieutenant of infantry. Because of his proficiency with small arms he was delegated to instruct in marksmanship, and he was still in the United States when the Armistice was signed. Returning to Harvard, he received his degree in 1920 (as of 1918) with Phi Beta Kappa honors.

He refused offers of positions in the East and returned to Utah. He wanted to write, and his plans were to produce an ambitious trilogy tracing the history of northern Utah. For two years he knocked around the West on the old frontier trails to get background for the work. In 1921 he taught history in the Ogden Junior High School, and the following year he was offered an instructorship in English at Northwestern University. There he taught for five years.

An essay, "The Coeds, God Bless Them," is reminiscent of those teaching years: the tribute is warmly felt, for it was in his first year of teaching at Northwestern that De Voto was married to "the brightest coed in his freshman composition class." She was Helen Avis MacVicar. The De Votos now have two sons, Gordon King and Mark Bernard.

Although he refused to study for a Ph. D., and although he "blasphemed against the dominant ideals of Big Business and bigger stadiums," De Voto was also an exceptionally good teacher whose reputation attracted the best students on the campus. This, together with his growing prominence as a writer, brought him an assistant professorship in 1927. His first book, *The Crooked Mile*, the story of a Utah pioneer's grandson, had been published in 1924. A second novel, *The Chariot of Fire*, appeared in 1926, a realistic study of revivalism in southern Illinois in the early 1830's. A third, *The House of Sun-Goes-Down* (1928), was very successful. Like his first, it was a product of his original plans for a Utah trilogy. During these years De Voto also began writing articles for magazines. He sold one on Utah, which Mencken liked, to the *American Mercury* in 1925, and more thereafter; and to *Harper's* he sold two articles and his first short story, "In Search of Bergamot." This was followed by the sale of a story to the *Saturday Evening Post*.

But the grind of teaching was interfering with the writing De Voto wanted to do, and his health was giving way under stress of trying to do both. So in 1927 he wrote a "Farewell to Pedagogy" and moved with his family to Cambridge, Massachusetts. There he had access to the Harvard Library for his research, and during the next decade De Voto busied himself in writing and absorbing the atmosphere of the Eastern seaboard. He wrote light fiction for a living so that he could go on with his serious work. For some time he studied intensively the writings of Vilfredo Pareto: De Voto was one of the early disciples of Pareto in the United States. In so far as he has any adherence to a particular viewpoint, it is to that of the Italian sociologist, but "reading Pareto merely strengthened a position grounded in his temperament and experience."

Mark Twain's America, the first of De Voto's work as a social historian, was published in 1932. It was written, he said, to correct certain generalizations and erroneous ideas held by many writers and critics concerning the American frontier. In particular it was an attempted rebuttal of Van Wyck Brooks' '41 *The Ordeal of Mark Twain* (1920), in which the American novelist had been presented as an artist gravely thwarted by his environment. De Voto's book is now "recognized as the authority on all phases of the life and literature of the West that relate to Mark Twain, and as the first thorough application of the methods of social history to the problems of literary criticism."

Two years later (1934) De Voto's most widely discussed novel, *We Accept with Pleasure*, appeared. It concerns the relations between a group of people who are in various ways ill-adjusted to life, and the adjustment they finally achieve. Several critics, particularly those with Left or proletarian leanings, found the novel little to their liking because it offered no solutions to our social ills; others praised it for its subtle handling of character and its skilled narrative technique.

In the meantime (1929-36) De Voto had become an instructor and lecturer at Harvard. and for two years he edited the *Harvard Graduates' Magazine*. He agonized the old subscribers by daring to propose the building of a "Thoreau House" at Harvard, at which low prices and plain living would make Harvard available to other than the sons of the wealthy. During his editorship he continued to hammer away at the various aspects of Harvard snobbery. In 1935 De Voto became editor of the "Easy Chair" of *Harper's*, a position which he currently holds. For two years (1936-38) he was editor of the *Saturday Review of Literature.*

On accepting the editorship of this literary weekly, De Voto stated his credo: "I believe that clear thinking is one of the most difficult and most desirable things in the world and that all absolutes are dangerous. I believe that the free meeting of diverse intelligences is as necessary to literature as to society itself. I believe that literature is so interstitial with the life of its times that all attempts to separate them are folly. Beyond that, I also believe that the present age in American literature is the richest we have ever had, and that America is a nation sufficiently great to abide all the confusion, folly, and despair of these times, and to triumph over them in its own terms and in harmony with its own traditions and institutions."

A book collection of his best essays, *Forays and Rebuttals*, appeared in 1936. It has been highly recommended to anyone interested in the trends of contemporary criticism; and it further presents De Voto's own critical creed, as developed in his articles on Mark Twain. Notable among the essays are "The Skeptical Biographer", "Thinking about America," and several discussions of education in America. A second collection of essays, literary and sociological, *Minority Report*, was published in 1940.

Continuing his intensive studies of Mark Twain, in 1942 De Voto wrote *Mark Twain at Work*, three essays which "combine scholarship and gusto as only De Voto can combine them." These are studies of the actual writing of *Huckleberry Finn* and *Tom Sawyer*, and an interpretation of Mark Twain's later years, when personal tragedy greatly changed, curtailed, and impaired his work as an artist. De Voto's most important work to date in the field of history, *The Year of Decision: 1846*, was the April 1943 choice of the Book-of-the-Month Club. The year 1846, according to the author, was the year in American history which decided the size and shape of things to come. His history of that year is written in terms of the personal experience of the various historically famed or typical figures who made it significant. One reviewer has called the book "the literary equivalent of a Sisley painting"; another, in spite of the fact that "it shouts aloud for judicious skipping," believes it nonetheless "a major historical-literary landmark."

De Voto was the general editor of *Americana Deserta* and editor of *The Life and Adventures of James P. Beckwourth* and of reprint editions of *Tom Sawyer, Huckleberry Finn,* and *Ethan Frome.* Under the pseudonym of John August he has written several romances, such as *Rain before Seven* (1940) and *Advance Agent* (1942), and various short stories. It is the "periodic assistance" of John August that has made it possible for De Voto to write *The Year of Decision* and other works. "As John August I spend five or six months on a serial that brings me in $20,000. Well, we can live two years on that—two years during which I can concentrate on my own work." De Voto says he is "not a natural" when it comes to knocking off stories. "And I say too proudly, 'I'm a hack.' That is probably the result of vestigial guilt left over from my youth, from the time when I wanted to be a great writer." His main problem in writing serials is getting the "story line" established; as for characters, the chief trouble he has is with the villain. "I have never known a real villain and I doubt if they exist outside the serials."

In 1943 De Voto was doing another romance by John August, preparing a critical edition of Mark Twain's *Life on the Mississippi*, getting together a collection of Mark Twain's letters, and writing a new novel—until forced in December to "halt his scribbling while awaiting word on a special mission to North Africa." It is evident that the hard-working man of letters has little time for his hobbies, which are "motoring and photography, but mostly reading out-of-the-way Americana and visiting sites of American history." De Voto is a "durable looking" man, with thick dark hair, a round, determined face, and heavy horn-rimmed spectacles that do not quite conceal humorous eyes. He lives with his family in Cambridge in a Victorian house which formerly belonged to William Roscoe Thayer. In the same room Thayer used for a workroom and library to write his histories of Italy, De Voto writes—in longhand in loose-leaf notebooks—his histories of America and his trenchant comments on the American scene and character.

DIETERLE, WILLIAM (dē'tēr-lē) July 15, 1893- Motion-picture director and producer
Address: b. c/o RKO Radio Studios, Inc, 780 Gower St, Los Angeles, Calif; h. 3351 N. Knoll Dr, Hollywood, Calif.

Known as "the Hollywood Plutarch" because of his frequent excursions into the biographical film, director William Dieterle has been outspoken in his criticism of motion-picture production methods, commenting to one interviewer: "Hollywood is beautifully organized. There are fine technicians, designers and assistants, but those who control production very often don't know anything about the business." In an effort to make motion pictures "forces for enlightenment and good," Dieterle became his own producer-director in 1941. The first product of this new combination was *All That Money Can Buy*, the screen version of the late Stephen Vincent Benét's *The Devil and Daniel Webster*, a daring and unusual film, which was warmly received by critics and audiences alike.

A naturalized American citizen, "Wilhelm" Dieterle was born in Ludwigshafen, Germany on July 15, 1893, the ninth son of Jacob and Bertha (Doerr) Dieterle. His parents were poor and planned that young Wilhelm should become a carpenter, but at an early age he resolved to make acting his career. After serving his apprenticeship in German stock companies which toured the provinces, Dieterle made his professional debut while still in his teens, in Heidelberg in 1910. He acted in all the large cities of Germany and Switzerland. His first opportunity to direct came when he met the late Max Reinhardt, for whom he worked as actor and director. Their association continued through the years, and in 1935 Dieterle assisted Reinhardt in directing *A Midsummer Night's Dream* for Warner Brothers, besides teaching motion-picture acting and directing at Reinhardt's School of the Theatre.

In 1921, when the German film industry was at its artistic peak, Dieterle abandoned the stage for the camera. He continued to act, however, directing and playing the leading role in the German version of *The Sea Beast*. His fame as a director spread to Hollywood, to which he was summoned in 1930 by Warner Brothers to direct foreign language pictures. Before he had mastered the English language he was directing English talkies, the first of which was *The Last Flight* (1931), a story of war heroes who are unable to adapt themselves to peacetime life, which, said Lewis Jacobs in *The Rise of the American Film*, "showed a rousing command of the medium." Even in his early pictures here Dieterle was beginning to put into practice his method of film making, which he describes as a "direct, forceful approach that discards everything that is not essential to the basic idea underlying the story."

The Last Flight was followed by *Man Wanted* and *Jewel Robbery* in 1932. For the next five years Dieterle directed for Warner Brothers a series of films which included *Six Hours to Live* (1932); *From Headquarters* and *Adorable* (1933); *Fog Over Frisco, Fashions of 1934, Madame Du Barry*, and *The Firebird* (1934). He was co-director of *A Midsummer Night's Dream* (1935). Most of these were well received though conventional in design.

The Story of Louis Pasteur (1936), with Paul Muni as Pasteur, gave Dieterle his first real opportunity to work with the film as a social force. In order to achieve the simplicity and unity which he feels are requisites of great motion-picture making, he did not hesitate to rewrite history. As a result the picture was criticized for its lack of historical reliability—for giving the impression that Pasteur was the first and only scientist of the century and ignoring the work of Lister, Koch, and others. But critics agreed that *The Story of Louis Pasteur* was sincere and genuinely moving. They pardoned the historical inaccuracies on the grounds of poetic license, saying: "William Dieterle's direction breathes moving life into history's pages."

In the same year Dieterle undertook to bring to the screen the life of Florence Nightingale in *The White Angel*. Discarding Lytton Strachey's cynical biography of her, Dieterle followed the romantic conception, portraying her as the "Lady with the Lamp," a humanitarian who was divinely inspired. *The White Angel*, however, lacked both the force and the dramatic entertainment which characterized Dieterle's other biographical films, and a reviewer described it as "dignified, reasonably accurate, deeply moving, and dismayingly pompous."

The Life of Emile Zola (1937), with Paul Muni again in the title role, was Dieterle's most successful biographical film. Full of the "deep social purpose" which Dieterle had already shown in *Pasteur* and was again to show in *Blockade* (1938), *Zola* was entirely vindicated for its slight rearrangement of the facts of the Dreyfus case, and the picture received the Academy Award for production. Always known as an outspoken liberal, Dieterle's "passion for freedom, justice, and intellectual tolerance" has dictated much of his work. *Blockade*, which he directed for Walter Wanger and United Artists, was distinctly sympathetic to the side of the Spanish Loyalists and was entirely consistent with a statement Dieterle made to his fellow directors in 1937: "Get the audience like a lion! Pounce upon them and hold them fast."

The year 1939 saw the production of two Dieterle-directed films, *Juarez*, for Warner Brothers, and *The Hunchback of Notre Dame*, for RKO. Although both pictures were lavishly produced, critics found them somewhat lacking in the warm, human entertainment values which were found in *Zola* and *Pasteur*. It was to these values that Dieterle returned in *Dr. Ehrlich's Magic Bullet* (1940), which he describes as "more than the story of a

German-Jewish scientist's fight to find a magic bullet. It is a much greater fight. The fight against disease is only a part of the fight against the forces of ignorance." *Ehrlich* was well received, and in the same year Dieterle directed *A Dispatch from Reuters*, a history of the famous British news agency, of which one reviewer said: "Director Dieterle rises to the occasion, capturing the mood and sustaining it."

The outbreak of the Second World War led to an intensification of his efforts to teach moral truths in the motion picture. Long a critic of Nazi Germany, Dieterle sent an ambulance to the Allies in 1940 at his own expense. At that time he said: "I can no longer think of Germany as being the land I once loved." In 1941 William Dieterle Productions, Incorporated, came into being, a new company that was to produce two pictures for RKO. The first of these was *All That Money Can Buy*, which Dieterle produced and directed. He had read *The Devil and Daniel Webster* when Stephen Vincent Benét first published it and had made up his mind then to do the story on the screen. It was a difficult job, and the major praise went to Dieterle for "welding together truths both timeless and timely. . ."

In contrast to the favorable reception which *All That Money Can Buy* received, the next production of William Dieterle, Incorporated, *Syncopation* (1942), was a decided failure. *Time* Magazine wrote of *Syncopation*, a story of the rise of American jazz told in terms of a theatrical family's life: "Unfortunately, the story, as gangling, forthright Director William Dieterle sees it, is too big for its breeches."

Tennessee Johnson (1943), which Dieterle directed for MGM, proved to be both the most controversial and the least popular of the biographical films which he had handled. Dieterle chose to portray President Andrew Johnson in a sympathetic light, insisting on the President's adherence to Lincoln's principles while stressing his bitter animosity to Thaddeus Stevens, who is drawn as almost the villain of the picture. *Tennessee Johnson* met with a strangely mixed reception. Various liberal and radical groups condemned it as a vicious distortion of the truth, as anti-Negro and anti-democratic, while Joseph Pihodna (writing in the New York *Herald Tribune*) called it "a remarkably accurate biography . . . a fair and unbiased presentation of what actually happened." On strictly artistic grounds, Theodore Strauss found fault with it in his review because "too much of its drama lies in its rhetoric." He concluded, however, that although "*Tennessee Johnson* may not be inspired drama," it "tells a fine story with restraint and frequent eloquence."

In the fall and winter of 1943 Dieterle was at work directing Ronald Colman '43 in MGM's Technicolor version of *Kismet* for 1944 release. In November David O. Selznick '41 signed him to a long-term contract, his first picture to be the next Ingrid Bergman '40 starring vehicle.

"The actingest director in Hollywood," Dieterle works under tremendous strain, often forgetting to eat or sleep while a picture is in production. He loses his temper easily, but is usually friendly with his cast and popular on the set. One of his few idiosyncracies is his habit of wearing white gloves while working, a custom which he developed in Germany when directors were expected to move scenery and had to protect their hands. Dieterle is six feet five inches tall, heavy-set, with powerful, rugged features. He is an ardent sportsman who swims, rides, and plays badminton. With his wife, the German actress Charlotte Hagenbruch, to whom he was married on July 15, 1921, Dieterle lives in a luxurious but unostentatious house on a hill overlooking the Warner Brothers Studios. Here he has a valuable collection of Chinese art, a large library, and a private projection room where he studies both foreign and domestic films. An avid reader, Dieterle dreams of the day when he will be able to bring the novels of Thomas Wolfe to the screen. He hopes, too, some day to direct *The Legend of Sleepy Hollow* and *Rip Van Winkle*. And, above all, he wants to prove "that Hollywood has a social conscience and is not shirking its educational obligations as a molder of thought."

DIXON, (CHARLES) DEAN Jan. 10, 1915- Musician; conductor

Address: h. 302 Convent Ave, New York City

When Dean Dixon was still too small to walk his mother carried him to the top gallery of Carnegie Hall in New York to hear a good concert; when he was three and one-half years old he began to take violin lessons. These were the beginnings of the musical education of the young Negro who, at twenty-six, became the first of his race ever to conduct a high-ranking symphony orchestra. "It is not an easy road," wrote David Ewen, "that has brought a Negro to the conductor's stands of two great American orchestras, but that the road has, at last, been traversed, speaks well for Dixon's capabilities and for the capacity of true talent to assert itself."

Born on West 35th Street in New York City on January 10, 1915, Charles Dean Dixon is the son of Henry Charles and McClara (Rolston) Dixon, both of whom came from the British West Indies. His mother wanted to pass on to her son her own deep love of music and, to that end, took him regularly to the Carnegie Hall concerts, where he would sit on her lap listening until he fell asleep. Mrs. Dixon was determined from the start to protect him from the "contamination" of inferior radio music. "So much that was worthless came over the air then," she said, "that we never let him listen to any of it. As soon as he came into the house the radio got out of order. And when he complained that all of the other children, in other homes, listened to the radio, we told him somebody had to play the music that came over the air and that if he studied hard he might do so when he grew up." He did, for one of Dixon's first major engagements as a conductor was to direct the NBC Symphony Orchestra, organized particularly for broadcasting.

Dean was "exposed," therefore, only to "good" music. Gifted with absolute pitch, he picked up musical knowledge early and easily, but, like most boys, he hated to practice his violin. His mother, however, sternly kept him at it three and four hours a day. Once, anxious to play stickball with the neighborhood boys, he bowed his violin with a knife and proved to her that the strings had "snapped." When he was five he gave concerts to imaginary audiences—his mother's idea. Later he went to the Harlem public schools, and played his violin at church and lodge concerts. When the boy was thirteen his music teacher informed Mrs. Dixon that her son had no unusual talent, and refused to waste her money by giving him any more lessons. Dean's mother, undismayed, continued his musical education during his high school period, although meanwhile she made arrangements for him to study medicine in Scotland. While at the De Witt Clinton High School (from which he was graduated in 1932) the youth organized his own amateur orchestra in a basement room of the West 135th Street Harlem YMCA—with such success that Harry Jennison, head of the Music Department of De Witt, urged that he devote himself to music as a career.

At Jennison's suggestion Dixon applied for admission to the Juilliard Institute of Musical Art when he was seventeen, and he was accepted on the basis of a violin audition. After his first half year he switched to the study of music pedagogy, with subjects ranging from keyboard harmony and orchestration to diction and Dalcroze eurythmics. In 1936 he received his B. S. degree and entered the Juilliard Graduate School with a fellowship. He also attended Columbia University Teachers College, from which he received his M. A. in 1939.

In 1934 the young man made his debut with a violin recital at the West 137th Street YWCA, New York City. The career of a professional musician, however, did not appeal to him; he wanted to conduct an orchestra. He had won a three-year conducting fellowship at the Juilliard Graduate School with Albert Stoessel; and he had learned to play all of the orchestral instruments when he took the public school music course there. He continued, therefore, to develop his own amateur orchestra, the Dean Dixon Symphony Society, which he had founded in 1932. At first his orchestra had consisted only of one violinist and one pianist, and his baton had been a lead pencil, but he gradually built it up until it numbered seventy players. The musicians were men and women, boys and girls drawn from the neighborhood, the only qualifications being "some technical proficiency and a sincere desire to make beautiful music."

With his lunch money Dixon himself financed the purchase of scores, rehearsal space, and, in some cases, instruments, until in 1937 a group of women interested in the cultural development of the community began to collect contributions for the orchestra. Thereafter the orchestra gave annual concerts, reserving a large block of free tickets for school children, and turning out excellent performances. Eleanor Roosevelt['40] heard of Dixon and his project, and it was early in 1941 that, at her request, he gave his famous Heckscher Theatre concert. In the audience was Samuel Chotzinoff['40], musical director of the National Broadcasting Company, who was instantly impressed by the young conductor. Arrangements were made for Dixon to direct the NBC Summer Symphony Orchestra for two concerts. Chotzinoff had some qualms as to how the players, all veterans, would react to being conducted by this almost unknown young musician. "I hope," Dixon told the players at rehearsal, "that when I finish this engagement, you will think as highly of me as I do of you." "The men," wrote Ella Davis of the New York *Times*, "gave him everything he asked for. He knew exactly what he wanted and wasted no time talking. From the very beginning he was master of the situation."

Prior to this, however, Dixon had had experience in other orchestral conducting. In 1938 he conducted a thirty-eight piece organization—the League of Music Lovers Chamber Orchestra—at a Town Hall recital and, later, on other occasions. In 1939 he conducted the music for *John Henry* by Roark Bradford and Jacques Wolfe, starring Paul Robeson['41]. In the summer of the following year he conducted the New York City Symphony Orchestra in two concerts. So successful were these concerts that he was cheered by his orchestra as well as by the audience. One critic wrote on this occasion: "A clean, graceful beat, enthusiasm without waste motion, a sense of drama, and, above all, ability to project the emotional content of a work without distortion are Mr. Dixon's virtues."

Dixon received most publicity, however, as leader of the National Youth Administration Orchestra. The group produced an ambitious program: a Beethoven cycle on Friday nights, a series of Sunday afternoon broadcasts, and a group of Saturday morning music appreciation sessions over New York's municipal station WNYC. The Friday night concerts also introduced promising young soloists and new works by young composers. Dixon ably demonstrated his ability to direct and discipline a group of inexperienced, naturally boisterous youngsters. At rehearsals he was patient, never raised his voice, and solved some problems with withering sarcasm. Once, when a player persisted in talking while the other musicians were rehearsing, the young conductor stopped and asked the offender to play his own part from beginning to end alone. Then he said quietly, "All right. Now you can talk while we play." Informal, tolerant, Dixon, "working in his shirt sleeves . . . is one of the boys and can handle them better with his own brand of humor than another conductor could with a display of temper. His authority stems not from a sense of personal power but from his knowledge of the music."

Following his direction of the NBC concerts in June 1941, in August of that year Dixon made his debut as conductor of the New York Philharmonic-Symphony Orchestra at the Lewisohn Stadium. He thereby earned the distinction of being the first of his race and probably the youngest musician ever to conduct that famous organization. His program featured work by Berlioz and Brahms, and a composition by a young Chinese-Hawaiian, Daikeong Lee, a fellow student of Dixon's when they attended the Juilliard School. The huge audience, highly impressed with the young conductor, recalled him many times; and the men of the orchestra again joined with the audience in applauding him. The critics also gave him an enthusiastic reception. He was praised for conducting "with assurance and a splendidly clear beat." "The orchestra," wrote the New York *Times* reviewer, "was under perfect control at all times, and he made it discourse some fine music, for he is a sensitive musician as well as a leader who can communicate his own energy and temperament to his men."

In January 1942 Dixon again conducted the NBC Symphony Orchestra, in the first of two programs in its regular series. He was criticized for his somewhat stiff and slow rendering of Prokofiev's '41 *Classical Symphony*, but applauded for a "razzle-dazzle performance" of Enesco's *Rumanian Rhapsody No. 1.* In May 1942 he led the New York Chamber Orchestra in an engagement at Town Hall. The concert, at which Mrs. Roosevelt was guest of honor, featured the work of four talented young American musicians as soloists. In July of the same year the young conductor again directed the New York Philharmonic at the Lewisohn Stadium, giving the first American performance of the First Symphony by Khatchaturian, a contemporary Russian composer.

J. Abresch

DEAN DIXON

The tall, athletic conductor has found time to add sports—swimming, tennis, and hiking—to his crowded musical life, which includes conducting two amateur mixed choruses and giving music appreciation courses to children and adults in Harlem, in Newark, New Jersey, and in Jamaica, Long Island. These courses comprise the Dean Dixon School of Music, of which he is director. A bachelor, he is particularly interested in teaching music appreciation to little children, and he considers each child who grows fond of good music under his tutelage as "a small triumph." He teaches children by inventing melodramatic stories, substituting musical notes for letters and words. "I try to use as much Superman stuff as possible," he says. Dixon does not write music himself. His favorite composers are Brahms, Beethoven, and Richard Strauss; he is not at all interested in jazz because "it's hard to retain the necessary classical sensitivity and cultivate an enthusiasm for boogie-woogie."

In 1943 Dixon acted as musical director of the Shoestring Opera Company, and as a member of the Music War Council served as one of forty judges of current war songs. He is also working toward his Ph. D. degree at Teachers College, Columbia University. His thesis, on the justification of the editing of classical scores, is, he says, "the result of research and analysis, in connection with a study of the instruments used in the time of the older composers and the instruments used today." Dixon says he wants his Ph. D.—although he will be the only conductor to have earned a doctor's degree—because "a Negro

DIXON, DEAN *Continued*

in these times can't be too well prepared." He has said little about discrimination against Negroes in musical circles, but he does talk about discrimination against women. He is convinced that at Juilliard and elsewhere many capable female musicians have been disbarred from orchestras through "traditional prejudice and nothing else."

DOUGLAS, SIR SHOLTO Dec. 23, 1893- British aviation officer

Address: b. c/o Ministry of War, London, England; h. Bentley Priory, Stanmore, Middlesex, England

Directly responsible to Air Marshal Sir Arthur William Tedder '43, air commander in chief, is modest Air Chief Marshal Sir Sholto Douglas, who is in charge of the Allied Middle East Command. A distinguished flyer in the First World War, and with the R. A. F. since 1920, Douglas rose in the service to become an air chief marshal in December 1940, and a few months later was knighted by King George '42. He is said to be a "solid, athletic man," a "short, powerfully-built bulldog type of soldier, an Oxford University product, and a fighter to the core."

Sir William Sholto Douglas was born on December 23, 1893, the son of Robert Langton Douglas, a professor at Adelaide University and a noted authority on Italian art. Young Douglas went from Tonbridge School to Lincoln College, Oxford where, in 1914, he was studying law. Then, as war with Germany seemed imminent, he volunteered in the University Officers' Training Corps and got a commission in the Royal Field Artillery. At the same time his father joined the armed forces as a staff captain, so father and son went off to war together.

But the son did not remain long in the Field Artillery. As he watched a squadron of aircraftsmen one day, he decided that he wanted to be a flyer. He asked for and received a transfer to the Air Force and soon qualified as an observer. In July 1915 he won his wings and entered the Royal Flying Corps. He was sent to the Western Front; and between September 1917 and Armistice Day 1918 the squadrons he commanded destroyed 201 enemy aircraft and drove down out of control an additional 140. Douglas was mentioned three times in dispatches, and won the Military Cross, the Distinguished Flying Cross, and the Croix de Guerre.

When peace came Douglas returned to England to enter civil aeronautics as a profession. He became chief pilot for the Handley Page Company, and made a three-hour record-smashing flight between London and Brussels in an early four-motored Handley Page plane.

In 1920 he rejoined Britain's Air Forces, now called the Royal Air Force. He served in virtually all branches of the Force, including a period at the Middle East Headquarters. In 1932 he became R. A. F. instructor at the Imperial Defence College, which he had once attended as a student. A year later he married Joan Leslie, the daughter of Colonel H. C. Denny.

Douglas was the third R. A. F. instructor at the college, where he soon distinguished himself as a "thinking strategist." From 1936 to 1938 he was director of staff duties, and he was then appointed the first assistant chief of air staff of the R. A. F. In that capacity he accompanied Chief of Staff Sir Cyril Newall '40 to France with the R. A. F. mission studying rearmament there after Munich. In May 1940 he was advanced to deputy chief of staff, and in November of that year transferred to the Fighter Command. He became an air marshal in December.

During the Battle of Britain it was the role of the Fighter Command to remain on the defensive. Then, when the battle turned in Britain's favor, the fight was carried to the enemy. The newly-appointed, forty-seven-year-old air commander was glad to take the offensive, and he acquitted himself so well that he was knighted by the King. According to a report by Douglas in March 1942: "We've increased the weight of our offensive sweeps until, today, we have achieved a fair degree of daylight supremacy over a considerable area of enemy-occupied territory—at any rate over the northwest corner of France." This supremacy made the possible invasion of Britain increasingly difficult. Douglas further pointed out that one of the principal aims of the offensive was to keep as many German aircraft as possible on the Western Front, thus relieving pressure on Russia. The Luftwaffe had to keep almost thirty per cent of their fighters on the Western Front during 1941—fighters that would have been worth a great deal on the Russian Front.

Under Douglas the Fighter Command also evolved two new methods of attack: first, the high level attack with the top squadron operating at more than 30,000 feet; and second, the low-level attack relying mainly on the element of surprise. In addition to a constant daylight offensive, the Command maintained also a small night offensive. At first night fighting was deficient in technique and equipment, but these faults were steadily overcome. Douglas praised in particular the work of Poles, Czechs, Belgians, Norwegians, Free French, and Americans who were fighting as aviators with their British comrades. "These Allied pilots have done great work," he said. "They have played no small part in helping to transform the Fighter Command from a

British Official Photo
SIR SHOLTO DOUGLAS

defensive organization into a powerful striking force."

It was while heading the Fighter Command that Sir Sholto Douglas became known for his modesty and his dislike of publicity. Once while inspecting a group of college students receiving voluntary air training he congratulated them on their efficiency, but lamented the publicity they had drawn to the R. A. F. by their work. Because of his unassuming manner and his qualities as a dynamic leader, Douglas became one of the most popular officers in the Fighter Command.

With the air offensive well in hand on the home front, the most important field of action for British aircraft was, early in 1943, in the Middle East. When the newly appointed air chief marshal arrived in Cairo to serve under Sir Arthur William Tedder, he found as his No. 1 task the interruption of Axis supply lines to Tunisia. Speaking at his first meeting with war correspondents early in February, Douglas revealed that fast Mosquito intruder aircraft had been sent from England to operate from Malta. "We are going flat out to prevent the enemy from reinforcing and building up his position in North Africa," he said. Allied aircraft under his command constantly attacked shipping in the Sicilian straits and harbors in Tunisia and Sicily by night as well as by day. He commended the work that the night fighters already had been doing in Tunisia. He also praised the American heavy bombardment groups attacking targets in Sicily. The whole direction of offensive fighter operations was a job for which Douglas had been previously well trained in England, and the Tunisian offensive campaign was exactly the kind he liked. But with Allied air superiority definitely established in North Africa, the way was well prepared for the subsequent complete expulsion of the enemy from that territory.

Because of the importance of Turkey in the Allied spring offensive operations of 1943 that followed close on the heels of the North African campaign, Air Chief Marshal and Sir Sholto Douglas went to Ankara late in March for several conferences there with the Turkish General Staff. The next month it was announced that the reorganization of Allied air forces in the Mediterranean had been completed with division into three forces—the Middle East Command, the Northwest African Air Forces, and the Royal Air Force in Malta. Douglas was given the Middle East Command, but remained responsible to Tedder, who as the new air commander in chief was himself subordinate to General Dwight D. Eisenhower '42 for all operations in the Northwest African theatre.

DOUGLAS, SIR WILLIAM SHOLTO *See* Douglas, Sir S.

DOWNES, EDWIN OLIN *See* Downes, O.

DOWNES, OLIN Jan. 27, 1886- Music critic

Address: b. c/o The New York Times, 229 W. 43rd St, New York City; h. 205 W. 57th St, New York City

"The writer can only stand or fall by his perceptions and the strength of his convictions," Olin Downes, the trenchant music critic of the New York *Times* has written, "subjecting them as much as possible to analysis and constant re-examination before he writes. But as he thinks so he must speak. Above all, let him not be guilty of the inverted egotism which makes him overcautious in the estimate of a composition. There have been those who thought deeply: 'What will posterity say of my opinion?' As if posterity were ever going to give a thought to the matter! But Hanslick, he reflects, went down to fame as the crabbed critic who did not understand Wagner. The American Beethoven may be around the corner. He may have bowed this very evening from the stage at Carnegie Hall! For fear of his reputation with 'posterity' this critic will assume the role of yes-man, even with music which is dubious. There is no worse policy or falser humility; no more Judas-like denial of trust, hence failing in his whole duty to his employer and to his public." In his thirty-seven years as a music critic, Downes has endeavored consistently to live up to his own standards of criticism.

Edwin Olin Downes was born in Evanston, Illinois on January 27, 1886. His parents decided early that he was to be a musician, and at the age of eight he embarked on his musical studies. His academic education ended with the elementary school, but he has studied piano, music history, and analysis under Dr. Louis Kelterborn, piano with Carl Baermann, harmony with Homer Norris and Clifford C.

DOWNES, OLIN—*Continued*

Heilman, and harmony and music appreciation with John P. Marshall.

When he was fifteen Downes spent four months in Washington, D. C., burrowing in the scores and musical literature of the Congressional Library. The following year he went to Boston to study, beginning a systematic study of scores with the "greatly respected and esteemed musicologist," Dr. Louis Kelterborn. Paul Kempf relates: "The two played music for four hands, explored together entire periods of the literature of opera, oratorio, chamber music, and argued, often violently, about them. Sometimes the views of the pupil were of an alarmingly youthful and radical nature."

At the age of twenty Downes decided that he wanted to become a music critic. At the time, as Kempf points out, Boston papers did not seem to need any new music critics, for the *Herald* and the *Transcript* had commentators who recorded the efforts of local and visiting musicians "with an erudition and unction eminently acceptable to the intelligentsia of the community." Downes presented "his boyish eager figure" to the *Post,* which had hitherto given little space to music. According to Paul Kempf the audacity of the stripling's proposal so intrigued the publishers that they gave him the position and $6 a week instead of the $4 salary he was willing to accept.

Downes remained with the *Post* for eighteen years. In his early days, it is said, he "played fast and loose with both budding and established reputations, unwilling sacrifices on the altar of his own experience." Downes continued his musical studies and began to read more widely in related fields. Although he had a thorough musical education he had had no writing experience or literary training and for a time he found writing about music "a task of appalling difficulty." Even later, when he had mastered his craft and had risen to the top of his field he was quoted as saying: "How can you find words to describe music? You might as well take a meat-axe and swing at the circumambient ether. Frankly, when one has heard a great work or a great performance, it is with a feeling of complete helplessness that one 'comes to' and tries with a sinking sensation of futility to tell the reader something about it. How can you describe or explore such a marvelous intangibility as a piece of music with a pen or typewriter for weapons of conquest?"

During those eighteen years, too, Downes struggled to support his family. (He was married to the former Marion Amanda Davenport and had three children: Edwin, Nancy, and Dorothy.) He wrote on political and nonmusical topics "when the music season was at low ebb" and appeared occasionally as a concert performer. He also made several trips to Europe during this time.

In 1924, when Richard Aldrich, then music critic of the New York *Times,* was looking about for a successor and trying out numerous distinguished guest critics, "his attention centered upon Olin Downes of Boston as the most likely in a long list of yearning candidates in all parts of the country."

In New York Downes soon established himself as a diligent music critic, eclectic in taste, firm and incisive in judgment, lucid in style. He became well known and liked in metropolitan musical circles and made a reputation for himself as a speaker as well as a writer on musical topics. He gave several series of lectures at the Brooklyn Academy of Music (the *New Yorker* Magazine said he had become "something of a rage" in Brooklyn), and in 1934 he was engaged by Town Hall for a series of lecture recitals with Walter Gieseking, in which the composer and the critic traced the history of piano music from Bach to Debussy. "Mr. Downes, you may be glad to know," the *New Yorker* commented, "is not yet eligible to good standing as a lecturer. He works without smirks, he stays within the bounds of the evening's material, he omits the stock anecdotes about pianists, and when he makes an inadvertent reference to 'the loud pedal' he immediately reproves himself for a vulgarism and adds a few illuminating remarks about pedaling. He is an enthusiast, happy to share with his listeners the results of his musical explorations."

Downes has written in favor of a school of musicology to train music critics. He has advocated government-subsidized music, and he was especially enthusiastic about the WPA music project. He was an early champion of and is now an authority on the music of Sibelius and he was made a Commander of the Order of the White Rose of Finland in recognition of his early appreciation of the Finnish composer. He prefers Sibelius and Strauss to Mahler. He has welcomed the work of Shostakovich '41 as that of a "young lion" and is particularly well disposed toward Russian music.

Downes has lectured on opera at Boston University. In the summer of 1911 he assisted in music courses at Boston University and at Harvard. He has lectured on musical theory, history, and appreciation at Chatauqua, New York, and at the Berkshire Festivals. He was musical director of the 1939 World's Fair, New York City. In 1939, too, he was awarded the honorary degree of Doctor of Music by the Cincinnati Conservatory of Music.

Downes is the author of many articles in a wide variety of magazines, popular and technical. He is the editor of *Songs of Russia,* and the author of *Lure of Music* (1918) and *Symphonic Broadcasts* (1931), published as *Symphonic Masterpieces* in 1935. His magazine articles have appeared under such captions as "Autocrats of the Podium", "Music at Home", "Music of the Movies," and "And after Toscanini, What?" In 1940 *Treasury of American Song* appeared, prepared by Downes in collaboration with Elie Siegmeister. It was hailed as a "shrewd, intelligent study," and the second edition, which appeared in May 1943, was equally well received. William Schuman '42 wrote, "This collection is indispensable for any song-minded gathering of Americans."

The good music critic, Downes holds, must have the following qualifications: he must have been born with ideal mental and temperamental characteristics; he must be able to read music easily and have a wide and detailed acquaintance with scores; he must have a practical knowledge of the technical principles of three or four families of instruments and of the voice; he must have a wide and comprehensive perspective of the history of the art he discusses and he should enlarge by every means and opportunity his knowledge of other arts and of general social and cultural developments; he should know several languages besides his own; and he should be especially conversant with the literature of poetry and of the drama. When he embarks on his work, Downes maintains, it is the critic's duty "to write in such a way that the general public can understand him. This is a difficult thing to accomplish while still employing the specialized terminology of the musician, but it is a thing that must be the subject of constant striving. As a matter of fact, writers on other special subjects, such as baseball or the stock market, express themselves in a jargon that is familiar only to the devotees of that sport or business. The music critic must talk the language of profound musicianship without disregarding the possible consideration of an untutored public which is daily growing in its appetite to know more about the art of sound and its relation to our time."

Downes' musical taste does not run exclusively to the classics. Along with every other critic in New York he waxed enthusiastic over the music in *Oklahoma!* and praised Agnes de Mille's '43 choregraphy for that production. And he has long been an admirer of the late George Gershwin.

Olin Downes is of medium height, with gray hair and firm features. He is reticent about his personal life and not eager for personal publicity. He is a member of the Century Association and of the Coffee House Club. In late 1943 he was in Washington, D. C., working for the Office of Strategic Services.

DUNN, JAMES CLEMENT Dec. 27, 1890- United States diplomat

Address: b. Department of State, Washington, D. C.; h. 27 Observatory Circle, Washington, D. C.

JAMES CLEMENT DUNN

Critics of the State Department often make the claim that a "small reactionary clique" within the Department is responsible for the policies which they deplore—and when names are named, James Clement Dunn's is almost invariably among them. The United States State Department's adviser on European affairs is, they will admit, the very model of a modern diplomat insofar as the social graces are concerned. He is "an inveterate conversationalist, an engaging companion, a retentive reader, a great one for innocent gossip." He is "flawlessly groomed," and has a "gentle voice and demeanor." His "talent for doing everything in good taste" is evident to all. And yet, according to *Fortune*, he is "better known for his diplomatic skill than for his political erudition"; and, in the blunter words of Robert Bendiner, "from a democratic point of view his influence with Hull '40 has not been fortunate."

Born in Newark, New Jersey on December 27, 1890, James Clement Dunn is the son of John Henry and of Mary Emma (Delaney) Dunn. His parents were wealthy, and he was educated privately. He studied law for a time but in 1912 he began practice as an architect, and two years later he married Mary Augusta Armour of the Chicago meat-packing family. In June 1917, after the United States entered the First World War, he applied for a commission in the Navy. He served for two years as a lieutenant and then, resigning his commission in 1919, became assistant United States Naval attaché at Havana.

Diplomacy suited Dunn perfectly. He soon won recognition and promotion by his talents, progressing from Class Four to Class Two in the foreign service. From 1920 to 1922 he served as third secretary of the Embassy in Madrid; from 1922 to 1924 as chargé d'affaires at Port au Prince, Haiti; from 1924 to 1927 as secretary of the Embassy at Brussels, Belgium. In 1927 he returned to the United States to become director of ceremonies at the White House during the Coolidge and, later, the Hoover '43 Administrations, and in 1928 he also became chief of the Division of International Conference and Protocol.

As chief of protocol "Jimmie" Dunn was soon known as the "Capital's social fixer"—the man who was consulted by high officials about what to wear on special occasions, the

DUNN, JAMES CLEMENT—*Continued*

authority who decided who outranked whom, the expert shuffler of place cards. He made "an ideal Ward McAllister to official Washington's Four Hundred." And there were more important duties. As reported in *Outlook* in October 1929: "For weeks before Premier MacDonald's arrival in Washington the short, well-knit figure of James Clement Dunn could be seen gliding through the gloomy corridors of the State Department Building. For weeks, off and on, he conferred with the President and the Secretary of State. . . Essentially, Jimmie's task was to have the proper place ready for the Premier at the proper time." In the 1930's Dunn won something approaching national fame by the decision that Vice-President Curtis' half-sister, Dolly Gann, was entitled to precede Speaker Longworth's wife to the dinner table.

In 1930 Dunn returned to foreign service: after serving as counselor to the Commission for the Study of Haiti, where he had spent two years, he was appointed first secretary to the Embassy in London. He remained in London for only a short time, however. From 1931 to 1933 and again from 1933 to 1935 he held his old post of chief of protocol, at the same time taking on heavy duties abroad. In 1931 he was secretary of the delegation at the fourth Pan-American Commercial Conference. In 1932 he was secretary general of the American delegation at the first stage of the General Disarmament Conference at Geneva, Switzerland. That same year he also served as assistant at the first meeting at Geneva of the experts' preparatory commission for the International Monetary and Economic Conference, and when the Conference took place at London in 1933 he was present as secretary general of the American delegation.

By this time Cordell Hull was Secretary of State, and, with the gift for being on the winning side that was to attract so much attention later, Dunn sided with him in his feud with Raymond Moley at the Economic Conference. He was also Hull's social mentor later that year when he accompanied the Secretary of State to the Seventh International Conference of American States at Montevideo as secretary general of the American delegation. Soon a close, croquet-playing friendship gradually grew up between the two men. In 1934 Hull made the quizzical-faced diplomat his special assistant, and the next year he promoted him to the position of chief of the Division of Western European Affairs.

The Division of Western European Affairs handled American relations with "Austria, Belgium, Canada, Czechoslovakia, the three Scandinavian countries, France, Germany, Great Britain (including everything which Great Britain owns), Hungary, the Irish Free State, Italy, The Netherlands, Portugal, Spain, Switzerland, most of Africa, European possessions in the Far East, the League of Nations, and all disarmament problems thrown in for good measure." The division was called upon to handle extremely important affairs, and, in the words of Hubert Herring, "the position of chief of this department is one of the coveted plums, usually reserved for a deserving foreign officer home for his turn. Its chief deals with the most exciting areas; his social responsibilities take him to the most attractive Embassies." Dunn's indubitable charm and manifold diplomatic graces were not enough to qualify him for this post in the eyes of many observers. Even his warmest friends did not stress his "sagacity," if Herring is to be believed. An entry in the diary of the late William E. Dodd '40, then Ambassador to Germany, is also revealing. Dodd wrote, on May 2, 1935: "Mr. Dunn, chief of our State Department's Division of Western European affairs, amused me a little today by his interpretation of events and attitudes. He is traveling about and making contacts as best he can, not knowing any language but his own."

In 1937 Dunn was appointed to an equally important post by Hull, that of the State Department's political adviser on European affairs (salary, $8,500 a year). It was the time of the Franco '42 revolt in Spain, and Dunn soon found himself one of the main targets for those sympathetic to the Loyalists. According to Max Lerner '42, while the Administration was dawdling with the idea of repealing the embargo on arms to Spain early in 1938, "James C. Dunn alone, among the powers in the department, was holding out. Dunn has always been the chief target of the attacks on State Department 'fascists.'.. His wife, a member of the Armour family and a converted Catholic, had been reported in the press as being openly anti-Loyalist, and Dunn was suspected of sharing her persuasion."

According to a *PM* reporter, writing in 1941: "In retrospect Mr. Dunn seems a little proud that the outcry against the State Department's adamant stand on the Spanish arms embargo centered on him. It was the first time that the public ever had credited him with influence beyond routine matters." In 1941 Dunn was still insisting, too, that the Spanish War had been purely a civil conflict. "I can't see how the Spanish War had any effect on the present European War," he was quoted, although he was also credited with the opinion that a Loyalist victory would have been to the disadvantage of France when the Second World War began.

Dunn was present at many historic departmental conferences during those days before the Second World War, although his contributions to them have not been recorded. On September 24, 1938 he was one of those gathered around Hull's desk to canvass the European situation before Roosevelt '42 made his last-minute appeal for "peace" to the dictators. April 10, 1939 found him in Hull's office while Hull read aloud Roosevelt's personal messages to Hitler '42 and Mussolini '42. Since the War he has been present at many more. Nearly all sources agree that he has been one of the State Department's most active members in attempts to stabilize the Franco regime in Spain. According to Drew Pearson '41 and Robert Allen '41, writing in December 1940, he secured Hull's assent to Ambassador Weddell's proposal for a $100,000,000 credit to Spain payable in American food supplies, principally wheat. Sumner Welles '40 intervened, and induced Roosevelt to veto the project. A month later, however, a deal was announced involving an Argentine loan of the same amount to Spain—made possible by a credit to Argentina through the United States Stabilization Fund.

Dunn's attitude on what American policy in the Second World War should be has been reportedly quite consistent. Before Pearl Harbor he opposed embargoes and export licensing as weapons to halt the Japanese military machine. "It is of the utmost importance to keep the situation in the Far East stabilized," he said, expressing fear that the United States might become involved there while Europe was in such a dangerous state. In December 1941, when Free French ships moved on the islands of St. Pierre and Miquelon, his reaction, like that of the State Department as a whole, was described as "violent." More recently, he was named as a member of the State Department clique which succeeded in getting Hull to clear the travel papers permitting Marcel Peyrouton '43 to proceed to North Africa.

During the summer of 1943 the rift within the State Department between those factions which supported Sumner Welles '40 and the anti-Welles groups came to a climax when Welles resigned as Under-Secretary of State. Dunn's anti-Welles sympathies had long been recognized. When Secretary Hull chose him instead of Welles to accompany him to the Quebec Conference, it was taken as a sign of the State Department's disapproval of Welles' liberal attitude, particularly his stand on American-Soviet relations. Thus Dunn seemed to be a likely successor to the position vacated by Welles. But the President's appointment of Edward R. Stettinius '40 as Under-Secretary settled the matter, and if Dunn suffered any disappointment at not receiving the post himself, he was rewarded when he received one of the choicest diplomatic assignments of the year—an appointment, as political adviser, to the staff which accompanied Secretary Hull to the three-power conference in Moscow. There was some protest at Dunn, "an active leader of the anti-Soviet clique in the Department," being sent on so important a diplomatic mission; but the results of the Moscow Conference—the expression of the complete unity of the United Nations, the agreement on joint post-War action—proved better than even the most optimistic commentators had anticipated.

Whatever critics of the State Department may say about him, good looking, youthful, dark-complexioned James Dunn retains his popularity with Washington's hostesses. And "he and his wife entertain on a more lavish scale than anyone else in the Department. They are particularly attentive to the nobility of the diplomatic corps [one of Dunn's daughters, Marianna, is now the Countess Guy de Baillet-Latour; the other, Cynthia Louisa, is unmarried] and before the War mingled freely with the aristocrats of the Italian and French Embassies." Dunn looks very much as he did fifteen years ago. "His crisp brown hair is parted in the middle and plastered down flat. His trousers are pressed razor-sharp and his generally dapper appearance is closest to what contemptuous Congressmen picture when they refer to the 'spat-wearing career boys of the State Department.'" Dunn is the possessor of the Victory Medal and of the Belgian Order of Leopold II. He is an Episcopalian, and he lists among his clubs the Metropolitan, the Alibi, the Burning Tree, the Chevy Chase (Washington), and the Brook (New York).

Bendiner, R. The Riddle of the State Department 1942
Who's Who in America 1942-43

DURANTY, WALTER May 25, 1884- Journalist; author

Address: b. c/o North American Newspaper Alliance, 247 W. 43rd St, New York City

"There is no American newspaper correspondent," wrote Alvin Adey in *Current History*, "or for that matter any other non-Russian writer on Soviet affairs, who surpasses Walter Duranty in knowledge and understanding of Russia." Moscow correspondent to the New York *Times* for more than twenty years, Walter Duranty has won fame not only from his dispatches to the *Times*, which earned him the Pulitzer Prize, but from his books and short stories, all of which deal principally with the Soviet Union. "That Duranty is pro-Russian in his sympathies is unmistakable," wrote Adey in commenting on Duranty's *The Kremlin and the People* (1941). "But were he not, he would not have that intimate understanding of the country which makes this book one of the greatest value not only in estimating the part played by the Soviet Union in the world politics of recent years, but in explaining many things inside Russia that appear strange and even fantastic to the outside world." Stalin '42 himself said to Duranty: "You have done a good job in your reporting of the U. S. S. R., although you are not a Marxist, because you tried to tell the truth about our country and to understand it and explain it to your readers."

Walter Duranty was born on May 25, 1884 in Liverpool, England. He first became aware of Russia at the age of four when his nurse took him to a fair and they witnessed a magic lantern show entitled *A Russian Ride*, in which a father and mother flung four babies to the wolves pursuing their sleigh before they reached home safely. Duranty received the usual "public-school education," attending Harrow and Bedford, at each of which he carried off classical scholarships. At Emmanuel College, Cambridge, where one of his fellow students was the novelist Hugh Walpole, Duranty majored in Greek and received a degree with first class honors in Classics.

"For seven years after college," according to the *Wilson Bulletin*, "Duranty took what his friend Alexander Woollcott '41 calls a 'fruitful postgraduate course in the humanities' by leading a 'fly-by-night, New York-to-Marseilles, hand-to-mouth existence, financed by

WALTER DURANTY

occasional jobs of pumping Latin into some bird-brain son of the rich, occasional stories sold to Mr. Munsey's *Argosy*, occasional lucky shots at the Derby and the Grand Prix.' In December 1913 he joined the European service of the New York *Times*. His job as 'second man' in the Paris office was to wait up every morning long enough to see the first edition of the *Matin* and also to go on various out-of-town assignments. During the War he was a correspondent on the Western Front, attached to the French Army."

In October 1919 the American Government had just appointed a high commissioner to the Baltic States, Commander Gade, and the *Times* assigned Duranty to accompany him. Although on this trip Duranty did not actually enter Soviet territory, he came into contact with the effects of the Russian Revolution, because Finland and the Baltic States had belonged to Russia previous to the Revolution.

During his travels through Eastern Europe Duranty had trouble getting from Helsingfors to Reval. "There was," he said, "no regular service, but someone told me that the British ran destroyers over every day or two; it was only a three hours' trip. So first I went round to see the British Naval attaché, who was a big potato in Helsingfors at that time. He received me with unexpected warmth and said: 'Why, of course, my dear fellow, any time you want. Let me see, there's one going tomorrow morning early. You'd better take that.' I thanked him, and he sat down to write my permit. Then I made a big mistake. 'Correspondent of the *Times*,' he said, and I was fool enough to reply, 'The New York *Times*. . .' 'The New York *Times*?' he asked. 'I thought you were English.' 'I am English, but I work for the New York *Times*.' 'I thought you worked for THE *Times*,' he said reproachfully. 'I mean this makes all the difference. The *Times* is one thing, but, you know, the Navy is not a ferryboat for American reporters.'" Ultimately Duranty found other means of transportation.

During his Baltic trip the best (or at least the most profitable) story Duranty ever had in his twenty years of newspaper work broke—the capture of a courier of the Third International on his way from Moscow to New York. Duranty said that he knows it was "the biggest break" he ever had, because it was the only occasion on which he received a bonus from the New York *Times*. "Some newspapers or agencies make a practice of bonuses large or small," but the New York *Times*, according to Duranty, "maintains a dignified aloofness. It is sparse with praise and blame and apparently thinks that the salaries it pays and the honor of working for it are sufficient for its employees."

At the beginning of March 1920 Duranty left the Baltic and returned to Paris, taking the place of the chief of the Paris bureau of the New York *Times*. He found the next twelve months dull since he was forced to cover all news from Paris without being able to be on the spot. "So I began pestering New York," he said, "to give me a job in the field somewhere, and finally got from them a promise that if and when Russia opened up I could have the job. Several of us American reporters had tackled Litvinov '41 on the subject at Dorpat in October 1919, but he wouldn't hear of it. He said that the Soviet did not want *bourgeois* reporters, that it had suffered enough already from lies and slander in the capitalist press."

Finally in the summer of 1921 "luck" broke Duranty's way "in the shape of the great Russian famine," and Hoover's Relief Association was called upon to minister to the sufferers. A dozen American correspondents accompanied the A. R. A. to Moscow, and Duranty was included in their number. Duranty hitherto had known little about Russia and had shared the view of many people that "the Bolsheviks were enemies of God and man, and sold to Germany."

Duranty returned to Paris at the end of January 1922, after having spent five months in the Soviet Union. "By this time," he wrote, "certain definite ideas about Russia had begun to form in my mind. When I first went there at the end of August, my only instructions from New York were to report the facts as I saw them, but to avoid quoting statements of Soviet spokesmen or newspapers, unless in the form of direct interviews given to foreign correspondents by commissars or other leaders, 'because we do not want to make the New York *Times* a vehicle for Bolshevik propaganda.'" Later the *Times* relaxed far enough to permit Duranty to quote Soviet newspapers or spokesmen as long as he made it quite clear that his quotations were expressions of opinion.

Duranty stayed in Paris until April 1922, when he was appointed permanent foreign correspondent to Moscow and returned to Russia. "During the next fourteen years," according to the *Wilson Bulletin*, "he covered all the important news stories from Russia and won fame for his interpretations to the Western world of the methods and mental processes of the Soviet Union." He proved not a bad prophet. In 1923, when Lenin's successor was being discussed, he wrote: "During the last year Stalin has shown judgment and analytical power not unworthy of Lenin

. . . Suppose today Stalin outlines a policy that he thinks should be adopted; others criticize it—Stalin answers."

"Duranty began what might be termed his 'literary' career in 1928 by winning the O. Henry Memorial Award with a short story about Russia called "The Parrot," which appeared in *Red Book* Magazine. 'This story,' says Alexander Woollcott, 'was actually written by Duranty's good friend and fellow journalist, Hubert Renfro Knickerbocker '40.' "

Duranty's first book, *The Curious Lottery and Other Tales of Russian Justice*, appeared in 1929. It contained the stories of ten dramatic trials originally printed in the New York *Times*. The *Times* reviewer commented that "Duranty has a flair for starkly realistic writing, for reproducing the scene, for imparting life to the actors. Moreover, he has an abounding appreciation of the humorous." The *New Republic*, on the other hand, called Duranty's style "ready-made" and "threadbare," and "too thin to hold any imaginative insight; and so, although the facts are all facts, and the tales are deft, they leave little impression of reality in the reader's mind."

I Write as I Please, the story of Duranty's journalistic career, followed in 1935 and became a best seller. The *Forum's* critic found the book "weighted with shrewd political analyses, enlivened by humorous anecdotes, and brilliant haphazard commenting . . . an absorbing account—not only of events in Russia but of how a social adventure affected an unusually interesting mind." Another critic considered the book the best about Russia that he had ever read and "a revelation of an amusing though not at all trivial personality." The comments of the other reviewers were equally favorable, with the exception of the London *Times'* critic who wrote: "So far as he describes his own domestic and professional experiences in Soviet Russia the book has undoubted interest, but as an objective guide to facts it is often vague to the point of flippancy. One cannot but discern an obvious indifference to the background of the great events he is reporting. . . None of these are very important points, but they demonstrate that Mr. Duranty's survey is more superficial than, with his opportunities, it should have been."

A novel, *One Life, One Kopeck*, was published in 1937. The *Saturday Review of Literature* called this "a good book, but only pretty good, because it is not what it purports to be, which is a novel. The fact is that Mr. Duranty is too good a reporter to handle fiction." Most of the critics agreed that, except for the author's sympathy with the Russian revolutionaries, the book was developed like a Hollywood scenario—it was "fast, slick, and vivid." One of the reviewers commented that Duranty's hero resembled nothing so much as one of the heroes of Sunday School tracts (except, of course, for his political viewpoint) and that the only character in fiction he (the reviewer) had ever hated more was Elsie Dinsmore.

After *The Gold Train* in 1938, Duranty wrote *The Kremlin and the People*, a work of non-fiction which appeared in 1941. The greater part of this book is devoted to the author's account of the Moscow trials, the Red Army purge, and what lay behind them. Later chapters deal with the Russian attitude toward Munich, the period of "neutrality," and the coming of the German attack on Russia. "This little book," said the *Atlantic Monthly*, "is in the style to which Walter Duranty's readers have long been accustomed—sophisticated, cynical, gossipy, and a trifle rambling, a combination of rather consciously hard-boiled reporting with overtones of an Oxford [Duranty actually attended Cambridge] education."

Duranty's *Search for a Key*, an autobiographical novel, was published in March 1943. The book was well received, although some reviewers pointed out that it was full of irrelevancies, more a collection of essays than a novel. Struthers Burt, writing in the *Saturday Review of Literature*, found fault with only one thing—"Duranty's openly expressed fear and distrust of emotion." The soul-searching protagonist, Oliver Joby, was conceded to be at his best when he discussed informally Russia and the Russian people.

"I am often asked," said Duranty, "what induced me to stay so long in Russia. People abroad have heard so much of the discomforts and difficulties of Soviet life, not to mention its actual danger, that they find it hard to understand why anyone should spend the best part of his life there if he had any choice in the matter. My reply has always been that Moscow is the most interesting place in the world and that as a newspaperman I would not change it for any other assignment. It is interesting politically because there before your eyes is being created something wholly new in human history. Still greater in my opinion is what might be called the natural interest of Russia—its utter difference from anything one has known before and its Alice-in-Wonderland topsy-turviness as compared with the Western world. Except for the direct human qualities of courage, skill, perseverance, integrity, loyalty, and intelligence, all our standards of values seem to be reversed in the U. S. S. R."

"Walter Duranty," according to the New York *Herald Tribune*, "knows his Soviet Russia; for twenty years he has been its most dramatic and cynical reporter." Duranty, however, points out that the gulf between the consciousness of this country—the Western mind—and the Russian consciousness is so wide that it is bold or even impudent for anyone to attempt to bridge it. It has been said that, starting as a non-sympathizer, Duranty later became favorably disposed toward the Soviet regime. When Maxim Litvinov '41 first came to the United States in 1933, Duranty accompanied him. George Seldes '41 in his *Freedom of the Press*, however, denied that Duranty leaned to the side of the Soviets. Seldes quoted Duranty as having said in 1932: "I have been, and still am, as anti-Bolshevik as anyone could wish. This is not unusual since I was with the French, Lettish, and White Russian Armies when they were fighting the Reds in 1920. But when I began covering the news of Soviet Russia, everyone round me seemed so prejudiced about it. I decided to try and be fair. It wasn't any desire to be unusual that led me to this attitude. It seemed to me that the

DURANTY, WALTER *Continued*

Soviet story, as much as any other, deserved to be handled with an open mind. . ."

Duranty's dispatches are marked by "scholarship, profundity, impartiality, and exceptional clarity, and are examples of the best type of foreign correspondence." He won the Pulitzer Prize for reporting in 1932. In his writings Duranty shows, according to various critics, indifference to moral judgments and, sometimes, undue flippancy. The late Heywood Broun once accused Duranty of "writing editorials from Moscow disguised as news dispatches." "I still believe," wrote Duranty in reply, "that interpretation of news is quite different from editorial writing, and that I had no alternative. It is better, no doubt, for a foreign correspondent to stick to the facts as far as he can and allow the interpretation to be provided editorially by his home office, but if the latter lacks sufficient information, as was the case about Russia in the early '20's, it is, I think, the duty of the correspondent to fill the gap where he can." Duranty has a reputation for sending out "factual, fair" stories from the U. S. S. R., in spite of the strict censorship and of sporadic attacks from both conservatives and radicals. George Seldes '41 wrote that he believed we would have nothing but objective and reliable news if all the editors in America chose correspondents of the Duranty caliber.

Duranty has been described as a "'peppery' little man with a limp." In November 1924, while traveling from Paris to Havre, Duranty was in a train accident which cost him his left leg. The French Railways paid him $10,000 compensation. He now has an artificial leg. He became prematurely bald, he says, as a result of the predilection of one managing editor of the *Times* for reprimanding foreign correspondents in terms that singed their hair off. He has, according to Lewis Gannett '41 of the New York *Herald Tribune,* a "strangely charming pip-squeak voice." From his appearance one would never suspect him of the adventurousness, aggressiveness, and persistence under hardship which are really his.

Duranty is unmarried. "His favorite pastime is going places, seeing things, and talking to people." A moody man, according to his friends, Duranty is sometimes sociable and a *bon vivant,* sometimes reserved and uncommunicative. He is a brilliant conversationalist and writes little prose poems in the "e e cummings manner" in order to get rid of his worries. Duranty is a linguist who speaks fluent Russian in addition to more usual languages.

Duranty returned to the United States in 1941, and is now living in Southern California. He is, since June 30, 1941, no longer in the employ of the New York *Times,* but his assignments for North American Newspaper Alliance appear occasionally in columns of the *Times.* In December 1943 he delivered to his publishers the complete manuscript of a new book, *U. S. S. R., The Story of Soviet Russia,* covering the history of the Soviet Union from the Revolution of 1917 through the 1943 Moscow Conference. It was scheduled for publication in March 1944.

DUVIVIER, JULIEN Oct. 8, 1896- Motion-picture director; producer; screen writer

Address: b. c/o Universal Pictures Corp, Universal City, Calif.

After interviewing Julien Duvivier, a reporter came to the conclusion that the famous director "is a Frenchman and an individualist. In French motion-picture studios a director's individualism is his strength and his fortune. In Hollywood, on the other hand, it just may gum things up—at least until the individualist becomes his own producer." With his second film for Universal Pictures Duvivier achieved that enviable status—he was writing, producing, and directing *The Imposter* (February 1944), starring Jean Gabin '41 and telling the story of the Fighting French in North Africa.

Duvivier, who has striven so to place the stamp of his unique individuality on every film he has made, was born in Lille, France on October 8, 1896. After finishing the equivalent of an American high-school course he enrolled at Lille University, but left school when he made up his mind to become an actor. He thereupon went to Paris and enrolled in a dramatic school. When he finished his course he returned to Lille and obtained a job acting in a small provincial theatre there. Then for two years he went through every role in the classical repertory of the National Odeon Theatre of Paris. Soon he gave up all thoughts of acting when he was given the opportunity to become an assistant of the great French stage director, Antoine, founder of the "Free Theatre."

After working with Antoine for several seasons Duvivier's attention turned to motion pictures, an art form which he considered to be at once more vigorous, dynamic, and fruitful as a mode of expression than the stage. Antoine, with whom he discussed the budding art, advised him to try his hand at film making. That was not so easily achieved. Duvivier scurried around from one studio to the other and finally obtained work as an extra.

Duvivier likes to tell of the first film he made in 1919, which landed its sponsor in the insane asylum. In a desperate attempt to crash the cinema gates Duvivier had found an "angel," a wealthy French mustard manufacturer, who wanted a commercial film made. To cut the cost of production Duvivier did all the preliminary work himself, acting as prop boy, scenery builder, call boy, and costuming director. The night before rehearsal he would go around to all the actors' homes and tell them what time to be on stage, just to save messenger fees. When the production was ready to be screened fire broke out and destroyed the scenery. "The sponsor of the film screamed when he heard the news, and continued screaming even after psychiatrists took the necessary steps and locked him away."

This very disturbing introduction to motion-picture making was followed in good time by a typical French film position—that of combination writer-assistant-director-film editor. Later Duvivier became a full-fledged feature director. By the time talking pictures came in in the late '20's Duvivier had written and directed the amazing total of forty-five silent films. French critics bewailed his lack of artistic ambition, however. He had, they maintained, placed his name on commercial productions which were almost totally lacking in art, subtlety, and value.

The critics changed their tune when they saw Duvivier's *David Golder* in 1933. Before that almost the only film of Duvivier's to survive had been one curious item called *A Machine for Re-creating Life* (1924), which included a considerable quantity of old motion pictures and even some scenes from *Caligari*. *David Golder*, made from a well known novel by Irène Némirovsky, was the tragic tale of an old Jewish financier, deserted by family and friends. Bardèche and Brasillach, the French critics, in their *History of the Motion Pictures*, said: "The most important director to emerge during the last few years (1929-35) was Julien Duvivier. He was by no means unknown, but had as a matter of fact made any number of undistinguished pictures which placed him definitely among the commercial directors. Then one fine day he made *David Golder*, not precisely a good film but a clever one." American film critics praised the picture highly, and it enjoyed a long run in the "little art movie houses."

David Golder was followed that same year by Duvivier's excellently received *Poil de Carotte*, also called *The Red Head*. It had been made from Jules Renard's celebrated novel of a half century ago. Filled with childhood's sufferings, despairs, and frustrations, the picture was a sensitive tale of a misunderstood child who lived, said William Troy in *The Nation*, in "the most dreadful household ever represented on the screen." Critics praised the exquisite technique and photography of Duvivier and felt he had been influenced by such widely different masters as Eisenstein and René Clair '41

Then in 1934 came a film which has been continuously revived in the United States and much praised by foreign and American critics—*Maria Chapdelaine*. It was made from the celebrated novel by Louis Hémon. Before its filming Duvivier (noted for his shrewd eye for latent talent) discovered an extra, Jean Gabin by name, and decided to star him in the film. It was the start of a collaboration which was to prove of immeasurable aid to both. *Maria Chapdelaine*, filmed in Canada, won the French cinema's *Grand Prix*, and in the United States was adjudged one of the ten best films of 1935.

Duvivier in listing his films skips over the next few years. Of *La Bandera* (1935) Alistair Cooke, English critic, grew lyrical: "Its positive merits are in the watchful but undallying direction of Julien Duvivier. When the French cinema dies it might do worse than find his name written across its retina. . . Duvivier is sensitive. And he's also a male with a gift of tenderness which he seems to accept in himself as something not to melt over. But if he has one thing more than another it is the practically unique power today of looking generously at beautiful scenery without bursting into sobs." Even in the face of this praise the film did not do very well. *Golgotha* (1935), the story of Christ, was a deviation from the sort of films Duvivier usually made. Religious critics called it a "masterpiece," while one French layman felt it had "marked ability and a most disconcerting lack of faith." *The Golem* (1937), that tale of the semi-human statue who in the early seventeenth century came to the aid of the Jews in Prague, was not as well liked as the earlier German version of the tale ("old Golems are the best Golems," said *Time* Magazine).

JULIEN DUVIVIER

The following two years brought two films, both highly complimented—*Pepe le Moko* (1937) and *Un Carnet de Bal* (1938). In 1935 Duvivier had heard from the Paris police tales of a strange "super-criminal" who had eluded the French police for many years by hiding out in the Casbah, or native quarter of Algiers, where he had not been exactly allergic to the ladies. The next year a serial story appeared on the life of the charming rogue. Duvivier, who had collaborated in the writing of the scenario, wanted Charles Boyer '43 for the role, but Boyer declined, feeling perhaps that Pepe was more rogue than charming. Jean Gabin played the lead, and the film was made in Algiers. When it was released in Paris (a tremendous success) Hollywood began bidding for the remake rights, and MGM bought it. Duvivier was given a one-picture contract to go to Hollywood and direct it, but MGM lost interest and sold the rights to Walter Wanger, who produced it as *Algiers*, with Hedy Lamarr making her debut in it. The American version, too, was a great success. Duvivier's French version was not released in the United States until 1941 and in the words of Bosley Crowther of the New York *Times*

DUVIVIER, JULIEN—*Continued*

"turns out to be an item well worth the waiting, the most distinguished new French film in months and months." Crowther felt that the original was much better than the Hollywood version for its "raw edged, realistic, and utterly frank exposition of a basically evil story. . . The manner in which M. Duvivier directed it for sharp and unadorned reality imbues it with a firmness to be found only in films which call spades by their names."

The other film—*Un Carnet de Bal*—written and directed by Duvivier, tells the tale of a French widow "as she traces over the names on the program of her first ball, nearly twenty years ago, then sets out to check up on these beaux of her yesterday." With the passing years Duvivier must have achieved a violent aversion to the words *Un Carnet de Bal*, for practically every film he has made since has been compared with it—always to the discredit of the later film. In the United States the film was called *Life Dances On*. *Time* Magazine's critic, commenting on the disorganized state of France's motion-picture industry in 1938, felt that the film, which, "satisfying to the last photographic and histrionic detail, richly deserves the prize it won abroad (Mussolini Cup, 1937, Venice Biennial Film Exposition), suggested the advisability of a little more disorganization in Hollywood." "One of the great films of all times," another critic called it, while others said "superb", "unforgettable," and "the finest film ever made in France." *Un Carnet de Bal* became a pattern for Duvivier's later work. Its large roster of stars in episodic short stories held together by one thread, its lack of realism, its sensitive and superb photography, its flamboyant imagination, its nostalgic looking back into the past—all became Duvivier hallmarks.

The director came to Hollywood in late 1937 to fulfill his one-picture contract with MGM. Although he had achieved fame in France, the MGM producers didn't know quite what to do with him, since they had sold *Pepe le Moko*. They let Duvivier assist the late W. S. Van Dyke in directing some scenes for *Marie Antoinette*.

"On my first visit to Hollywood years ago," Duvivier recalled in the spring of 1943, "I was called in to direct a few historical scenes in *Marie Antoinette*. While I was working with part of the cast, the regular director was busy with the rest. One day we happened to meet—he passed through my set on his way somewhere else. One of the actors thought to introduce us. He spoke briefly, I've forgotten what about. But I do know that one thing we never mentioned was the picture we were both directing! Films often come out of Hollywood all in one piece. I've never understood why!"

Finally MGM found a film for Duvivier to direct—*The Great Waltz* (1938), a musical film which told of the rise of Johann Strauss, II, and was supposedly filled with the spirit of old Vienna. Critics were sharply divided about the film. Franz Hoellering '40 in *The Nation* spoke for one camp when he said: "The whole picture is phony, awkwardly written, and with the exception of the woods sequence, as unoriginal as it is crudely directed." John Mosher in the *New Yorker* took the other side when he said: "Julien Duvivier lightly and airily combines his music and his story, and the combination is winning and a pleasure."

The film was evidently not a pleasure to Duvivier, the individualist, for he immediately returned to France, feeling that he had done the best he could, under the circumstances, in taking over a cumbersome script already written. In France he wrote and directed *La Fin du Jour,* called here *The End of a Day,* "to get," as he later put it, "*The Great Waltz* out of my system." Before he left he had the idea for the memorable *The End of a Day,* but when he broached the plan to studio officials the lack of interest, he says, "was profound. 'How could one make a picture just about old people?' the producers asked."

The End of a Day, a tale of a group of men and women in a retired actors' home who relive past triumphs, was praised for its superb direction, its nostalgic quality, its fine photography. *Belle Équipe,* called in the United States *They Were Five* (1938), was the tale of five jobless men who won a lottery and pooled their winnings so they could stay together. It was called "unusual for its warm human qualities, poetic reality" and praised for its "fine direction."

Just before the Germans entered Paris, Duvivier finished a patriotic French film—*The Heart of a Nation*—the last film made in France before the invasion. It was a dramatization of French history through three Teutonic invasions. The film was smuggled over from France and was not shown in New York until the spring of 1943. Most critics called it uneven, although they praised portions of the film. Duvivier himself said frankly that he didn't like the picture and that "it isn't much good."

Duvivier himself, accompanied by his wife and twelve-year-old son, arrived in the United States in the summer of 1940 after a harrowing trip from France. The director declined to regard himself as a refugee at that time and told reporters he had come to this country to make two films in fulfillment of contracts. He hoped, he said, to tailor his productions to the temperament of American audiences, which are different from French audiences. In France, before the invasion, only twelve per cent of the population attended film theatres, and therefore deeper and more essentially human stories were demanded. Duvivier brought with him an idea for a film, which Alexander Korda bought for Merle Oberon '41. It was called *Lydia,* and, not unlike *Un Carnet de Bal,* told of a faded beauty who sought out the suitors of her youth to see what had happened to them. "A mixture of cinematic hits and errors," said one critic of the film.

Miss Oberon was delighted with Duvivier's direction. "He has," she said, "that French charm, that quality they get in their pictures. He has also an extraordinary sense of tempo. His pace is faster than most American pictures. Why, you should have seen him hurrying everyone. He was always saying: 'Let's make it faster, faster!' "

In 1941 Duvivier directed *Tales of Manhattan,* which was called "a Hollywood dream—with five stories and more high-priced acting talent than has ever appeared on one film."

It was again the typical Duvivier story—episodic tales acted by many big stars and held together by a thin thread, in this case a full-dress coat which appeared in each episode. It was called another *Un Carnet de Bal*—but not so successful. By turns "deft, phony, striking, banal, stirring, startling, but never dull," said one critic in summing up the film.

For months the press in 1942 and 1943 had given hints of a strange film which Duvivier and Charles Boyer were co-directing. It was finished in early 1943 and released in the fall. Its title was *Flesh and Fantasy,* and in one part of the story "masks are worn, in another the characters are elements, the elements of nature. The action begins in a ghostly forest, proceeds to the future, and comes back to a circus." When reporters asked Duvivier how the average Abbott and Costello '41 fan would feel about such a picture, he made a little gesture indicating, "So what?" in French. Critical reaction to the picture, which was far from enthusiastic, probably did not trouble him too much.

It tooks eight months to film *Flesh and Fantasy*, an extraordinarily long time even for a "Grade A Super." Duvivier explained that he works slowly and meticulously. "The steps in picture making are everywhere the same," he explained in speaking of the differences in French and American film making. "First there is the idea, then the script. Next there must be financial backing, the casting, and set building. Then comes the direction and acting and finally, of course, the cutting. In France there are a few specialists. Except for acting, I myself have taken the script from my own idea, raised the money, selected the actors, worked on the set with the carpenters, directed, and edited. That way your work really belongs to you. . . In Hollywood there are the same steps, but different people take each one. . . Then the poor director—until he makes his prestige—must direct actors he did not choose in a story he may not like."

Duvivier is one of a small group of ace directors who work differently from the average American director. Famed as a screen writer as well as a director, he collaborates on writing his scripts, and insists that his writers work at his elbow throughout the production. Others who follow this rule are Frank Capra, Alfred Hitchcock '41, William Wyler, and Sam Wood '43

Duvivier explains that his ideal picture is "just the opposite of a stage production. . . He loves to roam around picking up one character after another, and then tracing their actions as they apply to a central theme. This has come to be known as the *If I Had a Million* formula, after the picture which showed what happened to a group of people each of whom was left a fortune by an eccentric." The trouble with Hollywood, according to Duvivier, is that it is still "too worried about romance." What he wishes most to achieve in his films is, as he puts it, "to touch the emotion." He likes laughing in the theatre or at the movies, but is not interested in achieving this result in his own productions. He wants to emphasize "the poetic quality of things." To him "the vilest person has his beauty."

Theodore Strauss says that Duvivier is a "shy, slender man, whose ruddy features are finely drawn." He speaks nervously in "an English that still bears the softly musical intonation of French." He seldom raises his voice above a whisper and demands absolute quiet on the set. "Above the small brown eyes his brows form in Gallic accompaniment to his speech." When Strauss spoke with Duvivier just after his arrival in the United States after the fall of France, the director refused to discuss politics—remarking that he never had been a politician and preferred to avoid controversial issues. "In the lapel of his casually tailored tweed suit he wore the pink ribbon of the Legion of Honor, awarded him by another government in another day." Duvivier has been called "a kaleidoscope of likes and dislikes." He dislikes sports, falls asleep in night clubs, weeps at football games. He likes "animals seen from a distance and poets seen close. He has a horror of crowds, and adores tranquility, the country, peace. He prefers Beethoven to Irving Berlin '42, and Conan Doyle to Schopenhauer."

EDDY, NELSON June 29, 1901- Motion-picture star; concert baritone

Address: b. c/o National Broadcasting Co, 30 Rockefeller Plaza, New York City; h. Brentwood, Calif.

The highest paid singer in the United States, handsome, blond Nelson Eddy, star of stage, screen, and radio, achieved his success, he says, "the hardest way of all," starting at the top with a leading role, and staying there. "I was expected to live up to a success which had not been actually earned, but which had merely happened." Eddy is one of the motion-picture industry's most lucrative assets, for, as one of the Metro-Goldwyn-Mayer executives remarked, "Nelson always has a profitable following. If he makes an extraordinary picture—if we happen to find an unusual story for him—the returns on it, of course, are unusual. But, no matter what he makes, there seems to be a basic return we can always count on." Consistently successful, both in pictures and on the concert

NELSON EDDY

stage, Eddy is probably the best known present-day American baritone.

The success that "merely happened," and is the envy of hundreds of aspiring young singers in this country, had, nonetheless, a musical heritage behind it. Nelson Eddy's grandmother was Caroline Ackerman Kendrick, a distinguished oratorio singer; his grandfather, Isaac N. Eddy, was bass drummer with Reeves' American Band for fifty-five years. Eddy's mother, Isabel (Kendrick) Eddy, was soloist in a church in Providence, Rhode Island, the city in which Nelson was born on June 29, 1901. (Eddy is descended from President Martin Van Buren. "My ancestors," Eddy says, "did not come over on the Mayflower. They missed it by ten years." He is of New England descent on his father's side and Dutch on the side of his mother.) Young Eddy's father, William Darius Eddy, was also a noted choir singer, and he became drum major of the 1st Regimental Band of the Rhode Island National Guard. Young Eddy went to camp with him as a mascot. The boy began to sing as a soprano in a church choir in his home town.

Eddy was educated in the grade schools of New Bedford, Providence, and Pawtucket, "where the salt air of the Atlantic built up powerful lungs." Most of his later education was obtained in evening school and from correspondence courses. When his family moved to Philadelphia in 1915 the future singer's early contacts with the world had little to do with music. He had to earn a living, and first went to work as a telephone operator in an iron foundry which belonged to his uncle. He had hoped to become a drummer in an orchestra, but was unsuccessful. Later he was promoted to the shipping department. After that Eddy became successively a classified ad salesman for the Philadelphia *Press*, a police reporter on the *Public Ledger* and *Bulletin*, and an advertising copywriter for N. W. Ayer and Son. He was fired, however, when it became apparent to his employers that he was more interested in music than in writing advertisements.

Unable to afford a singing teacher at first, Eddy began studying music "on his own," learning operatic arias by playing phonograph records over and over, and then singing with the soloist. From these records he imitated the voices of the great baritones of that day: Ruffo, Scotti, Amato, Campanari, and Werrenrath. Eddy recommends his system of musical self-education to all aspiring young singers in financial straits.

David Bispham was the young singer's first voice teacher. Eddy's initial stage appearance was in January 1922 in a musical play entitled *The Marriage Tax*, given at the Philadelphia Academy of Music. He attracted the interest of Alexander Smallens, conductor of the Philadelphia Civic Opera Company, who signed him as a soloist.

After a good many minor appearances—such appearances, Eddy believes, are most important to a young singer who wants to acquire poise and assurance—his first professional chance came. With about a hundred other young hopefuls he was given an audition for "chorus work." "After my number," said Eddy, "the judges said, 'Very well, you will sing Strephon, the lead in Gilbert and Sullivan's *Iolanthe*.'" That was with the Savoy Opera Company of Philadelphia which had given opportunities to many an aspiring young professional. Eddy sang other Gilbert and Sullivan roles, and moved on to work with the Philadelphia Civic Opera and the Philadelphia Operatic Society.

While singing in *Tannhäuser,* Eddy met Dr. Edouard Lippe, veteran opera singer, who became his coach and has continued to work with him ever since. On the advice of Dr. Lippe, Eddy decided to seek instruction from William V. Vilonat, teacher of many Philadelphia students. Vilonat, however, was on the point of returning to his native Dresden when Eddy applied. The impoverished singer felt himself unable to afford the trip to Europe. Dr. Lippe suggested that Eddy borrow on his future, and Eddy accordingly arranged a loan from a banker friend of the family and followed Vilonat to Dresden. The young man studied with Vilonat for many months in Dresden as well as in Paris. When he was ready to return to the United States he learned that he had been chosen for baritone roles with the Dresden Opera Company. "I don't think Vilonat has ever forgiven me for turning down that chance," Eddy says. "But I wanted to see America again. I wanted to put myself in the hands of the American public, sink or swim." Some years ago Eddy told young singers that the chief benefits of European study (now impossible because of war conditions) were "the learning of tradition and the absorption of atmosphere." "There is, however," he said, "no longer any need to go abroad for vocal training, since our own country now has plenty of fine teachers and excellent conservatories."

In 1924 Nelson Eddy made his debut at the Metropolitan Opera House in the role of Tonio in *Pagliacci*. Many operatic parts followed. Of the thirty-two operatic roles with which Eddy is familiar, he rates the Wagnerian as his favorites. Besides English, he has learned to sing in French, Italian, Spanish, Russian, and Yiddish. During the early '20's he began to win distinction on the radio. He is best known to radio audiences for his appearances years later on the *Chase and Sanborn Hour*, where he both sang and acted. It was not until 1928 that he gave his first concert recital, in Philadelphia. Some of his colleagues from the classified ad department of the *Press*, where he once worked, were there to applaud him.

Concert tours occupied Eddy for the next few years: by 1933 he had sung in nearly every large city in the United States. He still goes on periodic swings around the country, and finds conditions and tastes considerably different today from those which prevailed when he began as a young singer, "hoping for $50 a concert and glad to get $25." (Eddy now generally gets $3,000 to $3,500 for a concert appearance.) In former years concert singers were majestic, formal, singing the usual standardized classical routine with an air of condescension to impress the audience. At present there is much more informality on the concert platform, Eddy says, due largely to the influence of the motion pictures. On the screen you sing intimately, which is not very feasible in a large concert hall. Today, however, he remarks, "we concert singers try to give the impression that we are friends of the audience who have been invited to sing a song or two and are happy to oblige." For a singer like Nelson Eddy who has become well known through the films, there is a new audience facing him on tour. Besides the usual older concertgoers there are a large number of motion-picture fans who have never been to a concert before, and who have come to see the star in person. In Eddy's case, his feminine admirers alone can fill a concert hall. These listeners are often bored by classical numbers and want to hear the lighter, more popular songs. While this new audience of younger people has brought about a change in concert programs, Eddy says that he finds it "intelligent and so thoroughly alive that it reacts to everything."

It was the concert stage that brought Nelson Eddy to the attention of Hollywood. Two years before the filming of *Naughty Marietta* in 1935 (Eddy's first starring picture), a distinguished assembly in Los Angeles was awaiting the commencement of a concert by a noted opera star. The star, however, had suddenly become critically ill, and a substitute was being rushed by plane from San Diego. The substitute was Nelson Eddy, practically unknown on the West Coast at that time. When the tall blond stranger began to sing the audience at once accepted him. "It was a brilliant success, with the baritone responding to no less than fourteen encores and innumerable curtain calls."

The next day motion-picture studios began calling Nelson Eddy. Within a week he had signed a long-term contract with Metro-Goldwyn-Mayer, and had sung his first song on the screen—in Joan Crawford's *Dancing Lady* (1933). He also sang a brief part in *Student Tour* (1934). At this time, however, the trend swung away from musical comedy pictures. Eddy found himself sidetracked. After a talk with Louis B. Mayer '43, however, "I engaged a dramatic coach and began to study the technique of acting on the screen. That same day I discovered how little I really knew, and I've been studying ever since."

Eddy returned to the concert stage, and one year passed before he was called back to Hollywood to co-star with Jeanette MacDonald in the motion-picture version of Victor Herbert's light opera *Naughty Marietta* (1935). The team was a singing "natural," the picture an immediate success. Richard Watts of the New York *Herald Tribune* wrote: "Nelson Eddy has a brilliant baritone voice, he seems thoroughly masculine, he is engaging and good looking, and he gives the appearance of being unaffected. The fact that he still lacks training as an actor is unimportant in the face of these virtues." Other critics were not so enthusiastic.

A year later (1936) the stellar singing team appeared in *Rose Marie*. *Maytime* and *Rosalie* followed in 1937; and in 1938 came *Girl of the Golden West* and *Sweethearts*. Eddy played also in *New Moon* and *Bitter Sweet* (1940) with Miss MacDonald and in *Let Freedom Ring* (1939) without her. All of these pictures received critical approval, sometimes qualified; but Eddy, especially when paired with Miss MacDonald, had built up a following that filled the theatres every time one of his films was shown. In 1941 the popular *Chocolate Soldier* was filmed with Risë Stevens '41 and Eddy co-starring. In this picture Eddy appeared for part of the time as a Russian, sporting a thick beard and eyebrows and a thicker accent. Bosley Crowther of the New York *Times* suggested that, since the disguise enhanced Eddy's appearance, he should retain the beard and bushy eyebrows permanently. His advice was not taken, and in his next picture, *I Married an Angel*, which appeared in 1942, Eddy was his usual clean-shaven self. The critics on the whole were not enthusiastic about the film. It was Eddy's eighth with Jeanette MacDonald and seemed likely to be their last together, since in July of that year Eddy obtained a release from his Metro-Goldwyn-Mayer contract. He felt that it was more advantageous to free lance, in view of offers from other studios, and he was reported negotiating, in 1942, with both Universal and Columbia for single pictures or term deals. In January 1943 he signed a contract for the singing lead in a remake of the thriller, *Phantom of the Opera*. Film critics have generally considered Eddy's singing superior to his acting, which has been criticized as distinguished by "painful pomposity" and "embarrasing lack of ease." But when *Phantom of the Opera* opened (October 1943) his voice received unfavorable notices from two New York reviewers. The New York *Times* critic complained of the "windy Mr. Eddy" and of his "roaring" in singing an operatic number. Howard Barnes stated in the New York *Herald Tribune* that the musical selections were pleasant but "a bit too loud."

The idol of thousands of feminine adorers, the tall, fair-haired singer once had to change his phone number weekly and lock the iron-grilled door before his home. In January 1939, however, Eddy married Ann Franklin, the divorced wife of Sidney Franklin, a Holly-

EDDY, NELSON—*Continued*

wood producer. The bride was three years older than the groom. It was Eddy's first marriage. When the news was released, it is said, the female attendance at his concerts dropped, and his male auditors increased correspondingly.

Mr. and Mrs. Eddy live in a colonial house in Brentwood, California, where the star has a notable collection of ancient pewter and porcelain Tang horses. Slightly over six feet tall, he has blue eyes, white-blond hair, and weighs 180 pounds. It has often been rumored that Eddy is threatened with blindness as a result of the strong Kleig lights of the motion-picture studios, but he denies this. He says he doesn't sleep too well, and that "if I eat so much as a square inch of cake, my waistline suffers." He does not sing in the bathtub. That, he feels, is a time to relax. His hobby is sculpturing—a hobby he kept secret for some time for fear of being mocked by his friends about his first efforts. Now he feels confident enough to claim fellowship with the many Hollywood stars who practice graphic or plastic arts in their leisure moments.

EDWARDS, RALPH L(IVINGSTONE)

June 13, 1913- Radio producer; writer; master of ceremonies

Address: b. Columbia Broadcasting System, 485 Madison Ave, New York City; h. R. F. D. 1, New Canaan, Conn.

"Glib, breezy" master of ceremonies and originator of radio's "dizziest quiz show," *Truth or Consequences,* Ralph Livingstone Edwards, radio's youngest entrepreneur, was born far from the New York City from which his popular program stems. He first saw the light of day on a farm near Merino, Colorado, on an ominous date, Friday, June 13, 1913. Until he was thirteen, he worked on the farm; then his parents, Henry Livingstone and Minnie Mae (Browns) Edwards, moved in 1926 to Oakland, California, where young Edwards spent his boyhood. He attended the Oakland High School, working in his spare time in a drugstore and as a newspaper delivery boy. (He also attended the Merritt Business School in Oakland.)

In 1929, when he was sixteen and a junior in high school, a skit that he wrote (and in which he cast himself prominently) was broadcasted by the school and noted with approbation by the manager of Oakland radio station KROW. That gentleman promptly gave Edwards a job as script writer—for the munificent sum of $1 a script. The youth also worked on the same station as a part-time announcer and actor. Graduating from high school in 1931, he worked his way through the University of California at Berkeley, California, as actor, announcer, producer, writer, sound effects man, and janitor on radio station KTAB, also in Oakland. This varied work gave him, he feels, "an invaluable background in my 'profession.' "

RALPH L. EDWARDS

In 1935 Edwards received his B. A. in English, and set out to fulfill his ambition of becoming an English teacher. That field was, however, more than overcrowded, and the disappointed young man returned to radio. He worked for station KFRC for a time, but, determined to break into "big time" radio, hitchhiked ("I came," he says delicately, "in several cars") to New York. For months he "ate ten-cent meals and slept on park benches." Finally in 1936 he landed some part-time announcing jobs which managed to keep the wolf a short distance from his door until, in 1938, he landed a full-time position with the Columbia Broadcasting Company. By 1939 he was announcing forty-five shows a week, and he declares that "I announced more commercial shows than any other announcer in America." He has acted as announcer for the Fred Allen '41 program *Town Hall Tonight,* the *Lucky Strike Hit Parade,* Major Bowes' '41 *Amateur Hour, Life Can Be Beautiful,* and for Emily Post '41, Phil Baker, and numerous others. On August 19, 1939 he was married to Barbara Jean Sheldon. The couple have one daughter, Christine.

In 1940 Edwards, after suffering various indignities at the hands of his friends in the course of a parlor game called "forfeits," evolved the brilliant idea of inflicting the same tortures upon the nation as a whole. In March 1940 he sold his show, *Truth or Consequences,* to the National Broadcasting Company. The program was an immediate hit, and for the next three years it ranked No. 1 among audience participation radio shows. The basic idea of the program is much like that of any other quiz show. Questions, generally tricky, mailed in by listeners, are asked the contestants who, if they answer them correctly, are given prizes of $15 in war stamps. The unusual part of the program is that most contestants prefer to answer the questions incorrectly, for then, in addition to the $5 "consequence" prize, they are required to do a stunt on the stage as a forfeit. Twenty dollars is given for the best performance. These stunts are entirely unrehearsed and nothing purely visual is prescribed, so that the radio audience can get the benefit of the program.

To date no contestant has refused to perform a consequence except one Dodgers' fan who refused to malign his idols, even though a pair of tickets to the game was offered as a reward. (He got the tickets anyhow for his loyalty.) The success of the show, one newspaperman wrote, was likely "to make sociologists and psychologists shudder. From coast to coast audiences eagerly compete for the privilege of braying, getting down on all fours barking, smearing pies in one another's faces, and similar indecorous activities before the microphone." "Most of the American people," says Edwards, "are darned good sports."

Consequences range from pushing a walnut by the nose to washing an elephant. Two men have been required to crouch in a doghouse, alternately barking and singing *The Curse of an Aching Heart.* A woman has had to eat and drink alternately from a cream puff in one hand and a glass of milk in the other, singing *Here We Go Round the Mulberry Bush* at the same time, and skipping rope through the whole thing. An Eskimo housewife has been imported as material on which a victim had to test his icebox selling talents. One woman, told to sing while contending with an electric reducing belt, lost a tooth in the fray, but refused to accept another from Edwards. "It was fun," she said.

Several of Edwards' consequences have hit the newspapers all over the country. In one instance he ordered a contestant to do something about getting pennies back into circulation, and suggested that the radio audience send her coppers to buy War Bonds for her son in the Marines. The results alarmed even the irrepressible Edwards. For the next four days he had ninety men and women opening mail and counting pennies. There were 300,157 in one week's take. He had, moreover, a letter from the director of the Mint, thanking him for "jarring so many pennies out of pig banks and people's pockets."

The most spectacular stunt, however, was an elaborate practical joke that fooled not only the contestant, but New York's concertgoers. Huge posters announced for a week the coming debut of "the great European violinist Yiffniff." Some newspapers were even taken in by the gag and played it up in their music columns. Unsuspicious, although the tickets were free, 1,500 expectant music lovers assembled in the Town Hall auditorium which Edwards had rented for the night. Meanwhile, back in the studio, a New Jersey housewife, having missed her question, was thrust into a taxi, escorted by special police, and rushed to Town Hall, where a violin was thrust into her shaking hands. She had never even held a violin before. Edwards switched the controls to the concert hall, and the audience heard Milton Cross '40, "leading music announcer," greet the Town Hall audience and present "the great Yiffniff."

The housewife, clad in a polka-dotted print dress, appeared and began to scrape away at her violin. The audience sat in stunned silence for a moment and then broke into laughter. Everyone took the stunt good naturedly. Even music critics admitted that they had been fooled, and printed praise for the two music students who had been provided to console the audience after "Yiffniff's first and last musical effort." "The hearing," wrote Beatrice Schapper in *Liberty* Magazine, "had been a real break for these promising artists, who couldn't afford to promote such attention for themselves."

Out-of-studio broadcasts are often made, although they sometimes cost as much as $4,000. Once, for example, a female contestant was assigned to run a real locomotive engine while singing *She'll Be Coming 'Round the Mountain.* That part of the program was broadcasted from a railroad. The show brings in a $3,000 a week profit, much more when on tour. Although it is a "package" show, which means that Edwards controls the whole show and gets a flat sum out of which he pays all expenses, he occasionally spends more than he gets just to pull off something spectacular. Edwards is the owner, producer, writer, and master of ceremonies of *Truth or Consequences.* He wrote *The Truth or Consequences Party Book*, which appeared in 1940 and was highly successful.

Many times since the show's first appearance on the radio, Edwards has taken *Truth and Consequence* on tour as a vaudeville attraction. In 1942 he appeared in the picture *Seven Days' Leave*; in the spring of 1943 he made a three months' Bond Tour through the Middle West for the Treasury Department; and in January 1944 he was to start on a two months' Bond Tour through the South. While on these trips Edwards gives camp shows whenever possible.

He has prepared special programs for the War Manpower Commission, and he is writing *Truth or Consequences* shows for the War Writers' Board. The Treasury Department has given him four citations for his War Bond work. He has received plaques from radio magazines for his contribution to radio and for "outstanding showmanship in the presentation of governmental messages." In the fall of 1943 the youth of America were tirelessly collecting waste paper, spurred on by Edwards' promise to stage a coast-to-coast broadcast of his program direct from the school turning in the most pounds of paper per pupil.

Edwards is five feet ten inches tall, weighs 160 pounds, and is good-looking, with an "engaging" and ubiquitous smile. He has brown eyes and receding hair that he calls "auburn" and the press "red." A Methodist, he favors politically "anything that furthers democracy." He is fond of "horses in all forms"—he and his brother operate riding "pack-in" stables in the Sierras in California—and he also likes boxing (he was a welter-weight boxer at the University of California), basketball, football, and bowling. He is interested in home motion-picture work and often films the *Truth or Consequences* shows for his own amusement. His

EDWARDS, RALPH L.—*Continued*

wife's opinion of the program is that "it's crazy." "Maybe," says Edwards thoughtfully, "she's right."

EDWARDS, WALDO BERRY *See* Hingson, R. A., Edwards, W. B., and Southworth, J. L.

EGGERTH, MARTA (eg'girt mär'tə) Apr. 17, 1916(?)- Singer; film actress

Address: h. Savoy-Plaza Hotel, Fifth Ave. and 59th St, New York City; 708 N. Rodeo Dr, Beverly Hills, Calif.

Operetta roles with a continental atmosphere are second nature to the feminine star of the current revival of Lehar's *The Merry Widow*, for she has been singing them since she was nine years old. While still new to most American audiences, Marta Eggerth, internationally known Hungarian film actress and singer, is a top-flight star in Europe, England, and South America. Only since the War has she had any real opportunity to establish herself in the United States. With a Broadway musical, two American films, and concert and opera performances behind her, *The Merry Widow* marks her second appearance as co-star in a Broadway show.

Marta Eggerth was born in Budapest, the daughter of Paul and Tilly (Herczegh) Eggerth. Her father, director of the local Reichsbank, and his wife were divorced while Marta was still a child, leaving the girl, as it turned out, to be the sole support of her grandmother and ailing mother. Marta persuaded the family to allow her to enter the Budapest Opera House as a student-actress, with the result that at the age of nine she made her debut as a doll in *The Tales of Hoffman.* The next year she was engaged by the Magyar Szinhaz to chirp a few lines in a play. She became so popular that she was given a three-year contract stipulating that she sing a song in every show.

The manager of the theatre also owned another theatre in Budapest and, being a man with business acumen, he hung on to little Miss Eggerth. At fifteen, with her pigtails pinned up, she was singing ingenue leads at his Fovarosi Operett Szinhaz. She was heard one night by Emmerich Kalman, the famous composer, who hurried backstage to meet her. Without ado he whisked the nervous young singer off to Vienna with him that evening to an audition before the trustees of the Johann Strauss Theatre. They were pleased enough to sign her immediately as understudy to the prima donna.

This arrangement lasted about a week. The star considerately became ill, and her youthful understudy was shoved into the lead. Marta was an instantaneous hit. Despite the star's run-of-the-play contract, the audiences saw to it that Marta sang the role for 160 performances—a long run for a Viennese operetta—while the manager doled out two stars' salaries. It wasn't long before the motion-picture companies became interested in the reigning Viennese light opera star. Miss Eggerth, who until salaries were mentioned had had a vague idea that picture-making was a vulgar art, was soon lured by a breath-taking financial offer into making a film for Richard Eichberg, then the leading producer in Germany. One of her first appearances was in a part opposite the star Hans Albers in a film entitled *Der Draufgänger.*

MARTA EGGERTH

A Gaumont-British scout heard her during a concert tour in England and around 1932 put her into an insignificant film called *Where Is This Lady?* for which she learned her English lines parrot-fashion. Her next picture for that company was written around Schubert's Unfinished Symphony. The film had originally been made by Miss Eggerth in Austria, where it had been such a success that Gaumont-British decided to import her and the cast to England. The remake was well received in England and it also served to introduce her to American audiences in 1935. It had been lavishly produced and boasted the services of the Vienna Philharmonic Orchestra, the Wiener Saengerknaben, and the chorus of the Vienna Staatsoper. *Variety* felt that *Unfinished Symphony* was an extremely artistic picture, as did most of the New York reviewers. Although a few thought her singing left much to be desired, the majority commented admiringly on Miss Eggerth's beauty and the warmth and skill of her acting.

During the '30's Miss Eggerth appeared in numerous musical films, most of them made in Germany for UFA Films. They were gay and melodious, well produced, and gave her plenty of opportunities to sing the operatic arias and the light opera songs for which she was to become extremely popular. She was, in fact, to provide UFA "with one of its most luminous stars." A number of these pictures were also released in the United States: *Kaiserwalzer* (1935, made around 1933); *Csardasfuerstin* (1935); *My Heart Is Calling* (1935, made in 1934); *Hofkonzert* (shown in the United States in 1937, made about 1931); *Casta Diva* (1937, made in Rome about 1934); *The World's in Love* (1937); *The Charm of La Bohème* (1938). *Commonweal* wrote of *Casta Diva's* leading lady: "Europe's highly accomplished motion-picture and operatic star gives a splendid performance." *Variety*, after the American release of this film, called her a Hollywood possibility; the New York *Times* remarked that she was lovely enough in the film to justify the notion that Bellini's song *Casta Diva* had been inspired by the heroine; and other critics commented on her "winsome, capable performance." The New York *Herald Tribune's* reviewer said when her film *Command Performance* was shown in his city: "The film is buoyed considerably by the glorious singing of the beautiful Hungarian actress. . . It is her picture from the beginning." While all the American critics were not always so ecstatic over her voice, there were few who did not remark on her adeptness at light musical comedy, on her beauty, presence, ease, and personality, and on the charm of her singing.

Unfortunately, being importations, these foreign-made pictures were not made available to large American audiences, so Miss Eggerth never became very well known to the average movie-goer. In other countries, however, she was a minor sensation. She made films in Austria, Italy, France, and England, as well as in Germany. *Variety* rated her among the top ten box-office attractions in the world motion-picture market—in Rio de Janeiro, for example, she was No. 1. In Europe and in South America she appeared in operas, operettas, concerts, and on the radio, but she made trips to the United States only as traveling companion to her tenor husband Jan Kiepura '43.

In 1935 Miss Eggerth thought her chance for an American success had come: Universal had signed her to a contract. She went to Hollywood in September, at about the same time that Kiepura went there to make a film for Paramount. While he worked she started a little number entitled *Song of Joy*, which never saw the light of day; and the rest of the time she waited. In February 1936 she was finally forced to leave in disgust to fill European engagements. Of these there were many. For the screen she made numerous pictures. She and Kiepura (whom she had met in Paris on the set of *My Heart Is Calling* and had married on October 31, 1936) also toured in concert and opera performances. Together they made *Charm of La Bohème* just before the Nazis marched into Austria. They were in Warsaw in August 1939, three weeks before the Germans invaded Poland, and they were in France working on another film when the Second World War interrupted production.

When the *Bohème* picture opened at the World Theatre in New York in March 1938 the Kiepuras were present, Kiepura having come to the United States to sing for a season with the Metropolitan Opera Company. Most critics liked the artistry of the picture and, moreover, they still liked Miss Eggerth. One reviewer said that she was "breathtakingly beautiful"; others commented that she was appealing, touching, and sang superbly as the heroine, whose story paralleled the tragic one of Puccini's Mimi. But apparently she still was to remain to Americans the wife of the sensational Jan Kiepura. It was not until the War sent the Kiepuras again to the United States that Marta Eggerth decided that she would do something about her American career.

The "something" turned out to be one of the leads in Dwight Deere Wiman's *Higher and Higher*, with Jack Haley, Shirley Ross, and a seal named Sharkey. From April to June 1940 Miss Eggerth played a scullery-maid-turned-debutante who sang, became tipsy, and was spit at nightly by Sharkey. The show was definitely not one of Wiman's better efforts, nor were Rodgers '40 and Hart '40, who handled the music and lyrics, particularly proud of their work. But of all the parts in the show Miss Eggerth's was probably the most lighthearted. Although she found it different from the roles she had done in Europe, she enjoyed the experiment. Her range, as one critic put it, was "from coloratura to clowning." This coloratura, which was praiseworthy in the heavier songs to which she was accustomed, bothered some reviewers of the light musical, but many remarked that she had "genuine vocal talent" and was an "accomplished light comedienne" and an engaging actress as well. In June she decided to leave the cast to sail with her husband for a concert tour in South America. On her return she signed with the Chicago Civic Opera Company and made her debut on New Year's Eve in *La Bohème* opposite Kiepura, their first professional appearance together in the United States.

After this Hollywood began looking her way again. In August 1941 Metro-Goldwyn-Mayer announced that they had signed her to a long-term contract. Her first two pictures for MGM were *For Me and My Gal* (1942) and *Presenting Lily Mars* (1943). Although she was given only supporting roles in these films which starred the well established Judy Garland '41, she sang several songs "handsomely," and, moreover, she was at last appearing before her first large American audience.

In August 1943, following some concert work, Miss Eggerth and her husband opened on Broadway in the New Opera Company's revival of *The Merry Widow*, which soon became a box-office hit. In it the Kiepuras had "the time of their lives singing the music they love." The critics were not unhappy about the revival either, most of them reacting enthusiastically to the excellence of the production. Of Miss Eggerth herself the chief criticism was that her voice is small and occasionally uneven in quality and that her accent is a hindrance. Otherwise the reviewers were very much pleased with her performance. Said *Catholic World*: "Miss Eggerth is beautiful and gracious and obviously so in love with her Danilo that Sonia's part comes easily to her." Olin Downes '43 wrote: "She has a stage

EGGERTH, MARTA—*Continued*

presence, a personality, a highly artistic style and technical finish, and a voice comparatively small, but under excellent control, fresh, free in emission. . . She makes her success . . . by the most artistic means." Other reviewers remarked that she was "beautiful", "a charming little eyeful" who "sings in the best operatic tradition." *Cue* summed up her performance as "ravishing to see and occasionally ravishing to hear."

"When we arrived here," says Miss Eggerth, "people told us, 'Don't talk about the War. It is far away—it will never touch us.' They though the world was big. But me, I have lived all over the world, and I know it is small. Every day it is smaller.

"In *The Merry Widow* we live in a world not like that. It is a world where there is no trouble. It makes all of us in the company happy, and the audience feels as we do. To give that feeling to people for a few hours—that is something."

Miss Eggerth is slender and small, about five feet two inches tall, or "middle-high," according to her passport. She has dark, almost black, eyes, long red-gold hair, and an engaging, friendly personality. She is an Episcopalian, and she speaks six languages. Unlike the Merry Widow, she enjoys dancing only when it is with her husband. While in New York she and Kiepura live at the Savoy-Plaza Hotel with a very intelligent fox-terrier named Tony, who understands French, Polish, and English. Tony recently received his own portion of the limelight when the Greenwich Village Humane Society awarded him its Certificate of Honor as the outstanding dog of New York.

Miss Eggerth's hobby is interior decorating; and she put it to good use in 1941 when she designed the entire interior of her home in Beverly Hills. In the backyard of this house is a lovely garden which Miss Eggerth admits she misses very much—but, then, she still has a Hollywood contract.

EICHELBERGER, ROBERT L(AWRENCE) (ī'kel-bėr-gėr) Mar. 9, 1886- United States Army officer

Address: b. c/o War Department, Washington, D. C.

One of the youngest men of his rank in the United States Army, Brigadier General Robert L. Eichelberger commands one of the thirty-two triangular infantry divisions formed in 1942. Formerly superintendent of the United States Military Academy at West Point, he was called to active duty shortly after the outbreak of the Second World War.

Robert Lawrence Eichelberger was born in Urbana, Ohio, on March 9, 1886, the son of George Maley and Emma (Ring) Eichelberger. His father, a lawyer, was a descendant of Philip Frederick Eichelberger, who came to America with his family from Heidelberg, Germany, in 1728, and settled in Maryland.

Young Eichelberger studied at Ohio State University from 1903 to 1905, but left when, on June 15, 1905, he was appointed to the United States Military Academy from Ohio. He received his B. S. from the Military Academy in 1909 and was commissioned a 2nd lieutenant of infantry. His first service was with the 10th Infantry at Fort Benjamin Harrison, Indiana, from which in the spring of 1911 he was transferred to San Antonio, Texas. There he remained until the fall of that year. He was then ordered to the Canal Zone for duty at Camp E. S. Otis, where he served until March 1915. Returning to the United States later that month, Eichelberger was assigned to duty with the 22nd Infantry at Fort Porter, New York. He served at that post and also on border patrol duty at Camp Harry J. Jones, Douglas, Arizona, and at Warren, Arizona, until September 1916. During that time he was promoted to the grade of 1st lieutenant.

The outbreak of the First World War found Eichelberger a professor of military science and tactics at Kemper Military School, Boonville, Missouri. Called to active service again, Eichelberger joined the 20th Infantry at Fort Douglas, Utah, with the rank of captain. In the summer of 1917 he was transferred to the 43rd Infantry, with which he served at the last-mentioned post and at Camp Pike, Arkansas, until the winter of the following year. For almost two months he was an instructor at the 3rd Officers' Training Camp, Camp Pike; he was then ordered to duty with the War Department General Staff, serving with the War Plans Division until the summer of 1918, when he was appointed a temporary major and assigned to Camp Fremont, California.

Meanwhile in Europe, Russia, torn by internal war, had signed a peace treaty with Germany in the winter of 1917. Alleging that Germany's peace treaty with the Bolsheviks was merely a means of making Russia and the surrounding countries subservient to Germany, the United States and her ally, Japan, agreed upon a joint intervention in Russia, and a small force of Americans, commanded by the late Major General W. S. Graves, was dispatched into Siberia along with a body of Japanese. The Allied Forces landed in Siberia in July 1918. The next month Eichelberger, having served one month at Camp Fremont, was relieved of his post and ordered to Siberia.

On September 2, 1918 Eichelberger arrived in Siberia, where he served as assistant chief of staff, Operations Division, and chief intelligence officer, A. E. F. In the spring of 1919 he was promoted to lieutenant colonel (temporary). While participating in operations in the Suchan District during June and July 1919, Eichelberger performed many acts of conspicuous bravery. His first feat was the skillful penetration of the Bolsheviks' partisan lines, in the face of personal peril, in order to effect the release of four American soldiers who had been captured. On July 2, 1919, after the capture by American troops of Novitskaya, an American platoon detailed to clear hostile patrols from a commanding ridge was halted by enemy enfilading fire, seriously wounding the members of the patrol. Eichelberger, without regard to his own safety, personally covered the withdrawal of the platoon with a rifle. The next day, according to a release from the War Department, when an American column was fired upon while "debouching from a mountain pass, General Eichelberger voluntarily assisted in establishing the firing line, preventing confusion, and, by his total disregard for his own safety, raised the morale of the American forces to a high pitch." For this extraordinary heroism in action, Eichelberger received the Distinguished Service Cross, as well as the Distinguished Service Medal for rendering "most conspicuous services of inestimable value to the Government in a position of great responsibility." He also received three Japanese decorations: the Imperial Order of Meiji, the Order of the Sacred Treasure, and the Order of the Rising Sun.

The signing of the Armistice did not bring to a close the hostilities in Russia since there had been no official declaration of war; and, consequently, technically no state of war existed. Eichelberger, therefore, remained in Siberia until the spring of 1920.

The reasons for America's intervention in Russia were never made entirely clear. The story, according to George Seldes '41, is that when the Detroit soldiers were fighting the Bolsheviks at Archangel, one of the Russians approached the American lines under a flag of truce and asked: "Comrades, why are you fighting us?" The Americans had no idea and asked their commanding officer—Colonel Seward. The Colonel did not know and telegraphed to Washington, asking "what are we out here in the Arctic fighting for?" "But," wrote Seldes, "the War Department apparently did not know; at least it did not reply. So Hayden cabled to President Wilson, Colonel House, General Bliss, and all the others who were busy at the moment making peace in Paris. But he got no reply." The American soldiers consequently refused to fight. The British military censor, who had suppressed all mention of similar mutinies of the British, French, and White Russian troops, now flashed to the world the news that American troops had mutinied. "The American troops, however, were merely going home because they could not answer Bolshevik propaganda."

After leaving Siberia, Eichelberger, reverting to his permanent rank of captain, sailed for Manila, where he served as assistant chief of staff, Military Intelligence Division, Philippine Department, until October 1920, when he was assigned to special duty for the commanding general in Tientsin, China. While stationed in the Philippines Eichelberger received another promotion—this time to the grade of major, Regular Army.

Eichelberger returned to the United States in the summer of 1921 and was assigned to duty in the Military Intelligence Division, War Department General Staff. During the Limitation of Armaments Conference at Washington, he served as American liaison officer with the Chinese delegation. After the completion of the Conference he remained on duty with the Military Intelligence Division until August 1924. He was then appointed to the Reserve Division, the Adjutant General's Office, Washington, where he served until April of the following year. He was then transferred to Fort Hayes, Ohio, as assistant to the adjutant, 5th Corps Area.

U. S. Army Signal Corps

BRIG. GEN. ROBERT L. EICHELBERGER

Eichelberger next attended the Command and General Staff School, Fort Leavenworth, Kansas, from which he was graduated in June 1926. For the next three years he served as adjutant, personnel adjutant, and instructor at the General Service Schools, Fort Leavenworth, Kansas. He then attended the Army War College, Washington, D. C., from which he was graduated on June 30, 1930. During the next five years he served in the Officers' Division, Adjutant General's Office, Washington, and as adjutant and secretary of the Academic Board, the United States Military Academy. In the summer of 1934 he was promoted to the rank of lieutenant colonel. The following summer he was assigned to duty as a secretary in the War Department at Washington, D. C.

In August 1938 Eichelberger was promoted to the rank of colonel. The following year he assumed command of the 30th Infantry at the Presidio of San Francisco, California.

In the fall of 1940 Eichelberger was made a temporary brigadier general and appointed superintendent of the United States Military Academy at West Point, New York, succeeding Major General Jay L. Benedict. Eichelberger was the thirty-eighth superintendent of West Point, "falling heir to traditions established by General Sylvanus Thayer, 'father of the Academy,' by General Robert E. Lee, superintendent in the 50's, and many officers now forgotten." As superintendent of West Point, Eichelberger was modernizing the curriculum when war broke out. Early in the winter of 1941, however, he was released from his post at the Military Academy and recalled to active duty as the commander of an army division at a location undisclosed at that time. It was subsequently revealed that he was assigned to the 77th Division at Fort Jackson, South Caro-

EICHELBERGER, ROBERT L.—*Cont.*

lina. For outstanding service in organizing and training the 77th Division the War Department awarded him the Legion of Merit in September 1943.

Later in 1942 Eichelberger was promoted to the rank of temporary major general. On June 2, 1942 he was named commanding general of the 11th Army Corps upon its activation. Two weeks later he was assigned to command the 1st Army Corps. In October 1942 he was promoted to the rank of lieutenant general, an indication that he was being placed in charge of an important command, but his assignment was not disclosed. In January 1943, on returning to his general headquarters "from the campaign in the Papua Peninsula, where a Japanese Army of about 15,000 had been virtually destroyed," General Douglas MacArthur '41 awarded the Distinguished Service Cross to Eichelberger, who for the first time was revealed as the commander of the American troops in Papua.

Considered one of the Army's specialists on the Far East, Eichelberger does not underestimate the enemy. In addressing new American officers graduating from a school somewhere in Australia, he said: "The Japanese soldier is a more implacable enemy than either the Germans or the Italians. . . The enemy you are going to meet is one you can count on to fight to the last." During the New Guinea campaign he was always near the Front. In fact, his aide, Major Edwards, was shot trying to stay between him and the Japs. One day, on an inspection trip, "he went down near the beach to a trench overlooking Jap positions in Buna Village. 'I think I see a Jap up in one of those trees. Get me a tommy gun,' he said. Somebody handed him a tommy gun and somebody else said, 'Don't shoot. You'll draw fire.' The General looked scornful. 'This is a hell of a war,' he answered, 'if you can't shoot the enemy. Suppose I do draw fire. Then we'll know where they are.' With that, he sprayed the trees with bullets."

In October 1943 Eichelberger was nominated by the President for promotion to a Regular Army brigadier general. The promotion was postponed because his name appeared on the same promotion list with that of General George S. Patton '43

Besides the decorations he holds from the United States and Japan, General Eichelberger also holds the Abdon Calderon Order from Ecuador. He is a member of the Phi Gamma Delta Fraternity, the Episcopalian Church, and he is a thirty-second degree Mason. On April 3, 1913 he married Emma Gudger of Asheville, North Carolina. The couple have no children.

EVANS, ALICE C(ATHERINE) Jan. 29, 1881- Bacteriologist

Address: b. National Institute of Health, Bethesda, Md; h. 6601 Strathmore St, Chevy Chase, Md.

"During the Crimean War thousands of British soldiers quartered in the Mediterranean area were disabled by Malta fever. In 1886 Major General Sir David Bruce of the British Army Medical Corps discovered the guilty germ. In 1897 Bernhard L. F. Bang, a Danish veterinarian, discovered the germ which caused contagious abortion in cattle. In 1918 Bacteriologist Alice C. Evans of the United States Public Health Service showed that these two germs were closely related." The research of Miss Evans was important because it proved that for practical purposes both germs may be regarded as identical, and that either may cause a painful and dangerous disease in man known as undulant fever.

Since human beings contract this illness by handling infected animals or by drinking unpasteurized milk, Miss Evans urged that milk be pasteurized. For a considerable period of time after her discovery, however, careless dairymen and indifferent doctors neglected to require the pasteurization of milk, a simple expedient which would have prevented much unnecessary suffering. It has been estimated that in October 1929 there were at least 50,000 cases of undulant fever in the United States. Since that time the recognition of Miss Evans' discovery has brought about widespread efforts to control and prevent the disease.

Alice Catherine Evans was born on January 29, 1881 in Neath, in the Welsh farm country of northern Pennsylvania. She is the daughter of William Howell and Anne B. (Evans) Evans. After having attended the Susquehanna Collegiate Institute, Miss Evans entered Cornell University, from which she received her B. S. degree in 1909. The following year she was awarded an M. S. degree from the University of Wisconsin. She afterward continued her graduate studies at George Washington University and at the University of Chicago.

In 1910, directly from school, Miss Evans was employed by the United States Department of Agriculture in the capacity of a dairy bacteriologist. She is described as having been, at the time, "a pleasant-looking girl bacteriologist, anonymous among boy and girl microbe-hunters in the Dairy Division in Washington." She had been assigned to search for microbes in milk from immaculately clean, select cows. "In a state of fundamental hopelessness she plodded, like all girl bacteriologists. She was destined to no famous end. The best she could hope for was to hew wood and carry water (technically) for some microbe hunter whose man's brain was fit to exploit the drudgery of her hands." Her specialized function required her to dig out bacteria. Her study of these germs showed that some of them brought death to rabbits, a fact which caused Miss Evans to think that milk might be safer for consumption after it had been pasteurized.

Around 1917 Miss Evans, who still was a dairy bacteriologist, discovered a Bang bacillus in the milk of select cows. This germ, which produced contagious abortion in cows, had been regarded as harmless to humans. One day, as the eager young scientist was discussing the matter with her chief, the latter casually asked if she had ever compared the Malta fever coccus (Bruce bacillus) with the Bang bacillus. Since no one had ever delved into the matter, Miss Evans had an open field of research before her.

Fired with curiosity and expectation, Miss Evans set to work. Her first step was to send for a culture of Bruce bacilli. She then made her own cultures of Bruce and Bang germs. Of a group of pregnant guinea pigs, half were injected with Bang, or contagious abortion germs, and half were treated with the Bruce, or Malta fever, germs. Within several days both sets of guinea pigs had the same reaction. Further tests convinced Miss Evans that both germs acted in an identical manner.

ALICE C. EVANS

"Sort of vaguely I knew what it meant," said Miss Evans, speaking of her discovery. "I knew most American milk wasn't pasteurized. I'd just proved there was no practical difference between the abortion germ and the Malta fever microbe." But Alice Evans was an unknown laboratory worker who did not have an M. D. or even a Ph. D. to lend weight to her name. Consequently her discovery was ignored by American medical circles. Besides, it was argued, if the microbes were alike and could produce Malta fever in humans, why was there no such illness in the United States? But Malta fever, known as undulant fever in this country, was far more prevalent than even Miss Evans had suspected. In its mild form the disease resembles influenza; severe cases are so similar to typhoid fever, tuberculosis, malaria, or rheumatism that they are often diagnosed incorrectly.

In 1918 Director George W. McCoy of the United States Public Health Service urged Miss Evans to join his staff as an assistant bacteriologist. Her new job, dealing with the study of meningitis, occupied so much time that her private research had to be neglected. But she had no sooner relegated the undulant fever research to the background when reports and letters came from scientists in every part of the world—Holland, Austria, Germany, Italy, Tunisia—confirming her conclusions. America alone remained silent.

Matters came to a head in the United States when an investigator at Cornell University, Dr. Charles M. Carpenter, found Bang microbes in raw milk. These germs, he learned, were fatal to guinea pigs. In Ithaca alone Dr. Carpenter located twenty cases of the supposedly "rare" disease, Malta fever, and with one exception they had all originated from the Bang germs in raw cows' milk. In other words, the same germ which produced contagious abortion in animals caused Malta fever, or undulant fever in human beings. Miss Evans' conclusions were correct. Sub-

EVANS, ALICE C.—*Continued*

sequent experiments have demonstrated that the disease is transmitted to man from cattle, goats, and swine.

Just as Miss Evans began to experience the satisfaction of having her discovery recognized by American scientists, she herself fell victim to undulant fever in 1922, and she was seriously ill for seven years. "It seems as if those bugs had a special animosity toward me, since I made that discovery," she concluded.

As a token of recognition, Miss Evans was elected to the presidency of the American Society of Bacteriologists in 1928. From 1925 until 1931 she was a member of the Committee on Infectious Abortion of the National Research Council and in 1930 she was a delegate to the International Microbiological Congress at Paris. In 1934 she was the recipient of an honorary M. D. from the Women's Medical College of Pennsylvania and in 1936 she was awarded a Sc. D. degree by Wilson College. Many of her scientific papers have appeared in leading research publications, such as *Science*, the *Journal of Bacteriology*, *Public Health Reports*, and the *Journal of Immunology*.

Miss Evans is a modest-looking woman of medium height, with brown eyes and gray hair. No activity seems to be so interesting to her as her work. In 1943 a senior bacteriologist at the National Institute of Health, Dr. Evans is absorbed in studies on hemolytic streptococci.

FAST, HOWARD (MELVIN) Nov. 11, 1914- Author

Address: b. c/o Duell, Sloan and Pearce, Inc, 270 Madison Ave, New York City; h. 35 W. 85th St, New York City

"The current of American history as expressed by the mass of American people is revolutionary," says Howard Fast. "Emerson and Thoreau, who were the great intellects of their time, believed in John Brown and the righteousness of his cause. Today, Hollywood turns out pictures showing John Brown as a fool, a swine, and a murderer. I am going to try a one-man reformation of the historical novel in America." Most critics believe that he has already made a good start with his novels of America's past—one dealing with the drama of Valley Forge, another with the migration of the Cheyennes in 1878 from Oklahoma to Wyoming, a third with the darkest days of the Revolutionary War, a fourth with the life of Thomas Paine. And Joseph Henry Jackson suggests that "in the person of Mr. Howard Fast we have the next really important American historical novelist."

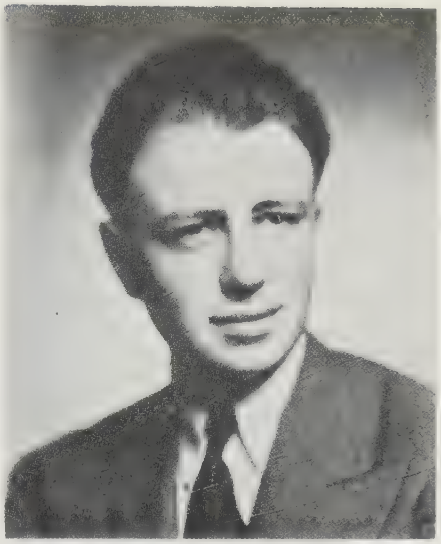
Howard Melvin Fast was born of Jewish parents in New York City on November 11, 1914—"in bed, which is still my favorite vacation spot." His parents, Barney and Ida (Miller) Fast, managed to argue and push him into attending first public school and then George Washington High School. When the time came for college he refused to be pushed, however, and offered his services to the Navy. Ungraciously rejected because of his "extreme youth," he ran away from home, and after working his way South returned to New York without a cent in his jeans. He worked a while at lumbering in the mountains, and then enrolled at a free art school, the National Academy of Design. Although at this time he supported himself by a job at a branch of the New York Public Library, he was already writing (he had finished his first novel at seventeen, and he sold his first story in 1932), and it took him less than two years to decide that he wasn't an artist. He quit the National Academy, and shortly afterward set out to see the United States again.

After working at one job until he had enough money to keep him fed for a while, Fast would quit and travel on to another town. In this way he acquired not entirely enjoyable experience—as a shipping clerk, a laundryman, butcher, tailor, delivery boy, dam-worker. In the course of his travels he made some kind of record as a hitchhiker by riding 900 miles in the same truck; he talked his way out of a Georgia chain gang; he became a first-class pistol shot; and he learned to make a canoe "do everything but talk." It wasn't until about 1936 that he decided to make writing his whole means of livelihood and "never to do any manual labor again, even if he starved." His first real break came, he says, when in March 1937 *Story* Magazine published a novella of his, "The Children." "And then Sam Sloan found him and his . . . novel, *Place in the City* (1937), and life became mutually good for both of them."

Fast's first novel, *Two Valleys*, a tale of the American frontier during the early days of the Revolutionary War, had been published in 1933. Of it the New York *Times'* critic had said: "Mr. Fast is unusually successful in conveying the mood and impression he depicts. He possesses also the knack of creating lifelike characters: his leading figures, in their outlines, have reality and act on their own volition, and the minor figures emerge as distinct individualities. Perhaps most characteristic of the mood of the early frontier America was the feeling of a future full of limitless possibilities. It is this element which Mr. Fast most vividly portrays." His second novel, *Strange Yesterday* (1934), the chronicle of five generations of an American family, had not been well received, however; and neither was *Place in the City*, which told the story of a cross section of life in a New York side street. It was criticized for sentimentality, pretentiousness, and melodrama, although it was agreed that the tale had been "swiftly and glibly" told.

In his next novel Fast again turned to America's past, and far more successfully. "I felt that the Valley Forge story should be written, and I wrote it," he says of *Conceived in Liberty* (1939). "I've been to Valley Forge, wandered all over the place; and it's beautiful beyond belief. In the winter it has a forlorn sort of loneliness, as if it's an island in time. Even in the winter it's beautiful." This fourth novel was the story of the winter of the American Revolutionary Army at Valley Forge, told from the point of view of a private who, after incredible hardships, tries to desert. One critic called it "a familiar dugout story, only this time George Washington is just outside"; another criticized its author for "hectic overwriting"; a third remarked that Fast needed to be "more than half a poet," which he wasn't. But Clifton Fadiman '41 noted that "there is a note of quiet and thoughtful patriotism, rather refreshing after the orotundities of some recent cloak-and-sworders"; and the London *Times Literary Supplement's* review was wholly favorable: "The characters, mostly men, live with hard masculine vigor. The prose, too, is tight and hard. The distress of the experience harshens every page, but the bravery equally inspires, and the latter impression finally prevails."

A remark by Struthers Burt in one of his books next interested Fast in the Dull Knife campaign of 1878 to 1879, when a small group of Cheyennes, with their women and children, determined to make the long trek from Oklahoma back home to Wyoming in spite of the pursuing fury of the United States Army. In 1939 Fast and his wife (the former Betty Cohen, whom he had married in June 1937) went West and went over the route of the tragic migration. They visited the Cheyenne Reservation and the Phillips Collection at the University of Oklahoma; they did research in Oklahoma, Wyoming, Kansas, and Washington, D. C.; they found a few survivors of the migration and got their story.



Pinchot

HOWARD FAST

The result of this research was *The Last Frontier* (1941), which Ralph Thompson called "as far above [Fast's] *Conceived in Liberty* as *Conceived in Liberty* was above his *Place in the City* . . . in some respects so moving and tragic that it might be a legend out of China or the Middle Ages rather than a record of what happened to certain American Indians during the Administration of Rutherford B. Hayes." Joseph Henry Jackson spoke of Fast's book as a "compact, restrained, ruthlessly pruned, and tremendously dramatic novel." And Oliver La Farge commented: ". . . it comes out of the healthy, increasing trend to rewrite the history of our frontier with a new honesty which has tended, first, to be reasonably truthful at last about the Indians on whose dead bodies America was founded, and, more recently, to perceive that the Indians, too, are a part of American society and that our treatment of them was and is a part of our democracy's success or failure. . . But by its unusual angle of presentation as well as the unusual quality of Mr. Fast's writing, it becomes something new, a book to be hailed with joy and read for pure pleasure and excitement."

The Unvanquished appeared the next year. The story of a "time that tried men's souls"—the four months' period in the American Revolution from the disaster in Brooklyn on August 27 to Christmas Night 1776, which found a ragged army of 600 beaten and discouraged men sitting on the edge of the Delaware—had much to say to America in 1942. Fast says, of the characters in *The Unvanquished*: "I wanted them to come alive, feeling that at such a time as this there is need for those half-forgotten men to live

FAST, HOWARD—*Continued*

again and to do their deeds once more and join in the battle of all men of good will against the forces of evil." His portrait of Washington, "the confused, humble, indecisive fox hunter from Virginia" who "developed slowly into the great leader of men," was found particularly remarkable. Altogether, the novel was, in the words of the New York *Times*, greeted as "the finest historical novel about the American Revolution in years, a story about Washington that makes him seem human as well as great, and a brutal, harsh, tensely dramatic account of defeat, desertion, and desperation."

Another novel about a great Revolutionary figure, *Citizen Tom Paine*, was published in the summer of 1943. Critics' reception of this new book was, on the whole, excellent. Although some questioned Fast's accuracy, his portrait of Paine's strange character, projected against "the stormy background of the times in which he lived," was generally felt to be a colorful, impressive contribution to the histories of the American Revolution. "Paine's real biography still remains to be written," wrote one critic. "The virtues of this fictional life story are its timeliness, its inspirational force, its sincerity, and its very great dignity."

Fast's development as a stylist is as evident as his increasing maturity as a novelist. Reviewing *Conceived in Liberty*, Stephen Vincent Benét could write of "the curiously impressionistic quality of his prose, which wanders between the past and present tenses for no discernible good reason and loses itself, now and then, in extremely unrealistic dialogue and description." But *The Last Frontier* was (to Rose Feld, at least) "austerely polished and austerely poetic"; and Clifton Fadiman, reviewing *The Unvanquished*, remarked on Fast's "determination to avoid any lush or fancy writing." According to Alice Dixon Bond, "Howard Fast has a rare and distinguished talent. With a paucity of words, he is able to limn a place, a situation, or a character with such fidelity to life, such subtle and delicate shadings, and such energizing verve that the whole becomes a vital and living thing."

Fast's hobbies are "writing, bridge, getting away from it all, mountain climbing, the American Revolution, talking, fishing, drinking, painting, and eating." The youthful, brown-haired author was rejected by the Army, and was working for the OWI until his resignation in 1943. He is the author of several juveniles, all of them exceptionally well received: *Haym Solomon, Son of Liberty* (1941); *Lord Baden-Powell of the Boy Scouts* (1941); *Romance of a People* (1941), the history of the Jewish people from the days of Abraham to the present; *Picture-book History of the Jews* (1942), done in collaboration with his wife; *Goethals and the Panama Canal* (1942); and *Tall Hunter* (1942), a legendary tale of early days in Kentucky: "how the narrator's grandfather's grandfather came to know Daniel Boone, to go away with him into the wilderness, and to hand down to his son and his son's son a debt, a chore for Johnny Appleseed." In the fall of 1943 Herman Shumlin '41 was reportedly paying him a weekly salary "until such time as he shall come forth with a play, Fast never having worked in this medium."

FERGUSON, HOMER Feb. 25, 1889- United States Senator

Address: b. Senate Office Bldg, Washington, D. C.; h. 110 Maryland Ave, N. E., Washington, D. C.

One of the "freshman" Republican members of the United States Senate is "friendly, mild-mannered" Homer Ferguson, "Detroit's symbol of civic virtue," who in November 1942 took Prentiss M. Brown's '43 Senatorial seat away from him. He shares the opinions of most of his Republican colleagues about the New Deal. "As far as I'm concerned," he said in January 1943, just after taking his oath of office, "the three branches of government definitely should be restored and should remain independent. This delegation of power to bureaucrats is not democratic and it should be stopped. Free people always can do a better job than regimented people."

Homer Ferguson was born in Harrison City, Pennsylvania on February 25, 1889, the son of Samuel and Margarete (Bush) Ferguson. After attending the Irwin High School he mined coal and taught in a country school to pay his way through college. From 1910 to 1911 he attended the University of Pittsburgh, and he then went on to the University of Michigan, where he received his LL. B. in June 1913. That same month he married Myrtle Jones. There is one daughter, Amy Margaret, now Mrs. Charles Robert Beltz.

Admitted to the Michigan Bar the year of his graduation, young Ferguson taught school again and studied medicine and dentistry before finally deciding in 1917 that he wanted to practice law. His first year as a practicing lawyer in Detroit, Michigan he earned only $862, but he has never regretted the decision. His brother joined him in the firm of Ferguson & Ferguson.

In 1929 Homer Ferguson left private practice when he was appointed a circuit judge. He won the "respect of lawyers and colleagues alike" in the performance of his duties, and the next year he was elected to the same office. (He was re-elected in 1935 and again in 1941.) From 1929 to 1937 he also served as professor of law at the Detroit College of Law. National fame did not come until August 1939, however, when a woman "numbers" operator, jilted by her policeman lover, left a suicide note which pointed to something rotten in Detroit's police department. Under a Michigan law, the entire Wayne County Bench promptly appointed Ferguson to sit as a one-man grand jury to investigate gambling, graft, and the link between the underworld and law-enforcing agencies. Later he was appointed to investigate graft in the Detroit Common Council, and then to investigate certain Wayne County offices.

Says Ferguson: "My old Dad used to say, 'Even a blind hog will find an occasional acorn if he just keeps his nose down.'" Ferguson kept his nose very well down indeed. Finding that witnesses talked more freely at night, he worked long past dark during the three years in which he conducted the three one-man grand juries. Altogether he examined 6,000 men and women and heard 20,000,000 words of testimony. The "acorns" repaid him for his efforts. Ferguson exposed the handbook racket, forked up a million-dollar conspiracy among city and county officials, policemen, and gamblers to operate a baseball pool, and swept out gambling dens and bawdy houses which for years had been running wide open in Detroit and Hamtramck, enjoying official cooperation and an annual take of $20,000,000. The county prosecutor and the immediate ex-Mayor of Detroit, both of whom had assured Ferguson that civic virtue reigned supreme, were among those sent to jail, as were many high police officials and underworld characters.

"People say it's no use trying to clean up a city because graft is bound to spring up again," Ferguson says. "Sure it is. That's why you have to keep after it all the time. You might as well say that it's no use to clean your house because it will get dirty again. This is a democracy and we have got to make it work, and the place to start is right at home."

Ferguson had refused to take time out for campaigning in 1941, but had been re-elected to the circuit court by a landslide, and soon there was talk that "The Fact-Finder" might become a candidate in the 1942 Senatorial race. The incumbent, Prentiss M. Brown, was a "much better than average" Senator, however, and according to *Time* Magazine many hoped Ferguson would "hold his terrific fire power for some opponent who really deserves a beating." Ferguson nevertheless became a candidate for the Republican nomination in 1942, running against Gerald L. K. Smith '43, who in the September primaries was rejected by the Republican voters of Michigan by a vote of two to one.

HOMER FERGUSON

That same month, September, the Democratic candidate, Prentiss M. Brown, improved Ferguson's chances of election in a state which is agricultural as well as industrial by helping to stop a bill which would have pushed farm prices up by several billion dollars. From then on the campaign was heated. According to *Time*, in a radio debate between Brown and Ferguson both "got involved in personalities, later wrangled privately about each other's bad sportsmanship. But they could make no real, telling points against each other, and they knew it." Brown warned voters that a Republican would be lost in the Democratic woods; Ferguson retorted that as a bird hunter he knew his way around the woods and would use the Constitution as a compass. (Later his friends sent him a real one.) In November 1942, "while the returns were coming in, Judge Ferguson pulled a pencil from his pocket to make notes. It bore the legend UNITED STATES SENATE; he had picked up Senator Brown's pencil at the radio debate. The pencil was an omen: Judge Ferguson got 576,307 votes; Brown 549,614."

Ferguson is a member of several Senate committees. As a member of the Special Senate Committee Investigating the National Defense Program, known as the Truman '42 Committee, he took part in the questioning of witnesses in March 1943 which revealed the deliberate faking of analyses of the quality and strength of thousands of tons of substandard steel to meet the specifications of war orders at the Irvin plant of the Carnegie-Illinois Corporation, a subsidiary of United States Steel. He also cross-examined John L. Lewis '42 about the alleged beating of two rival union organizers by representatives of his United Mine Workers. That same month, as a member of the Senate Committee on the Judiciary, he opposed reporting to the Senate the McKellar bill, which would have subjected from 25,000 to 30,000 officials and employes of the Government to Senate confirmation, and he also opposed confirming Roose-

FERGUSON, HOMER—*Continued*

velt's '42 nomination to the Circuit Court of Appeals of James V. Allred. He repaid the farm bloc which had helped to elect him by voting for the Bankhead '43 Bill to defer farm workers from the draft, and against the O'Mahoney substitute which would have limited deferment to those helping to raise certain products listed as essential in selective service regulations and in certain quantities to be determined by a definite formula.

Since that time Ferguson has continued to vote against the Administration on most issues. In 1943 he voted to prohibit the National Labor Relations Board from holding elections at a plant where a contract of more than ninety days' duration exists between any group of employes and the management; for the Ruml '43 income-tax collection plan; for the Smith '41-Connally '41 anti-strike bill and for overriding the President's veto of it; against continuing the loan powers of the Farm Security Administration; against the use of Commodity Credit Corporation funds for a rollback of prices; for abolishing the domestic branch of the Office of War Information; against money for the National Resources Planning Board and the National Youth Administration; for incorporation in a post-War policy resolution of a statement of the principles of the Atlantic Charter. Furthermore, he supported Senator Josiah Bailey's fight to block anti-trust prosecution of the fire insurance companies, accusing the Department of Justice of trying to "overrule" the Supreme Court in the matter. In December he jumped into the controversy caused by a War Relocation Authority publication's suggestion to interned Japanese that they had much to teach Ohio and Michigan farmers. Demanding to know what the WRA had in mind by "spreading such propaganda," he announced that the people of Michigan "need no stimulation from the Japanese mode of life." Later that month he was one of the four Senators who voted against a straight eight-cents-an-hour wage increase for 1,100,000 non-operating railway employes.

On the other hand, Ferguson has supported the Administration on more than one issue. He voted against including farm-labor costs in computing parity after the President had vetoed the bill; for the appropriation for crop insurance; for extending the Reciprocal Trade Agreements; against dismissing Watson, Dodd, and Lovett '43. Senator Langer's effort to block further delay on the anti-poll tax bill also received his support, as did Federal soldier vote legislation.

Ferguson remains active in the Truman Committee, and in September 1943 he introduced a resolution calling for the abolition of the cost-plus-fixed-fee system of letting war contracts as a cure for labor hoarding and wastage in industry. In November he was appointed to the Senate subcommittee investigating the scarcity of liquors in consumer markets and other aspects of the liquor situation.

The Republican Senator from Michigan is nearly six feet tall, weighs 200 pounds, and has blue eyes and unruly gray hair. He wears strong glasses, which he didn't realize he needed until three years after college, when he discovered that he had one-tenth normal vision. Always active in civic affairs, he is not only a member of the American, Michigan State, and Detroit Bar Associations, but is a member of the Institute of Pacific Relations and of the Council on Foreign Relations, vice-president of the Economic Club, director of the Boys' Club, and president of the Canadian-American Affiliate of the Foreign Policy Association. His religion is Presbyterian, and his fraternity Sigma Delta Kappa.

FLANNER, JANET Mar. 13, 1892- Author; journalist

Address: b. c/o New Yorker Magazine, 25 W. 43rd St, New York City; h. 212 E. 49th St, New York City

Most readers of the *New Yorker* Magazine agree that the brilliant "news letters" from abroad (1925-39) signed "Genêt," their observations individualized by clarity, precision, wit, and "a style so well-turned that epigrams seem pure condescension," were the work of a journalist par excellence. The same distinguished style was to be noted also in certain of the "profiles" appearing as a *New Yorker* feature, later published in book form: *An American in Paris* (1940). "Genêt" was Janet Flanner, a Quaker girl from Indiana who went abroad and lived there nineteen years, most of them in Paris, becoming the writer she had always wanted to be.

Janet Flanner was born March 13, 1892 in Indianapolis, Indiana, the daughter of William Francis and Mary-Ellen (Hockett) Flanner. Her two sisters are Mary Emma Flanner, the musician and composer, and Hildegarde Flanner, the poet. Of her family Miss Flanner writes us: "My mother, a Quaker from Wayne County, Indiana, had, oddly enough, barnstormed one season as Little Eva in a post-Civil War Tom show; it was the happiest period of her life, which was later cerebral and centered around little theatre productions. My paternal grandmother, Orpha Anette Tyler, was an upstate New Yorker from the Genesee Valley, where her father was a surgeon. She was born shortly after the death of George III, against whom her father and brothers fought, but dressed like a Georgian all her life: lace mobcap, fichu, brooch, purple silk dresses for the street, and an anachronous Victorian black-and-white Paisley shawl over all. My interest in history as a human not a battle record came from my early attention to her extraordinary early American tales, which included driving from New York to North Carolina in a coach, as a child, because her father wanted to hold a conversation with a learned doctor who lived there. She was a fine botanist; after her marriage to my grandfather, an Ohio Quaker, musician, farmer, and intellectual in not very good meeting standing, they collected American flora for their friend Asa Gray, the botanist. She also corresponded with John Muir, of the glaciers. She was a vanished type, even when I knew her as a child."

After preparatory school at Tudor Hall, Indianapolis, "with my family I spent a year in Germany before the last War because my elder sister was studying music there." On her return she entered the University of Chicago in 1912. "Robert M. Lovett '43, English composition teacher, afterward editor on the *New Republic,* now government secretary of the Virgin Islands, was my reason for going there. I worked with him and Robert Herrick. At that time Lovett was the only man in western colleges who actually taught writing, was a true pedagogue, and also a great influence on me. Other men whom I did not know who influenced me were Henry James and Walter Pater. And Kipling." Miss Flanner had two years only at the University: "I was requested to leave Green Hall Dormitory as 'a rebellious influence.'"

Janet Flanner went back to Indianapolis to become probably "the first cinema critic ever invented" (1916-17). The idea was that of Tarkington Baker, cousin of Booth Tarkington, and editor of the Indianapolis *Star.* It is reported that even before this Miss Flanner's unorthodox interests—among them an interest in crime, as later revealed in *An American in Paris*—had resulted in her working for a short while in a girls' model reform school.

"After the War," Miss Flanner writes, "I lived in New York unsuccessfully trying to learn to be the writer I had for twenty-five years already wished to be; by chance I went on a trip to Greece, Crete, Constantinople, and Vienna, which in 1922 wound up by my settling down in Paris where I lived until after the Second World War broke. I wrote a novel that was really a character sketch and not a novel at all: not a good one anyhow, *The Cubical City* (1926). My New York friends had been Alexander Woollcott '41, Neysa McMein '41, and the group which included a returned newspaper soldier named Harold Ross '43. When his wife, Jane Grant, a friend with whom I had helped found the Lucy Stone League, asked me to write a Paris Letter for Ross' new magazine, something called the *New Yorker,* I wrote back asking, 'Is it any good?' None of us now think it was, then.

JANET FLANNER

"Because I was easily intimidated by and distrustful of French officialdom and because, as at first a fortnightly correspondent, I was in no condition to compete with daily cable New York newspapers, in my helplessness I invented for my *New Yorker* "Letters" a formula which dealt not with political news itself, but with the effect public political news had on private lives. The nom de plume of Genêt was given me by Ross without asking me first. . . Owing to Ross' speaking no printable French he did not know that Genêt was the broom-flower, a civet cat, and also a jennet, which is a small Spanish horse, as well as a not very reliable French journalist who after the French Revolution was the first Franco-American gazeteer."

For fourteen years Miss Flanner wrote all the *New Yorker*'s "Paris Letters"; then, in the late '30's, its "London Letters." She began doing also a series of profiles for that magazine. "My first political profile was that of Hitler '42, written in 1935 when I took him more seriously than was then fashionable, as he was still thought to be a joke. I like best my profiles on Hitler, Edith Wharton, Elsa Maxwell '43, and Dr. Thomas Mann '42." *An American in Paris* was composed largely of these profiles with additional pieces. "Each a mosaic of tidbits culled from hundreds of informants, each sleek with refined comedy, these reports are a valuable dossier on the very highest life of the past twenty years. Janet Flanner believes firmly that the international smart set of those years was 'even more important than its members thought, which is saying a great deal.'" Epigrams abound. "Those who love Bullitt '40 think he merits all he has received from life; those who do not love him think he's a trick done with mirrors." Of Elsa Maxwell: "She was built for crowds. She has never come any closer to life than the dinner table." Two aspects of Paris are encompassed in her sketches of famous

FLANNER, JANET—*Continued*

Parisian dressmakers and famous French murderers. The latter include the pathological Papin sisters, who plucked an eye from each victim, while under the bodies "blood had softened the carpet till it was like an elastic red moss."

Returning to the United States in November 1939, Janet Flanner continued writing her profiles and other sketches for the *New Yorker.* She writes slowly and painstakingly, rewriting often and polishing each sketch. She worked for two years on her profile of Thomas Mann. "It took me all one summer to get the material and a winter to digest it." After the fall of France she began writing and speaking on the subject of France because of her knowledge of and deep sympathy for the French people. In memorable articles in the *New Yorker* (signed Janet Flanner) she wrote of conditions in unoccupied France. She remarked on the "bitter civil war of words" that has broken out between the generation of the First World War and the one which let the Germans pass in 1940; on the penitent revival of interest in the Church; most of all on the poverty. "It is a large, uniform panel of deterioration, in which no one is starving, everyone is hungry, and food is an obsession." Children were tubercular; babies weighing three pounds at birth were not uncommon; and adolescents, as a group, were hardest hit by the food shortage.

In February 1941 Miss Flanner made a radio speech in French in a short-wave broadcast to France. "I told them to keep up their courage," she said. "I told them that we Americans loved them now as before, that we loved the French people in their bad days as we did in the good days." She said that in the letters received from France by the BBC, "eighty per cent of the writers take the trouble to say outright they hope England will win." In a radio address for Columbia's Lecture Hall (February 1941) Miss Flanner told the women of America: "There isn't a woman in France today who wouldn't work herself to the bone to earn the rights which every American woman enjoys, yet which so many of them let go to waste."

In an interview just before America's entry into the War she deplored the fact that Americans were behaving "neither imaginatively nor realistically." For one thing, "I am sure that this country teems with paid German agents, and we ought to throw them out. Immediately. Why, when anti-Fascists come here, they do so as best they can, with the greatest inconvenience to themselves, and sometimes are detained for months at Ellis Island. But the Fascists arrive by Clipper and walk right in, unmolested." During 1942 and 1943 Miss Flanner, in articles which have appeared in the *New Yorker* and the *Ladies' Home Journal,* has continued to be concerned with the home front.

Having lived in another country for so long, Miss Flanner says that she has no domestic ties which make it sentimentally unhappy for her to live anywhere. She was married once, but so long ago as to make it "unimportant now." Living in other places does at least help one's understanding, she is convinced. "I understand what refugees who come here are going through. It's not easy."

Everything in Miss Flanner's appearance, such as her preference for strictly tailored clothes, reveals her ordered way of thought. According to her own description, she is of average height, and slim, with "brown eyes, and gray hair since I was thirty. I look rather like an eighteenth century judge off the bench." *Harper's Bazaar* says that "in appearance she is elegant, as worldly and as salty as an eighteenth century abbé, and her talk excels her writing in erudition, crochetiness, and wit." In spite of her sophistication —"outwardly evident in a billowing gray mop of hair and man-about-town monocle"—Miss Flanner is said to have also a certain naïveté. Her friends remember that when *Vanity Fair* asked her for a series on French murders she objected that Americans wouldn't be interested, because French murders were so different from American. "For example," she said, "in France nobody ever kills anyone he doesn't know."

In politics Miss Flanner says she "is a Democrat now: on principle a mugwump." As for hobbies and recreations, her favorites are "conversation and croquet. Pretending I still don't play card games, I now play a rousing game of six-pack bezique. I play bad chess and like it, also the harmonica." Miss Flanner in 1943 was at work on a four-part profile of Marshal Pétain '40 for the *New Yorker,* "which will be a sort of hourglass history of France's Third Republic."

"After the War," she says, "I'm going back to France, find a quiet un-Germanized spot, and stay there long enough to write a book." It is to be a book of modern essays done in the classical manner. "I'm so weary of delving into the psyches of queens and criminals, I want to settle down at the age of fifty (whatever I'll be when the War ends) and discover what I really think about life. You know, Love, Nature, the Republic (of Mr. Roosevelt '42, not Plato), God (in a slightly New York manner)—and that sort of thing."

Flanner, J. An American in Paris 1940

FLANNERY, HARRY W(ILLIAM) Mar. 13, 1900- Radio news analyst

Address: b. Columbia Broadcasting System, 6121 Sunset Blvd, Hollywood, Calif; h. 537 N. Wilcox Ave, Hollywood, Calif.

When it was announced that Harry W. Flannery, William L. Shirer's '41 successor as CBS correspondent in Berlin, was to have *Assignment to Berlin* published in the summer of 1942, the literate American public pricked up its ears and eagerly awaited the birth of another *Berlin Diary* (1941). The publisher encouraged comparisons by printing prominently on the jacket of *Assignment to Berlin:* "This book belongs in your library next to *Berlin Diary.*" Such comparisons are unfair to Flannery's book; he had no intention of doing the sort of book which a war correspondent with years of experience in international capitals would write. Flannery wanted merely to write a personal chronicle. Exactly because of the author's lack of international background at the time of his European assignment, the real interest of *Assignment to Berlin* lies, says Percival R. Knauth, foreign correspondent, in the "picture it presents of the feelings experienced by an average American suddenly thrown from a peaceful existence in the American Midwest into the maelstrom of Nazi Germany." The stay-at-home reader is able to identify himself completely with Harry Flannery in his struggles with the annoying, unheroic problems which beset him—loneliness, strange and uncongenial surroundings, censorship difficulties, inadequate equipment, frozen funds, bad food, and vague fears (chiefly of failing miserably at his job).

It was on March 13, 1900 that Harry William Flannery was born in Greensburg, Pennsylvania, the son of John V. and Catherine (Flynn) Flannery. He considers himself Maryland-bred, however, for it was there that he attended high school and became a reporter for Hagerstown, Maryland newspapers just about the time he was donning long trousers. During his vacations from the University of Notre Dame he continued to chase news for Hagerstown, keeping his hand in during the school year by editing everything in sight. He was editor of the literary weekly, art editor of the humorous monthly, and editor in chief of the annual, but, finding himself still unsatiated, he founded—and edited—the *Notre Dame Daily*. On the side he earned his Ph. B. in journalism *summa cum laude* (1923), twice won the J. Sinnot Myers Burse for excellence in journalism, and acted as secretary to the dean of the Journalism Department.

Journalism was no passing fancy with Harry Flannery, for immediately upon his graduation he wangled a job as special assignments reporter from the Baltimore *Sun* and the next year (1924) he became a reporter for the Chicago City News Bureau and later telegraph editor for the Decatur (Illinois) *Herald*. He did not linger long in Decatur, however, for toward the end of 1924 he was offered the position of secretary to J. P. McEvoy, the playwright, while the latter was preparing a musical comedy for Florenz Ziegfeld. Recalling the illustrious list of McEvoy's ex-secretaries ("an honored institution," including film comedian Charles Butterworth and other now famous names), young Harry accepted with alacrity. By 1926, however, the lure of journalism won again, and he was back doing special assignments, this time for the Albany *Evening News*. Later in 1926 he became interested in the advertising end of the business and spent four years in Fort Wayne, Indiana, finding out more about it. By 1932 Flannery had become editor of the *Hoosier Observer* (Fort Wayne), and it was at this time that he made his first connection with radio, doing a program of news comments several times weekly over a local station, WOWO. Flannery explains: "It was interesting work but I thought it was no more than a sideline then."

HARRY W. FLANNERY

Nevertheless when in 1933 he had to make a choice between newspaper work and radio, he decided on the sideline. His programs had become so successful that the radio management asked him to leave the paper and take charge of all news broadcasts. He attacked his radio work with the same zeal that he had formerly shown in his editing, not only presenting two daily news programs on the air, but also writing dramas, producing them, and even writing and selling commercial programs. Anxious to move upward in radio, Flannery left Fort Wayne to work for Stations WJJD-WIND (Gary and Chicago), where he broadcasted what he called "the worst football broadcast ever made." Forsaking sports after this and beginning to concentrate on news, on January 1, 1935 he joined the staff of the Columbia Broadcasting System station KMOX in St. Louis as news editor and analyst, immediately starting a daily early morning news program which greatly increased his popularity. During his five years on KMOX he gained local fame through his campaign against the smoke evil in St. Louis. "The people of the city had ... gone to work in the morning through a smoke fog that oftentimes made driving hazardous, coughed because of the heavy smoke, and suffered more than their share of colds and sore throats. Flannery's vigorous campaign brought action."

When the great flood of the Ohio and Mississippi Rivers occurred in February 1937 Flannery was given an opportunity to broadcast eyewitness accounts for the Columbia network, making some thirty broadcasts from the KMOX field headquarters in Charleston, Missouri. On July 5, 1937 Flannery was married to Ruth Carmody, an event of no little importance in his life, as witnessed by the innumerable times he refers to her and to his daughter Patricia Ann (four years old in 1943) in *Assignment to Berlin*. In the midst of meager meals, banned broadcasts, FLANNERY, HARRY W.—*Continued*

and bombings his thoughts seemed always at home with Ruth, and when he was suddenly cut off the air, as sometimes happened, his first concern was to worry over whether Ruth would worry. As one of the critics pointed out, he is a family man, and his book "may actually set a record, even among foreign correspondents' books, for the detailed reports it gives on the author's family. Thus we hear not only about Flannery's wife, his daughter, and a character referred to as 'Cookie,' whose identity is not clear to the reviewer, but also about the author's mother, a sister, and a nephew, too." ("Cookie," explains Flannery, is his mother-in-law. Because of a proofreading error this information was omitted from the first editions of the book.)

In October 1940 Harry Flannery was chosen by CBS to take William Shirer's place in Berlin. Flannery himself illuminates some of the reasons for the choice: "Even before I left the United States the Nazis knew all about me. They had made a complete investigation before they granted me an entrance visa. . . Doubtless the Nazis had found me the type of correspondent they wanted. I was one of those people who were known as 'open-minded,' who did not believe that Nazi Germany was necessarily a threat to the United States, who believed it was at least possible that we might do business with Hitler '42. Now that I look back, I suppose I might even have been considered an isolationist. . ." Apparently Berlin wanted no more worldly-wise correspondents like William Shirer, but sought inexperienced and, if possible, naïve and guileless reporters who might be "properly treated" and unconsciously made instruments of Nazi propaganda.

Flannery details in *Assignment to Berlin* the many small privileges accorded him as a new correspondent, the invitations to visit concentration camps and "see for himself," the wining and dining, the good stories, the trips to the Channel coast, to France, and to Crete, the exclusive interviews with German airmen, the vacation in the winter paradise of the Berchtesgaden—all of which, according to Percival R. Knauth, who knew Flannery in Berlin, "newsmen better versed in the ways of Berlin had long since come to accept as bribes. . . It is to Mr. Flannery's credit that fresh from America though he was, he saw through the plan and kept his head (which not all newcomers did)." By the time Flannery returned to the United States in October 1941, he was "shocked" to find that "some of the people were repeating the very thoughts I had before I went to Nazi Germany and saw that country at first hand. . . Few seemed to realize that Nazi Germany was coiled to strike its fangs into us—a nation grown fat, proud, and soft."

Flannery's *Assignment to Berlin* became a best seller. Fanny Butcher, writing in the Chicago *Tribune*, calls it "extremely interesting," and "a more informal, more personal record than Mr. Shirer's, more concerned with the methods than with the origin of Nazi bureaucracy." Sterling North '43 in the New York *Post* calls it "a worthy sequel to Shirer's *Berlin Diary*." Most critics, while declaring that the material was not new, still commend the scope of the book, but Orville Prescott in the New York *Times* disagrees with them, saying: "The brutal truth is that, in spite of Mr. Flannery's merits as a good observer and a sound journalist, his book is far less important factually and far less good reading than its popular predecessor." He softened the blow by admitting that "much of this is not his fault. Perhaps it is the law of diminishing returns finally catching up with the long procession of correspondents' books about Germany and making it increasingly difficult for them to say anything significant about that unhappy land that has not been said unaccountable times before."

After the usual difficulties encountered by correspondents attempting to leave Nazi embrace shortly before the outbreak of war with the United States, Flannery was able to return to America and since that time he has been engaged in delivering lectures and writing an occasional magazine article on his experiences. He has been of help to the FBI in investigations of those Americans who had gone to Germany and who had remained to extol Nazism. Since 1942 he has been CBS news analyst for the West Coast, broadcasting daily from Hollywood. In addition he conducts a *Question of the Week* broadcast with commentator John B. Hughes and Wallace Sterling of the California Institute of Technology. These tasks do not keep the energetic reporter busy enough, so that he also makes a weekly OWI news broadcast to Australia, has written a war play, *Upon These Ashes*, with Elmer Harris, which in the fall of 1943 is being considered for production in New York, and recently acted as technical advisor to Twentieth Century-Fox for the filming of Howard K. Smith's '43 *Last Train from Berlin.* Described as five feet nine inches tall and weighing 170 pounds, Flannery is affable, sun tanned, with regular features and rimless glasses, giving the effect of a rather modest and unassuming college professor. (As a graduate student he taught English at his Alma Mater for a year.) Unlike many radio personalities he has no affected manner of speech, and has even retained his Midwestern accent. He is a devout Catholic and an "independent Democrat," likes to smoke a pipe, and spends his spare time doing "poor but enthusiastic swimming" and taking motion pictures. In December 1943, in reply to a question about what should be done with Germany after the War, he was quoted:

"I do not believe we can institute a new form of Nazism, or rather anti-Nazism, that controls and censors the press, demands textbooks perverted as completely, according to our ideas, as the Nazis had distorted them to their ends. The press should be free. The schoolbooks and courses must, so far as possible, seek to tell truth. Teachers should be selected not because they are anti-Nazi, but because they have proven themselves fair and unbiased, the kind—so far as possible—that incite a zeal to know the truth."

Flannery, H. W. Assignment to Berlin 1942

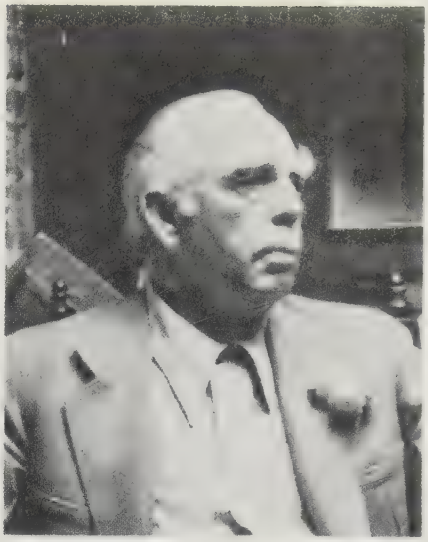
FLAVIN, MARTIN (ARCHER) (flā'vin) Nov. 2, 1883- Playwright; scenarist; novelist
Address: h. State Highway No. 1, Carmel, Calif.

"It takes living to have something to say," said Martin Flavin on his sixtieth birthday. Flavin speaks not only from the wisdom of his years but also from the experience gained through three full-fledged careers. He has been successively and successfully businessman, playwright, and novelist. At forty his first Broadway play was acclaimed by the press as an artistic success. (It was written during his spare hours as vice-president of a wallpaper company.) At fifty-seven his first novel was published; at sixty his third novel, *Journey in the Dark*, was selected as the winner of the Harper Prize Novel Contest for 1943.

Martin Flavin's roots are deep in the American soil and in the state of California. He was born in San Francisco on November 2, 1883; his mother, Louise (Archer) Flavin, was born in San Jose, where she still lives. His grandfather, a distinguished citizen and jurist, came to California from his native state of South Carolina, "via the University of Virginia, in a covered wagon in 1850." And to add piquancy to the American strain, his father, Martin J. Flavin, was of Irish parentage, though born in New York City. "My parents," Flavin writes, "were liberal-minded people who took me to the theatre before I learned to walk. *Romeo and Juliet* made an indelible impression upon me at the age of four. In short, the theatre was the passion of my childhood."

Martin Flavin's father died while the son was still a child, and shortly afterward his mother remarried. He grew up in Chicago, attending the public schools there. At the age of twelve he wrote plays which he produced with a group of girls and boys in the basement of his home. While attending the University of Chicago, his interest in the theatre continued. Identified with all college theatrical activities, his chief interest, however, was in comic opera. When his college career was interrupted he tried "his hand at writing short stories, supplementing the irregular rewards with a night job on the Chicago *Tribune*." In a year or so he had succeeded in establishing a market "for a certain type of story." Not satisfied with the short story as a medium and concluding he was not mature enough "to write the things he wanted to write," he entered a manufacturing business in the Middle West (1906) with the reservation that at some time he would return to creative writing.

"For twelve years I didn't write a line," says Flavin. "It was not until 1918 that I was able to divorce myself from business to spend part of my time in writing." He had achieved success in business—president of one company, vice-president of another, both leaders in their industry. For several years he managed to combine both occupations. During this time (1921) he wrote *Casualties*, a one-act play, published with his other short plays. They are: *Brains, Casualties, An Emergency Case, A Question of Principle, The Blindman,* and *Caleb Stone's Death Watch.* A reviewer describes them as "grim, somber, pleasantly skeptical in idea." *A Question of Principle*, however, showed that Flavin "could smile," and *Brains* disclosed his ability to make a melodrama "artistic."



MARTIN FLAVIN

In 1923 he had his first production on Broadway. *Children of the Moon*, a serious and mordant play, which ran for more than one hundred performances, and it "has remained deeply engraved on the minds of theatre-goers as a work of considerable distinction," a gripping study of maternal tyranny and inherited insanity. Another reviewer said the intensity of its mood and the suave skill Flavin displayed in its writing had earned him the title of "the American Ibsen." In the cast were Henrietta Crosman, Beatrice Terry, and Whitford Kane.

In 1924 his one-act play, *Caleb Stone's Death Watch*, played a Little Theatre tournament in Jersey City and for many years it has continued to be popular in the tributary theatre. Although dealing with death and the hereafter, "its salient observations on human frailties give it satirical humor." *Lady of the Rose,* his second long play on Broadway (1925), was not so clever as *Children of the Moon,* but there was "more life in it." New York audiences and critics failed to like the play and it closed after sixteen performances. After its failure Flavin turned to sophisticated farce. *Service for Two* (1926) was a "slick job, entertaining, neat, and utterly gay," but again Flavin failed to win the critics and the public. In the same year *Brains* was produced by the Vagabond Players of Manhattan as part of a Little Theatre tournament. *The Road to the City* was never publicly acted, but "had a note of passion in it" which appealed to the reviewer Barrett H. Clark.

In 1926 Flavin retired from business to devote his entire time to writing. On a rocky point in the Pacific Ocean, a few miles south of Carmel, California, he built Spindrift, which has been his home ever since. It is a picturesque location—the sea can be seen from three sides of the stone house. Three years

FLAVIN, MARTIN *Continued*

later (1929) Flavin became the "big theatrical news of the season." He had three plays on Broadway at once: *The Criminal Code, Broken Dishes,* and *Cross Roads;* among themselves they presented abrupt and striking contrasts. *The Criminal Code* (awarded the New York Theatre Club Medal for the best play of the season, considered as a Pulitzer Prize winner, and listed by Burns Mantle as one of the ten best plays of the season 1929 to 1930) ran for almost two hundred performances. A visit to San Quentin Prison inspired the plot. The law exacts its toll from a boy when he is sentenced to a ten-year term for manslaughter. The criminal code, no less severe, demands that he refuse to betray a criminal who has committed a murder in the prison; because of this the boy is so tortured by solitary confinement in the underground dungeons that he is at last driven to committing murder himself, without realizing that on that very day the warden had obtained his parole.

Written in a prologue and twelve scenes, with a curtain of a gray prison wall to sustain the mood between the acts, the play was praised unanimously. Brooks Atkinson '42 (New York *Times*) said: "You are quite swept off your feet by the forces it sets in motion." The late John Anderson compared it to Galsworthy's *Justice*, which in his opinion is a sterner and more ironical study of "men and prisons, but somehow less compassionate than the searing woe and dumb faithfulness" of Flavin's *Criminal Code.* "Flavin tells the story effectively," said John Mason Brown '42, "in terms of simple and direct speech and scenes that mount one above the other with a lacerating intensity."

In the same season came *Broken Dishes*, a "delicious and generally side-splitting comedy," which earned for Flavin the tribute, "our most versatile author." *Commonweal* regretted that it was "another play about a henpecked husband in a house of women," but went on to say: "It doesn't make a bit of difference if the plot is as old as Nineveh, or the characters as familiar as the morning ash-can dumper . . . the point is that Mr. Flavin has rewritten all the old stuff so well, deepened the etching of characters so acutely, and maintained his suspense so delightfully that the whole affair is as fresh as the morning dew." Donald Meek and Bette Davis '41 were in the cast.

In his third play of the season, *Cross Roads,* Flavin dealt with the difficulties of the young student who cannot afford to marry while acquiring a higher education. *The Nation* thought he showed skill in handling with dignity a "gaudy theme." But considered "purely as the foundation for a dramatic work of art, it has the defect of most stories invented for the purpose of asking a social question. The incidents, the characters, in fact everything about it is obviously typical. Despite the competence of the dialogue, one never has the feeling that here is a moving tale, significant because it has its roots in contemporary life, but only that here is a synthetic story concocted for the purpose of expounding one of the problems of that life. Important, for it is the distinction between the kind of vital realistic drama which can achieve a first-rate artistic importance and the mere 'problem' play which has always been one of the stepchildren of the stage."

Following the Broadway production of his three plays, Flavin in 1930 had another play published, *Spindrift*—its scene, and perhaps its characters, taken from his picturesque home on the Pacific. But Broadway producers would have none of it, although Flavin considered it one of his best plays. In March 1930 the Pasadena Community Theatre produced the play. *Dancing Days* and *The Road to Damascus,* written during the years from 1930 to 1934, also failed to find Broadway producers, although the former was tried out by the Pasadena group in the 1930-31 season.

The year 1935 gave Broadway two Flavin plays, *Tapestry in Gray* and *Achilles Had a Heel*; a third play, *Amaco* (1935), was presented in the non-commercial theatres. *Achilles Had a Heel* is a symbolic play with a dark-skinned elephant-keeper and an elephant representing strength and honesty, and a monkey-keeper and his wards representing the antithesis of these virtues. A mulatto wench, urged by the monkey-keeper, saps the elephant-keeper's integrity. The elephant, outraged, knocks down his friend the keeper. The monkey-keeper gets the elephant job, makes a mistake, and is promptly killed. Walter Hampden acted as producer and star in the play. The majority of the New York critics thought its symbolism hazy. *Commonweal* thought that it was "as clear as day" and that it had "been told in imaginative English."

Tapestry in Gray received unfavorable notices. A critic in analyzing Flavin's career as a playwright pointed out: "He has imagination, he has a keen sense of drama, he writes workmanlike dialogue. There is every reason why he ought to be the nation's foremost playwright. Perhaps he really is, for *Children of the Moon* and *The Criminal Code* are two of the most interesting American plays in recent years. What is it then that stultifies his reputation with the critical fraternity? One of the reasons is that Mr. Flavin is not in the fashion; he is interested in neither the sociological play or the smart one; therefore, he alienates both Park Avenue and the intelligentsia. That he is interested in plays of the human soul is good, but he is apt to be interested in the more morbid attributes of that soul. *Tapestry* is a case in point. It tells the story of a woman who, to fill the void in her own soul, feeds upon the genius of the man she loves and, like a fungus growth, kills the vitality of the man himself. . . Some of the scenes are so utterly distressful, with no clear reason, that the average theatre-goer is revolted."

Around the Corner (1936), originally called *Sunday,* records the physical poverty and moral degradation which overtakes a middle-class family when the depression robs them of their security. It received adverse criticism—one critic was of the opinion that the play (concerning the depression) came several seasons too late. "Its failure," says Flavin, "proved to be the straw that broke the camel's back." After thirteen years spent in writing for the theatre he decided to seek a new medium. For a quarter-term he taught a class in playwriting at Stanford University. While there (about 1937) the Stanford University players produced his play *Blue Jeans,* about a strike of lettuce workers in California and the struggle between a capitalistic father and a radical son. An interesting sidelight on the play is that Flavin wrote it one month before a real strike of lettuce workers occurred in the same locale as the play's.

Although Flavin writes that "the synthetic method of picture production is not adapted to me," he spent some time in Hollywood in 1930, 1931, and 1932. His principal contribution to the films was a prison picture, *The Big House.*

His first novel, *Mr. Littlejohn,* was published in 1940. For his subject he selected the story of a middle-aged American businessman who, bored by his way of life in general, leaves all behind him and starts across the continent. He meets with many kinds of people, has a series of adventures, and when he is eventually tracked down, escapes once more. Phil Stong writing in the *Saturday Review of Literature* said: "It is about as engaging and perceptive and humorous and amusingly philosophic as any novel I have read since *Candide* and *Tristram Shandy.* . . In short, we have fitting company for the charming gentlemen mentioned and for Mr. Pickwick and Don Quixote and even for Mr. Rousseau in . . . lighter moments." A dissenting voice in the warm praise given the book came from the New York *Times* reviewer who thought the novel more entertaining in its sideswipes than in its main intention and commented that "Mr. Littlejohn never acquires character."

Corporal Cat (1941) "is remote in mood from Flavin's entertaining story *Mr. Littlejohn,*" said the New York *Herald Tribune.* "Corporal Cat is a German parachutist, so called because of his talent for landing on his feet. But one time the Corporal, by accident, lands alone and, without his companions, is lost." As he steals through the dark, not knowing whether he is in Germany or enemy territory, "vast moments of his life move through his mind. He remembers his love of Martha and their misunderstandings—and Martha's compassionate discovery: 'What things we do to each other and ourselves when we are frightened.' When we are frightened . . . that is the motif which Flavin ingeniously orchestrates." The reviewer considered it "a cooler book than most of the anti-Nazi novels, written with more perspective and with a saving wit," commenting that Flavin writes with a "tense and ironic sense of human drama." The opinion of the Springfield *Republican* was that "technically the author has handled his story with magnificent economy and efficiency. The mood of pity and terror achieved in the first dozen pages is maintained unbroken to the final catastrophe, and the significance of character and incident achieve a flawless pattern." The review in the New York *Times* stated: "One might suppose this to be the stuff of which exciting yarns are made, but actually the story falls flat. The reader's sympathies never can be oriented, for the moral blacks and whites are muddled."

Journey in the Dark, representing sixteen months of a "long, hard grind," won Flavin the $10,000 Harper novel prize. It was selected by the judges, Bernard De Voto '43, Irita Van Doren '41, and Clifton Fadiman '41, from 666 manuscripts submitted in the contest. The theme—life is a journey in the dark, particularly if the only guiding motive of the traveler is money in large quantities—is developed in a biographical novel about Sam Braden, a small-town boy who made $5,000,000. He grew up in Wyattville, the son of a gentle mother who took in sewing and an ineffectual father whose size and arrogance had made him the town marshal. The nearest neighbors of the Bradens were, on one side, the Coles, a hard-working Negro family, respected by the community, and, on the other side, the Hogans, Irish and equally diligent. Sam grew up with them, knowing them as friends. In addition, he counted as his friend the straight-thinking Mitch Ballou, son of the owner of the town's weekly newspaper. Sam was nine when he came to a realization that the world was made up of the poor and the rich. There were families like his own and families like the Wyatts, who gave the town its name, who owned the bank and lived in a large house surrounded by an iron fence. "As he saw it wealth was the key to equality with the Wyatts." Leaving the town at twenty, he went to Chicago, where he acquired his millions. When Sam returned to build his huge estate in Wyattville, Mitch Ballou, the rebellious boy turned into a rebellious newspaper correspondent and, according to his self-description, a "sucker" for facts and the truth, told him what was really wrong with him.

"You've done everything the copybooks advise, everything the kids are taught to think," Ballou said. "You should be immortalized, for in a way the story of your life is the story of America—a statement of its values. . . I'll tell you how you look to me: the loneliest man I've ever known . . . a lonely man going nowhere in the dark—" This outburst came when Sam decided he could no longer afford to finance Mitch's newspaper. The man was a rebel with Communist tendencies. That was the reason Sam gave "to fire the quarrel between them," but beneath there lay a personal fear. His son was getting interested in Mitch's daughter, Jewish on her mother's side—"the Braden name, made powerful by millions, must be kept pure."

"What makes this novel so profoundly moving," wrote Rose Feld in the New York *Herald Tribune Books,* "is Sam's instinctive recognition ... of the places in his life where he had failed in essential integrity and decency. . . There was the time when he guiltily refrained from greeting Cassie Cole's brother in the beer saloon because he feared it would hurt his standing to acknowledge acquaintance with a Negro . . . there was his feeling about Mitch and Mitch's daughter. It all added up to something that left him tragically lost and inadequate as a person." In conclusion, Miss Feld said, "No review can succeed in transmitting the art, the integrity, and the dramatic rightness of this book."

The *New Republic's* reviewer found Sam Braden "anti-Semitic, Jim Crow, and reactionary," and the book "a popular novel in the very worst sense." The Chicago *Sun's Book Week* hailed it as a "novel in the great tradition, FLAVIN, MARTIN—*Continued*

coming in a season notably devoid of first-rate novels." Orville Prescott in the New York *Times,* on the other hand, said that Flavin, "in concentrating so exclusively on keeping Sam typical, had also made him uninteresting."

Journey in the Dark is dedicated to Flavin's children, Flavia, Martin, and Sean. Flavia is the author's daughter by his first marriage in 1914 to Daphne Virginia Springer, from whom he was divorced three years later. In 1919 he married Sarah Keese Arnold, who lost her life in a tragic accident near Spindrift, his California home, where their two sons Martin and Sean grew up. Sean is in the Navy and Martin in the Army. In 1940 Flavin was married to Mrs. Cornelia (Clampett) Bell. He does most of his writing in a detached redwood study. The room is lighted by a skylight with no view of the "distracting sea." He loses patience with people who stand ecstatically on the windy point and say: "What a wonderful environment to write in." He can write in any environment as long as it does not bother him. He has written in North Africa, Moscow, Paris, London, New York. His hours for writing are from ten in the morning until three in the afternoon. "I've always worked alone," says Flavin. "I am, I suppose, both politically and spirtually an individualist."

Flavin's politics are founded in the democracy of Thomas Jefferson: "Like those sturdy pioneers from whom he descended, he believes in the freedom and dignity of the individual." He is affiliated with no political party and is not a member of any church. In appearance he is a little like a less obese and less extreme Irvin Cobb, with a hint of his Irish ancestry in his features. He is five feet eight inches tall and weighs 160 pounds. His most remarkable feature are his gray eyebrows, which "outdo those of John L. Lewis '42," bristling up over his forehead to an unusual length. His eyes are blue and keen. His hair, once brown, is now gray. In clothes he favors sportswear, tweeds in plaids and checks.

In the mountains, thirty miles from Spindrift, he owns a 1,300-acre ranch inhabited by 400 sheep, two riding horses, and one tenant ranchman. The ranch house has one large room, a kitchen, and sleeping porch, and stands under a 500-year-old oak tree which has a ninety-foot spread. Flavin says: "It is one of the most beautiful spots that I know in the world" (and he has traveled all over Europe and the Orient). When there he does the cooking, which he enjoys and does well. "I have no time for golf or sports," he writes. "I used to be an enthusiastic flyer (learned to fly when I was forty-six years old) and had my own plane for several years. Competitive sports have always bored me and I have never been good at any of them. I really like to work better than anything and often wish I didn't."

In his sixtieth year Flavin prepared for still another career. After taking a six months' course as a machinist, Flavin says he can turn out steel spindles to the half-thousandth of an inch. Another plan for furthering the war effort is "to convince the State Department that it would be a good thing for everyone concerned if creative writers were given an opportunity to see what was going on in the world." Creative writers, he believes, "with the advantage of deeper, longer lives than the average journalist, have a definite function in the forming of public opinion."

FRANCO, AFRANIO DE MELLO *See* Mello Franco, A. de

FRANKLIN, FREDERIC June 13, 1914-
Ballet dancer

Address: b. Apt. 2-B, 213 E. 51st St, New York City; h. 39 Gordon Dr, Pilch Lane, Liverpool, England

Although in the ballet it is generally the ballerina who secures the spotlight, the *Monte Carlo Ballet Russe*, wrote Walter Terry, dance critic of the New York *Herald Tribune*, has "one young man who can hold his own against the most glamorous of ballerinas and who is responsible for some of the finest dancing I have ever seen. His name, of course, is Frederic Franklin. His technical virtuosity marked by streamlined speed is sure to win applause; his good-natured grin can draw your attention away from the glamour-dripping danseuse. Whatever role he dances . . . Frederic Franklin projects his characterizations with artistry, good humor, athletic grace, and virility."

Despite the fact that Frederic Franklin hails from Lancashire and early in his professional career appeared with a troupe that called itself "The Lancashire Lads," he has no Lancashire accent due to his dramatic school training. He was born in Liverpool, England, on June 13, 1914, the son of Fred and Florence Mabel (Brown) Franklin. When he was six years old his mother entered him in Mrs. Kelly's Dance School in Liverpool. At the same time he attended the Clint Road School, a regular day school, where he received an academic education and captained the school team in what was then a popular new sport—baseball. Apparently at that early age Franklin had no thought of dancing as a career. As a matter of fact he actually started his professional life as a radio actor—every Saturday he and his colleagues stirred little Britons everywhere with their performances in a radio serialization of that renowned classic *The Swiss Family Robinson*.

By the time he was twelve, however, and had exhausted the resources of Mrs. Kelly's Dance School the youth discovered that dancing which, during the past two years, he had come to consider "unmanly," would have to be his livelihood in the future. It was not until three years later that he finally deserted his formal schooling in order to take an apprenticeship at the Shelagh Elliot-Clark School in Liverpool, where he learned dramatics as well as dancing. Whereas in his first professional work he was heard but not seen, he now was seen but not heard, for he appeared in a number of "the usual children's pantomimes in London" that seem to be the lot of every embryo English ballet dancer.

At seventeen the young man decided to strike out on his own, and accordingly went to London to seek his fortune. There he signed as a "hoofer" with a tap-dancing troupe, "The Lancashire Lads," of which the comedian Charlie Chaplin '40 had been a member a number of years before Franklin's admission to the group. In 1931 the troupe went to Paris where Franklin's improvised jazz at the piano and his singing interested the famous Mistinguette, who arranged with the management to have him do a number with her, he at the piano and she on the piano.

FREDERIC FRANKLIN

Franklin left the "Lancashire Lads" and returned to London where he began his career in vaudeville and musical comedy. It was said later that before the War there was virtually no night club or music hall in London and Paris in which he had not appeared at some time or other. Meanwhile he studied dancing in London under a number of Russian teachers—Lydia Kyasht, Nicholas Legat, and Lubov Egorova. In 1933 the well known British dancer and choregrapher, Wendy Toye, selected him as her partner. It was she, Franklin feels, who really got him started in his career. They danced together in night clubs and music halls for two years, working under the aegis of the dancer Anton Dolin, to whom Franklin had been recommended by the producer of a cabaret show in which the young dancer was appearing. Dolin also had a great influence upon Franklin's career, teaching him, among other things, how to be a good ballet partner. "He certainly had talent," commented Dolin of his junior colleague. "A charming boy, a little headstrong, but so anxious to be a really great dancer. His training at the Liverpool School of Dancing had been as good as anything to be found in the provinces. His work in cabaret had certainly not given him the style and class so essential to the classical ballet, but the technique of the dance was already strongly developed in him. From the very beginning I had faith in young Freddy and I am glad to know that he has come up to all my expectations of him." Franklin left in 1934 to dance in operettas, but returned once more to the Dolin fold when the latter and Alicia Markova '43 formed their own ballet in 1935.

Franklin danced as a soloist with the Markova-Dolin Company until 1937, winning some critical notice of his own. "There is real pleasure," wrote the *Spectator's* critic, "to be had from the masculine vigor of Mr. Frederic Franklin." In the year 1937 Léonide Massine '40 was forming a *Ballet Russe de Monte Carlo* of his own and garnering

FRANKLIN, FREDERIC—*Continued*

dancers from the various ballet companies. From the Markova-Dolin Ballet he made off with Markova herself and Franklin. "Although I was very sorry to lose him [Franklin]," Dolin wrote, "nothing would allow me to stand in his way."

When he first toured America, Franklin was unknown there, but he soon began to grow popular, receiving increasingly favorable reviews. "Franklin," wrote a Detroit critic in 1939, "is a particularly fine dancer, immediately proving himself worthy of such a distinguished organization." Another critic in 1940 found him dancing "as a man should dance, with gusto, athleticism, strength, and fire." By 1942 he had been chosen by *Newsweek* as "one of the two best male dancers of the day." (The other was his fellow dancer in the *Ballet Russe*, Igor Youskevitch.)

The *Ballet Russe* continued to tour Europe during the first few years of the War, and Franklin, who is noted for his conversational gifts, is fond of describing his harrowing experiences in war-torn Paris, where, garbed in tights, he was forced to flee from his hotel into a bombproof shelter, with his head swathed in cotton in lieu of a gas mask. When, in the fall of 1942, Massine left the *Ballet Russe*, Franklin assumed many of his roles with great success. What the young dancer considers a milestone in his career was the occasion in San Francisco when he took the part formerly danced by Massine in the ballet *St. Francis*, and was thought by many critics to have surpassed the elder dancer in his interpretation of the role. In the fall of 1943 Franklin was still working with the *Ballet Russe* in the United States.

It is said that Franklin has been approached a number of times by motion-picture talent scouts, particularly for the role which Danny Kaye['41] created in *Lady in the Dark*. His contract with the *Ballet Russe* has prevented him from entering into any agreement with the producers, but he has indicated that he would be interested in a motion-picture career.

Although Franklin is technically capable of handling classic roles and has done so with distinction, he is at his best in character roles, usually comic, where he is free to radiate charm all over the stage. "There is no stage grin in the world," writes Walter Terry, "to match that of Frederic Franklin, the *Monte Carlo's* young British star. He fairly grins with his whole body." Franklin has won a number of awards and medals in dancing competitions and is a graduate of the London Royal Academy of Dancing.

Swimming and tennis are Franklin's favorite sports. He also sings and plays the piano—he not only plays popular music by ear but is a serious pianist as well. He is fond of eating and, since his arrival in the United States, has been fascinated by the variety of soft drinks and pies available in this country. Like many thespians he also makes a hobby of sleeping—"he can sleep anywhere or anyhow, lying or sitting, and probably standing, too, which will probably soon become necessary if traveling continues to be so crowded." He says that this ability to sleep easily and at odd moments is the only thing that enables him to get through the long and arduous ballet tours.

Dancing is, of course, Franklin's chief interest, and he has said that he has had to give up his personal life in order to be a dancer. His family, consisting of his mother, a younger brother who is in the R.A.F., and a younger sister who is a member of the WAAF, live in England. Franklin is unmarried.

Reputed to be exceedingly good-natured, Franklin has never refused an autograph or an interview to any of his fans who have caught him. On occasion he is mistakenly described as American, but observers call him "typically Anglo-Saxon." Blond and blue-eyed, he is of medium height, although he appears tall on the stage. He is rather youthful looking and it is told that during an engagement of the *Ballet Russe* at Wilmington an elderly and presumably myopic waiter at a restaurant refused to serve him a drink on the ground that it was illegal to serve liquor to minors in Delaware.

FRASER, SIR BRUCE (AUSTIN) 1888-

British Naval officer

Address: c/o Ministry of War, London, England

Charged with the important task of overcoming Hitler's['42] U-boat offensive in the summer of 1943 was Admiral Sir Bruce Fraser, one of the British Navy's greatest experts in the air-sea fighting. As commander in chief of the Home Fleet, Sir Bruce has the job of watching every square mile of sea around the British Isles, and of patrolling far out into the North Sea, the Arctic Ocean, and the Atlantic. He has played a part in the spectacular German submarine losses of 1943, and in December the German battleship *Scharnhorst* was brought to action and sunk by units of the Home Fleet under his command. (The Home Fleet at the time was covering a North Russian convoy.) The *Scharnhorst* had been in the battle off Norway in June 1940 which resulted in the loss of the British aircraft carrier *Glorious*, captained at one time by Sir Bruce.

Sir Bruce Austin Fraser was born in 1888; his father, the late Sir Alexander Fraser, was a general in the Royal Engineers. The Home Fleet commander was educated at Bradfield College and entered the famous training ship *Britannia* as a cadet of fourteen in 1902. In his student days he was outstanding for mathematical brilliance, and took "firsts" in all subjects when passing for his lieutenancy. His specialty was gunnery; he now has the reputation of being the foremost gunnery expert in the British Navy.

During the First World War, Bruce Fraser, first as a lieutenant and then as lieutenant commander, was gunnery officer on the cruiser *Minerva* in the Dardanelles and in the East Indies. He then served on the battleship *Resolution* in the Grand Fleet.

Following his promotion to the rank of commander in June 1919, he was attached to the base at Constantinople for service with the Enzeli Expedition. He was the fleet gunnery officer on the staff of Admiral Sir Roger Keyes in the Mediterranean when he was promoted to captain in 1926. For the following three years he was head of the tactical section of the naval staff.

In 1930 Bruce Fraser was put in command of the *Effingham* and made flag captain and chief of staff at the East Indies Station. He served there for three years and he was then brought home to be appointed director of naval ordnance. In that post he planned the guns of the Fleet he now commands. He was serving as chief of staff in the Mediterranean when the Second World War began. He returned home at once and, with a new promotion—third sea lord and controller of the Navy—was specially charged with the building and provisioning of ships. Sir Bruce initiated those plans which now have "come to powerful fruition in the launching of ship after ship of all classes, from the mightiest battleship to the sleekest, swiftest motor-torpedo boat." In 1941 Fraser was made a Knight of the British Empire.

By no means retired from active service, Sir Bruce in 1942 became second in command of the Home Fleet. Additional qualifications for this post were the fact that he had served as gunnery officer in the famous battleships *Warspite* and *Queen Elizabeth,* and had been captain of the aircraft carrier *Glorious.* His experience with the air arm of the Fleet also proved an invaluable asset. Immediately upon assuming full control of the Home Fleet in 1943, Sir Bruce reinforced it with the most powerful modern fighting units.

When cruisers and destroyers of the Home Fleet drove the *Scharnhorst* within range of the fourteen-inch guns of the battleship *Duke of York* on December 26, 1943, Sir Bruce was aboard that ship. This was the first great ship-to-ship action in which the British Navy had been involved in the Atlantic since the *Bismarck* sinking in the spring of 1941, and Admiral Fraser directed the day-long fight, "which was a masterpiece of cooperation between naval squadrons and of gunnery operation in darkness." After the sinking of the one-time pride of the German Navy, the British convoy steamed on with its cargoes of arms and munitions for the Red Army. Prime Minister Churchill '42 sent word to Admiral Fraser: "Heartiest congratulations to you and the Home Fleet on your brilliant action. All comes to him who knows how to wait."

In appearance, Sir Bruce Fraser is not the typical British sea hawk. He does not have the fierce, aggressive features usually associated with admirals of the "old Salt" variety: "His face is full, the eyes look thoughtful, the mouth sensitive. He is a cheerful, kindly soul who makes a bright and very forthright after-dinner speech." The commander of the Home Fleet also likes sports and recreation, and for some forty years has been trying to find time for them. Now, with a job that demands full attention and exertion, he knows that the gardening, golf, and horseback riding which he enjoys must be postponed for the duration.

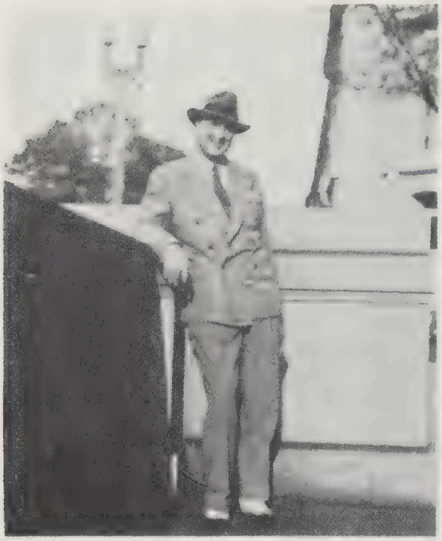
Who's Who 1943

FRASER, HUGH RUSSELL Feb. 16, 1901-
Journalist; writer; educator

Address: h. 1829 Summit Pl, N. W., Washington, D. C.

Heading a campaign for a change in the methods of teaching American history in the high schools and colleges of the country, Hugh Russell Fraser, chairman and self-styled "mouthpiece" of the Committee on American History which he organized in the summer of 1942, recently burst into prominence when his cause was espoused by the New York *Times.* In the *Times* of April 4, 1943 a front-page story described the "appalling" results of a history test given to 7,000 students in more than thirty colleges. The test, which had been devised by Mr. Fraser and by Dr. Allan Nevins of the History Department of Columbia University and administered under the auspices of the paper itself, sought to determine how much of American history was learned and retained by high-school students through courses in this subject as they are currently conducted. Its results provoked nationwide editorial dismay and stirred up a controversy which left Fraser gasping a little for breath.

The son of the late Reverend Hugh Russell and the late Jessie Edgerton (Hough) Fraser, Hugh Russell Fraser was born at Cornwall-on-the-Hudson, New York, on February 16, 1901. After completing early school studies, he was a student at the Mt. Hermon, Massachusetts, Preparatory School from 1917 to 1919. In 1917, while a student, he began his newspaper career as a correspondent for the Springfield *Republican.*



Underwood & Underwood

HUGH RUSSELL FRASER

The first connection Fraser formed with the *Times* was in 1919, when he found a position there as news classifier. He worked in this position only a year, however, and then for a score of years continued in the newspaper field as reporter, editor, correspondent, and columnist. He was editor and publisher of the Shenandoah Valley *News*, Basic City, Virginia, from 1923 to 1924; reporter on the Washington *Herald* from 1925 to 1926; on the copy desk of the Indianapolis *Star* and St. Louis *Globe-Democrat* from 1927 to 1928; on the staff of the Denver *Post* and Chicago *Journal of Commerce* in 1929; assistant telegraph news editor for the Buffalo *Courier-Express* in 1930; "As I See It" columnist on the Albany, New York, *Evening News* in 1931. From 1933 to 1936 a member of the staff of *Real America* Magazine, in 1935 Fraser was also the author of the first nationally syndicated articles on the plight of the Southern sharecroppers. That was the end of his newspaper career for a while. A Senate committee inquiring into the problems of the dirt farmers in the South and West hired him as a special assistant in 1937, and he was research consultant for the Department of the Interior on the Columbia network series "What Price America" from 1938 to 1940.

For many years Fraser had been interested in Andrew Jackson. He had already founded and served as president (1935-38) of the Andrew Jackson Historical Society of Tennessee when in 1938 his study of Jackson's war against the Bank of the United States, *Democracy in the Making*, was published after four years of work. The book, which was sub-titled "The Jackson-Tyler Era," was criticized by more than one reviewer for its misleading title, since it made no attempt to be a complete history of the period. The *New Republic* and New York *Times* critics also had faults to find with its style, but in the eyes of the former, at least, Fraser's "aggressive truth telling, his relentless exposure of hypocrisy, and his keen eye for the rogue" compensated for any of the book's failings. Dr. Allan Nevins, later to be associated with Fraser in the *Times* history survey, wrote a very critical review of the book. Upon Fraser's protest, Dr. Nevins, whom Fraser did not know at that time, re-read the volume and corrected and revised his original estimate (*Saturday Review of Literature* February 4, 1939). He said: "*Democracy in the Making* throws new illumination on an important subject never properly treated by American historians, the struggle against the re-chartering of the Second United States bank; and it does much to present at their true worth the services of that much neglected figure, John Tyler. It represents hard and earnest work by its author in hitherto untouched sources." The volume was rated by *Time* Magazine one of the four outstanding books published in the field of biography and history in 1938, and was endorsed by six of America's outstanding historians—Charles A. Beard '41, Allan Nevins, Claude G. Bowers '41, William E. Dodd '40, Marquis James, and William E. Woodward.

In 1939, while still working for the Department of the Interior in Washington, Fraser began conducting a weekly newspaper column, "Inside Washington." Remaining in the capital after his work on the "What Price America" series was finished, in December 1940 he was hired by the United States Office of Education as an editor-writer on the staff of the National Defense Training Program. As such he was given credit for the preliminary edition of the Education and National Defense series pamphlet No. 2, titled *Government Sources of Information on National Defense.*

In June 1942 the New York *Times* printed an article based on a survey of American colleges saying that the study and teaching of American history was being neglected: in eighty-two per cent of the colleges such study was entirely optional. Fraser later told a reporter that "for sixteen years before the *Times* came out with its story . . . I was boiling, because I felt that the situation was hopeless. I tried to get the idea over to my friends and to everybody I could get hold of . . . and when the *Times* story came out, I was amazed." He says further: "Within five minutes of the time I read that story I was on the telephone talking to Allan Nevins about the situation. I was of the impression that Nevins was responsible. Nevins told me that he wasn't the one responsible for the article. He said: 'You ought to call Mrs. Sulzberger [Mrs. Arthur Hays Sulzberger, wife of the publisher of the New York *Times*].' "

Fraser corresponded with Mrs. Sulzberger, and then on July 15, 1942 he called a meeting of a number of people in the Willard Hotel, Washington. Among those present were Mrs. Sulzberger, Supreme Court Justice Robert H. Jackson '40, Henry Pringle, George Morris, and representatives of the American Legion, the National Education Association, and the United States Chamber of Commerce. Thus the Committee on American History was born. "Informally," Fraser says, "it was decided to make an appeal to the United States Office of Education to conduct a survey of the status of American history in the schools." This effort was unsuccessful, however, and so Fraser discussed the survey with a *Times* reporter, who said he thought the paper might be interested.

Besides Fraser and Nevins, Mrs. Sulzberger (who is not a member of the Committee on American Education, but who is interested in its work) and Dr. Benjamin Fine, education editor of the New York *Times*, had a large part in the conducting of the history test. But to Fraser and Nevins fell the lot of "wording the questions, weeding out too difficult or unfair ones and assembling the rest." Students were asked to name the home states of certain prominent figures in the United States history, to identify others, to name four of the specific freedoms granted to the individual in the Bill of Rights, to give the date of the Homestead Act, to answer questions about geography, etc. Fraser calls the type of questions asked "index" questions, in that if the student did not know the answer it could be presumed that he could not have answered a longer and more important one on the same subject.

Two days after the New York *Times* analysis of the results appeared and stirred up nationwide controversy, a resolution calling for a Senate investigation of the ways and means by which the Federal Government could promote better instruction in American history was presented in Congress by Senator Guffey of Pennsylvania, with whom Fraser had conferred even before the *Times* announced the official results. Next, on April 10, the resignation of Fraser as information officer of the Office of Education was reported, "as a result of differences in opinion over instruction in American history in high schools."

Two days later, another Washington dispatch quoted Commissioner John W. Studebaker '42: "It is not the responsibility of the Federal Government to determine the content of the various curricula of the schools in the states, nor to attempt to impose any particular method of instruction. Hence, the Office of Education does not presume to control what is taught or learned in the school systems of the respective states."

(In reply to this statement Fraser is quoted in the press as saying: "Nobody contends that the Office of Education can or shall dictate to the schools as to what should or should not be taught. The idea that I ever suggested any such thing is preposterous, and Commissioner Studebaker knows it is preposterous. But the Office, which was founded in 1867, has a very definite responsibility to investigate the status of American education in the states—including American history—and this responsibility Commissioner Studebaker is dodging and has been dodging all along.")

"Mr. Hugh Russell Fraser," Dr. Studebaker continued, "has had no official responsibility for making studies or pronouncements in connection with the teaching of American history. I understand that his activities in this field have been confined entirely to time outside his working hours in this office and as a member of what is called the Committee on American History. This Committee has no connection with the United States Office of Education.

"Mr. Fraser has been employed on emergency funds in the Information Service of this office. Because of the required reduction of personnel in the various government agencies, he was notified some time ago that his position would be discontinued as of May 1 next."

Replying to this last statement, Fraser said that it was "probably only a coincidence, of course, that on the day I notified a representative of the Office of Education that the New York *Times* survey was to appear the following Sunday I was informed that my job was being abolished."

In the meanwhile historians, educators, and Congressmen were still praising or hooting the *Times* survey and offering explanations of why United States students apparently knew so little about their own country's history. Some refused to be alarmed. Many students said that they had been entirely facetious in answering the questions. President William Otis Hotchkiss of Rensselaer Polytechnic Institute, one of the colleges included in the survey, said: "I would predict that the percentage of correct answers would not be appreciably higher if the examination were given to all the high-school teachers in the country, if the history teachers were eliminated. . . The results would be much the same if . . . lawyers . . . physicians . . . engineers . . . business groups . . . had been given the examination." Harry Carman, historian and professor of history at Columbia University, ventured: "The *Times* test was a memory quiz. Such tests prove very little. It certainly doesn't prove whether a student knows or doesn't know his history." Forrest E. Long, professor of secondary education at New York University, also held to this view. "The *Times* test," he said, "merely confirms that people forget most facts which they don't use and for which they feel no need." Others admitted the poor results, but gave dull textbooks, low pay, poor teachers, and sketchy history courses as explanations of the students' showing. Later the University of Louisville confirmed the *Times* survey results, and stated that the questions had not been answered facetiously.

Fraser himself was in disagreement with those who explained student ignorance by anything but a change in teaching methods. "The change, he said, took place in Denver in 1924, when Denver schools, at the instigation of Teachers College of Columbia University, began to emphasize the study of social trends and aims at the expense of chronological history." This development, he said, "represented the first organized attempt in the American school system to teach history backward—a procedure dear to the hearts of the educational psychologists. Thus, according to this school of thought, you start with the present and work backward; only the tendency recently has been to start in the present and stay in the present, with only occasional glances at the past. ." He declared war against the "practices of the National Council for the Social Studies and its twin brother, Teachers College, Columbia," calling the latter "the great citadel from which attacks on American history have proceeded for the past twenty years." The day when the movement to introduce social studies into high schools started should be considered "a day of mourning," he said. Half of our high-school students

FRASER, HUGH RUSSELL—*Continued*

don't get an organized course in American history at all, while those who do "get, too often, a mere course in contemporary problems, plus a generalized discussion of social forces, plus a discussion of a few arbitrarily selected topics in American history."

These statements, in turn, made Fraser subject to attacks from progressive educators, who disagreed with his dictum: "Give the students the facts first, then the interpretation." Since the *Times* survey had made no attempt to find out in what manner students answering the questionnaires had been taught their American history, they found his assumption unwarranted that the old-fashioned approach to history, with its emphasis on memory and detail, had left students better informed even so far as the "facts" were concerned. But their attacks on him as a "reactionary" angered him, in view of his "long record of championship of the lowly, the humble, the dispossessed, and disinherited of the earth." He cited particularly his articles on the sharecropper, his book on Jackson's fight against the Bank of the United States.

On June 23, 1943 announcement was made of funds donated by the Rockefeller Foundation for the survey sponsored by the American Historical Association in conjunction with the Mississippi Valley Historical Association and the National Council of Social Studies. In a statement to the press Fraser asserted that this survey was a farce designed to divert attention from shocking neglect of United States history in the public schools. However, the New York *Times* warmly endorsed the Rockefeller-financed survey under the directorship of Edgar Bruce Wesley, professor of education at the University of Minnesota. The full report on the survey was published on December 28. Even before this Dr. Wesley had announced that American children were not so ignorant as the *Times* survey indicated when it came to the history of their country—the trouble was, he said, that teachers tried to cram too many dates down their throats.

Fraser, who is characterized by Allan Nevins as "a crusader with a grim determination," is not himself a teacher. ("Do you have to be a horse to judge a horse race?" he asks.) He estimates the membership of the Committee, whose statement of policy he drafted on May 4, 1943, as about forty-five. The members are not dues-paying, and the Committee's activities have, he says, cost him "about $1,000 of my own money"—most of it spent in travel and long-distance calls. In addition to his chairmanship of the Committee he is consulting editor of *News of the Nation*, a historical newspaper first published by Doubleday Doran in 1943, and he is also conductor of the radio program *A Date with a Date*. In late 1943 he was named education editor of the *Pathfinder* Magazine.

Fraser is an inch short of six feet tall, weighs 171 pounds, and is blond. In religion he is Episcopalian; in politics, Democratic. On February 16, 1931 he was married to Agnes Margaret Hines. The couple have no children.

FULBRIGHT, J(AMES) W(ILLIAM) Apr. 9, 1905- United States Representative
Address: b. 206 House Office Bldg, Washington, D. C.; h. 2101 Connecticut Ave, N. W., Washington, D. C.

On September 21, 1943 the House of Representatives adopted the Fulbright resolution on post-War collaboration. Author of this fifty-five word, one-sentence bill is a young, freshman Representative from Arkansas, J. W. Fulbright. His bill reads simply: "Resolved by the House of Representatives (the Senate concurring), that the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace, among the nations of the world, and as favoring participation by the United States therein, through its Constitutional processes."

The precedent-shattering Fulbright has been in Congress for less than one year, but he has to his credit already a number of Congressional accomplishments, including a debate in which he successfully outargued Clare Boothe Luce '42. His resolution, proposed during the Seventy-Eighth Congress, was considered a modified statement that would commit the United States less to participation in international cooperation than the more publicized Ball '43-Burton-Hatch-Hill '43 Senate Resolution 114, commonly called B2H2. It was radical, however, in its brevity and simplicity, its lack of controversial clauses over which clashing party leaders might take issue, and in the fact that it was proposed by "the lowest-ranking Democrat on the House Foreign Affairs Committee, a first-term Congressman." It paved the way for the debate in the Senate which finally resulted in the passage of the modified Connally '41 post-War resolution.

While James William Fulbright is still young politically, he has a distinguished career behind him. He has been president of a university and of a large investment company, an attorney, an instructor in law, and a Rhodes Scholar. The son of Jay and Roberta (Waugh) Fulbright, he was born in Sumner, Missouri on April 9, 1905. His family moved to Arkansas, and he attended high school in Fayetteville, going on to the University of Arkansas where he played right half on the football team and took his B. A. in 1925. Awarded a Rhodes Scholarship, Fulbright went to England to study political science and history at Oxford University. Here too he distinguished himself not only as an academician, but as a sportsman as well: he was a member of the Oxford-Cambridge lacrosse team which toured America in 1926. Oxford awarded him a B. A. in 1928 and an M. A. three years later. After a year in Vienna young Fulbright returned to the United States to take an LL. B. at George Washington University in 1934.

In the same year Fulbright was admitted to the District of Columbia Bar and took a position as attorney in the antitrust division of the Department of Justice. He left the following year to accept an instructorship in law at George Washington University (1935-36) and from there he transferred to the University of Arkansas where he remained as instructor until 1939.

It was in Fulbright's teaching days in Arkansas that he developed his theory that "most of the faults in government could be traced to personnel." Because business was more profitable it attracted "the smartest people." "So I told my students that they should go into politics, or our governmental system would never get better. I said that if you can have a good government—a reasonably honest and clean government with the most intelligent people in it—all the other problems will solve themselves."

From 1939 to 1941 Fulbright served as president of the University of Arkansas. At the end of the two years he was fired because, the story goes, the Governor of the state did not like the editorial policy of a newspaper which Fulbright's family owns. The ex-university president made an easy transition from academic to business life, however, and was president of the J. H. Phipps Lumber Company and the Fulbright Investment Company from 1941 until his election to Congress.

In 1942 a former student of his, Clyde Ellis, who was running for the United States Senate, reminded Fulbright of his lectures on government at the University and urged him to throw his hat into the political ring. Fulbright decided to run for the House. His opponent in the Democratic primary was a protégé of the same Governor who had fired him from the University and who now claimed that Fulbright "was a nice young man who knew nothing about running for office." "Drawling and genial," the would-be Representative campaigned vigorously, touring the district with his attractive young wife and an election platform which emphasized "full United States cooperation with other nations" to maintain permanent peace. The student who was running for the Senate lost, but Fulbright was elected to the House by a 4,000 majority, "the biggest in thirty years."

J. W. FULBRIGHT

Fulbright broke into the headlines with his first speech in Congress. On February 16, 1943, already a member of the House Foreign Affairs Committee, he attacked the post-War air plans of another freshman Representative, Clare Boothe Luce. In her first Congressional address Mrs. Luce had hinted that the United States should try to gain control over commercial air lanes after the War and had coined the now-famous word "globaloney" in reference to Vice-President Henry Wallace's '40 post-War ideals. Fulbright later said that her speech "seemed to me to represent the exact opposite of what our policy should be. I thought it would raise suspicion among our Allies. It irritated me." A week after Mrs. Luce made her address Representative Fulbright gained the floor in the House and with chivalry but firmness proceeded to answer her arguments. Quoting from Mrs. Luce's speech, Fulbright said: "The way to avoid this calamity, she implies, is that we must now, before this War is over, begin to prepare for the next war by adopting her version of sovereignty of the skies," a plan which he called "a narrow, imperialistic policy of grab."

Representative Fulbright then invited Mrs. Luce to question him, and before a tense House they "exchanged caustic words." Congressmen agreed that Fulbright was the "win-

FULBRIGHT, J. W.—*Continued*

ner" because when Mrs. Luce asked that he point out passages in her speech to which he referred, he answered: "Would you like me to read your speech again to this House?" The Associated Press reported that at that point "what Mrs. Luce said was drowned out by laughter from the Democratic side."

Fulbright was soon to win favor from liberal quarters not only for his tangle with Mrs. Luce, but also for his vote against continuing the Dies '40 Committee. One of only ninety-four Representatives who voted against it, he says candidly: "I was advised it would be politically unwise to do that. Maybe I'll be around here only for two years."

During the spring sessions of the Seventy-Eighth Congress numerous bills on world peace organization were proposed. Some were lengthy and highly detailed; others were vague and, commentators agree, deliberately ambiguous. When the House Foreign Affairs Committee gave its unanimous approval to the Fulbright resolution, conflicting interests seemed at least partially reconciled. But in June 1943 Senator Tom Connally, chairman of the Senate Foreign Relations Committee, dismissed the resolution as "mild and cryptic" while, at the same time, the sponsors of the Ball-Burton-Hatch-Hill bill "gave it their qualified approval," stating that "it is a step in the direction we think the American foreign policy should take." Although Fulbright is known personally to favor the setting up of an international military force and other international agencies, his resolution was markedly noncommittal and had been modified from his earlier versions "which might more directly imply Congressional support of an international police force."

Like the B2H2 resolution, Fulbright's resolution cut across party lines and was supported by Democrats and Republicans. Unlike other post-War plans, it even won the tacit approval of such outstanding isolationists as Hamilton Fish '41 of New York and John Vorys of Ohio. (Representatives Clare Hoffman and Jessie Sumner were its chief opponents.) Mrs. Luce herself urged the House to adopt the resolution, and the New York *Times* editorially deplored Senator Connally's announcement "that if any post-War planning resolution is approved by the Senate it will be one of our own making."

Congress adjourned for midsummer recess without taking action on any post-War planning bill, but during the summer of 1943, while supporters of B2H2 stumped the country for immediate action on their bill, Senator Robert A. Taft '40 of Ohio, in a debate with Fulbright before the American Bar Association, denounced the Fulbright and other such plans "as intended to commit Congress to cooperate in creating international machinery after the War as a means to maintain peace." Taft continued: "The Fulbright resolution may mean nothing or it may mean everything. . . About the only policy which it definitely excludes is one which reserves freedom of action to the United States in the future." In rebuttal Fulbright said: "The professional patriots beat their breasts and wave the flag and shout 'sovereignty,' hoping thereby to frighten us, like sheep, back into the corral of isolationism. . . Many opponents of collective security seek to confuse the issues by proclaiming at length that we do not want an international WPA. . . It is brains and leadership that we must supply and not gifts of bread and milk and honey and oil . . . if we can contribute leadership and our fair share of the force found necessary to make an international system of control effective, that is all the world can or should expect."

Republican support for the Fulbright resolution was assured after the Republican Party conference at Mackinac Island; and when Congress reconvened on September 14, 1943 immediate action was expected. Two days later the House Foreign Affairs Committee ordered an early vote on the resolution. While a sizable Republican group objected to "pushing" it through hurriedly, it was not strong enough to have a serious effect. Another Republican group insisted on the insertion into the resolution of the phrase, "through Constitutional processes."

Finally, on September 21, by an overwhelming vote of 360 to 29, the House of Representatives approved the Fulbright resolution. Although the Senate was not expected to endorse it as written, an even more definitive substitute measure was promised. But Senator Connally, meanwhile, continued to postpone action, claiming that such a proposal would cause "intemperate and trouble-making debate" in the Senate. On October 13, 1943 the Senate Foreign Relations Subcommittee at last reported to the full Committee a resolution of its own. A week later the full Committee approved this resolution and sent it on to the Senate for debate. Only seventy-five words in length and "bearing a striking resemblance" to the Fulbright proposal, it was described by Senator Connally as "the best possible action that could be secured." While Fulbright and the sponsors of the B2H2 resolution continued to call for more vigorous action, the Senate debated the new resolution. The Moscow Conference finally made up Senatorial minds, and in November the Senate passed a revised version of the Connally resolution.

The author of the Fulbright resolution has not been content to sit back and celebrate his success but is still working hard to propagate the idea of international cooperation. In a meeting in New York City, just a few days after his resolution was passed, Fulbright declared that the House's action was a first step in the right direction. He summarized his position when he said: "This resolution is not a grant of power to the Executive; it is simply an expression of our people, through their representatives, that we intend to participate sincerely in an effort to bring order into the world."

Fulbright has usually voted with the Administration on issues involving price control and Federal spending. He voted with the Administration on the Ramspeck Federal Pay Bill, on the Federal income-tax bill, on incentive payments to farmers, on more money for soil conservation, on incentive payments for certain crops, on funds for crop insurance, on money for rural electrification, on keeping the Home Owners' Loan Corporation, on funds for a price rollback, on funds for OPA enforcement, on limiting the policy makers on price regulations, and on keeping the OWI domestic branch. He has generally voted against the Administration, however, on such domestic issues as labor policy: he supported the Hobbs anti-racketeering bill, supported the Smith ['41]-Connally anti-strike bill and voted to override the President's veto of it, opposed the $25,000 limit on salaries, voted for the creation of the Smith Committee and against the anti-poll tax bill. (Exception: he voted against continuance of the Dies ['40] Committee.) And finally, in November 1943, he joined that bloc of Congressmen fighting against consumer subsidies, saying that "neither the people nor this Congress believes that the subsidy program can be or will be efficiently administered."

Fulbright, who is tall and has dark hair and friendly blue eyes, is a hard worker, usually reaching his House office at about nine in the morning and working on until six or seven in the evening. On June 15, 1931 he was married to Elizabeth Williams, and the couple have two daughters, Elizabeth and Roberta. A gentleman farmer, he writes that farming and golf are his favorite recreations. Fulbright is a member of Sigma Chi and of the Order of the Coif. He is modest about his own career and said shortly after his election to Congress: "I'm just a boy from the country. But there are people capable of finding out and telling us how to solve the problem [of international cooperation], and what I'm interested in is seeing that they get the opportunity."

Who's Who in America 1942-43

FUQUA, STEPHEN OGDEN (fū-kā')

Dec. 25, 1874—May 11, 1943 Retired Army officer; journalist

Bulletin: Stephen Ogden Fuqua died on May 11, 1943.

From February 1943 issue:

MAJ. GEN. STEPHEN OGDEN FUQUA

During his forty-odd years of service in the United States Army, retired Major General Stephen Ogden Fuqua was on the scene of almost every important military event. He is well qualified for the lecture forum and for his assignments as military editor of *Newsweek* and radio analyst. The son of James Overton and Jeannette M. (Foules) Fuqua, Stephen Ogden Fuqua was born in Baton Rouge, Louisiana, on Christmas Day, 1874. He attended Tulane University from 1888 to 1889 and the University of Louisiana from then until 1892. From 1892 to 1893 he was at the United States Military Academy.

As a captain in the Volunteer Army from 1898 to 1901, Fuqua served in the Cuban Campaign and the Philippine Insurrection. His first appointment in the Regular Army was in 1901 when he was made a 2nd lieutenant of the 23rd Infantry. In February of the same year he was made 1st lieutenant and transferred to Fort Ethan Allen where he served as post adjutant. Later he joined the 23rd Infantry at Plattsburg and was assigned to duty as battalion adjutant.

From Plattsburg Fuqua left on foreign service, and during his second tour of the Philippines he served as provost marshal of Malabang, Mindanao. From September 1904 to February 1905 he participated in the Cotta Bato Valley campaigns against Datto Ali. At the expiration of this second tour he visited China and Japan during the Japanese-Manchurian War. On his return to the United States, he was stationed with the 23rd Infantry at Madison Barracks, New York.

Fuqua is a distinguished graduate of the School of the Line at Fort Leavenworth, Kansas. In the summer of 1906 he acted as infantry instructor in the combined Army and Navy maneuvers. He attended the Fort Leavenworth Staff College from 1907 until his graduation in 1908.

From November 1908 to April 1910 Fuqua saw service in the Philippines for the third time—again in the Island of Mindanao. On March 11, 1911 he was promoted from the rank of lieutenant to that of captain. Captain Fuqua was instructor-inspector of the National Guard of California from 1912 to 1913. The following year, as a captain of the 12th Infantry, he accompanied General Pershing's brigade to the Mexican border and was stationed at Nogales, Arizona. In 1915 he was transferred to Fort Sill, Oklahoma, where he became director of the Department of Small Arms and later assistant commandant

FUQUA, STEPHEN OGDEN—*Continued*
of the School. In the spring of that year, however, he was again assigned to border duty as adjutant of the 12th Infantry.

When the United States entered the First World War, Fuqua was placed in charge of an Officers Training Camp. Later he was appointed major in the National Army and detailed as assistant chief of staff of the 37th Infantry, which was stationed at Camp Sheridan, Montgomery, Alabama. Transferred to the 28th Division in November 1917, he served as assistant chief of staff and acting chief of staff in charge of training. He commanded the "Advance Troops" of this Division until they reached France, where he was placed in charge of the Division training on the British Front.

Upon completion of this duty, he was promoted to lieutenant colonel and ordered to the Army Staff College, A. E. F., at Langres. From there he reported to General Pershing and was assigned as Assistant G-3 (Operations) of the 1st Army, in which capacity he served in the Château-Thierry Salient, St. Mihiel, and the Argonne until October 30, 1918, when he was promoted to the rank of colonel of Infantry and assigned to duty as chief of staff of the 1st Division. He served with it in the campaign along the Meuse and through the Argonne to Sedan. During the entire period of the German occupation he was chief of staff of this Division, and, later, until the end of January 1921, was at Camp Taylor and at Camp Dix.

Fuqua was then transferred to Hawaii where for three years he was the military intelligence officer. Upon his return he was assigned to the field officers' course at the Infantry School, Fort Benning, Georgia, where he completed his studies. Later he commanded Fort Jay, Governors Island, New York.

As a fitting climax to a distinguished career, Fuqua was appointed chief of Infantry of the United States Army in 1929. In the course of his service he had been awarded the Cross of the French Légion d'Honneur, the Croix de Guerre, the Distinguished Service Medal, and other medals covering his campaign services.

Sent to Spain to finish his military career in a "quiet but comfortable and interesting" post, Fuqua was serving as military attaché with the American Embassy there when the lid blew off. The Spanish Civil War followed and Spain, though "interesting," proved to be anything but quiet. Fuqua remained there until 1939, and, as the New York *Times* said of his activities there, "won much praise and considerable distinction both among Army and civilian circles for his handling of numerous difficult situations arising as a result of the Spanish Civil War." He had one peculiar habit—that of suddenly appearing on the Front and dashing into areas under fire.

After returning to the United States, Fuqua retired and went to California to write a book on Spain, feeling that events there would be the background for the next war. The "next war" came before he had an opportunity to finish the book, and when the publisher of *Newsweek* asked him in the fall of 1939 whether he would consider being military analyst for that publication he accepted the offer.

In addition to his work for *Newsweek* Fuqua appeared as radio analyst on a number of radio programs. His latest, *Ahead of the Headlines*, which was heard every Thursday night on one of the major networks, was a round-table discussion of the current war. Besides his routine duties General Fuqua is now engaged in delivering military talks throughout the country. Among the groups he addressed recently were the Georgia Bar Association and the students of Yale University. Fuqua has also written a book, *Americans Wanted* (1940), which is designed for young men entering the military service.

In speaking of his work as editor, Major General Fuqua describes himself as a "trained seal," which, in journalistic parlance, means a specialist. His work is very similar to the work he did in the military service. Asked whether he ever made any wrong predictions, he replied that he never tries to see into the future, but merely analyzes what has gone before, and, on that basis, reaches conclusions about possible future trends. Moreover, he explains, two analysts may arrive at diametrically opposing solutions by following different estimates, although both are based on correct military reasoning.

His articles in *Newsweek* bear him out. Major General Fuqua is one of the most cautious of military commentators, and is therefore seldom found out on a limb. When the Nazis invaded Russia and most American commentators were rashly predicting a Russian defeat within six weeks, Fuqua confined himself to the statement that "the German Army never launched a campaign under more favorable conditions." In December 1941, when statements about the impregnability of Singapore were flying thick and fast, he was writing simply that "an analysis of the Japanese plan of invasion and the British defense positions indicates no pushover by the Nipponese in their Malay campaign." "Success will depend on. . ." is a typical opening.

Fuqua is married to Pauline Stafford, daughter of Major John Stafford of the United States Army, and he is the father of two children, Mrs. Rupert Bellville, now in England, the wife of a British flyer, and Stephen Ogden, Jr., a major in the United States Army and assistant military attaché at Lisbon, Portugal. General Fuqua is a brother of the late Governor of Louisiana, Henry Fuqua, and brother-in-law of the late Colonel Thomas D. Boyd, president of the University of Louisiana from 1895 to 1927. Gray-haired and with a tendency toward corpulence, Fuqua looks the part of a retired general, although his tweed jackets contrast with the sober garb he wore for so many years as a soldier. He enjoys the theatre and motion pictures, and is something of an authority on the dishes of his native Louisiana.

GARDNER, ED(WARD FRANCIS) June 29, 1905- Radio author and actor

Address: b. Hotel Royalton, 44 W. 44th St, New York City; h. 22 E. 72nd St, New York City

"Archie" is the star of radio's *Duffy's Tavern,* a weekly program broadcast over the Blue Network of the National Broadcasting System. His familiar greeting whenever the phone rings—and it rings all through the program—is the now almost-classic "Duffy's Tavern, where the elite meet to eat. Today's special, pickled pigs feet." The tavern and its habitués are all the brain children of Ed Gardner, the author and radio actor who plays the role of Archie.

Gardner's recent rise to radio fame was preceded by many years of obscurity and discouragement. For a long time Gardner was variously a saloon pianist, salesman, theatrical promoter and all-round man with small-time stock companies. It was not until the appearance of his radio program that he became a celebrity. In 1941 he won *Movie-Radio Guide's* award as the outstanding new radio comedian of the year; during 1942-1943 he has acquired 7,000,000 steady listeners. It is reported that the prisoners at San Quentin Penitentiary (whose warden is named Duffy) enjoy his program so much that they now call their jail Duffy's Tavern.

It all began on June 29, 1905 when Edward Francis Gardner was born above a butcher shop in Astoria, Long Island, New York. He came of German-Irish parents, and his original name was Edward Poggenberg. His father, also named Edward, was an ornamental plasterer and semi-professional baseball player who had no objections to his only son's getting an education so long as his schooling was confined within reasonable limits. Eddie went through New York's Public School No. 4 and then attended Bryant High School, leaving after his second year to avoid the risk of becoming overeducated.

Gardner, sixteen and right out of Bryant High School, found a job in an Astoria saloon, playing the piano. Duffy's Tavern probably derived some of its features from this old-fashioned bar where Ed's uncle Henny, who was a carpenter, spent most of his time. Ed was "right fond" of the place. "They'd have pig roasts on Saturday nights," he recalls, "and I used to play the piano, a fellow named Freddy Vopat the drums, and a guy called Theodore Smith the violin. We were the band and we were rotten. It was a nice place, though, and everybody had a good time."

ED GARDNER

Ed's father, who dreamed of a more stable future for his son, wanted him to become a businessman. Under paternal pressure Ed tried his hand at various jobs, always without success. For a while he was a crew dispatcher with the Pennsylvania Railroad, but he was fired for not attending to his work. "Gardner," growled his boss, "you'll never change your tactics." He never did. He became a salesman, clowning his way through selling everything from paint to pianos. It was in 1929, during his days as a piano salesman, that Gardner met the actress Shirley Booth '42 at the home of a friend and was later married to her. Soon after their marriage Miss Booth went into a stock company at Springfield, Massachusetts, and Eddie began selling miniature golf courses. Once he invented a collapsible bar and managed to sell a few of them. Within a short time, however, the business, like the bar, collapsed.

Show business was what attracted Gardner most, especially since his wife was connected with it. He finally broke into the theatrical world by becoming a promoter for Crosby Gaige, the producer. After several months Gardner left Gaige. He became a "whirling dervish of the show world": he managed, directed, wrote, and produced shows for shoestring stock companies; he signed up actors and theatres, handled hotels and transportation problems for road companies, painted scenery, typed scripts, acted as understudy, and was casting director for the Jennie Jacobs New York office.

Gardner's best achievement as a producer was *After Such Pleasures* by Dorothy Parker, a play adapted from the book published in 1933, which played for three weeks at the Barbizon Plaza in New York. The show rang the bell as far as rave notices were concerned, and obtained an attractive offer of an advertising position for Gardner. The unpredictable producer refused the agency offer; he found himself a director in a WPA outfit instead. Gardner remained with the WPA until his wife made a hit in *Three Men on a Horse.* Then his personal pride, if

GARDNER, ED—*Continued*

nothing else, forced him to accept the opening in the advertising agency where, he remembers, "I was the guy who gave radio actors the brush-off."

Later Gardner became connected with the children's programs of the Columbia Broadcasting System, at $25 a week. The radio job proved to be a springboard for more ambitious and profitable ventures. Gardner began moving up: he wrote and produced the *Believe It or Not* series; later he went to the Coast where he handled the MGM *Good News Show*. Among the many programs Gardner has directed since are the Rudy Vallee and the Burns '40 and Allen '40 shows.

Characteristically, Gardner left his $750-a-week director's job in order to develop an idea for a new type of radio program. The idea shaped itself into a revue called *This Is New York*, which was used by the Columbia Broadcasting System as a sustaining program. Gardner received $200 a week for it, but after a while his salary was raised to $375. The purpose of the program was to present to the radio audience diverse types of New Yorkers, from celebrities to cab drivers.

In his experience with the program, Gardner learned that while suave sophisticates were a "dime-a-dozen," real New York "mugs" were hard to find. Gardner conceived the latter type not as a rowdy or gangster but as "a genuine guy, naïve, kind, and simple-hearted." Archie was born to meet this need. A short time before the first broadcast of his new program Gardner was still auditioning for a city type. "We wanted a guy to talk New Yorkese," he explains. "All we could get were voices that sounded like Dodger fans in the left field bleachers." In despair Gardner gave a sample of how downtown diction ought to sound. "While I am demonstrating how it should sound to talk New Yorkese," he states, "the gang in the control room is havin' hysterics." The search was ended: Gardner became Archie and has kept the role ever since.

Unfortunately, the Columbia Broadcasting System was forced to scrap *This Is New York* because it did not attract any sponsors. But Gardner would by no means part with Archie. In August 1939, Gardner was in Hollywood again. While there he directed the variety portions of the *Texaco Star Theatre* and kept Archie alive by dreaming up a new show for him. He soon had built a program around Archie which he called *Duffy's Tavern*; he sold it to the Schick Razor Company early in 1941. (*Duffy's Tavern* has been broadcast from New York except between October 1943 and January 1944, when the program originated from Hollywood.)

Duffy's Tavern became an overnight success. It was one of the most original, best balanced, and, at the same time, craziest programs on the air. The patrons of this Third Avenue Saloon are welcomed by Archie, who acts as host and general factotum around the tavern because Duffy, the boss, is never there. In fact, Duffy has no real existence except at the other end of the telephone wire. He phones Archie about eight times during a broadcast to check up on him. From Archie's telephone monologues the audience learns that Duffy is a stubborn Irishman who lives somewhere on New York's West Side and who dislikes everything but Irish tenors. Duffy's daughter, strictly from Flatbush, appears regularly on the program. Originally played by Shirley Booth, the role was taken over by Florence Halop, sister of one of the Dead End kids, when the program returned to the air in October 1943 in Hollywood after a summer vacation. ("The script for the seasonal opening," commented *Variety*, "did not make for a particularly hilarious performance. . . Gardner seems inclined during most of the proceedings to go in for long monologues and assigns but the leavings for his confreres.")

Paramount Pictures purchased the film rights to *Duffy's Tavern* at a reported price of $150,000 and began production of the motion picture late in 1943. Ed Gardner assisted in preparing the screen play and became one of the actors in it.

Gardner and Miss Booth are now divorced. The radio comic was remarried in March 1943. His present wife is the former Simone Hegeman. Miss Booth was married to Corporal William H. Baker in September 1943.

Gardner is a "lean, mischievous, battered six-footer" with bushy eyebrows, blue eyes, curly brown hair, and a cleft chin. His voice sounds like a combination of kazoo and irate cab driver. He is the prototype of the Hollywood live wire: he thinks fast, talks fast, and acts faster. Whenever he relaxes he either paints or plays golf. Gardner's habits defy most success formulas: he keeps terrible hours, rarely goes to his office, and smokes like Pittsburgh. He recently bought an $80,000 house in Hollywood "with mirrored ceilings and suede-lined closets."

Whenever a guest celebrity appears on his program Gardner cannot resist making a barbed quip. He introduced Zorina '41 as "the terpsicorpse from the ballet." Another time, when Elsa Maxwell '43 was on, Gardner asked: "Speaking of the Four Hundred, how're you and the other three hundred ninety-eight?"

Duffy's *First Reader* by Archie, the counterman of *Duffy's Tavern*, was published (November 1943) by Gardner's sponsors. "It drips in grammatical gore," wrote the New York *World-Telegram* reviewer, "the shattered infinitive, the participle hanged and left swinging, the venerable quotations impaled on the pikes of blissful ignorance." While Gardner had "able assistance from half-a-dozen script writers in preparing *First Reader*," continued the review, "it's plain to those who know him that a good bit of Ed's own nut-brown wit has gone into the 'toombe' as he calls it."

GEORGE II, KING OF GREECE July 20, 1890-

Address: Greek Government-in-Exile, Cairo, Egypt

GEORGE II, KING OF GREECE

George II, King of Greece, was born on July 20, 1890 at Tatoï, the royal villa near Athens, the son of King Constantine and Princess Sophia of Prussia, daughter of the Emperor Frederick and sister of the Kaiser. He is closely related to the British royal family, being the great-grandson of Queen Victoria, but is of mixed Danish-German-Russian royal blood, and has not a drop of Greek blood in his veins. His grandfather, George I, a Danish prince of the Schleswig-Holstein-Sonderburg-Glücksburg family, founded the present dynasty when he was elected King by the Greek National Assembly in 1863.

George's grandfather was still on the throne when George was born. The young prince grew up at Tatoï; at Mon Repos on the isle of Corfu, where his grandfather used to spend his holidays because Kaiser Wilhelm did ("If I don't, he'll think he's King of Greece"); and in the Athens Royal Palace, "a gaunt structure of stuccoed white marble." He was brought up as both a sailor and a soldier, for a short time in 1909 being attached to the first regiment of his uncle's Prussian Guard in Berlin. In 1912, when the first Balkan War broke out, he served against Turkey in the 1st Greek Infantry and acted as orderly officer to his father (then the Diadoch Constantine, Duke of Sparta) during the attacks on Ioannina and at Salonika. In March 1913 King George was assassinated at Salonika. Constantine ascended the throne, and young George became Diadoch.

Then came the First World War. Although nominally neutral, King Constantine, George, and the late John Metaxas['40] (Greek chief of staff at that time) were accused by the Allies of being pro-German. There were many conflicts between King and Government, for the Government of Premier Eleutherios Venizelos, head of the Liberal Party, was strongly pro-Allied. After the Allies had landed troops at Salonika in 1915 in an attempt to save Serbia, Venizelos was summarily dismissed by Constantine, but the Allies continued to try to force Greece into the War. In September 1916 Venizelos seceded to Salonika, set up a provisional Government, and began to organize a state militant. Finally, deposed by an ultimatum of June 11, 1917, Constantine fled the country with Queen Sophia and the Diadoch George, then a major of infantry and a commander in the Greek Navy. Venizelos returned to Athens and in June declared Greece in the War, while the Allies set up Constantine's second son, Alexander I, as their puppet King.

In October 1920 a fatal monkey bite ended Alexander's career. The next month at the polls the Greeks overthrew Venizelos' Government, and in a plebiscite on Constantine's return their old monarch received 150 per cent of the eligible votes. On December 19, 1920 Constantine therefore returned to the throne, although the British refused to recognize him, and Venizelos left to live in exile in western Europe. But Constantine was not to remain King long. Venizelos had started an offensive war against Turkey, and Constantine continued it. During the exhausting campaigns

GEORGE II, KING OF GREECE—*Cont.*
in Anatolia the Diadoch George again saw military service, first as a colonel, later as a major general. Then defeat at Smyrna at the hands of the Turks precipitated a military revolt. A Revolutionary Committee insisted on the King's abdication, and in September 1922 the Diadoch became King, hurriedly taking the oath from the first priest who could be summoned from the church next door. The year before, on February 27, 1921, he had married Princess Elizabeth, the elder daughter of King Ferdinand and Queen Marie of Romania.

George's rule was even shorter than that of his father, who died in January 1923. The Revolutionary Committee carried its own policies into effect without consulting him, keeping George in ignorance of the progress of affairs after having executed several of Constantine's principal ministers and advisers. In October 1923 an abortive revolt against Revolutionary control, led by Metaxas, only strengthened republican feeling; and in December, following a great Venizelist victory at the polls, George and his Queen were "advised" to leave Greece while the General Assembly decided on the future form of government. George left for Bucharest on December 19, 1923, but refused to abdicate. Venizelos returned to Greece the next month to put an end to agitation for immediate proclamation of a republic and was forced to accept the Premiership, but in a few weeks resigned and left Greece. On March 25, 1924, the 103rd anniversary of the Greek declaration of independence, the General Assembly proclaimed a republic in Greece, deposing the Glücksburg dynasty and forbidding its members to reside in Greece; and on April 13 a national plebiscite confirmed the vote of the General Assembly. The nation's name was changed from "Kingdom of Greece" to "Hellenic State."

In Bucharest George tried living with his in-laws for a while, but soon grew bored and went to visit his Danish cousins in Copenhagen. Tiring of Copenhagen, he took a fling at Paris, where he tried in vain to write saleable film scenarios. He finally ended up in London (without his wife), hinting that under the proper financial auspices he would be quite willing to appear on the stage in New York City. "One of the unemployed who hopes to get his job back" is how he described himself, although he was willing to tell anyone who asked that it was "a rotten job, being a king." In London, where he was welcomed by the royal family as the great-grandson of Queen Victoria, court circles always referred to him as the King of Greece. Often a guest at Balmoral or in the Royal Box at Ascot, sought after by Mayfair hostesses, he led a busy social life but lived on $5,000 a year in a "dull London family hotel, Brown's on Dover Street, paying cash when he bought things because he couldn't afford to run up bills." For some time he did not even have his own car.

The new Greek Republic got along fairly well after Venizelos' return to power in 1928. In 1931, however, economic difficulties began. In the elections of March 5, 1933 the Populist Party of M. Tsaldaris obtained a small majority, and Tsaldaris became Premier. Promptly he began to eliminate Army officers and public servants known to be loyal to Venizelos. Republicans became uneasy, and there was an abortive republican revolt in March 1935. Venizelos, and those of his friends who could get out of the country, fled; others were arrested and had their fortunes confiscated. In protest, republicans boycotted the elections in the spring of 1935, and this time the Government won a much larger majority.

War Minister in Tsaldaris' Cabinet was George Kondylis, known as Italy's man in Greece. In October 1935 he organized an Army coup which took over the Government. After filling the streets of Athens with soldiers, declaring nationwide martial law and a state of siege, he proclaimed Greece once more a monarchy and himself the Regent. The National Assembly, summoned by him, voted to abolish the republican constitution, to revive the old monarchical constitution of 1911, and to hold a plebiscite on November 3 to confirm Kondylis' *coup d'état* and recall George to the throne. This was all very agreeable to the British, for George's pro-German reputation was by this time forgotten and he was known as Britain's man; it was even rumored that he might return to Greece only to be vindicated, afterward relinquishing his throne in favor of the Duke of Kent and the Princess Marina. Kondylis, however, kept in Mussolini's '42 good graces by going to Rome and talking of restoring the throne in such a fashion that he would remain dictator and would link the policies of Greece closely with those of Italy.

In the November 1935 plebiscite voters had their choice of dropping a blue ballot for George into the box or casting a red ballot for the Republic and, in *Time's* words, "getting roughed up." After some 800 republican and Communist leaders had been sent to island concentration camps their followers boycotted the polls. It was not unexpected, then, when the royalists (who counted the ballots) announced that ninety-eight per cent of the votes cast had been royal blue. George promptly wired: "This event by God's grace and the will of the Hellenic people will lead Greece to general prosperity and glory. The separation was hard for me, and all of us have suffered deeply. But I harbor no resentment against anyone. Greeks! Remember what the nation accomplished under my father, how we progressed toward the fulfillment of our dreams. Greeks! My ancestors' motto will also be mine: 'My strength lies in my people's love!'" Greek republicans, in turn, issued a manifesto addressed to "George Glücksburg" stating: "You are only the leader and tool of a gang of terrorists."

Kondylis sent George $200,000 in advance expense money for his triumphal return to Athens—still without his wife, for in July 1935 she had divorced him on grounds of desertion. The King's first proclamation from his palace at Athens was: "I will put at the nation's disposal all my capacity for work and my love for the people. I will bury the past for the sake of all, without exception." And at first it seemed as if he meant it. He had reportedly stopped in Paris to make a deal of republican toleration with Venizelos, and had promised an amnesty for political opponents imprisoned without trial and the reinstatement of Army officers involved in the March revolution. It was on the basis of Kondylis' opposition to such an amnesty, moreover, that George dismissed him four days after the restoration and commissioned Constantine Demerdjis to form a new provisional Government, pending the outcome of elections. On the strength of George's promises the Venizelists agreed to tolerate George's rule and to back a pro-British foreign policy. Kondylis threatened to mobilize his old military colleagues for battle if Greece voted in the Venizelists, but the King concentrated warships and troops in possible trouble centers, and in the elections that followed the Venizelists became the strongest group in Parliament.

But all was not well. Kondylis' coalition ran second in the elections and "united" with the other anti-Liberal parties, creating a parlimentary deadlock. Though fifteen Communists held the balance of power, George refused to tolerate the Communist deputies and the Liberals themselves refused to accept the Communist vote. No government could therefore be formed, and the deaths of both Kondylis and Venizelos not long after the elections made the situation still more difficult. George now had an opportunity to act. In August 1936 he sent for Metaxas, the Monarchist leader whose party had received only seven seats in the elections, and asked him to take over the Demerdjis provisional Cabinet. On August 4 Metaxas declared that a general strike scheduled for the next day in Athens was in reality a Communist revolt, declared martial law, and appointed himself dictator—supposedly a "temporary" measure until the political parties found it possible to reach an agreement and form a government. The decrees that followed, however, abolished the constitution, dissolved the parliament, banned the old parties, and created a "Third Hellenic Civilization." These decrees were signed by George, and most historians agree that the King's previous dealings with Metaxas (who had, it will be remembered, led the royalist revolt of October 1923) make him fully responsible for the dictatorship.

This dictatorship has been described as "a mixture of a National Socialist regime and a capitalist state of the eighteenth century," complete with secret police and youth movement. Demonstrations by democrats were savagely repressed by Metaxas, being labeled "Communist plots." Political opponents were given the castor oil treatment made famous by Mussolini, sent to island concentration camps, or executed. The universities were purged. A strict censorship of all reading matter was put into effect, such authors as Thucydides, Plato, and Xenophon being put on the Index. Liberty was proclaimed "a nineteenth-century illusion." Favorable reports on Mussolini, Hitler '42, and Franco '42 were published. Many remarkable social reforms, such as a minimum wage, were decreed, but they were enforced only on paper; actually the cost of living grew higher, salaries lower. The King's salary was an exception. According to *Time*, Metaxas' chief hold on the King was a little secret between them: "the King, who is always hard up, signed a decree paying himself his salary for the years of his exile, and the King knows that if Little John gets mad he will spill the story to the country." What is more, after sending more than $500,000 out of the country in less than two years for safekeeping in foreign banks George received a loan of about $1,400,000—supposedly as a mortgage on one of the old royal estates.

The people did not conceal their hatred for King and dictator, but behind the dictatorship were not only the Army and the police, but Germany. (Germany lent Greece four-and-one-half million dollars, all to be spent on armaments, while taking the bulk of Greece's exports.) Even after Metaxas rejected the Italians' three-hour ultimatum to Greece in October 1940 and the Italians invaded the country, George and his Government maintained cordial relations with Germany. The German military attachés in Athens and Salonika were, for example, permitted to observe and note in detail the arrival and deployment of the British forces up to April 5, 1941.

None of this prevented the Nazis from invading Greece themselves on April 6, after it became evident that the Greeks, fighting valiantly in spite of their own Fascist Government, were more than a match for the unenthusiastic Italians. By this time Metaxas was dead, and the late Alexander Korizis '41 Premier. Korizis, however, had not been allowed to change a single member of Metaxas' Cabinet, or even to choose his own secretary; and it is certain that there were traitors in high places. A large part of the Greek Army had been demobilized against its will, and the military situation already looked hopeless when on April 18 George called the Cabinet in extraordinary session and announced to the assembled group that he had learned of Fifth-Column activities by people in that very room. Korizis went home and committed suicide, and on April 20 George proclaimed himself Premier, appointing a new Cabinet and calling on the Army to "continue the fight to the end." The next day Emmanuel Tsouderos was appointed Premier, and on April 22 George and the Government abandoned Athens for Crete, pledging to fight on even though General Papademas had signed a separate armistice without orders. The Germans bombed the length and breadth of the island, and George and his party barely reached the seacoast alive, while thousands of British and Greek troops died in a defense rendered hopeless by lack of Allied airpower.

At the seacoast George embarked on a British destroyer bound for Cairo, and from Cairo via Capetown he reached London in September 1941. He had formed a new Cabinet in June, though retaining Tsouderos as Premier, and this now was recognized as the Greek Government-in-Exile. On New Year's Day 1942 George proclaimed: "Far from our dear country this year, I am devoting all my energies, all my thought, to the continuation of the fight of Greece at the side of our Allies; my Government, our national armed forces, and the unity of all Greeks abroad support me in this endeavor. I am confident that the victory of our arms will bring freedom, happiness, and internal peace to our country which, under a constitutional Government, will emerge from her present plight with renewed

GEORGE II, KING OF GREECE—*Cont.*

strength, and will occupy a position befitting her among the free nations of the world." That same month he took the first step toward the formation of a Balkan Union by pledging to unite the Balkan countries, when liberated, in defense, foreign policy, and foreign trade; and in June 1942 he came to the United States to sign a lend-lease agreement for the land, sea, and air forces of his country "who are fighting still." George and his party were guests at the White House and were honored at dinners given for them by President Roosevelt '42, Secretary of State Hull '40, and Secretary of the Navy Knox '40.

In the fall of 1942 most of the Greek Government-in-Exile was transferred to Cairo so that it might be nearer Greece and more useful in case of Allied action. It was not certain, however, that the Greek people were enthusiastic about this proximity, for underground reports at about this time were stressing the fact that the Greeks did not want a return to dictatorship. At a meeting of political leaders held in February an effort had been made formally to depose the King, but this action had been dropped on the grounds that it was not wise to go to extremes. Instead, it was agreed that a national plebiscite on the Crown would be held after Greece's liberation but before the King's return to Greece, with the United States and Britain sending observers to guarantee the honesty of the poll. As if in answer to this decision, on July 4, 1943 George announced in a broadcast from Cairo that as soon as it was possible for the Government-in-Exile to return to Greek soil all its members would resign in order that a truly representative Government could be chosen which would guarantee "freedom and orderliness of elections." He promised free elections for a constitutional assembly convention within six months of the liberation of Greece.

This was not at all what Greek democrats had meant, for they feared that, once on Greek soil, George's Government could control the results of any elections. But that George again had the support of Britain was made evident by Anthony Eden '40, who immediately told the House of Commons that the British Government endorsed George's post-War aims. The *New Republic* commented that same month: "[George's] democratic gestures in Cairo are to be interpreted as the maneuvers of a man, unsure of himself, fishing for an invitation to come back home. . . One of Greece's ablest fighters, Colonel Zervas, who is hoping to take over leadership of the guerrilla groups, has sworn his loyalty to George II. It may well be that the King is begging an invitation, but he is at the same time trying to write that invitation himself." (According to other sources, Zervas, who leads the army of the EDES, is anti-Royalist but even more anti-Russian and anti-Communist.)

On August 10, 1943 there arrived in Cairo, through England's assistance, representatives of various Greek underground factions to confer with the Allied command on the strengthening of Allied activities and to convey to Allied authorities the objection of the Greek people to George's return. On August 31, however, British Prime Minister Churchill '42 announced: "I take this opportunity to send a message of encouragement . . . to the Kings of Greece and Yugoslavia who have never faltered for one moment in their duty and who we hope to see restored to their thrones by the free choice of their liberated peoples."

According to a New York *Herald Tribune* correspondent: "In view of the present state of Greek public opinion, observers believe that the United States and Britain would be committing a great political error and laying the foundation for future troubles if they attempted to bring the Greeks royalty at the same time they bring them independence from the Germans. The alternative would be to deal with those Greeks within the country who have been leaders of the movement of resistance to the Nazis." Finally, on November 11, Churchill declared that the Greek people alone would eventually decide the future of their King; and the next month George himself indicated that he would reconsider his intention of returning to Greece with his Cabinet before a plebiscite on the issue. In the meanwhile there were persistent reports from Cairo of armed clashes between Zervas' forces, which had been receiving aid from the Allies, and ELAS, the Army of the National Liberation Front (EAM), composed of republicans, liberals, socialists, communists, and agrarians, and said to represent from seventy-five to eighty per cent of the Greek people. These reports were not confirmed by sources inside Greece, however, and George was accused of attempting to use Zervas as the Yugoslav Government-in-Exile had used Mikhailovitch '41: to discredit the popular partisan forces.

The man who may or may not return to Greece is five feet six inches tall, described by *PM*'s Cecelia Ager as "a lithe, dapper, well-set-up sort of chap, not too tall, not too short, even though he thinks he is. He wears built-up shoes. . . The King speaks the King's English like a King, and obeys the newsreel cameramen like a good egg. He looks directly at you when he says something, smiles when there's something to smile at, gets off graceful cracks himself, appreciates any in return." According to *Time*, he "commands ten languages, likes dancing, tennis, shooting, prizefights, the circus, slapstick at the Palladium and ginger ale with his meals. Untroubled by minor inconsistencies, he is a Mason, Greek Orthodox, and divorced—all in good standing." He also likes to drive a car fast, "go to first nights, wear snappy clothes—stripes and braided uniforms." He is childless, and is interested neither in family life nor in intellectual pursuits. In a debate at Oxford Union during his exile in 1928 he once said: "Instinctively I distrust the professor and the pedant. Give me a burly man of bone and gristle. The world is too full of bookworms and blue stockings, long-haired men and short-haired women."

GEORGE, WALTER F(RANKLIN) Jan. 29, 1878- United States Senator

Address: b. Senate Office Bldg, Washington, D. C.; h. Vienna, Georgia; Mayflower Hotel, Washington, D. C.

Chairman of the Senate Finance Committee and former chairman of the Foreign Relations Committee is conservative, hard-working Walter F. George, veteran Senator from Georgia whom President Roosevelt '42 attempted to "purge" in 1938. Poised, dignified, a "scholar and a gentleman," according to one irreverent reporter he would be a perfect Southern Senator of the old school if he would let his hair grow long and sprout a goatee. Even his wife calls him "Mister George," and few of his friends feel inspired to call him "Walter."

In spite of his patrician appearance Walter Franklin George is proud to remember his humble beginnings. He was born on a tenant farm about three miles from Preston, Georgia (in Webster County) on January 29, 1878, the son of Robert Theodric and Sarah (Stapleton) George, who were of Welsh and English stock. He knew both poverty and hard work as a boy, following his father from farm to farm, going to country schools first in Preston, then in Cordele. But his talents for oratory were already evident. When he was only fifteen he was summoned to a Masonic convention to substitute for a scheduled speaker who was late; at twenty, as a student at Mercer University, a Baptist institution in Macon, Georgia, he won an intercollegiate oratorical contest in Atlanta with an oration on the Constitution. Even away from the speaker's platform his way of handling words was impressive. According to one story, as a youth he rode into a small town one day on an ancient mule whose dilapidated condition provoked merriment in a girl watching the scene from her front porch. George promptly rode up to her and observed loftily: "This mule of mine is a worthy burden bearer of our farm. He does his work most uncomplainingly. Because of his toil he is an animal not to be despised. After five or six days of labor, he is entitled to recreation. How could this mule come into town for a little pleasure unless I brought him? To laugh at me, miss, is a reflection cast upon this good animal."

Obviously here was a born lawyer, and in 1901, with B. S. and B. L. degrees from Mercer, young George hung out his shingle at Vienna, Georgia. In 1906, three years after his marriage to Lucy Heard, he was elected solicitor of the Vienna city court. Between his election and induction the post of solicitor general for the Cordele Judicial Circuit Court fell vacant, and when he tried for the higher office he was again elected. According to Vienna legend, all the lawyers in town had urged him to go into politics: he had cornered all the law business!

WALTER F. GEORGE

By 1912 George was a judge of the Superior Court of the Cordele Judicial Circuit. He went from the circuit bench to the Court of Appeals on January 1, 1917, but resigned this last office on October 1 of the same year to become a Justice of the Supreme Court of Georgia. There he made a distinguished record. In the State Supreme Court he handed down at least one decision that was later appealed to the United States Supreme Court, and in upholding the decision of the lower court Justice Van Devanter said that George's opinion was written in such precise and unmistakable language that he was forced to quote it literally as his own. In 1920 George's Alma Mater honored him with an LL. D.

In 1922 fiery old Senator Tom Watson died, and George, his temperamental opposite, was picked to succeed him by the South Georgia Watsonites and Atlanta financial interests. In his campaign for the Democratic nomination George denounced the League of Nations and other "foreign alliances," promised to vote against the soldier bonus, and advocated abolition of the Railway Labor Board and more teeth for the Volstead Act. The United States should allow no further immigration "until every man in our country has a job," he also said. In the October primaries he received the biggest landslide given any Georgia candidate for twenty years. One of his first announcements after this victory was that he would wage a Senate campaign against any anti-lynching law.

On November 23, 1922 George was seated in the Senate, and he has been sitting there uninterruptedly ever since. (His present term does not expire until 1945.) According to the New York *Times*, he then proceeded to distinguish himself by hard work in committee chambers rather than by championing

GEORGE, WALTER F.—*Continued*

any spectacular causes or making many headlines. He soon acquired the reputation of a "regular" Democrat, one who was continually seeing a danger to "States' rights" in the rise of Federal power, urging that taxes be lowered, and denouncing high tariffs.

At the Democratic National Convention in June 1928 Senator George, by this time Georgia's favorite son, received fifty-two and one-half votes for the Presidential nomination, but he was defeated. He then helped to carry Georgia for the victorious candidate, Al Smith, in spite of the fact that Smith was a "wet" and George a confirmed "dry" who had formerly taught Sunday School in the Baptist Church. When George came to Washington in 1922 he had never touched liquor in his life, and he was proud of it: "I've battled a thousand in that respect, and I don't intend to let Washington weaken me." In 1928, however, he announced that although he was personally a dry, the wets "have every right . . . to oppose the Eighteenth Amendment and the Volstead Act and to do all within their lawful power to take a Federal Government out of a domain where it has no business to be —in the regulation of a private citizen's habits and wishes."

George was, of course, a conservative from the very beginning. In 1928 he fought Senator Tom Walsh's resolution to investigate the power trust on the grounds that "the supreme need of the present is to turn back to the Bill of Rights and the Constitution, and the abandonment of this stupid policy of projecting government more and more into the private lives and affairs of the people." He opposed Roosevelt as early as the Democratic Convention of 1932. When Roosevelt was elected he supported many New Deal measures, including the National Reconstruction Act, the Agricultural Adjustment Act, the Tennessee Valley Authority, the Banking and Securities Exchange Commission bills, the Wagner '41 Labor Act, and Social Security. But there were others of which he disapproved. In 1934, when he was a member of the Senate committee investigating the munitions industry, he signed the minority report with Senators Barbour and Vandenberg '40. In 1935 he attacked the Costigan-Wagner anti-lynching bill on the ground that it violated freedom of the States by providing that State agencies could be penalized by Federal courts, and he spoke against the Guffey coal bill. He voted against the "death sentence" Holding Company Act and against the Wagner housing measure, and he sponsored a Federal housing projects municipal taxation bill. In 1937 he took the lead in the fight against Roosevelt's proposals to reform the Supreme Court and to reorganize the executive branch of the Government, asked the Senate to override the President's veto of the Veterans War Risk Insurance bill, opposed the wage-hour bill, and asked for revision of undistributed profits taxes.

In 1938 George was, therefore, a logical candidate for Roosevelt's attempted "purge." In the campaign that year the New Deal candidate was Lawrence Camp, a young Federal district attorney in Atlanta, and on August 10, the day before he was scheduled to speak at the Gordon Institute stadium at Gainesville, Roosevelt referred to Camp as the "gentleman who I hope will be the next Senator from this State." That same evening both Camp and George made campaign speeches. Camp declared: "The record of Senator George during his sixteen years of service in the Senate discloses that he has been the Senate leader for the forces of entrenched greed, Big Business, and its millionaire owners of the country. That is the reason the local agents for these big Eastern corporations are supporting George." George, who had anticipated just such an attack, was at the same time announcing: "When I was fighting for the soldiers of the World War—those crippled and disabled men who, in the very hell of war itself, gave their bodies—I know that I was not fighting for Big Business. And six times I have taken the floor in the Senate to override a Presidential veto of bills that had been passed for the benefit of our veterans or for the widows and orphans."

At Gainesville the next day Roosevelt, announcing that he would vote for Camp if he could vote in the Democratic primaries in Georgia, called George a "gentleman and a scholar" and my "personal friend," but a man who "cannot, in my judgment, be classified as belonging to the liberal school of thought." "Some false representative of the people" had given lip service to the objectives of social and economic progress, he said, but had not "raised their little fingers actively to attain the objective itself. Too often these few have listened to the dictatorship of a small minority of individuals and corporations who oppose the objectives themselves. That is a real dictatorship."

George immediately arose, shook hands with the President and announced: "Mr. President, I regret that you have taken this occasion to question my democracy and to attack my public record. I want you to know that I accept the challenge." And in his radio address at Waycross four days later he took up the gauntlet in all earnest. The speech was the most effective and impassioned he had ever given; at one point the usually restrained Senator sobbed audibly, and tears coursed down his cheeks. "Are the people of this State or any other State entitled to choose their own servants?" he demanded. "Are they entitled to do so? This is not the first time it has been fought out in Georgia. We settled it once before when honesty walked down through the shadow of bayonets, held in carpetbagger hands, and cast an honest ballot for redemption of this State. . ." When he finished—"I am persuaded that this generation of white Democrats will not let democracy down in our beloved States"—and the band broke into the strains of *Dixie*, his visible audience of 1,500 was in tears.

In the spirited campaign that followed, Camp called George a representative of the Georgia Power Company, and Eugene Talmadge '41, the third candidate, charged that the George forces had spent $100,000 in placards, post cards, and advertisements, and had "a half million already contributed by the giant corporations of this nation at hand." George himself, admitting that "the Georgia Power Company supports me, but so do most of the other business interests of Georgia," called himself "an eighty per cent New Dealer"—"a liberal, but a liberal within the Constitution." All in all, it was one of the most bitterly fought campaigns in the history of the state. In the September primaries the early returns showed Talmadge in the lead, but as more outlying rural counties reported it became evident that George had carried the day. Most of the campaigning had been carried on in the rural areas, not only because the ownership of forty acres of land or $500 in property are requirements for voting in Georgia (a poll-tax state), but also because the county unit system makes some rural votes worth as much as thirty-five urban votes.

In 1939 George opposed the confirmation of Harry L. Hopkins '41 as Secretary of Commerce, assailed the wage-hour law, attacked the government lending bill and urged a spending cut, and spoke against a Presidential third term. On foreign policy, too, he and the Administration were at odds before the War. In April 1939 he attacked Roosevelt for asserting in an address at Warm Springs, Georgia that war might be imminent, and predicted that if we left Europe alone there would be no war. At the time Roosevelt wanted the arms embargo lifted and a cash-and-carry plan instituted that would benefit the democracies in case of war. On July 11 Senators George and Gillette (another "purge" survivor) cast the two deciding votes by which the Foreign Relations Committee deferred consideration of the neutrality act to the next session of Congress.

With the outbreak of war in Europe Senator George and President Roosevelt moved much closer together on foreign policy, and with the late Key Pittman, then chairman of the Foreign Relations Committee, George led the successful fight to repeal the arms embargo. But he remained an independent on most questions. In 1940 he voted for the new Hatch bill and spoke against a third term for the President. In the debate on the Selective Service Act he assailed the Administration's "dilatory attitude" in preparing for defense and announced that Congress was being asked "to do everything but actually declare war." He voiced opposition to the Russell Amendment authorizing government conscription of industry, saying that if such an amendment were passed the American people would know that we were not preparing for peace, but for war; he criticized Roosevelt's exchange of destroyers for British air bases on the grounds that Congress should have been consulted; and he argued against permitting the President to send the National Guard anywhere in this hemisphere in peacetime, calling it "the doctrine of militarism, the doctrine of tyranny, the doctrine of dictatorship." Although a supporter of Hull's '40 reciprocal trade treaties (he is a good friend of the Secretary of State), he also opposed the Latin-American loan bill.

In November 1940, with Key Pittman's death, Senator George became chairman of the Foreign Relations Committee. The late Senator Pat Harrison had refused the office because he wished to retain the chairmanship of the Finance Committee. At the time George stated his position on foreign policy: "I have never been an isolationist nor have I been for intervention. I favor making the whole Western Hemisphere economically as well as militarily immune from attack." He favored aid to England as well, and in 1941 he and Senator Barkley '41 led the fight for passage of the lend-lease bill. Yet he remained less of an interventionist than Roosevelt up to the day of Pearl Harbor. He soon came to the conclusion that the neutrality act would have to be amended, but for a long time he opposed the use of convoys, which, he thought, would probably lead to actual war, and in June he led the attack on the Administration's "totalitarian methods" in the debate on the Administration's request for emergency powers over merchant shipping. In July he suggested that it might not be necessary to pass a new law keeping selectees beyond their year of training, although the next month he himself voted to extend their service.

A long-time member of the Senate Finance Committee, Senator George had not allowed all of these debates over foreign policy to keep him from working hard on that Committee. In 1940, for example, he had led the fight for the kind of excess profits tax bill which was finally passed—a bill which, as one reporter pointed out, saved the Coca Cola Company, Georgia's richest concern, about $11,000,000 a year in excess profits taxes it would have had to pay under the Treasury's original plan. In August 1941, with the death of Senator Harrison, George gave up his chairmanship of the Foreign Relations Committee to become chairman of the Finance Committee. One of his first moves was to endorse the suggestion that tax exemptions be reduced from $2,000 to $1,500 for married persons and from $800 to $750 for single persons. The next year he opposed any change in the present method of allowing corporations to elect to pay their excess profits on the basis of their previous earnings, proposed to grant both corporations and individuals temporary exemption from taxes on that portion of their incomes which they would put into a proposed new type of security and to permit deductions of debts as a tax relief, and was responsible for the so-called Victory Tax, a five per cent gross income levy applying to all incomes of more than $624, which the Senate Finance Committee refused to repeal in December 1943.

In May 1943 he voted against the Ruml '43 plan when the Ruml-Carlson bill reached the Senate Finance Committee. He had previously criticized the Forand-Robertson bill passed by the House for not employing "the principle of equality of tax treatment," however. He promptly introduced a compromise bill, which, like the Forand-Robertson bill, would have abated seventy-five per cent of all 1942 income taxes, but which, like the Ruml-Carlson bill, would have collected the same percentage from both upper and lower tax brackets. His bill won the support of the National Association of Manufacturers and was eventually passed after extensive debate. George then announced that the carry-over tax of twenty-five per cent should operate to "freeze" personal income taxes for the next two years; and, again supported by the N.A.M. as well as by most Republican Senators and

GEORGE, WALTER F.—*Continued*

a goodly number of Democrats, he held to this conviction the following fall. When the Roosevelt Administration demanded $10,500,000,000 in new revenue, and the House Ways and Means Committee "cut back" the pending tax bill to raise only $2,000,000,000 George described the action as a distinct service. The bill reported by his Senate Finance Committee in December 1943 raised only slightly more (both the House and Senate Committees turned down Treasury proposals for heavier taxes on corporations and on high incomes and for higher inheritance taxes), and made changes in the War Contracts Renegotiation Law that Secretary of the Treasury Morgenthau '40 said opened the way for "truly extortionate profits" and held the "seed for a national scandal." According to Drew Pearson '41, the chairman of the Federal Finance Committee of the United States Chamber of Commerce once boasted that he controlled George's vote on taxes.

On the issue of price control George's record has been equally anti-Administration. In 1942 he criticized lack of wage control but spoke against price ceilings, arguing for increased production of civilian goods to hold prices down through normal competition. In 1943 he voted against considering farm-labor costs in parity only after the President had vetoed the Bankhead '43 farm price bill, and (although he himself had been one of the chief sponsors of the subsidy on gasoline to the oil companies) he also led the long fight in the Senate against rollback subsidies.

A strong critic of the Administration's extravagance, George has opposed the use of Federal funds for many other purposes, too, voting against an appropriation for crop insurance, for abolishing the domestic branch of the Office of War Information, and against money for the National Resources Planning Board. In June he also proposed that the combined expenditures of the Army and Navy be limited to $75,000,000,000 a year, since the armed services were indulging in "unnecessary" expenditures threatening the home-front economy. Where he has voted with the Administration on matters involving Federal spending the interests of his farm constituents have usually been directly involved. He voted, for example, for continuing the loan powers of the Farm Security Administration, for a $100,000,000 appropriation for soil conservation, and for money for the National Youth Administration, and he supported the school aid bill which was killed after an anti-discrimination amendment had been appended to it by its foes. (In the past George himself had offered three bills authorizing money to support vocational education in United States high schools, the courses outlined confined to such subjects as agriculture and industrial arts.) In late November Senator Wagner '41 introduced for him and for Senator Bennett C. Clark '41 a bill providing for unemployment insurance for veterans and credits on old-age insurance for each month of active service since September 16, 1940.

On other domestic issues the Senator has generally lined up with the conservative Southern bloc. He voted for the Bankhead bill to defer farm labor from the draft. He voted for the Smith '41-Connally '41 anti-strike bill and for overriding the President's veto of it. He urged the Senate to accept the House demand for the dismissal of Watson, Dodd, and Lovett '43. As ranking member of the Byrd '42 Committee, he favored Jesse Jones '40 and his Reconstruction Finance Corporation in the dispute between Vice-President Wallace '40 and Jones; as chairman of the special Senate Post-War Economic Committee (created in March), which is primarily concerned with industrial demobilization at home, he announced that America must remain "politically free" from government supervision after the War. Particularly interested in the aviation industry, he has also attacked the Civil Aeronautics Board, and he has long been on the warpath against the way renegotiation of contracts is applied to aviation manufacturers.

On matters affecting foreign policy Senator George has not been particularly vocal in 1943, although he led the fight for renewal of the reciprocal trade agreements, and although in March of that year Senator Connally appointed him to a subcommittee of the Foreign Relations Committee to study all pending and impending resolutions relating to cooperation with the United Nations in the prosecution of the War and the establishment of agencies to preserve post-War peace. In October, after foreign statesmen as well as sponsors of several Senate measures had been heard by the subcommittee, the first report was made to the full committee, and the Connally peace resolution was the result. Critics of the Connally peace resolution insisted that its attempt to antagonize no one, even isolationists, had robbed it of all meaning, and tried to get an amendment to it passed providing for a post-War international organization "with power, including military force," to enforce peace. This amendment George opposed, saying he was against an international peace force. On October 31 he doubted that the Moscow Conference would produce results affecting the Senate's stand on post-War problems, but following the Conference he himself voted for the revised Connally resolution.

Senator George is a man "of medium height, rather slender, with graying hair," who "is always fastidiously dressed, usually in a gray, double-breasted suit." According to Allan A. Michie '42 his "speech in private conversation is still slow and judicial, without any feeling save an occasional touch of dry sarcasm. On the platform his voice is strong and resonant, but he can raise it to a roar only with genuine physical effort." (He once loosed all his batteries against Huey Long, though, in a speech that is still remembered as one of the most punishing orations in Georgia history.) "He is courteous, but so instinctively reserved that even the members of his family call him 'Senator.'" Unfriendly critics say that he is pompous, humorless, and severe, pointing out that he never cracks a joke or tells a funny story. Even his enemies acknowledge that his mental caliber is distinctly above the average, however, and his memory even more remarkable. The story is told that he once gave a reporter a fifteen-minute extemporaneous statement and an hour later "repeated it, word for word, period for period, to other reporters who had got wind of it."

The Senator from Georgia has a reputation for working hard and playing not at all, but he does have two relaxations: hunting and fishing. Sometimes he even listens to Fibber McGee '41 and Molly '41 over the radio. He and Mrs. George (known to all her friends as "Miz Lucy") dine out very seldom, almost never dress for dinner, and, while in Washington, live in great simplicity at the Mayflower Hotel, where Mrs. George likes to do her own cooking. In Vienna the Senator owns a five-room home and 132 acres of land. He has two sons, Heard Franklin, who is in the Army Air Forces, and Joseph Marcus, who, as a lieutenant in the Naval Air Corps, was reported missing in action while on patrol duty in August 1943.

GOLIKOV, FILIP (IVANOVITCH) (gô'li-kov) 1900(?)- Russian military officer
Address: b. People's Commissariat of Defense, Moscow, U. S. S. R.

On February 16, 1943, six days before its twenty-fifth anniversary, the Red Army stormed and recaptured Kharkov, the capital of the Ukraine and the fourth largest city in the Soviet Union. Leading the valiant Red warriors was Colonel General Filip Golikov. When Hitler's '42 hordes had entered the Ukrainian capital in October 1941, trumpets had blown in the streets of Berlin and the Führer's voice had risen in paeans of self-adulation—for Kharkov, second only to Moscow as a railway center and a forge of Soviet industry, seemed at the time the final proof of Nazi invincibility. Now, sixteen months later, the Germans licked their wounds and determined to spare no cost in its recapture. Fresh Nazi divisions having been released from the troops of occupation in the West, a German counteroffensive followed which compelled Golikov's outnumbered men to abandon the martyred city for the second time—but only after fierce resistance. "We will be back!" vowed the Reds. And on August 23, 1943 vic-

GENERAL FILIP GOLIKOV

tory bells rang in Moscow as the city changed hands for what was surely the last time.

Colonel General Filip Ivanovitch Golikov is somewhat better known abroad—specifically in the English-speaking countries—than most of his colleagues. This is due to the fact that a few weeks after the Nazi attack on the Soviet Union, Colonel General (then Lieutenant General) Golikov headed a military-diplomatic Soviet mission to London and Washington to discuss lend-lease arrangements. Still only the barest outlines of his life have been published in Soviet and foreign publications. There is some doubt about the date of Filip Ivanovitch Golikov's birth. Most sources say he was born in 1900. In 1918, shortly after the Bolshevik Revolution, he joined the newly organized Red Army, and he fought in its ranks throughout the civil war period. His valorous service record was rewarded with a scholarship to the Moscow Military Academy.

After graduation, his rise at first was slow. He specialized in mechanized warfare (he is now regarded as one of Russia's principal tank experts) and he was finally given the opportunity to put his theories to fiery tests during the Finnish campaign of 1940, in which he distinguished himself and received several decorations. From then on he skyrocketed to the top. When the War with Germany broke out Golikov was already a key member—deputy chief—of the Soviet General Staff, serving under Marshal Shaposhnikov '42. He is one of the group of unknown "youngsters" in the Red Army command who have proven their mettle in the present fight and who have climbed to important posts over the better known oldtimers.

General Golikov was designated by Stalin '42 as the first envoy to his new allies. On July 8, 1941 the young Soviet general and his military mission, consisting of Rear Admiral N. Kharlamov of the Soviet Naval Staff, Colonel Pugachev, Colonel V. Dragun, Major A. Sizov, and a military engineer named Varanov, arrived in London. They were the center of an enthusiastic demonstration when a crowd of singing and cheering Soviet sympathizers greeted them at the railroad station. Some of the women broke through police lines to embrace the members of the delegation.

The mission led by General Golikov visited Foreign Secretary Anthony Eden '40 the following morning. They also conferred with Sir Archibald Sinclair '40, Captain David Margesson '41, General Sir John G. Dill '41, and other staff officers. Within twenty-four hours of General Golikov's arrival in England the first shipment of British war supplies was on its way to Russia. Five days later Golikov's mission and the English military authorities drafted a joint Russian-British plan of strategy against Nazi Germany and for close reciprocal assistance. On July 13 Golikov returned secretly by plane to Moscow for consultations with Stalin. He was accompanied only by Colonel V. Dragun, a specialist in motorized warfare and deputy chief of the External Relations Bureau of the Soviet Defense Commissariat. The other members of the mission under the leadership of Rear Admiral Kharlamov remained in London to continue the technical talks. In the meantime a mutual aid pact was signed by representatives of the two countries in Moscow.

In a few days General Golikov was back in London with new instructions. He remained in the British capital for another fortnight until a final agreement on strategy was reached, supplementing the Anglo-Russian alliance. On the last day of his sojourn in London, he conferred at the American Embassy with Ambassador John G. Winant '41 and Harry L. Hopkins '41, administrator of the Lend-Lease program who was in England at the time. At this conference it was disclosed that General Golikov had been commissioned by Stalin to depart for Washington to discuss American aid to Russia.

On July 26, 1941 General Golikov, accompanied by Engineer General Alexander Repin, arrived at La Guardia Field, New York, by way of Montreal. From there they proceeded to Washington, where they held a series of conferences in the next few days with State Department officials and with General George C. Marshall '40, chief of staff of the United States Army. The purpose of General Golikov's visit to the United States, as it was officially explained, was to coordinate Russian orders for military supplies under the Lend-Lease Act.

On July 31 General Golikov and his aide were received at the White House by President Roosevelt '42. The Soviet generals wore uniforms of scarlet, blue, and olive drab, with the hammer and sickle embossed in gold leaf on their visored caps. After the conference General Golikov told the press that it was "extremely easy to discuss military questions with your President."

"One feels," he added, "that President Roosevelt is well acquainted with all problems involved—that he is Commander in Chief not only by constitutional right but also by knowledge and by his deep understanding of the international political situation."

Commenting on his talks with General Golikov, the President highly praised the Russian stand against Nazi aggression and permitted himself to be quoted as saying, "It is magnificent. Frankly it is better than any military expert of Germany thought it would be." Simultaneously with General Golikov's negotiations in Washington, conferences were being held between Lend-Lease Coordinator Hopkins and Joseph Stalin in Moscow regarding American aid to Russia.

With his military-diplomatic mission in Washington successfully completed, General Golikov returned to Moscow to be placed at the Front—as a fighting man again. When the Soviet capital was threatened in the fall of 1941, he was given command of a field army, serving under Marshal Timoshenko '41 and General (now Marshal) Zhukov '42. Both in the winter of 1941 and in the spring of 1942, when his army helped to beat back the Nazi onslaught on the Moscow Front, General Golikov's name was frequently mentioned in dispatches. After the tension there was released General Golikov was assigned to the more critical southern theatre of operations as chief of the Voronezh sector. Because of his constant and phenomenal successes at his new post, the young General was then chosen by Premier (now also Marshal) Stalin to "liberate the Ukraine."

General Golikov began a new counteroffensive as early as December 1942. Three days before Christmas his relentless drive southwest across the Don Bend reached Kantemirovka after a fifty-five mile push. By January 23, a month later, his fast-moving troops were occupying Volokonovka, a railway junction seventy-eight miles northeast of Kharkov, and capturing 12,000 new prisoners, thus increasing the total of Axis captives on this front to 64,000. In the preceding nine days of this offensive, Golikov's army had routed seventeen Axis divisions, nine of them Hungarian. In seizing Volokonovka, General Golikov succeeded in cutting the Elets-Kupyansk railway, which was of immeasurable help to him in his subsequent sweep to the Eastern Ukrainian metropolis of Kharkov.

By February 6, 1943 Colonel General Golikov had cleared the last Germans from Voronezh and had driven some 100 miles to the west. One of his most brilliant accomplishments was the encirclement of the Axis forces between the Don and the Moscow-Rostov railway. It resulted in the virtual capture or annihilation of the remnants of nine routed divisions. This action, it is conceded by neutral observers, just about knocked the Italians out of the fighting. Two days later, Golikov's army pounded its way within forty miles of Kharkov and on February 16 he stormed and reconquered the Ukrainian capital. General Golikov's troops pushed steadily westward and in the first week of March had gained close to a hundred miles in their new drive toward Kiev. By the middle of March, however, in an "enveloping movement from north and east," the Germans had launched a counteroffensive; and on March 16, 1943 the Soviet High Command admitted that Kharkov had fallen to the Germans again. Golikov was not commanding the Red warriors who retook the city by storm in August of that same year, but it is safe to say that he rejoiced with them.

Colonel General Filip Golikov is married and is the father of two daughters. He is "stocky, shaven-headed", "a husky man with a broad face." Although some describe him as "tall," photographs taken with former Under-Secretary of State Sumner Welles '40 show the Soviet general to be of less than medium height, some six inches shorter than Welles. Newspapermen who saw General Golikov emerge from the conferences with the President in Washington remember his "steady blue eyes, his clean-shaven head, and his barrel chest," covered with the Red Star and with the ribbons of the orders of Lenin and of the Red Banner.

GORDON, MAX June 28, 1892- Theatrical and motion-picture producer

Address: b. 149 W. 45th St, New York City; h. 30 W. 54th St, New York City

His leisurely and friendly manner belie the fact that Max Gordon produces three or four Broadway plays during a season (a high average), spends six months of each year in Hollywood superintending film productions, and does an all-year job for the National Broadcasting Company as general production director of television. Biographical sketches of him fail to agree in many particulars because his sense of humor prompts him to sacrifice facts for a laugh when talking of his career—the laugh usually directed toward himself.

"I was born [June 28, 1892] in poverty," says Gordon, "at 59 Goerck Street in the slums of New York City, and my father was a pants-presser in a sweatshop." His family included ten people, his father and mother, Harris and Doba (Friedman) Saltpeter, himself, two elder brothers, Dave and Cliff, and five sisters—all ten of them slept in four rooms. "The Saltpeter boys discovered the theatre when they were still in short pants, and sold popcorn at baseball games to get money for tickets to the neighborhood shows." Brother Cliff took a job with a burlesque show and changed his name to Cliff Gordon. By 1910 he owned three shows and had become well known in burlesque.

At eighteen Max decided to follow Cliff into show business. Cliff, wishing Max to continue his education, refused to give him a position in any of his shows. A freshman at City College at the time, young Max could not see the advantage of further schooling and through his own efforts secured a position with the Hyde and Behman burlesque shows. Two years later Cliff, unable to persuade young Max to continue his educa-

Lucas-Pritchard

MAX GORDON

tion, gave him a position in the business end of one of his own burlesque shows. It was then that Max changed his name to Gordon.

When the company played Minneapolis he met Albert Lewis, a comedian in another burlesque show, and made a major decision in his career. Lewis and Gordon went into business together. Their first vaudeville venture, an act called *The London Fire Brigade*, was a thoroughgoing failure. It was not until the team produced Aaron Hoffman's sketch *Straight* that they achieved any success. Some time later, when they were invited by the Keith vaudeville circuit to book their acts with them, Lewis and Gordon started on their way up in the theatrical profession. Among their successes was a one-act play, *In the Zone,* by Eugene O'Neill, then a young and unknown playwright, who asked for and was given a $50 advance on the sketch because he wanted to get married. A few years later Lewis and Gordon began making investments in Broadway plays. *Six-Cylinder Love* (1921); *The Nervous Wreck* (1923); *Rain* (1923); *The Family Upstairs* (1925); *Easy Come, Easy Go* (1925); and *The Jazz Singer* (1925) were plays which earned them approximately a million dollars. When their theatre profits were lost in the stock market the Lewis and Gordon partnership was terminated. In 1930 Gordon became an independent producer.

The season before, Dwight Deere Wiman and Tom Weatherly had produced *The Little Show* (1929) starring Fred Allen '41, Clifton Webb '43, and Libby Holman, with such success that they were planning a second version for 1930. When the producers changed their plans, leaving Allen, Webb, and Holman available, Gordon decided to put them under contract, though their combined weekly salaries amounted to $6,000, a considerably larger sum than he had ever paid for acting talent in his vaudeville days. Borrowing money for the planned revue, he engaged Howard Dietz and Arthur Schwartz to write a book and score. Under the title *Three's a Crowd,* the revue opened in October 1930. *The Nation's* critic pronounced it "the best revue New York has seen in many years." After a successful New York run the revue went on the road, where it lost money. Although the show finally managed only to break even it established Gordon as a producer of smart shows built around big names.

His next production, *The Band Wagon* (1931), also produced on borrowed money, earned, however, a profit of $100,000. The reviewers were unanimous in their praise, and "many people still think of it fondly as the greatest revue of all times." The critics were divided in their opinion of his second musical production in 1931, *The Cat and the Fiddle,* but Gordon "nursed the play into a healthy state of convalescence." He was not so successful with *Flying Colors* (1932), which folded after a "short flight." The following year, although he had three hits to his credit since his debut as an independent producer, "Gordon's stock market losses and his indulgence in engaging the highest-priced talent left him broke and he had a nervous breakdown."

Noel Coward's '41 play, *Design for Living* (1933), brought him out of his physical and financial slump. In this, his first venture into drama, Gordon followed his musical comedy policy of engaging big names. The Lunts '41 and Noel Coward '41 were cast in the leading roles. Joseph Wood Krutch, writing in *The Nation,* attributed its success to the popularity of the Lunts and Coward. Richard Lockridge '40 of the New York *Sun* supported Krutch's opinion when he wrote: "Not very much plot is supplied or needed, but the whole as written and acted is as happy a spectacle of surface skating as one might hope to see. They skate with fantastic swoops and little nonsensical shouts and a fine abundance of animal spirits."

Gordon's production of Clare Kummer's *Her Master's Voice* (1933), starring Laura Hope Crews and Roland Young, also was praised chiefly for its casting. The *Commonweal* review stated: "The play has no particular plot or purpose. Its only merit lies in its verbal fireworks. Even these would fall flat in other mouths than those of the capable actors who take charge of the proceedings." *Roberta* (1933), a musical comedy by Jerome Kern '42 and Otto Harbach adapted from a story by Alice Duer Miller '41, received adverse criticism from twelve of the fourteen leading reviewers—but Gordon had faith in it. The musical comedy had cost $140,000 and was losing $5,000 a week on running expenses, but Gordon kept it open. Four weeks later the box-office receipts began to soar. Many attributed the change to the fact that one of its songs, *Smoke Gets in Your Eyes,* had become a nationwide hit.

In 1934, a peak year for Gordon, only one out of the five plays he presented was a failure. Despite the early demise of *The Spring Song,* a play about an East Side family who had the same dreams and frustrations that he knew in his own youth, Gordon still speaks of it as his favorite play. *The Shining Hour*

(1934) introduced to the American stage London's favorite star, Gladys Cooper. Raymond Massey was cast opposite the English star. *Newsweek* hailed the play as "a welcome arrival to the New York stage." *The Farmer Takes a Wife* (1934), a drama about the boom days of the Erie Canal, adapted by Marc Connelly and Frank Elser from the novel, *Rome Haul,* received favorable notices as a charming bit of Americana. Another production of that same year, *Dodsworth*, directed and adapted by Sidney Howard from Sinclair Lewis' book of the same name, is considered one of Gordon's most distinguished productions. The press were unanimous in their praise. Walter Huston and Fay Bainter played the leading roles.

Gordon may laugh off all credit for the success of his productions; proof, however, of his artistic taste is that all of his productions have been marked with distinction, and though superbly mounted, never have been lavish at the expense of discrimination. The one exception to this was *The Great Waltz* (1934). *Newsweek* called it "a miraculous feat of scenic and musical extravagance," a $250,000 production backed by the Rockefellers to put over the huge theatre they had built in Radio City and which had been a money loser for them. *The Great Waltz* was based on the lives and music of the Johann Strausses, junior and senior. "With a lavishness that dazzled and awed Manhattanites," Gordon conquered the gigantic proportions of the Center Theatre, adding a $100,000 proscenium and installing a $50,000 switchboard for lighting. The cast numbered 200, the stage-hand crew ninety. Despite much adverse criticism, *The Great Waltz* played out the season to crowded houses and established the Rockefeller property as a legitimate theatre.

Jubilee (1935) by Cole Porter '40 and Moss Hart '40 was, in the opinion of the *Catholic World,* "a very jubilant jubilee for everyone concerned. One worries only about losing one's self in a plethora of superlatives," wrote the critic, "for there is an amiable generosity of beauty and fun about the entire production which invites gratitude." Helen Jerome's dramatization of *Pride and Prejudice* (1935) under the direction of Robert Sinclair was judged by *The Nation* "a director's triumph." The dramatization by Owen Davis and his son Donald of Edith Wharton's novel, *Ethan Frome* (1936), was considered uncommonly good. Settings were by Jo Mielziner; the cast included Raymond Massey, Ruth Gordon '43, and Pauline Lord.

Less enthusiastically reviewed was *St. Helena* (1936), written by R. C. Sherriff and Jeanne de Casalis with Maurice Evans '40 in the role of Napoleon. The play "had been hospitably received by the English critics as a rather dandy example of the literary drama," wrote George Jean Nathan in the *Saturday Review of Literature,* but Nathan's personal opinion was "that if *St. Helena* is a literary drama in any sense, give me *Boy Meets Girl.*" He thought, moreover, that the play "had not much more drama than literature." The public seemed to have agreed with Nathan—it was not one of Gordon's money makers.

The Women (1936) was Gordon's biggest box-office success up to that time—it had a record of 657 performances. While the metropolitan critics were unanimous in their disappointment at the playwright's picture of American womanhood ("If women were what Clare Boothe '42 has pictured them to be then God should have left Adam his rib," wrote the *Catholic World*), they admitted a little grudgingly that the show was a hit.

Gordon's next production was Shakespeare's *Othello* in 1937. The *Commonweal* considered its outstanding features "the Iago of Brian Aherne and the costumes and scenery of Robert Edmond Jones." The Othello of Walter Huston was "chiefly commendable because of its sincerity . . . a likable rather than a tragic Moor." In 1938 Gordon returned to his first love, the smart revue. *Sing Out the News,* produced in collaboration with Moss Hart and George S. Kaufman '41, belongs to the *Of Thee I Sing* school, obtaining its comedy from audacious impersonations of contemporary political figures. That same year Gordon's *Save Me the Waltz* was described as "not strong enough to stand on its own dramatic feet." During the 1938-1939 season Gordon also produced *The American Way* and *Spring Thaw* in association with Sam H. Harris. Of the former, George Jean Nathan said: "George Kaufman's and Moss Hart's *The American Way,* proffered as a cavalcade of the nation from 1896 to the present time, turns out to be the most unabashed cavalcade of hokum that our theatre has seen in the same considerable period..." Nathan concluded his review, however, with the admission: "The reviews of the other metropolitan local critics seem to indicate that I don't know what I'm talking about." Staged in the mammoth Center Theatre (Radio City) during the first year of the World's Fair, the play was manufactured with an eye on the visiting public.

Very Warm for May (1939), with music by Jerome Kern and lyrics by Oscar Hammerstein II, had a short run. "The tunes were bright and strummy enough," commented *Time*, "but a raucous, epileptic plot made the show a bird that could sing and not fly." In 1940 Gordon in association with E. Ray Goetz produced the screen version of Robert Sherwood's '40 play, *Abe Lincoln in Illinois,* under the RKO banner. This year (his tenth as an independent producer) saw a change in his policy of engaging big names for his plays. Out of seven Broadway productions under this new policy during the seasons of 1940 to 1943 he has had three top box-office successes, two with "mild takings," and two failures.

My Sister Eileen, adapted from the Ruth McKenney '42 sketches by Jerome Chodorov and Joseph Fields, played 866 times on Broadway, opening on December 26, 1940 and closing in mid-January 1943. In 1941 Columbia Pictures bought the film rights for $225,000; at the same time Columbia signed Gordon to produce the film version and to make himself available as producer of other pictures during six months of each year. In July 1943 he severed this contract and "went over to Twentieth Century-Fox Films. Gordon was reportedly dissatisfied with small budget allotments from Columbia. His new contract allows him larger budget allotments on pic-

GORDON, MAX—*Continued*

tures and stage plays and specifies no definite time in Hollywood." His weekly drawing account from the picture company is $1,500. *The Bandwagon,* Gordon's 1931 musical revue hit, will be brought to the screen under this contract, with Gregory Ratoff ['43] directing and Ginger Rogers in the leading role.

The Land Is Bright (1941) by Edna Ferber and George S. Kaufman, a dramatic play about four generations of a very rich American family, was only a mediocre success. Gordon's *Sunny River* (1941), a musical comedy by Oscar Hammerstein II and Sigmund Romberg, was one of his failures—closing after a four weeks' run. *Junior Miss,* on the other hand (adapted from the Sally Benson ['41] *New Yorker* stories), proved to be one of Gordon's most profitable ventures—opening in November 1941 and running until July of 1943 on Broadway while two other companies played the road. Its motion-picture rights were bought by Mary Pickford in August 1943. The contract calls for a first payment of $355,000 and thirty-five per cent of the net profits.

The Doughgirls (1942) by Joseph Fields was the 1943 hit of Broadway's non-musical comedies. It was hailed by the press as a hilariously funny and sophisticated comedy-farce on the Washington housing theme. The picture rights went to Warner Brothers for the sum of $250,000. Despite the high regard in which it was held during its Boston tryout, *Men in Shadow,* which Gordon brought to New York on March 10, 1943, failed to elicit a similar response from most critics. "To the contrary all were agreed that the [war] melodrama fell short in actual writing and character development." The play closed after twenty-one performances.

Jerome Chodorov's *Those Endearing Young Charms* (1943), a four-character romance with a war background, found the reviewers divided in their opinion. Gordon put up a battle against the critical opposition—through advertisements he personally guaranteed the play's entertainment value, citing other productions of his which the public had liked despite adverse criticism from the press—but he was unable to save the play as he had done in 1933 with *Roberta.* The film rights were bought by Samuel Goldwyn for the sum of $75,000. In January 1944 Gordon was to present *Over Twenty-One* with Ruth Gordon as its star and its author (her first play). Harry Segall's *Action in the Living Room* was also on Gordon's production schedule for 1944.

Gordon is described as "a sturdy compact-looking man. He wears eyeglasses and grayish or brownish clothes which are all so much alike that a friend once complained that he always seemed to be wearing the same suit." Gordon denies the story (often reported) that he is a frequent guest at luncheon or dinner in the White House with the President ['42] or Mrs. Roosevelt ['40]. Gordon has visited there and is "friendly with Mrs. Roosevelt, but doubts if F.D.R. would remember him if he saw him again."

In 1921 Gordon was married to Mildred Bartlett, an actress whose stage name was Ray Dean, and who retired from the stage before her marriage. The Gordons live quietly; their social excitement is limited to Mrs. Gordon's bridge parties—Mr. Gordon doesn't play. His recreations are golf and horses.

He gets up around 6:00 every morning and reads plays until about 10:00, when he goes to his office. In New York he occupies a suite of rooms over the Lyceum Theatre, once the home and business abode of the late Daniel Frohman, dean of American theatrical producers. Gordon has replaced Frohman's collection of photographs and other mementoes of theatrical celebrities of the '90's with a more modern décor.

Next to his own career, Gordon's greatest interest is politics. He would like to run for Congress after he has produced a few more shows. If he ever "makes Congress he undoubtedly will introduce a bill to give people in the creative and precarious professions, like actors, writers, musicians, and producers, a break by the Government on their income tax. 'They may work ten years before they have a hit, and they may not have another for the next ten,' he points out, 'yet the tax they pay is based on their incomes at their highest point.'" He is a member of the War Writers' Board, and like other producers gives his quota of free seats to men in the service. His New York clubs are the Westchester Country, City Athletic, and the Quaker Ridge Golf.

GORDON, RUTH Oct. 30, 1896- Actress
Address: b. Music Box, 239 W. 45th St, New York City

"The will to succeed . . . that is half the battle. I hadn't any illusions about my ability; I only thought if other people could learn to act, I could," says Ruth Gordon, who over the span of twenty-eight years has become one of America's leading contemporary actresses. Her repertoire of roles ranges from satire to tragedy.

Born on October 30, 1896 at Wollaston, Massachusetts, near Boston, Ruth Gordon is the daughter of Clinton Jones, a retired sea captain, and of Annie (Ziegler) Jones. In "Look in Your Glass," an autobiographical sketch in the *Atlantic Monthly,* she recalls "our shabby half of a double house at 14 Elmwood Avenue . . . where my mother and father and I and our cat hoped, dreamed, and somehow scrimped along . . . on $37.50 a week which my father earned as a foreman at the Mellin's Food Factory in Boston. . . I think that my father would have been different in almost any place where he chose to live, for he was unswayed by public opinion. He loved reality—trees, birds, flowers, weather, facts . . . the sea and ships. My mother loved anything that made my father and me happy. . . And I loved myself and

Miss O'Neill, my Latin teacher, and anything that had to do with the theatre."

As a senior at Quincy High School Ruth wrote to her favorite actresses and eagerly awaited their replies. "When you are seventeen and stage struck, mail is magic, for the postman may bring a brown photo mailer in which is a signed picture of an actress." A brief note from Hazel Dawn, whom Miss Gordon had seen in *The Pink Lady*, convinced her that her destiny was on the stage. Her mother, who had bartered her sewing for Ruth's piano lessons and who had accompanied her daughter to Boston stage entrances, encouraged her ambition. But "how we should break the news to my father was a great worry, for he wanted me to be a physical culture instructress, and nothing would convince him that I did not have enough talent in that line to stand up straight." When her theatrical bent was admitted one evening at dinner, her father asked her bluntly: "What makes you think you've got the stuff?"

Mr. Jones wasn't going to "stand in his daughter's way." In 1914 he dug up $400 from an old sock and brought her to New York himself. She spent the year at the American Academy of Dramatic Arts. The following year, installed in a hall bedroom at the Three Arts Club, she started looking for a job. "The question of whether I walked from West 85th Street to Times Square was largely determined by whether some solvent Three Arts Club member had left a nickel or two lying handy on her pin tray." On the side, she worked as an extra for silent films made at Fort Lee, New Jersey. As a taxi dancer in Irene and Vernon Castle's first film she earned $1.25 and two ham sandwiches a day.

Her career actually began when, in 1915, she appeared with Maude Adams in a Christmas week revival of *Peter Pan*, playing Nibs, a dancing part. She was overwhelmed with gratitude to Alexander Woollcott['41] for writing: "Ruth Gordon was ever so gay as Nibs." Under the illusion that one thanked critics for good notices, she wrote an appreciative note to "Mr. Roger Woollcott." After playing in Miss Adams' road company of the *Little Minister*, she was offered the lead in one of the road companies of *Fair and Warmer*. The engagement consisted of thirty-nine weeks of one-night stands. Several times the actors were snowed in. Without the protection of Actors Equity, salaries were docked for failure to appear at the next town.

In 1919 she was mouthing sugary sweet tones as the "Baby-talk Girl" in Booth Tarkington's *Seventeen*. During the show's running she married the late Gregory Kelly (he died in 1927), who was playing William Sylvester Baxter in the same play. The following year she played in *Clarence* in Chicago with her husband. Jane Cowl, after one performance, told Miss Gordon that she had been wonderful. "It was the first time anyone ever told me I was a good actress. . . People used to compliment Gregory first and then turn to me."

Vandamm

RUTH GORDON

For a while Gregory Kelly and his wife owned a stock company in Indianapolis. Working in stock helped to give Miss Gordon the experience she needed to improve her acting. In *The Fall of Eve* she was featured for the first time (1925). "Then I didn't have a job for a year and a half and probably wouldn't have been given one then if Guthrie McClintic['43] hadn't fought for me." The part was Bobby in *Saturday's Children* (1927) by Maxwell Anderson['42]. Anderson didn't think Miss Gordon could play anything but "dumb" roles, but her success as the honest, baffled newlywed, struggling with a slim budget and marital vagaries, surprised him.

Between 1929 and 1932 she completely outgrew the "delicious moron" type of part she had become associated with in her early career. She appeared in *Serena Blandish* (1929); *Hotel Universe* (1930); *The Violet* (1930); *The Wiser They Are* (1931); *A Church Mouse* (1931). In *Here To-day* (1932) she played a sweetly poisonous lady author with a "gentle, plaintive, ingenuous manner which conceals splendid malice—a scatterbrained air which hides a world of catty shrewdness." The following year, however, John Mason Brown['42] criticized her performance in *Three Cornered Moon*: ". . . she acted with the same skill, but so familiar was everything she did that she seemed to be giving the very same performance she has been giving for some years. Surely Miss Gordon is too gifted an actress to limit herself to this performance, no matter how good it may be."

In the next few years Miss Gordon's acting showed a surer technique, and her roles became more varied. In 1934 critics applauded her performance in *They Shall Not Die* and in *A Sleeping Clergyman*, both Theatre Guild productions. Her moving portrayal of Mattie Silver in *Ethan Frome* in 1936 was also widely acclaimed, although some critics found her performance brilliant but at times too lavish or "showy for the gaunt necessities of the play." After the introspective gloom of *Ethan Frome*, Miss

GORDON, RUTH—*Continued*

Gordon wanted something gay. She turned to *The Country Wife.*

The Country Wife opened at the Old Vic Theatre in London in October 1936. An American actress in native English drama in London is walking on eggs, and for this reason Miss Gordon's warm reception was doubly remarkable. The production broke box-office records. During the last week people were willing to pay double price for seats advertised in the personal columns of the London *Times*. The London papers were full of praise. "Miss Gordon's smile and arch ways would bring forgiveness to any character she cared to play." Of her American accent, they said that one forgot it quickly or "accepted it as reminiscent of seventeenth century rusticity or . . . a convention of country speech."

The New York stage welcomed the play two months later. Less fond of the play itself, American critics hailed her performance. "She picks up Wycherley's notorious Restoration comedy whenever it threatens to act its age by tumbling feebly into the doldrums and sets it securely on its somewhat disreputable feet by the sheer splendor of her comic talent."

As a contrast to *The Country Wife*, she next acted in Ibsen's *A Doll's House* (1937). Brooks Atkinson '42 wrote: "The first two acts seemed taxed with restlessness, artfulness, and effervescences that lie on the surfaces of the character. . . When doom begins to circle . . . Miss Gordon takes the part seriously . . . and concludes the play with force and her own touch of modest glory." John Mason Brown, on the other hand, found her at her best in her "childlike moments of gaiety and pathos. . . She never becomes the New Woman. She remains Miss Gordon." Alexander Woollcott was so impressed with her acting that he broadcasted on a coast to coast hookup urging listeners to see *A Doll's House*. Lynn Fontanne '41, after a performance of *Amphitryon 38*, made an unprecedented curtain speech lauding Miss Gordon's acting.

Ruth Gordon left Broadway for Hollywood to act in Warner Brothers' pictures. In 1940 she appeared as Mary Todd in *Abe Lincoln in Illinois* and as Mrs. Ehrlich in *Dr. Ehrlich's Magic Bullet.* Of the former Frank Nugent said: "It is Mr. Massey's fortune as an actor and Lincoln's as a man that Mary Todd had to stand in the background of most of the film." Miss Gordon didn't come back with the usual Broadway disdain for Hollywood. "The fact that the films are made in scattered scenes I consider a help rather than a hindrance; one always has time to shut out the world and get the feel of a character and an emotion." She also appeared in *Two-Faced Woman* with Greta Garbo (1941) and *Action in the North Atlantic* (1943). *Edge of Darkness,* her latest film, was released in April 1943. Miss Gordon played the shy, retiring wife of Walter Huston, the highly respected doctor in a Norwegian village. *Newsweek* commented: "Miss Gordon, possibly reflecting her contempt for the movie medium, turns in an indifferent and highly mannered performance."

In 1941 she appeared in Boston and Chicago in a revival of *Here Today.* During this engagement she celebrated her twenty-fifth anniversary on the stage, and Alexander Woollcott broadcasted a very unusual tribute to her. She then appeared in *Portrait of a Lady* (a play about a woman playwright, married to a publisher, which was said to be vaguely biographical of Clare Boothe Luce '42), and also appeared in *The Strings, My Lord, Are False.*

Her performance in Katharine Cornell's '41 production of Chekhov's *The Three Sisters* (it opened December 21, 1942), in which she was "buoyantly vicious" as Natasha, was acclaimed by critics. "Miss Gordon's range from a flouncy girl this side of comedy to a spirit so evil it curls the hair is magnificent," wrote Lewis Nichols in the New York *Times.* He also noted that she combined two styles of acting . . . the "vague, restless Ruth Gordon of *Here Today* with a Ruth Gordon who is holding a world's record as a vixen." The critic on the New York *Sun* found "her stylized, imaginative playing . . . cruelly revealing of one of the few characters for whom Chekhov had little pity." "The highest honors of the evening were carried away by Ruth Gordon," said the New York *World-Telegram.*

Her next Broadway appearance as an actress (January 1944) was also to mark her debut as a playwright. Into *Over Twenty-One* Miss Gordon has written a large part for herself. The story concerns a famous lady writer (reportedly resembling Dorothy Parker) "living with her husband, an old fellow of almost forty, who is trying to get his wings as an aviation cadet." It is said to derive much of its humor from the attempts of this "highly sophisticated lady, plunked down among naïve Army kids and moronic colonels' wives," to buck up her husband. The play was to be produced by Max Gordon '43, directed by George S. Kaufman '41, and backed by Twentieth Century-Fox.

Brooks Atkinson attributes "extraordinary industry" to Miss Gordon's acting. Her performances are "richly documented," authoritative art. She herself speaks of "the peaks of an actor's knowledge" when she saturates herself with everything she can find about the person and the period she is to portray. For this reason her acting has "uncommon fullness by the time it reaches the stage." Most critics agree on her resourcefulness, originality, and skill. Some, however, find that her performances become monotonous, too overladen with tricks and mannerisms. One critic, comparing her to Helen Hayes '42, said Miss Hayes was the deeper actress, Miss Gordon the wittier.

"Small, quietly dressed, with fine dark eyes, a dreamy, deliberate manner . . . she possesses that plastic quality in both appearance and personality which designates the rare actor," wrote one interviewer for the New York *Herald Tribune.* Others who have met her admire her charm, sense of humor, intelligence, spirit, and warmth. "Few women of the stage are so well liked by their contemporaries." Recently, after appearing on *Information Please,* she said: "I think there's a little talk around of me being an intellectual actress. So I thought an appearance in really intellectual company might dispel that notion. Well, I wasn't so intellectual. But I got them right!" Miss Gordon was married to Private Garson Kanin '41, United States Army Air Forces, Forth Worth, Texas, on December 3, 1942. Private Kanin directed such noted films as *A Man to Remember, Bachelor Mother, My Favorite Wife,* and *Tom, Dick, and Harry.* Miss Gordon has written several autobiographical sketches which have appeared in *Atlantic Monthly* and in *Reader's Digest.*

GOURIELLI, HELENA RUBINSTEIN *See* Rubinstein, H.

GOWER, PAULINE (MARY DE PEAULY) 1910- British Air Transport officer

Address: b. Air Transport Auxiliary, London, England; h. Sandown Court, Tunbridge Wells, Kent, England

Since 1941 many British women who have won their wings play a definite part as pilots in war air service. They form about one-fourth of the total Air Transport Auxiliary. The "Commandant Woman" is Pauline Gower, an attractive young woman in her early 30's. Miss Gower had more than 20,000 flying hours to her credit before the outbreak of the War when, in partnership with Dorothy Spicer, another well known woman pilot, she ran an air taxi business. She considers flying a job which, like any other job, is done by the people qualified to do it—not by "heroines of the air."

Little has been recorded of Miss Gower's early life and education. Pauline Mary de Peauly Gower is the daughter of Sir Robert Vaughan Gower, Member of Parliament since 1929. She started to fly at the youthful age of eighteen. Before she was twenty she had won her A license at Reading airdrome, her B license at the London Airplane Club, Stag-lane, being then the first woman to do so, and her radiotelephone license at Croydon. She earned the Air Ministry's second-class navigator's license in 1936. While still underage she wanted very much to fly to India, but her father forbade this. When she came of age, however, he made her a present of a Spartan two-seater airplane with a Sirrus-3 engine.

It was shortly after this that Miss Gower decided to break conventionalities for women in the flying field by establishing a five-shilling air taxi service. It is estimated that she carried more than 30,000 passengers in her air taxis without a mishap. Sir Kingsley Wood '40 was impressed by her record and ability; and before the War she was the only woman appointed by him to serve on the committee investigating flying over populous areas. At the time England entered the War she was district commissioner for the London area of the Civil Air Guard.

COMMANDER PAULINE GOWER

Before this, however, Miss Gower had long been agitating and campaigning, with the aid of a wide circle of influential acquaintances, for a women's air arm in the national defense. This fervor found expression in a book, *Women with Wings* (1938), for which the famous flyer Amy Johnson wrote a foreword. The book helped prepare the way for women pilots in the ferry pilot service. This was a far step ahead from the days "when people laughed at the thought of any woman handling even a Spitfire."

Then, in 1940, Miss Gower was made commandant of the women of the Air Transport Auxiliary, whose women pilots are called the "Ata-girls"—though probably not by Miss Gower, who intensely dislikes all forms of glamorization. At that time there were only forty-five crack women pilots in the service—the number has since been greatly increased—though many others were going in for ground service and training. Ages of the Ata-girls range from twenty upward; Miss Gower does not speak of them as girls, but women. "Women in this service," she says, "are treated exactly like the men. That is one of the things for which I have fought. There are men pilots and women pilots, cadets in the school, men and women on refresher courses. Instructors can be either men or women and they deal with both of the sexes. It is not a question of sex but of ability; the most useful person does the job." Women pilots also receive the same rates of pay as men pilots. They fly fighting planes from the factory to front-line defense air stations, ferry home damaged aircraft, and perform innumerable other services in which planes are required. They can fly anything "that gets off the ground" in England. "Every day," Miss Gower says,

GOWER, PAULINE—*Continued*

"they handle tens of thousands of pounds' worth of Lancasters, Hurricanes, Mosquitoes, Blenheims, Spitfires, and all the rest of our aircraft."

A successful pilot, according to Miss Gower, must have a good eye and good judgment. Her reactions must be quick. She must have confidence without being overconfident. Not all women pilots are alike, nor do they all have the same qualifications as men pilots. "It matters tremendously to a tense, nervous woman if she is sent as a stranger to a rough station. A man probably would not mind in the least. I like to choose the personnel myself and to know the temperament of each pilot; that is important if you are to get the best from them. Also I make it my business to see that the airdrome commander is unaware that there are women here—for him there are just pilots."

In May 1943 Miss Gower was included in the new appointments to the Board of the British Overseas Airways Corporation. The appointment means that in addition to her war job, she will act in an advisory capacity to the Air Ministry on the comfort and psychology of women air travelers.

Miss Gower is not a member of the R. A. F. —that is exclusively man's province. Her headquarters is an airport, and her office is "square, unostentatious, its walls lined with maps. A chart in many colors shows the position and job of every woman in the service. A winged lion has been cut out and pasted upon the wall so that its paw rests on the map of Britain. On Miss Gower's desk, beside her portable typewriter, stands a bowl of moss filled with violets and snowdrops."

She herself is friendly and comely, "one of the designers and most successful modelers of the snappy, navy blue uniform" worn by the women of the A. T. A. Miss Gower says little about herself, according to all reports; but she has only high praise for the work done by Britain's women pilots. "There is nothing very special about me. I just happen to have some administrative ability, so I can do this job. I am enormously proud of my women—I always knew they could do it."

Who's Who 1943

GRAEBNER, WALTER (ADOLPH) (greb'ner) Dec. 16, 1909- Foreign correspondent; author

Address: b. Time and Life Bldg, Rockefeller Center, New York City; h. 71 King's Highway, Westport, Conn.

Foreign correspondent for *Time, Life,* and *Fortune* Magazines, Walter Graebner has followed the news as it was being made in various European and Eastern capitals. His experiences and observations as a journalist have filled a number of magazine articles, as well as four books, of which *Round Trip to Russia* (March 1943) has brought him the most fame.

The son of a Lutheran minister, John Graebner, and of Hedwig Louise (Sievers) Graebner, Walter Adolph Graebner was born on December 16, 1909 in Hilliards, Ohio. He considers Wausau, Wisconsin his home town, however, because he attended high school there, and then entered the University of Wisconsin. A few months before he was to be graduated from the University (1931) he left to take a position as editorial assistant in the Chicago office of *Time* Magazine. He has been affiliated with the *Time, Life,* and *Fortune* combination ever since.

Eventually Graebner rose to become head of *Time's* Chicago editorial office. In 1937 he was promoted to head of *Time's* London office —"the largest," according to *Time* itself, "maintained by any United States publisher in England." Part of his job was to travel around Europe to meet other *Time* correspondents and to pick up news. He visited Warsaw, Berlin, Bucharest, and interviewed newsmakers in Rome, Barcelona, Lisbon, Istanbul, Ankara, Jerusalem, and Cairo. He was in Vienna during the tragic days of the *Anschluss*, where he "had his bags Gestapoed at the hotel every day for four days running by a Himmler '41 agent with the odd habit of leaving little chromium swastikas as calling cards." He visited Prague shortly before Czechoslovakia was occupied, and several other capitals of the continent which were soon to follow the fate of Prague. He interviewed General Weygand '40 in Syria; he went to Egypt to see the defense of Suez and to appraise King Farouk's '42 loyalty to Britain. He was caught in the great earthquake at faraway Erzinjan on the Euphrates while he and Margaret Bourke-White '40 were photo-reporting their way through Turkey.

From 1940 until 1942 Graebner was London Bureau manager of all Time, Incorporated publications. He ran the office through the Battle of Britain—"the toughest six months of news coverage any *Time* man has ever known." His dispatches, together with many striking photographs of the London Blitz, were published in the pages of *Life*. Graebner narrowly escaped with his own life during that period. "He still can't figure out why he wasn't killed when a loaded Junkers bomber crashed almost on his doorstep; the terrific explosion blew his housekeeper from one room right through the door into another, bashed in the whole house. After that Graebner slept in the office." Nevertheless, he and his staff of twelve continued to keep the news going across the Atlantic.

In January 1942 he returned home aboard a United States cruiser, and, on the way, "got a dramatic sea-level view of the Battle of the Atlantic, for twenty-six U-boats were plotted on the ship's course between Ireland and Newfoundland." Graebner was happy, however, to be back for a brief vacation with his wife (the former Jean Fairchild Bellis, whom he had married on November 10, 1934) and their two children, Gretchen and John. He had spent only fourteen months of the preceding two and one-half years with his family.

Their Finest Hour, Graebner's first book, which he had written together with Allan A. Michie '42 (a co-worker on *Time*), appeared in 1940. It is a collection of narratives, each told in the first person, of England's war on land and sea and in the air. Critics in general agreed with one reviewer's appraisal of it as "a straight, wholly reliable, and extremely moving collection of stories of people living, in Churchill's phrase, 'their finest hour.'" A sequel, *Lights of Freedom*, was published in 1942. Before his return to the United States Graebner had also collaborated with Stephen Laird, former Berlin correspondent of Time, Incorporated, on a small book comparing Britain and Germany at war, *Conversation in London* (1942). In the form of talks between the two correspondents, the book ranged casually from topic to topic: the respective food supplies in the two countries, the relative freedom of movement permitted, the effect of enemy propaganda, the results of R. A. F. bombings. Of it Ralph Thompson wrote: "We could use a dozen other reports as candid, graphic, and reasonable."

In May 1942 Graebner was off again—this time to Russia, partly to get pictures and other material for *Life's* special issue on the U. S. S. R. The last thing his "boss" said to him as they parted was, Graebner says: "Try to find out what the Russian people are really like. They are our Allies. We are working with them now, and we will be working with them after the War. We must know more about them. What are they doing and where are they going?" Graebner was inoculated against tetanus, typhoid, typhus, smallpox, cholera, and yellow fever, all of which, given in swift succession, "almost floored him." He traveled by Clipper the long way, flying via Brazil, Liberia, Egypt, and Persia to Baku. At Baku he took a steamer across the Caspian Sea to Astrakhan and another up the Volga to Stalingrad and Kuibyshev—thence on to Moscow. In this way he saw a lot of Russia and its people that a good many correspondents miss.

In his book *Round Trip to Russia* (1943), Graebner calls the Brazilian five and ten cent store female clerks whom he met en route "extraordinarily attractive," the girls in Egyptian bazaars "ravishing beauties," but the Russian women "physically . . . superior in every way to any women I had seen since leaving America." He describes the Russian women as "sturdy, erect of posture, bright-eyed, with healthy hair and clear peach-colored skin. They walked with the firm, determined step of athletes. . . Though they looked feminine, they had the look of strength usually found in males." He describes the Intourist Guides in Kuibyshev as "mostly blue-eyed blondes, outfitted in clothes which would cause admiring gazes on Fifth Avenue or Piccadilly," and his Moscow secretary-interpreter as "one of Moscow's attractive women, with a tall and slender figure, large blue eyes, and neat bobbed brown hair." ("While the other secretary-interpreters had the edge on [her] in language," he comments, "she was far ahead of them in beauty.") "I dwell on the subject of women," says Graebner, "because they made a profound first impression on me."

WALTER GRAEBNER

Graebner liked the bureaucratic rigidity of the Russian state less than its people. Religion, which would naturally interest him because of his background, he found "not dead in Russia, but all indications were that it is in an extremely unhealthy condition." He wrote also of the food shortages, high prices, lack of matches, and so forth. "Mr. Graebner," commented Lewis Gannett '41 in the New York *Herald Tribune*, "appears to have been a rather naïve and impressionable young American, which gives his book its fresh quality. He does not make many large generalizations about Russia and usually sticks to the surface when he does. He has no doubt whatever that the Russians have their heart in this War, and will fight to the end; he thinks them more justified in worrying about our missing Second Front than we in worrying about their post-War policies." Critics on the whole considered the book "well written, continuously interesting, highly informative."

Graebner was the last foreigner to leave embattled Stalingrad before its siege. His book concludes with a brief account of his homeward journey, with a stop-off in Egypt, where he saw the defeat of Rommel '42 by the British 8th Army. His comments on Americans—both soldiers and civilians—in foreign countries were far from complimentary. Too many were spoiling international relations, he found, by vulgar, arrogant, and offensive conduct. "We must behave better, improve our manners, become more tolerant—in short, we must grow up."

The young correspondent brought back from Russia several thousand feet of film, which was released as *One Day of War*, a "March of Time" subject. The picture was taken by 160 Soviet cameramen, of whom thirty-two were killed. The account of how this film was made is one of the highlights of Graebner's book. The *Saturday Review of Literature*, which does not usually indulge in motion-

GRAEBNER, WALTER—*Continued*

picture reviews, inserted a sentence in the review of *Round Trip to Russia* to the effect that *One Day of War* was "the most honest, cruel, horrifying, and sincere documentary film ever made." Graebner himself calls it, more modestly, "probably the best documentary film of the War."

Graebner is five feet ten inches tall, weighs 165 pounds, and is dark. His favorite recreation is walking. Upon his return he became news editor of *Life* Magazine, but in October 1943 he left for England, where he returned to his old post as chief of the London Bureau for *Time, Life,* and *Fortune.*

GRANDI, DINO, CONTE (gran′dē dē′nō) June 4, 1895- Italian politician; industrialist
Address: b. Palazzo Venezia, Rome, Italy

For many years, whenever there was discussion as to Mussolini's '42 probable successor, the name of Dino Grandi was sure to be mentioned. In conservative British or American circles the name was often pronounced with a certain amount of pleasure. A former Italian Foreign Minister and Ambassador to London, and until July 1943 president of the Chamber of Fasces and Corporations, Keeper of the Seal, and member of the Chamber of Deputies and of the Fascist Grand Council, Grandi nevertheless enjoyed a reputation in such circles as an Anglophile and a "moderate" Fascist. Not until the Italian Darlan '41 turned out to be General Badoglio '40 did Grandi's name disappear from the lips of political commentators "in the know"—and the permanency of this disappearance was not certain.

Born on June 4, 1895 in Mordano (Bologna), as a youth Grandi became one of the earliest and most fervent Fascists in his district after the First World War. When Italy entered the First World War in 1915 he enlisted as a private, and was made a second lieutenant within a year. He took part in the bloody battles on Monte Altissimo, Val Lagarina, and the Altipiani Val Brenta, and in the battle of the Piave, the decisive engagement of the Italian campaign. When the Armistice came he was promoted to a captaincy, and by this time he had been decorated with a silver medal, a bronze medal, and three military crosses for valor. Before the War he had been a law student, and he was graduated with a degree in law at the University of Bologna in 1919. He might have enjoyed a successful legal career. But he had already fallen under the spell of Mussolini. As one writer (apparently a Fascist sympathizer) puts it:

"One night, while studying, he was interrupted by mobs of Socialists holding a demonstration outside his window and decrying the services of those who participated in the War. The harangues irritated him, and he decided then and there to take up the cudgels on behalf of patriotism. Benito Mussolini was just then organizing the Fascist movement at Milan. Grandi became one of the first militants from the Bologna district. His dynamic personality and capacity for leadership soon put him at the head of a local phalanx of Fascist youths."

Among the early exploits of the "Dagger Squad of Bologna" was the destruction at Ravenna of Byron's Palace, where a local Socialist section was housed. As late as December 1920 Grandi was nevertheless writing: "The Fascists are not and do not intend to become a party. They have risen, by spontaneous generation, by a rebellious gesture of all Italian youth, perenially romantic and perenially 'Garabaldine,' against the cowardly tyranny of the little and big minorities, protected by the senility of a State which, as is the case today, no longer does anything, and by a King Log no less unserviceable and no less useless."

But it was under the banner of the Fascist Party that Grandi "was elected to Parliament when he was twenty-four. He was below the age limit, according to the law at that time, and was declared ineligible for his seat. Although ruled out of the chamber, Grandi was one of the first thirty-eight deputies who stood under the Fascist banner with Mussolini. Grandi then started a militant Fascist newspaper at Bologna under the dashing title of *l'Assalto* (The Charge) and entered politics with a vim. His pungent paragraphs became bywords among the rank and file of Fascists. He led the thought and action of the new party for the regions of Emilia and Romagna. By the time the Fascists held their convention at Rome, near the end of 1921, he was nationally prominent for his eloquence and combativeness." In that same year he had become a member of the General Direction of the Fascist Party Organization, and had again been elected a member of the Chamber of Deputies. He had also led the opposition against Mussolini within the Fascist Party when Mussolini signed a pact with the Socialists in which both sides agreed to do what they could to stop fighting, to arbitrate conflicts, and to respect each other's emblems and organizations; and eventually Mussolini had been forced to forget the pact.

Grandi, then, already had had considerable experience in leading his Bologna *squadristi* in attacks on the "reds." In 1922 his Fascists smashed the once powerful cooperatives of peasants in the fertile Po Valley, and, backed by the big landowners, tried to import into Bologna cheap farm labor to bring about unemployment, force down wages, and establish "open" conditions for hiring and firing. The prefect of the city forbade this importation of unorganized labor, and so in June 1922 the Fascists occupied the city, Grandi assembling 60,000 from all the neighboring countryside. At that time Edgar Ansel Mowrer '41 and his wife interviewed the young Fascist leader. He told them: "You must admit that the majority of the young living forces are with us. We must impose our will. There are only two real political parties in Italy: the Socialists and the Catholics. We are the vanguard of the coming third party."

Mussolini called off the occupation of Bologna within three days, but only a few months afterward, in October, came the so-called March on Rome. Grandi was chief of staff to the quadrumvirate who led the march, and he and General de Vecci, another Fascist deputy, helped to engineer the King's surrender to the Black Shirts. Grandi's diplomatic talents continued to be needed after the success of Mussolini's bluff. When, for example, the alarmed Vatican sent emissaries to Grandi and de Vecci, they sent back word that the Catholic Church had nothing to fear: that Mussolini had realized the necessity of having the cooperation of the Vatican in order to establish a successful regime in a country almost wholly Catholic. That same year Grandi was given his first official diplomatic assignment, to Geneva, as a delegate to the Fourth International Labor Conference. "His youthful vigor made an impression on other delegates, and Mussolini appointed him Italian delegate to the Fifth International Conference of Labor." When the Fascist militia was created in 1923, Grandi was given the title of lieutenant general.

In 1924, the year he married Antoinietta Brizzi, Grandi became Under-Secretary of State for the Interior. Mussolini repaid him in other ways, too, for his services to Fascism. The Socialist deputy Matteotti (murdered in June 1924) before his death uncovered the fact that Grandi and other Fascist leaders had been engaged in a tremendous graft and corruption deal in relation to the oil monopoly. Grandi had been made a director of the governing board of the Fiume Mineral Oil Refining Company after the Fascist State had purchased 18,000 shares of the corporation in 1923.

In 1925 Mussolini appointed Grandi Under-Secretary of Foreign Affairs. He remained a member of the Chamber of Deputies, of which he had been deputy president in 1924, but from that time on he spent a great deal of time out of his own country. He was a member of the Italian delegation sent to Washington in 1925 to negotiate the funding of the Italian debt. That same year he went to London and secured "a satisfactory settlement" of the Italian debt to England, and then proceeded to Locarno, "where he upheld the Italian point of view and aided materially in settlement of the questions which culminated in signing of the Locarno pacts." From 1925 to 1932 he was permanent Italian delegate to the Council of the League of Nations. In 1926 he was Italian delegate to the Conference for Settlement of the War Debt in London; in 1929, Italian delegate to the Hague Conference on War Debts.

According to Thomas Morgan, Grandi spoke French and English perfectly, "kept himself slim by an ascetic's diet, and ordered his clothes from the only English tailor in Rome." At Geneva, London, and Locarno everyone but the French, with whom the Italians were endlessly fighting for prestige, described him as "dynamic", "charming", "electric," and "captivating." In Italy there were different adjectives occasionally used. In the early days of Fascism, for example, the Bolognese ras (a local Fascist leader) had exposed graft amounting to 300,000,000 lire in the building of the Florence-Bologna railroad tunnel, and had accused the "Grandi Gang" of taking the money. The "Grandi Gang" had hired a physician to administer disease germs to the ras, but at the last minute the doctor had repented and confessed, publishing his confession in a local newspaper. Grandi had then challenged the ras to a duel, but the latter had refused to cross swords with a man whom he called a "common gangster." Still, Grandi's gift for captivating foreign observers, together with his loyalty to Il Duce—in 1926, when there was a plot in the Fascist ranks to upset Mussolini, he reportedly saved Il Duce's life—made him the perfect choice for Minister of Foreign Affairs in 1929. By this time other marks of official favor had also come to him. He had held his rank of captain in the regular Army reserves, and in 1927 he had been promoted to the rank of major by King Victor Emmanuel '43. Later he was to be elevated to the rank of lieutenant colonel.

CONTE DINO GRANDI

As Minister of Foreign Affairs at thirty-four, the youngest man ever to grace that office in Italy, Grandi acted in Geneva as the protagonist of international cooperation and disarmament, claiming Italy as the flag-bearer of the League ideals, while Mussolini attacked the League and armed Italy as fast as he could. In 1930 Grandi headed the Italian delegation to the London Naval Conference, where, according to A. C. Cummings, he sat through interminable sessions, public and private, as "the very image and statue of discretion." Cummings

GRANDI, DINO, CONTE—*Continued*

spoke of him as "one of the extraordinary successes of European politics since the War." In the fall of 1931 Mussolini sent his model Foreign Minister to the United States for a few hours' talk with President Hoover '43, "to assist the peaceful cooperation of all the nations of the world, for a return of the welfare and prosperity of the world." He had to be practically smuggled ashore in New Jersey to thwart anti-Fascist demonstrations, and in Washington he was so heavily guarded that his protectors had trouble keeping out of one another's way, but the American press generally welcomed the visit. According to Percy Winner of the New York *Evening Post*, Signor Grandi told Hoover that Italy would support the United States at Geneva on the subject of world arms control and production if the United States would help clear the Franco-Italian naval dockets, and the men "arrived at an informal arrangement on this point."

In 1932 Grandi was Italian delegate to the Danubian Conference in London as well as head of the Italian delegation to the Geneva Disarmament Conference. After the French and British composed an agreement excluding Italy at the Lausanne reparations conference that same year, however, Mussolini took away Grandi's portfolio as Foreign Minister. It is said that the Foreign Minister was called to Il Duce's office one evening and handed a typewritten sheet of paper announcing: "Dino Grandi has resigned as Minister of Foreign Affairs. He will take up an important diplomatic post." "What do you think of it?" Mussolini queried. "Whatever Your Excellency does is always well done," Grandi reportedly replied. He was soon in London as Italian Ambassador to St. James.

Of Grandi's career in London, Thomas Morgan says: "He made the great hit of his career. He became the intimate friend of king, queen, baron, and publican." Particularly popular with the Cliveden set, for a long time the handsome Ambassador managed to sell Mussolini as a lover of peace. According to Grandi, for example, the episode in 1923 when Mussolini's Navy fired on Corfu and hoisted the conquering flag had not been meant "to intimidate Greece, but to intimate to Europe that it was time to halt for a moment in order to consider Italy's international position, before the tension created in Italy by the wrongs done her at Paris reached the danger point. By so doing [Mussolini] made the first real contribution to European peace." Another such contribution was Italy's support of "Germany's legitimate demands for defensive rearmament."

But the Italian Ambassador's task became more difficult after the Ethiopian crisis. As early as 1932 he himself had advanced Italian claims to expansion in Africa, but now "he had to tell the British how the invasion of Ethiopia was not aggression," alternately pounding on the table and making conciliatory gestures. Mussolini was said to have been furious with Grandi in the summer of 1935, when it seemed that Britain would actually go through with imposing sanctions against Italy, for it had been Grandi who had succeeded in securing the Fascist Grand Council's support for the Ethiopian War. Grandi, in turn, was furious with the British, and kept reminding them that when he had informed them earlier that year of Italy's plans no objection had been forthcoming. In 1936, however, he was head of the Italian delegation to the London Naval Conference and Italian representative to the London session of the Council of the League of Nations and the London meeting of the Locarno Powers.

The Spanish War required even more than the Ethiopian tact; but the members of the London International Committee for Non-intervention in Spain were willing to listen when Grandi assured them that Mussolini was not sending troops to Spain. They even helped him by drawing up rules to discourage complaints over violations, and by voting with him when the Soviet representative made accusations against Italy. Finally, at the meeting of March 23, 1937, Grandi announced that the imaginary Italian volunteers would not leave Spain until a Franco '42 victory, and on April 15 he consented to "discuss" withdrawals of the troops which he still insisted were not there. The British nevertheless continued to work with him, and he was able to persuade Chamberlain and Lord Halifax '40 to negotiate the "gentlemen's agreement" of January 1939 guaranteeing the *status quo* in the Mediterranean. Ungrateful, in May 1939 Grandi made a speech to the Italian colony at the Embassy accusing Great Britain of "lying against the Axis powers" and scoffing at "the decrepit impotence of the democracies." The month before his speech Italy had violated the "gentlemen's agreement" by invading Albania. Grandi's usefulness in London was apparently over. In July 1939 it was announced that he was being transferred to Rome because of arthritis.

While in London, Grandi had liked to make listeners believe that he had his own "dissident" views, and apparently he had been amazingly successful. Even after his recall his friends in London insisted that his 1939 speech had been the result of explicit orders from Rome and had been made under protest; they whispered that he had disliked the policy of anti-Semitism that Mussolini had adopted in 1938; they hoped audibly that the recall indicated that Mussolini wanted him in Rome to put the brakes on "Ciano's '40 hell-for-leather axial policy." It did not. Grandi became Keeper of the Seal and Minister of Justice, relatively unimportant posts in a country controlled by the OVRA (secret police) and the Gestapo. Since 1939 he has also been president of the Chamber of Fasces and Corporations, and for years he has had his own Bologna newspaper, *Il Resto del Carlino*. In the words of Herbert L Matthews '43, "he took his orders, allied himself with Count Volpi, who was closely tied up with the German industrialists, and set about completing the new legal code—while Italy went to ruin." In December 1939 he attended the meeting of the Fascist Grand Council at which Mussolini was given a free hand to implement the military alliance with Germany at the most opportune moment. He conferred upon Hans Frank '41, Nazi head of the General Government of Poland, an academic degree in recognition of his services in suppressing cultural institutions in Poland. And on April 27, 1940, in a speech to the Chamber of Fasces and Corporations, he announced "The Fascist Empire is not, and knows that it cannot be, on the margin of this conflict between peoples." The speech ended with an impassioned tribute to Mussolini.

According to Frank Gervasi '42, Grandi opposed Italy's entry into the current War as the ally of Germany. If this is true, Hitler '42 seemed incognizant of it when he pinned the Order of the Eagle, the highest decoration ever bestowed on a foreign diplomat, on the Italian's breast. Rumors of Grandi's opposition to Mussolini's policies persisted in the foreign press, however, particularly when in March 1941 he was reported assigned to military duty and temporarily relieved of his duties as Minister of Justice. It was even said that Robert Farinacci had approached Count Ciano and Grandi with the offer of forming a triumvirate to supersede Il Duce, although the scheme had come to naught when Italian high finance refused to back them. That same year, however, Thomas Morgan called Grandi "the one figure who has been able to weather all the caprices of Fascist policy both domestic and foreign. He has done it by obeying Il Duce and by submerging his own opinions for those of the great master."

During Myron Taylor's '40 visit to the Vatican in September 1942, Taylor was reportedly approached by representatives of various groups in Italy who told him that the United States must avoid encouraging anti-Fascist groups outside Italy if any agreement that would pull Italy out of the War was to be reached, and that any post-Mussolini Government must be set up inside Italy by people who could prevent a revolutionary situation from developing. This, presumably, meant men like Grandi, who was called the spokesman for the "pro-British" industrial clique. (Grandi is personally connected with the Corima Company of Genoa, which recovered the gold from the submerged liner *Egypt.*) Gaetano Salvemini '43, Harvard professor and former Italian deputy, told the New York *Post* in January 1943: "The American State Department and the British Foreign Office are seeking in Italy for a pro-Allied fascism in the place of a pro-German fascism and for fascism without Mussolini instead of fascism with Mussolini." On February 5, 1943 Grandi was removed from Mussolini's Cabinet, along with others: Germany had been calling for the dismissal of those linked with the alleged peace feelers, it was said. This, of course, made him even more eligible as an Italian Darlan, particularly since he was not out of favor with the King, to whom Allied propaganda had consistently been kind. On March 25, 1943 an official communiqué announced that the Italian monarch had bestowed the Supreme Order of the Annunciata on him, raising him to the juridical rank of "cousin of the King," with the title of "Excellency." (He already had one title, that of Conte di Mordano, bestowed in 1937.) As more than one commentator pointed out, however, Mussolini, another "cousin of the King," must have given his consent to this honor; and if Grandi was truly out of favor with Il Duce it was strange that he retained the strategic position of president of the Chamber of Fasces and Corporations.

Grandi's role in bringing about the fall of Mussolini has been variously reported. One version says that he brought a copy of the minutes of the last meeting between Mussolini and Hitler to the meeting of the Fascist Grand Council on July 24, 1943 and, when Mussolini announced that Hitler had promised him unlimited assistance, proved that Il Duce was lying by reading the minutes aloud. Mussolini refused to resign, but was later dismissed by the King, who had been secretly informed of events by Grandi. Another version says merely that at the Council meeting the opportunistic Grandi tabled a motion of non-confidence in Mussolini with the object of putting himself in Mussolini's place as Fascist Prime Minister, and that the crisis went further than he would have liked, the Fascist Party disappearing officially along with Mussolini. A third version says that Grandi and Count Ciano '40 led a fight to get Mussolini to transfer all power to the Crown at that same meeting, at which nineteen favored Mussolini's resignation and at which only five were opposed. Whatever the truth about the "palace revolution," early in August 1943 Grandi was not only still at liberty in Rome but had reportedly had two long interviews with the King; and later in August the Swiss newspaper *Tat* reported that an Italian group headed by him had arrived in Lisbon, Portugal to join an Italian mission seeking peace with the Allies. Only part of this proved to be true: Grandi did reach Lisbon, but he did not take part in the negotiations between Bagdolio and the Allies.

Dino Grandi was described by a correspondent of the United Press in 1931 as "tall, but bulky, with the physique of a football player," and a youthful face "disguised with an Assyrian square-cut beard of a remarkable purplish-black hue." At that time he wore high-buttoned shoes with glass buttons, and, on formal occasions in Italy, a black shirt or the uniform of a general of the Fascist militia. He is the author of *Origins of Fascism* (1929) and *Italian Foreign Policy* (1931). Aside from his appearance and his ideology, however, he models himself after the English gentleman. His recreations are book collecting, riding, gardening, and mountaineering, and he is a member of nearly all the "right" British clubs: St. James's, Athenaeum, Travellers', Bath, and Turf. He has one son and one daughter. Before the Italian surrender to the Allies he collected his speeches in book form and dedicated the book to his son as a reminder to him of Italy's war in alliance with Nazi Germany.

GRANDJANY, MARCEL (GEORGES LUCIEN) (grän-zha-nē') Sept. 3, 1891- Harpist; composer; teacher

Address: b. Juilliard School of Music, 120 Claremont Ave, New York City; h. 235 W. 71st St, New York City

An exponent of contemporary harp playing at its best, harpist and teacher Marcel Grandjany feels that "the harp is very much misunderstood. It is generally held to be a sort of musical decoration, pleasing to look upon, but useful only for accompaniments and 'effects.' As a result of this 'effect' theory, then, many mysterious systems and methods have been evolved for the securing of technical display. All this carries with it, of course, a total misconception of the harp. As a matter of fact the harp is a thoroughly complete and independent musical instrument, as expressive as the piano and richer than the violin, because it is independent of accompaniments. It is different, certainly, from these more familiar instruments, but its differences should not be gauged in terms of deficiencies. As a complete major instrument, it offers as full a scope and as great a recompense as any other to which the student can devote himself. And its mastery depends upon no systems whatever. There is only one correct way to play the harp—and that is to play it well."

Victor Schertzinger
MARCEL GRANDJANY

Marcel Georges Lucien Grandjany was born in Paris, France on September 3, 1891, the son of Eugène and Marie Jeanne (Hugo) Grandjany. He comes of a musical family: his uncle, Lucien Grandjany, was one of the Paris Conservatory's most famous teachers of the organ; his father was a piano tuner for the famous manufacturer Erard. After he lost his mother in early childhood, the boy received his musical education from his cousin, Mlle. J. G. Grandjany, a pianist. Mlle. Grandjany had always dreamed of playing the harp herself, but, since this was denied her, she decided to obtain at least a vicarious satisfaction by having her little cousin learn. Mlle. Grandjany studied composition in the same class with the harpist Henriette Renié, and she asked her if she would give the child lessons. Mlle. Renié consented, and, at the age of eight, young Grandjany began to study the harp. Since the strings of an ordinary instrument were not within the easy reach of a child's arms, he had to use a special small one.

In 1900 Grandjany entered the Conservatoire Nationale de Musique de Paris, studying there with Paul Vidal (fugue and composition); Hasselmans (harp); Caussade (counterpoint); Rougnon (solfeggio); and Taudou (harmony). He won the First Medal for Solfeggio-Theory in 1902, the First Prize for the Harp in 1905, the First Harmony Prize in 1909, and the *Accessit* (honorable mention) in Counterpoint in 1910. On January 24, 1909 he made his debut as a concert artist, appearing as a soloist with the Concerts-Lamoureux Orchestra conducted by Camille Chevillard. The young harpist was immediately acclaimed as an "artist of the first rank and a startling talent," and, through this and subsequent recitals, he became well known throughout France as the outstanding virtuoso on his instrument. He was also a performer of distinction upon the organ, although he did not play it professionally.

Grandjany's brilliant career was interrupted when the First World War broke out in 1914. A severe illness disabled him, however, and he was released from further military duty. In 1915 he returned to his musical life, becoming an organist at the Basilique du Sacré-Coeur in Paris. The young man was dubious as to his success as a professional organist, but after one trial he decided that he was sufficiently competent to accept that important position. He continued as organist until 1919, the year of his marriage to Georgette H. Boulanger (May 20), but he did not neglect the harp meanwhile. He gave frequent harp recitals throughout France and in 1921 became a member of the Jury of the Paris National Conservatory. At the same time he was chosen to be the first head of the Harp Department at the Fontainebleau School of Music, a summer school for American students, which was newly founded that year.

In 1922 Grandjany made a successful debut in London, and two years later he made his first visit to the United States, where he was widely acclaimed. "The harp," wrote the New York *Times* critic, "is no limited instrument in Grandjany's hands. It rises to artistic heights. The elegance of his style, the rich, subtle gradations of tone coupled with his innate musical sense are well known." Grandjany subsequently toured Europe, the United States, and Canada a number of times. On one New York trip he performed as soloist with the New York Symphony Orchestra.

Grandjany left the National Conservatory in 1934 and the Fontainebleau School of Music the following year. In 1936 he and his family moved to America to make their permanent home in the United States, and, two years later, he was appointed head of the Harp Department at the celebrated Juilliard School of Music in New York. That same year he became a harp teacher at the summer session of Mills College in Oakland, California, and he continued to teach there every summer until 1941, when he taught in Los Angeles.

"Mr. Grandjany's technical skill and interpretative mastery," wrote the New York *Herald Tribune* critic about a 1936 concert, "are well known here and were always in evidence last night; his tone again had a notable sonority and range of color, and he set forth to an unusual degree the expressive resources of his instrument." From 1936 until 1941 Grandjany gave a number of recitals throughout the United States. Alfred Frankenstein of the San Francisco *Chronicle* commented that "there is nothing a harp can do that Marcel Grandjany does not know about, and there is nothing a harp can do of which he is not a past and unrivaled master." In 1941 Grandjany gave a performance in Town Hall, impressing the New York *Times* critic as "a master of both the technical and the interpretative resources of his instrument; his finely shaded tone seemed to provide all the colors and timbres of which the harp is capable, including mellow lower notes, incisive staccati, and fine-spun webs of sound in delicately wrought passages on the highest strings. There were no buzzes, no departures from a consistent clarity of detail." Since then the harpist has given a number of recitals with great success. Critics, for the most part, are highly enthusiastic about his playing, and hail him as one of the greatest contemporary masters of the harp, if not the greatest.

Grandjany says that he has found "living entirely in America, devoting all my teaching to American students," a pleasure. "Individual Americans," he declares, "are no strangers, because of the fine opportunity I had of working with them in Fontainebleau since 1921. But even this experience had not prepared me for the wealth of musical vitality and enthusiasm one finds among Americans in their own land. The American student does not lack the gifts of musical endowment. He must be taught, however, how to work, how to develop his gifts, how to adjust himself to the best possible relationship between himself and music. The American student's greatest fault is the zeal which leads him into the pitfall of working too fast. At best, this mistaken ardor results simply in overdoing. But at its worst it can do the incalculable harm of forcing. Now, the important thing in music is, not to 'get there,' but to learn music in a musicianly way. For this, the element of time is necessary, quite as it is in the development of a plant. The finest seed and the richest soil are wasted if the plant is not allowed sufficient time in which to grow. Just so in music. One cannot practice twenty hours at a time, in the belief that this will make for quicker progress than practicing two hours a day for ten days. Quite the contrary, the speed system will delay advancement. The secret of study is, quite simply, to master, to learn. After one has learned, it is permissible to demonstrate what one knows. But to study for the sake of hastening the hour of demonstration is ruinous."

The harp, Grandjany says, is a difficult traveling companion, not only because of the bother of packing it each day in its padded eight-foot trunk, but because of the annoyance of seeing it in and out of the baggage car. Grandjany never boards a train without first seeing his harp on since the almost fatal occasion on which he failed to do so. The harp remained in New York while the harpist arrived in Norwich, Connecticut.

Another time Grandjany was en route to a recital engagement in Canada when his train became snowbound by a blizzard near Saskatchewan. It was unable to move for twenty hours, and, since it was supposed to be a short-run train, there were neither dining nor sleeping accommodations. The passengers gathered in the baggage car to amuse themselves, and someone discovered Grandjany's harp. Learning who the musician was, the passengers begged Grandjany to play. He obliged and entertained them for hours until a snowplow arrived and cleared the track.

Grandjany, his wife, and their son Bernard live in New York City. The harpist has played at Juilliard-sponsored Victory Concerts and at numerous benefit concerts since the beginning of the War. Besides being a harpist and teacher Grandjany is a composer. He has written many works for the harp and has also transcribed a number of works for the harp by other composers. The harpist is five feet eight, slender, and has dark hair shot with gray. In 1940 the Russian sculptor Derujinsky made a study of his hands, and more recently the painter Styka made a three-quarter portrait of him at his instrument.

GRAY, ELIZABETH JANET Oct. 6, 1902- Author; librarian; teacher

Address: h. 6347 Wayne Ave, Germantown, Philadelphia, Pa.

Winner of the 1943 John Newbery Medal for "the most distinguished contribution to American literature for children" published

ELIZABETH JANET GRAY

in the preceding year, Elizabeth Janet Gray is the author of a number of children's books. She was born in Germantown in Philadelphia, Pennsylvania on October 6, 1902, "a very belated addition," she writes, "to a family that had long since considered itself complete. My mother [the former Anne Moore Isard] started life as a New Jersey Quakeress, tracing her descent from two of the Regicides—she still feels guilty about Charles I—and from Thomas French who cleared out of Nether Hayford just in time to precede William Penn up the Delaware. My father [John Gordon Gray] was an Aberdonian born, with all the love of the Scotsman in America for the traditions and romance of the country he had left behind." It is from her father that she has inherited a love of the border ballads and a feeling for Scottish history.

Since her family was Quaker, Miss Gray attended the Germantown Friends School. There was never a "beginning," she says, to her writing. "I have written all my life because I can't help it. It's like a taste for drink. It's a bad habit that I got into when I was very young, and as everyone knows those are the habits that [are the] hardest to break." While she was still at the Friends School she wrote a moral story for children and was exceedingly gratified, not so much that the *Young Churchman* accepted her story and rewarded her with $2, but that the editor's "inspired" letter of acceptance began, "My dear Mrs. Gray."

Miss Gray entered Bryn Mawr College before she had reached her seventeenth birthday. At twenty she received her B. A. degree and immediately set out to look for a position, but was greeted on all sides with the declaration that she was too young and inexperienced. Disgruntled at this cool reception of her talents, she decided to remain at home. For a time she did odd jobs of tutoring and grading papers, "of writing short stories and cynically papering a segment of the wall of my bedroom with the rejection slips. The Sunday School magazines stood by me nobly, and I broke into the Contributors Club of the *Atlantic Monthly* with an essay on the Scotch. It was unsigned and I later had the fun of hearing an outlying member of my family appropriate parts of it, without acknowledgement, to decorate an after-dinner speech."

Finally, "weary of leading what we then called a parasitic life," in 1925 Miss Gray signed up with a teacher's agency and secured a position teaching English, ancient history, and community civics at a high school in Asbury Park, a New Jersey seashore resort. She spent a year there, working on a book for girls that appeared later under the title of *Merediths' Ann* (1927). At the end of 1925 she went to the Drexel Institute in Philadelphia, where she received her B. A. in Library Science the following year. Her first library position was as assistant in the Catalog Department of the University of North Carolina's Library during the years 1926 and 1927. "It was a lucky stroke of fate," wrote Frances Clarke Sayers, head of the Children's Department of The New York Public Library, "that sent Elizabeth Janet Gray to Chapel Hill, North Carolina. In North Carolina she felt the impact of the South, and the imminence of the past which the South nurtures increased her natural interest in history and led to the writing of several fine history books for girls: *Meggy MacIntosh* [1930]; *Jane Hope* [1933]; and *Beppy Marlowe of Charles Town* [1936]. All the elements of Elizabeth Gray's heritage are combined in *Meggy MacIntosh.* In this story of the Scottish girl who follows Flora MacDonald to America, she finds a theme that parallels the threads of her own heritage." During these early years Miss Gray also wrote *Tangle Garden* (1928) and *Tilly-Tod* (1929). In the summer sessions of 1929 and 1930 she taught cataloging and reference in the University.

"Early in 1929," Miss Gray writes, "I married Morgan Vining of the faculty of the University of North Carolina and settled down to life in Chapel Hill for, I thought, the rest of my days. We built a little house in the middle of an acre of oaks, elms, and cedars, we went to California one summer, I wrote a book, we had a year in New York while my husband, on leave, worked for a degree at Columbia University, and I wrote another book. There were altogether four years and eight months of such blazing happiness as few people know—wiped out forever in a single instant one golden October morning by an automobile accident."

After her husband's death in the accident Miss Gray returned to Germantown, where she is still living, and continued her career as an author of children's books. Her two biographies, *Young Walter Scott* (1935) and *Penn* (1938), arising respectively from her Scottish and Quaker strains, appeared during this time. In 1940 *The Fair Adventure,* a "story of modern girlhood," was published.

Two years later *Adam of the Road* appeared. This book arose out of Miss Gray's husband's study of the metrical romances for his degree many years before. The subject interested her at the time and, from the notes she had made, she later wrote *Adam.* "I chose the thirteenth century," she says, "because of the kind of time it was and the light it sheds on our own life today. It was not a golden age, but an age of beginnings of many things we cherish and dream of and fight for today—the law, our English heritage. Edward I was the first King to have a feeling for the law and a genuine love of the people. It was a time when the universities developed, and there was opportunity for poor scholars. There was freedom of learning and of thought and speech. It was a time, too, when the worth of the individual soul was recognized."

The selection of Miss Gray's novel for the 1943 Newbery Medal was found by Mrs. Sayers "a choice which will delight and satisfy all who are interested in children's books and reading. It is an award fittingly made at a time when permanent values are threatened by the immediacy of war. . . There was never a time in which knowledge of the past was so greatly needed as it now is as a means of acquiring the long view; for the hope of the future depends upon the use of the accumulated experience of man. *Adam of the Road* contributes its share to this knowledge in terms which boys and girls find natural and contemporary and in terms, too, of a good story."

At present Miss Gray is working on another book about Flora MacDonald. "Why do I write for children?" she asks. "I rather think because they enjoy their books so much, read and reread them instead of tossing them aside after a cursory skimming—which is satisfying to a hard-working author."

It is Miss Gray's "power of observation," Mrs. Sayers feels, "and the ability to tell what she sees in fresh, direct terms which gives her freedom to attempt to write about the present as well as the past, and to claim biography as well as fiction as her field. No one reading Elizabeth Gray's historical stories can escape being cognizant of her ability to recreate the past in terms which seem to derive from actual experience rather than research."

Elizabeth Janet Gray, wrote May Massee of Viking Press, is "a person with a very lively human interest, a quick wit, a gay spirit, a love of words, and a scholar's mind in the best sense of that much abused term: one who has imaginative perception and infinite patience." Her favorite recreations are mountain climbing and travel; her hobbies, birds and sketching.

Warner Brothers

SYDNEY GREENSTREET

Beginning his motion-picture career at the age of sixty-one, veteran English actor Sydney Greenstreet received an enthusiastic reception from audience and critics alike for his first screen performance, in *The Maltese Falcon.* He had spent forty-one years on the stage before succumbing to the lure of Hollywood, and he had appeared in every drama in the Shakespearian repertoire. After watching him perform in a Shakespearian role, Sir Herbert Beerbohm Tree is said to have remarked: "He is the greatest unstarred star of the English stage." Greenstreet has by no means abandoned the theatre for the motion pictures; as far as his screen contract allows him he will continue his distinguished career on the stage.

Sydney Hughes Greenstreet was born in Sandwich, Kent, England on December 27, 1879, the son of John Jack Greenstreet, a tanner, and the former Ann Baker. From 1887 to 1897 he attended the Dane Hill Preparatory School at Margate, England. Although he dabbled in amateur theatricals for a time, he did not start his professional career as an actor. Instead he went out to Ceylon in 1899 as a tea planter, and remained there until 1901. In that year he returned to England as manager of an agency in Harrow for Watneys, Coombes, and Reed's Brewery, and he held that position until 1902, when he left the business world to become an actor.

The young man started his theatrical career with the Ben Greet School of Acting in London, where he made his first appearance on the stage in a walk-on part in Shakespearian repertoire. He made his debut in 1902 in a speaking part at the Marine Theatre in Ramsgate, where he played the role of Craigen in a road show of *Sherlock Holmes.* After that he played in *The Eternal City* (1903) for Bannister Howard and in several other plays; and in 1904 he came to the United States with the Ben Greet players. From 1904 until 1909 he was a leading comedian in Shakespearian repertoire; he had roles in eighteen different plays during this period. He has played in this country ever since, except for tours, GREENSTREET, SIDNEY—*Continued*

which, in addition to Canada and South America, took him through the British Isles, India, Italy, France, Malta, and North Africa. On one of his trips he met the late President Woodrow Wilson on an Atlantic liner, and became a good friend of his. He was also a friend of Theodore Roosevelt, and once, during Roosevelt's term at the White House, when Hawthorne's *Wonder Tales* was being presented on the lawn, Greenstreet used the White House as a dressing room.

Greenstreet next spent a year with the Harry Davis Stock Company in Pittsburgh, as a leading character actor. For two years he worked with Henry W. Savage, appearing during this time in the farce *Excuse Me.* His subsequent appearances on the stage are so numerous that even Greenstreet forgets all of them and has to refer to *Who's Who in the Theatre* to refresh his memory. He spent one year in stock in New York, two years in Shakespearian Repertory with Margaret Anglin, and appeared in a number of musical comedies, including *Roberta* (1933). He was with the Theatre Guild for three years and with the Lunts '41 for six. He has appeared with Sir Herbert Beerbohm Tree, Julia Marlowe, Viola Allen, Lou Tellegan, and many other famous actors. Some of the plays in which he appeared are: Oscar Wilde's *Lady Windermere's Fan* (1913-14); Eugene O'Neill's *Marco Millions* (1928); Karel Capek's *R. U. R.* (1930); Robert Sherwood's '40 *Idiot's Delight* (1936); Chekhov's *The Seagull* (1938); and innumerable others.

Greenstreet has, perhaps, achieved greatest distinction in Shakespeare's plays, in every one of which he has appeared at one time or another. Some of his roles have been: Antonio, the Sea Captain, and Sir Toby Belch in *Twelfth Night;* the Duke of Venice, Lancelot Gobbo, and Gratiano in *The Merchant of Venice;* the First Gravedigger, Polonius, Fortinbras, and King Claudius in *Hamlet;* and the First Lord, Charles the Wrestler, the Usurping Duke, the Banished Duke, Corin, William, Oliver, Touchstone, and Jaques in *As You Like It.* It was during a performance of *As You Like It* at Bryn Mawr College that one of the most striking incidents of the enormous actor's career occurred. A stage had been erected three feet above the ground, and Greenstreet, weighing even more than the 250 pounds he does now, was performing as the Banished Duke. Suddenly the stage collapsed, and Greenstreet vanished into a large hole. He appeared from the wreckage in time to deliver his next line, which was: "True it is, we have seen better days."

"Another time my weight got me into trouble," writes Greenstreet, "was during the dress rehearsal for *The Nest Egg* in New York. I had to rush frantically out of the scene. Unfortunately they forgot to unhook the door, and I pushed against it so hard, trying to open it, that the whole flimsy set collapsed. I never played that part, because they decided they couldn't take chances on the scenery. They rewrote the part to fit an eight-year-old boy!" One of the most embarrassing incidents in his career occurred during the run of *The Admirable Crichton* (1931) in New York. "I was rushed into the part in four days," he tells us, "because of a sudden switch in casting. I managed to get through the first night all right, but for no reason at all, during the second night, I forgot my lines. Walter Huston was in the scene with me. He whispered, 'Go on.' I whispered back, 'I wish I could.' He ad libbed. It wasn't until I was off stage that I realized he had given me my line. 'Go on' was all I had to say!"

Greenstreet had been approached many times by the motion-picture industry, but he had always pleaded previous commitments. When he was touring in *There Shall Be No Night* with Lunt and Fontanne in the spring of 1941, however, they decided to take a summer vacation before they resumed their engagement of the play. Their last show had been at Los Angeles, where Greenstreet, deprived of the excuse of a previous engagement, finally yielded to the blandishments of the film studios, and consented to make one picture—*The Maltese Falcon,* which starred Humphrey Bogart '42. At the Warner Brothers' sneak preview of the picture audience-opinion cards in response to the question "Who gives the best performance?" were virtually unanimous in answering, "The fat man"—who was, of course, Sydney Greenstreet. When the picture was released in the fall of 1941 critics heartily concurred with the preview audience's commendation of Greenstreet's performance. The *Newsweek* reviewer wrote that special mention must be reserved for Sydney Greenstreet's "unctuous and sinister impersonation of a criminal master mind. Making his screen debut at sixty-one . . . the English actor . . . brings to Hollywood a talent for comedy and villainy that should keep him there indefinitely." Greenstreet was nominated for the Academy Award for the best supporting male role as a result of his work in *The Maltese Falcon,* but he did not win the Award.

Greenstreet's next picture was *They Died with Their Boots On* (1941) in which he played the part of General Winfield Scott and, critics agree, acquitted himself with credit. In the fall of 1942 he was again featured with Humphrey Bogart in *Across the Pacific,* another melodrama. Bosley Crowther in the New York *Times* described Greenstreet, in the villain's role, as "entirely an enigma—malefic yet dignified, urbane and full of enviable refinement, yet hard and unpredictable beneath." *Casablanca,* the third thriller in which he was paired with Bogart, appeared in the same year and had a phenomenal run on Broadway. Although his acting in *Casablanca* was considered excellent as always, critics felt that his part (a minor one) was not essential to the plot.

In 1943 Greenstreet also completed roles in *Background to Danger, Thank Your Lucky Stars,* and *Devotion* (in which he plays the part of William Makepeace Thackeray). After *Devotion* the bulky actor was scheduled to appear in *Conflict, Outward Bound,* and *Passage to Marseilles.* It was also reported that the Lunts wanted Greenstreet for a London production of *There Shall Be No Night.*

Greenstreet is light-complexioned, and has unusual hazel eyes and grayish brown hair. He is five feet, ten and one-half inches tall, and extremely corpulent. His agents insist that once, when crossing a New York street, he was run over by a runaway horse and a heavy cart. Greenstreet himself was uninjured. The horse was fatally hurt.

Despite his weight Greenstreet has always been athletic. At school in England he played soccer, football, hockey, and cricket, and captained all the school games, including tennis and swimming. His years have not lessened his love of sports: he is still a good golfer and tennis player and he is fond of dancing. He also takes a keen interest in all competitive sports except boxing. He does a little painting and sculpture, but his hobby is collecting antiques. Nothing that he collects, he writes us, may be cracked or decayed. All his antiques, especially furniture, must be in perfect condition, in case he wishes to put them into actual use.

Greenstreet plans to teach acting when he retires from the stage and screen. His religion is Episcopalian; politically he is "open-minded." He married Dorothy Marie Ogden on August 12, 1918, and they have one son, John Ogden Greenstreet, who is in 1943 serving in the United States Army as a private.

Who's Who in the Theatre 1939

GRISWOLD, OSCAR W(OOLVERTON) Oct. 22, 1886- United States Army officer

Address: b. c/o War Department, Washington, D. C.

Assigned on May 12, 1943 to succeed Major General Alexander M. Patch '43 as commander of the United States Army Forces at Guadalcanal was Major General Oscar W. Griswold, former commander of the 4th Army Corps. The War Department explained that the assignment was in line "with a new policy of affording units in training the benefit of combat experience under commanders who had seen battle"; hence the return of General Patch to the United States to train new units of the 4th Army Corps, while General Griswold replaced him in the Solomons. On December 15, 1943 Griswold took over field command at Bougainville.

Major General Oscar Woolverton Griswold was born at Ruby Valley, Nevada on October 22, 1886, the son of Willard Smith and Margaret (Woolverton) Griswold. He was appointed to the United States Military Academy from Nevada in 1906, and on his graduation in 1910 became a 2nd lieutenant of Infantry. His first service was at Fort Mackenzie, Wyoming, with the 18th Infantry from 1910 to 1914, during which time (July 1911) he was married to Elizabeth Katherine Matile; and at Texas City, Texas with the same regiment until October 1914. Transferred then to the 15th Infantry, he sailed to the Far East and served at Tientsin, China until July 1917.

Returning to the United States, Griswold (with the rank of captain) was ordered to Camp Zachary Taylor, Kentucky as aide-de-camp to Major General Harry C. Hale. In this capacity he served until June 1918, during which time he made a tour of inspection of British, French, and American forces on the Western Front in France. He then returned to the United States to serve for a short time at Camp Sherman, Ohio as a machine gun officer of the 84th Division, and he returned to France with that division in September 1918. When that organization was broken up for replacements Griswold was on duty at the 302nd Brigade Tank Center. From December 1918 to April 1919 he served as assistant chief of staff for operations and training of the 8th Army Corps. Following this he was ordered to Paris on special duty with the athletic subsection of General Headquarters, serving in that capacity until July 1919.

U. S. Army Signal Corps
MAJ. GEN. OSCAR W. GRISWOLD

After returning to America, Griswold was detailed to duty in New York City in the office of the Port and Zone Transportation for a year. In 1920 he was promoted to major and was ordered to Syracuse University, New York, as professor of military science and tactics, instructing there until August 1921. His next station was at the Military Academy at West Point, where he served as instructor in the Department of Tactics for four years. Then at Fort Leavenworth, Kansas he became a student officer at the Command and General Staff School, from which he was graduated in the spring of 1925. For the next three years he commanded the demonstration battalion of the 29th Infantry School, Fort Benning, Georgia.

General Griswold was next ordered to Washington, D. C. as a student officer at the Army War College. After his graduation in 1929 he was detailed to the War Department General Staff, serving with the public relations' branch of the Military Intelligence Division until June 1931. He then saw brief service with the Air Corps at Brooks Field, Texas. Again ordered to Fort Benning, Georgia, he served with the 24th Infantry and was

GRISWOLD, OSCAR W.—*Continued*

a member of the Infantry Board from July 1932 to May 1936.

For the next three years Griswold was on duty in Washington, D. C. in the office of the chief of Infantry. He subsequently returned to Fort Benning to assume command of the 29th Infantry, with the rank of colonel. In October 1940 he was promoted to brigadier general (temporary) and was assigned on October 10 to the 4th Division at Fort Benning. Five months later he was ordered to Camp Croft, South Carolina as commanding officer of the replacement center there. In August 1941 another promotion made him major general (temporary) and a few days later he was assigned to command the 4th Motorized Division at Fort Benning, Georgia.

After the attack on Pearl Harbor, Major General Griswold became commanding general of the 4th Army Corps at Camp Beauregard, Louisiana. This position he held until his assignment to replace Major General Patch as commander of the Army Forces at Guadalcanal. His next assignment was to Bougainville, where the Marines had landed on November 1, 1943.

The Griswolds have two children, Matile and George Matile. A daughter, Katherine, is deceased. Major General Griswold is an Episcopalian and a thirty-second degree Mason.

GROMYKO, ANDREI A. (grō-mi'kō än-drā') 1908(?)- Soviet Ambassador to the United States

Address: b. c/o Soviet Embassy, Washington, D. C.

On August 21, 1943 the announcement was made from Moscow that Maxim Litvinov '41 had been "relieved of his duties" as Soviet Ambassador to the United States and would be succeeded by Andrei A. Gromyko, chargé d'affaires of the Soviet Embassy. Although the American State Department hastened to tell the public that it had been informed of the change several days before the official announcement and had already approved Gromyko as Russia's new envoy, commentators were soon busy speculating as to the political significance of the announcement, which came in the midst of the Quebec conference. The Soviet Ambassador to Britain and the Soviet Minister at Ottawa had previously been called home, and of late few signs had seemed to point to Russian satisfaction with either Anglo-American political or military strategy. Most of the press therefore interpreted the recall of the popular Litvinov as an expression of Russian displeasure at the lack of a second front in Western Europe and at encouragement allegedly given by the Allies to anti-popular movements in the occupied countries. Not until the Moscow and Teheran Conferences was it certain that Anglo-American-Soviet friendship, far from being in danger, was on firmer grounds than ever before.

ANDREI A. GROMYKO

Andrei A. Gromyko, "barricaded behind deep red draperies and a watchful Embassy staff," zealously "guarded his reputation as a man of few words and less publicity" throughout all this speculation. He was reportedly the youngest man ever to be Ambassador for a major power in the United States, his age being given as thirty-five. Few details about his career before he came to the United States were available, however, beyond the fact that he was born in Minsk, is a graduate of the Institute of Economics, lectured for a time at the Russian Academy of Sciences, and then spent a year in charge of the American section of Moscow's Foreign Office.

During the tenure of Constantine Oumansky '41 in 1939 the young diplomat came to Washington as counselor of the Soviet Embassy, and in the three months between Oumansky's departure for Russia and Litvinov's arrival in the United States (December 7, 1941) Gromyko was in full charge of the Embassy. Closely connected with the Soviet purchase of supplies from the United States and with American-Soviet political questions, when Litvinov was called back to Moscow for consultation in May 1943 Gromyko was appointed chargé d'affaires of the Embassy, once more becoming acting Ambassador. He therefore has had more important diplomatic experience than the title of chargé d'affaires would indicate. In September 1943 he was named Minister to Cuba, replacing Litvinov in this post also.

It was not until October 4 that Ambassador Gromyko presented his credentials at the White House. His speech at that time, emphasizing the importance of mutual understanding and his nation's hope for closer post-War cooperation, was an encouraging prelude to the Moscow Conference, as was his speech over NBC's *March of Time* program on October 21, his first public address since becoming Ambassador. On November 8 he again called for coordinated action by the United Nations for a speedy victory over Nazi Germany and warned against Nazi efforts to plant dissension in Allied ranks, in an address before the Congress of American-Soviet Friendship.

On November 9 Ambassador Gromyko signed the agreement creating the United Nations Relief and Rehabilitation Administration (UNRRA), and later that month he attended the UNRRA conference as delegate from the U. S. S. R. until the belated arrival of the Russian delegation from Moscow. He reportedly argued that the negotiations were so delicate and important that absolute secrecy should be maintained until the end of the conference, but this has been officially denied.

A tall, dark, taciturn man with horn-rimmed glasses, before becoming Ambassador, Gromyko lived quietly in a suburb thirty miles from Washington with his friendly-faced wife, their son Anatoli, and their daughter Milya. His new status, requiring his residence in the Embassy, will probably prevent him from following some of his enthusiasms: volleyball, fishing, chess, collecting stamps for Anatoli's album, and attending the movies on Saturday afternoons. (His first public appearance as head of the Soviet delegation was at the showing of *The City That Stopped Hitler* [1943], a documentary film about Stalingrad.) "Diligent, industrious, and strongly patriotic," he was, according to *Newsweek*, "expected to spend his spare moments boning up on American history, poring over the reports of American manufacturers, and studying political and military journals—the standard procedure for a typical Soviet career diplomat."

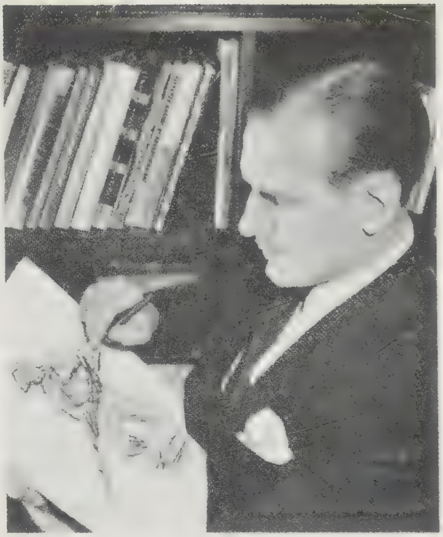
GROTH, JOHN (AUGUST) (grōth) Feb. 26, 1908- Cartoonist; artist

Address: b. Parade Publications, Inc, 405 Lexington Ave, New York City; h. 415 E. 58th St, New York City

Instructor at the Art Students League and art editor of *Parade* Magazine, cartoonist John Groth "has been fighting Fascism with his pen for ten years." He says that he became "socially conscious" in the early '30's when most people who protested against Fascism were assumed to be Communists, for Hitler['42] had dedicated himself to a crusade against Bolshevism. "Groth lost many of his friends, who called him 'warmonger' and 'Red.'" When the United States entered the Second World War the situation changed, and "now," remarks Groth, "anyone who can draw a picture has no qualms at all about attacking Hitler and Fascism."



JOHN GROTH

John August Groth was born in Chicago, Illinois on February 26, 1908, the son of John and Ethel (Bragg) Groth. He was educated in the public schools of Chicago, and attended the Chicago Art Institute intermittently from 1927 to 1930, studying part of the time in the evening sessions. From 1930 to 1931 he studied art privately with Todros Geller. In 1930 Groth made his first trip to Mexico, where he was arrested for taking photographs and had to spend the night in an unpleasant Mexican jail before he was released. After this he went to the West Indies and Central America continuing to make drawings and sketches.

When Groth returned to Chicago he became "artist-in-waiting" to a wealthy philanthropist, Josephine Hancock Logan, who wished to aid deserving artists, and who chose Groth as her assistant, since, he says, he was the first artist she had met. In the fall of 1933, however, he left her to become art director for the newly-founded magazine *Esquire*, subtitled "The Magazine for Men," and established as a quarterly in October of that year. A fifty-cent magazine, "frankly bawdy," *Esquire* was not expected to succeed because of its comparatively high cost. According to *Time*, "its sexy cartoons, mannish stories, and articles, big pages and colorful men's fashion drawings" nevertheless "found instant favor with a large and admiring public." It became a big money-maker and "the darling of the barbershops."

(Continued next page)

GROTH, JOHN—*Continued*

Late in 1933 *Esquire* assigned Groth to make another trip to Mexico for some local color sketches. Groth spent several months in Mexico making drawings of the Mexican Army and of bullfights. His sketches were made into etchings, lithographs, and water colors, and were printed in *Esquire*, which was promptly banned from Mexico by that country's irate Government, which resented Groth's satirical portraits of "fat, droopy Mexican soldiers on sleepy horses."

Groth saw the Mexican peon "as a pathetic sufferer enduring privation as unthinkingly as a dog." He drew the Army as a "tragi-comic band numbering 250 generals to 15,000 men, where the uniforms are all one size, built for a putative warrior of five feet two, where a haircut would make most caps four sizes too large, where concern for the appearance of the parade ground leads to unutterably funny spectacles, where whole families travel as integers of every group, where men, women, dogs, pigs, and kids bivouac together on cold Mexican nights."

After Groth left Mexico he returned to Chicago in February 1934 "with something under a carload of drawings and sketches," then resumed his travels for *Esquire*. His next destination was Russia, but *Esquire* said that he would "make several stops on the way, the first of which will result in a London portfolio." Groth stayed in England long enough to study under James Titton at the London School of Art, his "London stopover having been stretched . . . into the semblance of a residence." After a brief stop in France he finally got to Russia, where he was received with open arms, banqueted, and given a one-man show at the Museum of Western Art in Moscow. The entire collection of his pictures was bought by the Soviet Government. He was offered a Soviet Government art commission to make sketches of a collective farm community, but he refused it. Groth brought back a portfolio of drawings from the U. S. S. R., "where the worker is the only king and where everyone works . . . and where waiting in line is the national pastime." "In Russia," Groth wrote later, "everybody stands in line. Three cartoonists work as a team, one to stand in line to wait for commissions, one to execute them, the other to stand in line to collect for them."

Groth also visited Berlin, where he once saw Hitler entering a government building. His frequent caricatures of the "No. 1 Nazi," therefore, are drawn "with firsthand authenticity." From his travels Groth also brought back a portfolio of shipboard scenes entitled "Ho for the Life of a Sailor!"

In 1936 Groth left *Esquire*. For the next few years he studied at the Art Students League under Robert Brackman, Arnold Blanch '40, and Howard Trafton. The famous satirist George Grosz '42 was also his teacher. Groth free lanced for several years, making drawings for various magazines, including the *New Republic*, *Asia*, and *The Nation*. For the last he drew a regular feature, "Behind the Enemy Lines." In 1938 he taught for a time at the American Artists School.

The following year the late Heywood Broun, who was looking for an art director for his newspaper, the Connecticut *Nutmeg*, was introduced to Groth. Groth got the job. Later Broun said he considered Groth the best graphic artist in America.

"We had a fine time working on Heywood's weekly," says Groth. "Each week it seemed the issue wouldn't appear because of financial difficulties. But it always did, despite the opposition of Mrs. Broun, who thought the $200 a week Broun lost on the *Nutmeg* could be put to better use." After Broun died Groth was standing by his coffin, feeling, as he puts it, "very blue," when a man popped up and demanded whether the mourner were John Groth. Surprised, Groth replied in the affirmative, whereupon he was handed a summons. It seemed that hitherto the process server had been unable to find the elusive artist, but, being one of the *Nutmeg's* few readers, he noted Broun's frequent reference to his friend and art teacher in its columns, and had assumed quite correctly that Groth would be at the funeral. At this point, Groth remarks sadly, all his pictures were confiscated to satisfy a debt claim.

With Broun's death, the *Nutmeg*, which had been his personal enterprise, ceased publication. Groth returned to free lancing until 1941, when he became art editor of *Parade* Magazine, a five-cent weekly produced by the Marshall Field '41-Ralph Ingersoll '40 combination to recoup the financial losses incurred by their tabloid *PM*. With its offices entirely separated from *PM*'s, *Parade* stood a chance for success rated as fair-to-good if it could reassure its public that it had broken with *PM*'s "Leftist traditions." *Parade*'s subject matter, according to *Time* Magazine, lays emphasis upon "pretty legs, movies, theatre, the more picturesque side of national defense, and the more colorful reporting of *PM*'s foreign correspondents." A great deal of its contents is "lifted discreetly from *PM* itself."

Groth's first traveling assignment for *Parade* was to make some sketches of a Canadian lumber camp. In 1942 he spent some time in upper Quebec, living in a lumber camp himself, and he returned to New York with a number of drawings which were printed in *Parade*. At present Groth is still with *Parade* and is simultaneously conducting a course in cartooning at the Art Students League of New York City, where he has taught since the summer of 1942. He plans some day to write a book on the history of cartooning.

Although he is best known for his cartoons, Groth works in oil and water colors as well, and does lithographs and etchings. For *Parade* he does drawings and political and "gag" cartoons. He has drawn political cartoons for *PM* and "gag" cartoons for the *New Yorker*, *Esquire*, the *Saturday Evening Post*, *Collier's*, and many other magazines. His pictures cover a variety of topics: he has illustrated the Bible, *Don Quixote*, and many articles and stories in *Esquire*; his favorite subjects, however, are war and bullfights. He frequently forgets to sign his drawings and sometimes dates them English fashion. Concerning one of Groth's 1939 exhibits, a collection entitled "Impressions of War and Peace," the New York *Times* reviewer said:

"These small paintings are vivid and vigorous things, if at times seeming to make use of an almost willful crudeness, perhaps to further certain effects of fantasy. Motion is well expressed and a certain grimness makes itself felt."

Handball, volleyball, and bowling are Groth's favorite sports. He also collects prints, books, and caricatures. Groth is five feet nine and one-half inches tall and weighs 170 pounds. He has "straight, silvering" blond hair, "sharp, angular features," a "ruddy" complexion, and, occasionally, a mustache. Protestant by faith, Groth decribes himself politically as a liberal Democrat. He has been married twice, in 1936 to Alexandra Markoff, a Russian Royalist, and in 1940, after a divorce, to Frances Barbara Kernan. He has two children: Elizabeth Tamara, from the first marriage, and John Heywood (named after Broun) from the second.

ERNEST R. GROVES

GROVES, ERNEST R(UTHERFORD) May 6, 1877- Author; educator

GROVES, GLADYS HOAGLAND Apr. 3, 1894- Author; educator

Address: b. University of North Carolina, Chapel Hill, N. C.; h. 704 Gimhoul Rd, Chapel Hill, N. C.

The recognized pioneer among educators teaching college courses on sex and marriage, and one of the first to write on the American family, its relationships and social functions, is "scholarly, gray-haired" Professor Ernest R. Groves. Besides his own books and articles in this sociological field, he is co-author with his wife, Gladys Hoagland Groves, of several books on childhood and parenthood. Mrs. Groves has made her own career as a writer, editor, and educator, specializing in social work and modern social problems. Her particular current interest lies in her directorship of the Marriage and Family Council, Inc.—"the only organization of its kind in the Southeast; it gives information and counsel on courtship, preparation for marriage, and marriage and family problems to individuals and groups." Both Mr. and Mrs. Groves teach courses in marriage preparation at the University of North Carolina (the first such course there having been started in 1927 by Professor Groves) and related sociological subjects.

Ernest Rutherford Groves was born on May 6, 1877 at Framingham, Massachusetts, the son of Henry Hunt and Hannah (Seward) Groves. Upon his graduation from the Hudson (Massachusetts) High School he entered Yale Divinity School, receiving the degree of B. D. in 1901. At Dartmouth College he took his B. A. in 1903, with Phi Beta Kappa honors. That year he became professor of sociology at the University of New Hampshire. In 1907 he went to Dartmouth as instructor in English. The same year he married Dorothy Doe, who died in 1916, leaving two daughters, Catherine and Ernestine Dorothy.

Returning to the University of New Hampshire in 1909, Professor Groves again taught sociology and five years later became dean of the Arts College. From 1920 to 1927 he was professor of sociology at Boston University, where he started the first college credit course (1923) on preparation for family life. Since 1927 he has been professor of sociology at the University of North Carolina. He has also been lecturer on "The Family" at Duke University since 1937.

It was on February 25, 1919 that Professor Groves was married to Gladys Hoagland, a graduate of New Hampshire University. Two daughters were born: Ruth Elva and Lois Mary.

Ernest Groves is the author or co-author of more than thirty books, many of which have had foreign editions and several editions in the United States. *The Marriage Crisis* (1928) appeared at a time when the subject of "trial" or "companionate" marriage was receiving wide popular discussion. In this book Groves decried both trial and companionate marriage as solutions for the problems created by changing economic and social conditions, "since they tend to magnify sex attraction and obstruct the development of permanent affection. . . The only solution of our matrimonial ills is the greater stressing of affection as the hope of marriage." *Parents and Children* (1928) was a book on training for parenthood. *Introduction to Mental Hygiene* (1930) written with P. M. Blanchard, has been used as a textbook in many colleges. Two important, extensive sociological histories were *The American Family* (1934), originally titled *Social Problems of the Family*, a study of family life in the United States from colonial beginnings to the present; and *The American Woman* (1937). The latter is a record of the social development of the average woman, showing her "advance in status in a setting of masculine dominance." The book

GLADYS HOAGLAND GROVES

describes the life of women in the Colonial and Frontier periods, and contrasts women of the North and South up to the Civil War. It analyzes careers for women in the twentieth century, showing handicaps and inequalities under which women still work. But in the new period that is dawning, "woman at last contributes to the argosy of our civilization with the same sense of self-determination that possesses man."

In 1940 appeared *The Family and Its Social Functions*—"an indispensable compendium of three decades of psychological study"; and in 1941 a revised edition of *Marriage* (originally published in 1933). Of this last book one reviewer commented: "Professor Groves suffers the heroic fate of the pioneer—namely, of being outmoded in his own territory. His is behind the newer, jazzier texts on preparation for marriage. Whereas he still clings to some of his sociological generalizations and insight and thus produces a superior book from the point of view of scientific study, the newer models dispense with dull theorizing altogether and give straight, unadulterated advice." The more recent *Christianity and the Family* (1942) is a plea to the Protestant ministry for a more practical understanding and interest in the family and a greater appreciation of its relation to Christianity.

Groves has contributed for several years to scientific and popular magazines such as the *American Journal of Sociology, Hygeia, Social Forces, American Family, Ladies' Home Journal, Good Housekeeping,* and *Parents' Magazine.* Typical in the popular field was an article, "Too Much Kissing," which appeared in the *American Magazine*; in the semi-scientific, "Getting Acquainted with Children," in *Parents' Magazine.*

Groves was editor of Longmans, Green Sociological Series from 1926 to 1940; and he is associate editor of *Social Forces* and of *Education*; corresponding editor of *Parents' Magazine*; and member of the editorial council of the *Journal of Educational Sociology.* From 1936 to 1938 Groves was the president of the North Carolina Mental Hygiene Society; from 1938 to 1940, chairman of the Committee on the Family, Federal Council of Churches of Christ in America; from 1941 to 1942, president of the National Conference on Family Relations. He is a member of the American Sociological Society and of the Authors Guild. In 1942 he received an honorary doctor's degree in literature from Florida Southern College.

Gladys Hoagland Groves was born on April 3, 1894 in Boston, Massachusetts, the daughter of the Reverend Napoleon S. and Julia Ann (Comley) Hoagland. After her graduation from the Lowell (Massachusetts) High School she began her career as a district schoolteacher in Madison, New Hampshire. In 1918 she took her B. A. degree at New Hampshire University, following this with a half year of graduate study at the University of Minnesota. At the time of her marriage she was a resident in social work at the Pillsbury Settlement House.

In 1926 Mrs. Groves again entered teaching, becoming an instructor on "The Family" at the Garland School of Homemaking in Boston. From 1927 to 1928 she gave extension courses in parent education at the University of North Carolina. She also taught courses in family relationships at the summer sessions of Teachers College, Hays, Kansas and at the Oklahoma Agricultural and Mechanical College, Stillwater, Oklahoma, and similar courses were later given at Syracuse University, 1937 to 1938; at Oregon State College, 1940 to 1941; at the University of North Carolina, 1941 to 1943; and at the North Carolina College for Negroes, 1941 to 1943.

Mrs. Groves is the author of *Marriage and Family Life* (1942), which has been issued both as a college textbook and in a trade edition. She is co-author with R. A. Ross, M. D., of *The Married Woman, A Practical Guide to Happy Marriage* (1942). With her husband she is co-author of *Personality and Social Adjustment* (1923); *Wholesome Childhood* (1924); *Wholesome Marriage* (1927); *Wholesome Parenthood* (1929); *Sex in Marriage* (1931); and *Sex in Childhood* (1933). Collaborating with both Mr. and Mrs. Groves on a revised edition of *Sex Fulfillment in Marriage* (1942) was Catherine Groves (Mrs. Joseph Peele), Professor Groves' daughter by his first marriage. A graduate of the University of North Carolina, with an M. A. in social work at Smith College, she is the author of *Get More Out of Life* (1941).

The Groves' books, many of which are used as texts or reference works in many college courses on preparation for marriage, in treating of sex tend to stress its psychological rather than its physical aspects, the latter being discussed from the scientific, physiological angle. Mental and emotional development and adaptability in marriage are thoroughly discussed. Of the books one reviewer has said: "They do not stand alone and cannot stand comparison with other books in the field. They lack distinction in certain important respects. To begin with, they are verbose in the extreme and they are pedestrian in manner." Another critic, however, writing of *Sex Fulfillment in Marriage,* commented: "Well-organized and with a clarity and simplicity of style greatly appreciated by the average reader, the book will be very helpful to young couples entering marriage. It should also be of value to college courses in marriage."

Following the pioneer work of Professor Groves, many colleges and universities now have courses in marriage preparation. His own course at the University of North Carolina is "one of the largest and most popular elective courses there." Men and women students are taught separately in order to obtain full freedom in questions. Professor Groves teaches women students, and Dr. Donald Klaiss teaches men. Mrs. Groves teaches in the summer session with her husband in a graduate seminar. Because of a university ruling husbands and wives may not teach in the regular college year. The chief source of reading is the Groves' textbook, *Marriage*. The women students are said to be most interested in problems of courtship and of single life; and, when discussing marriage, in questions relating to finance and in-laws. The men are more interested than the women in heredity and fertility and—oddly enough—in problems of child psychology. Professor Groves "deals out facts unflinchingly, and likes to let students make their own decisions. Fully half of them go to his office for individual consultation. Some bring relatives and friends for advice; and students from distant schools often make special trips." Professor Groves has had seventeen years to observe the results of these courses on students who have been graduated and married. In a ten-year period "he has observed only two serious sex maladjustments—and no divorces."

In recent years Professor Groves has been chiefly interested in developing graduate courses for teachers in the field of marriage and the family. He has developed a cooperative program with Duke University. One course, which is not taught elsewhere and which has attracted much attention, is a medical course on marriage and the family taught by fourteen specialists of Duke Medical School. Each year Groves conducts a conference on marriage and the family, which is attended by several hundred educators from all over the country.

In their writings on sex and marriage Mr. and Mrs. Groves are apparently in full agreement. In outside matters, such as politics, social life, and recreations, they show a friendly divergence of interests. Mrs. Groves' national political affiliation is Republican, while her husband is an "Independent Democrat." For hobbies and recreation she likes gardening, cycling, and swimming; he prefers reading mystery stories—and cooking.

GULLION, ALLEN W(YANT) (gul'-yun) Dec. 14, 1880- United States Army officer

Address: b. School for Military Government, University of Virginia, Charlottesville, Va.

There will be no Heinrich Himmler '41 placed by the United States in charge of policing and governing Allied-conquered territories either during hostilities or in post-War years. The man chosen for this important task, insofar as that burden falls upon the United States Army, is Major General Allen W. Gullion. When in August 1941 the War Department re-created the office of provost marshal general, Gullion was selected not only because he is known as a strict disciplinarian, but because he has had wide experience as an Army prosecutor and has served as judge advocate general of the Army. The duties of the provost marshal general are to train and command military police, supervise internment camps for aliens, set up military government in conquered territories in order that the civil population may be controlled and safeguarded, etc., while fighting is still going on elsewhere. General Gullion is said to be "admirably suited by education, training, and temperament for his enormous assignment. He is a lawyer, experienced soldier, and administrator and has unbounded faith in leadership and tolerance as opposed to harsh punishment."

U.S. Army Signal Corps
MAJ. GEN. ALLEN W. GULLION

Handsome, well-groomed Allen Wyant Gullion, Southern-bred and educated, was born at Carrollton, Kentucky on December 14,

GULLION, ALLEN W.—*Continued*

1880, the son of Edmund A. and Atha (Hanks) Gullion. In 1901 he was graduated from Centre College, Danville, Kentucky, with a B. A. degree. That same year he was appointed to the United States Military Academy and upon his graduation on June 13, 1905 was commissioned a 2nd lieutenant of Infantry. He joined the 2nd Infantry at Fort Logan, Colorado, serving there until 1906. For the next two years he served with his organization in the Philippines. On his return to the United States (1908) he joined the 2nd Infantry at Fort Thomas, Kentucky, remaining there until 1911. He then went to Honolulu for several months, serving with his regiment at Schofield Barracks. He returned to duty in the United States with the 20th Infantry at Fort Douglas, Utah.

From 1912 to 1914 General Gullion was professor of military science and tactics at the State University, Lexington, Kentucky. While teaching he decided to take the University's law course, and obtained his degree of LL. B. in 1914. He then rejoined the 20th Infantry at Fort Bliss, Texas and served at various posts on the Mexican border until July 1916. He was with the 35th Infantry at Nogales, Arizona when in April 1917 he was ordered to Washington, D. C., as assistant executive officer and chief of the Mobilization Division in the provost marshal general's office, administering the Selective Service law. For this work, which included supervision of all matters relating to the making and filling of calls and accomplishment of individual inductions, he was awarded the Distinguished Service Medal with a citation "for exceptionally meritorious and distinguished services . . . of great value in raising our national Army."

Gullion's overseas service began in March 1918 when he sailed for France to serve as section judge advocate in the Rents, Requisitions, and Claims Offices; and as judge advocate of the 3rd Army Corps. When he returned to the United States late in 1918 he was assigned to the Operations Division of the War Department General Staff. From 1919 to 1922 he was judge advocate of the 2nd Corps Area at Governors Island, New York, and until 1924 he was assistant and acting judge advocate of the 2nd Corps Area. He then served in the office of the judge advocate general, Washington, D. C., until June 1927. The next year he attended the Command and General Staff School at Fort Leavenworth, Kansas.

In 1929 Gullion was sent as the War Department representative to an international conference of forty-seven nations at Geneva, Switzerland, to formulate a code for handling prisoners of war and to revise the Geneva Convention of 1906. In this year, too, he was promoted to the rank of lieutenant colonel. He returned to duty in the office of the judge advocate general. In 1931 he was graduated from the Army War College and in 1932 from the Naval War College. He was then ordered to Honolulu, where he was judge advocate in the Hawaiian Department at Fort Shafter until 1933, and deputy administrator of the N. R. A. in the territory of Hawaii until 1935. He was awarded an honorary LL. D. degree by the University of Hawaii in 1935. In October of that year he came back to the United States and was assigned to the military affairs section of the judge advocate general's office.

It was on December 1, 1937 that Gullion, with the rank of major general, became the judge advocate general of the Army. In 1938 he was the sole delegate of the United States at a conference of juridical experts at Luxembourg, where he addressed the Conference on International Law on the subject "Protection of Civil Populations from Bombardment from the Air." On August 2, 1941, in addition to his duties as the judge advocate general, he was given the position of provost marshal general. He concluded his work as judge advocate general in December 1941.

Not long after his appointment General Gullion created a new school for military police at Arlington Cantonment, Virginia, and the Provost Marshal General's School for Military Government at the University of Virginia. The military police school trains officers and enlisted men in the handling of traffic, detention of prisoners of war, military law, criminal investigations, etc. The School of Military Government trains men to become administrative assistants to the military governors. By early 1943 this school had an enrollment of 150 officers, chosen from the National Guard and from civilian life through the former Army Specialist Corps, with General Cornelius Wickersham at the head of the faculty. According to General Gullion, "little time is devoted to ideology and pure theory. While a background of international law and the general principles of public administration is, of course, presented, seventy per cent of the students' time is spent on practical problems dealing with the areas of potential occupation."

In an address (November 1942) before the New York *Herald Tribune* Forum, General Gullion spoke of the nation's plans for military occupation, followed by civil control, in conquered countries. He stressed the point that it is the duty of the occupying authority to preserve so far as possible the local institutions, laws, and customs of the occupied region. And, when the Army gives up its temporary control, "the duties then to be assumed by the succeeding civilian agency will be on a much greater scale and probably of much longer duration. For it is then that civil authority must take on the burden of helping the crushed and dispirited peoples to create a stable world." A large technical and professional personnel will be required, now being selected by government civilian agencies. They include engineers, sanitation experts, educators, economists. In order to facilitate the transition from military to civilian control, the Army schools, in cooperation with a number of colleges, plan to give these experts "some insight into the institutions, customs, and psychology of the people with whom they will have to deal." When the transition comes these men can simply take off the uniforms they wore under military control and perform their special tasks under civil control.

General Gullion's theory of military occupation is one in which fear is to play no part. "All our preparations," he says, "are colored with the philosophy of Francis Lieber, a great American who was born a German and who became the father of the written law of humane land warfare--the philosophy that military government should be conducted with 'justice, honor, and humanity, virtues that adorn the soldier more than any other man, for he has the power of arms over those who are unarmed.'"

General Gullion was married on September 9, 1905 to Ruth Mathews, now deceased, and had six children, five now living.

GWATHMEY, ROBERT (gwäth'me) Jan. 24, 1903- Artist; teacher

Address: b. Cooper Union, Cooper Sq, New York City; h. 1 W. 68th St, New York City

Rosalie Gwathmey

ROBERT GWATHMEY

"One of the most original talents of our day," says a critic of Robert Gwathmey, prize winner in the Carnegie Institute's 1943 exhibition, "Painting in the United States," at Pittsburgh. *Hoeing*, for which a jury awarded the second prize of $700 to the painter, and which the Institute later purchased for its permanent collection, is described as "unique because of its difference from every other canvas in the show . . . an essay in understatement, the veritable skeleton of a picture for the observer to compose." Some critics have been violent in their reactions to Mr. Gwathmey's stark representation of a scene in a Negro family's farmyard. "It is an affectation of cruelty—really horrible, except to the sophisticates," writes the critic of the Pittsburgh *Press*, while Edward Alden Jewell of the New York *Times* finds *Hoeing* "a success only in that it travesties art." But to those who feel that the artist of today has "an increasing sense of participation in the life and thoughts and movement of his time and a deepening interest in social ideas," Gwathmey's painting appears "biblical in its simplicity . . . fine painting as well as social commentary. The hewers of wood and drawers of water could have no better spokesman than Gwathmey, who knows how to paint a picture the while he pleads their cause."

Robert Gwathmey was born in Richmond, Virginia on January 24, 1903, the son of Robert Gwathmey and Eva Mortimer (Harrison) Gwathmey. After finishing John Marshall High School in Richmond he worked in a railroad office for two years before going to North Carolina State College in 1924. The following year he went to the Maryland Institute in Baltimore to study painting, later transferring to the Pennsylvania Academy of the Fine Arts, where he studied under George Harding and Daniel Garber, and from which he was graduated in 1930.

That Robert Gwathmey developed into a social comment painter is not surprising, for from the time that he was fourteen he had contact with the working classes while holding various summertime jobs in a department store, florist shop, lumber yard, construction camp, and—during his student days at the Academy—as part-time assistant in a settlement house in the Italian section of Philadelphia and as assistant in the engraving room of the Philadelphia *Inquirer* on the night shift. His background was also enriched by travel. In the summer of 1925 he shipped as a seaman on a freighter of the American Merchant Marine. In off-duty hours he sketched the crew and in port he made frequent shore excursions. When the ship put in at Antwerp for two weeks Gwathmey had an opportunity to make a sketching trip and to visit the famous Belgian galleries; but later on, when the freighter took on cargo at Guatemala, he was not so fortunate and had the tantalizing experience of rowing the captain ashore, but not being allowed to land. The ship went through the Panama Canal and then to San Francisco, where "the only interesting thing that happened was the death of Rudolf Valentino." For two successive summers, 1929 and 1930, Gwathmey was awarded Cresson Scholarships by the Pennsylvania Academy of Fine Arts and went abroad, sketching and visiting the great art galleries in England, France, Germany, Italy, and Spain. In Spain he was overcome by the glories of the Prado and profoundly shocked by the extreme poverty and repression of the lower classes. Acting on the theory that artists who paint people should know people, he traveled third class everywhere, observing the "common man" whose lot he was to portray so tellingly later on.

Back in the United States, Gwathmey accepted a teaching post at Beaver College, Jenkintown, Pennsylvania, where he was assistant

GWATHMEY, ROBERT—*Continued*

to the head of the Art Department from 1931 to 1938. Near the end of this period he destroyed almost everything he had painted previously, which makes the body of his work rather small. His explanation for this is that "it takes about ten years to wash yourself clean of academic dogma." Since that time Gwathmey has progressively developed his flair for pictorial demonstration against the evils of society. He believes that form should be imposed on semi-flat areas and that each image used should be apparent for its full worth. His work does have a third-dimensional quality, with some degree of shadow, but his interest in that quality is not extreme; he feels that too much chiaroscuro lessens the element of design. Striking characteristics of Gwathmey's work are "a bold pattern, incisive line, frequent use of strong contrast, and felicitous color. His pigment is built up carefully and economically, with a fine feeling for textures and nuances of color in any given area."

In 1939 Gwathmey became an instructor in the Department of Painting and Design at Carnegie Institute of Technology in Pittsburgh. That same year he exhibited in the third annual showing of the American Artists Congress, called "Art in a Skyscraper." In the "mediocre level of technical accomplishment" a critic noted several good pictures, among them "a humorous bit of satire on chauffeurs and Pomeranians by R. Gwathmey." In the summer of 1939 Gwathmey exhibited at the Golden Gate Exposition in San Francisco and at the World's Fair in New York City. Of his work at the latter, Richard Carline wrote in the *Studio*: "Robert Gwathmey . . . uses the emotional effect of brilliant color to superimpose on his satirical vein. His themes are often scathing, such as the aged grandmother holding a baby in her lap, or the lonely hitchhiker against a joyous background of brilliantly colored poster hoardings [billboards]. With this artist we have reached one of the very young painters, and the character that points perhaps towards the art of the future."

When Congress stopped the appropriation for the Government's Section of Fine Arts it brought to an end a project for fostering artistic production. Working on the theory that "a greater body of talent must be encouraged if American art were to flourish," the Section, through a system of anonymous competitions open to all American artists, had been procuring decorations for Federal buildings. In the Forty-Eight States Competition, widely publicized in *Life* Magazine under the slogan "This Is Mural America for Rural Americans," Robert Gwathmey entered a sketch which won him the commission to decorate the Post Office of Eutaw, Alabama. The winning sketches were exhibited in the Corcoran Gallery in Washington and later in the Whitney Gallery in New York. Gwathmey, who feels very strongly that mural painters should do contemporary scenes, wrote to the postmistress at Eutaw for some information about the region, but when he received a stilted reply stressing the antebellum glories of the town, he decided that he would have to make his own discoveries. Armed with a map from the county agent, he drove over the area, noting the products—cattle, corn, cotton, lumber—the people, and the degree of prosperity. All this information appeared in pictorial form in the mural, with three white people and two Negroes indicating the ratio of the population, and the absence of farm machinery denoting the poverty of the community. One critic, commenting on the contemporary aspect of the murals, wrote: "The Section competitions, to the benefit of public and artist alike, have rid American mural painting of a whole dictionary of once-sacred Neoclassic clichés. [We] are grateful that Athenian matrons, Roman nymphs, and blinded Justices with all their impedimenta are banished." Forbes Watson, adviser to the Section, described the competition as having brought "a great big breath of fresh air into American painting."

In 1940, when Ralph Ingersoll '40, the editor of *PM*, decided to revive the idea of the artist-reporter, "a fabulous and wonderful institution which suffered almost total eclipse with the rise of photography," *PM*, in collaboration with the Museum of Modern Art, announced a competition to find artists "who can report the news with brush or pen." One of the prizes went to Robert Gwathmey for a wash drawing, *Undermined*, a vivid representation of the rescue of a woman from the second story of a shanty which was collapsing into the street.

"Gwathmey's Reward" was the facetious title given by a reporter to the artist's one-man show at the American Contemporary Art Gallery in January of 1941. This show was the result of the competitive exhibition which the A. C. A. Gallery holds every year to uncover new talent. In 1939 the top prize—a one-man show at the A. C. A. Gallery—was unanimously awarded by a jury to Gwathmey for his canvas *Land of Cotton.* But since he paints very slowly, it was not until 1941 that he collected his reward, making a successful debut. His show "constituted a compelling vindication of the worth of the gallery's pioneering venture." Critics commented upon his clarity of style, saying that his canvases, "built up largely of flat areas of paint that underline the simplification to which he submits his material, are colorful, adroitly managed, and well-knit. . . Though he is not given to outright propaganda, Gwathmey surveys his world objectively and makes social comment that is both penetrating and restrained. He is animated by a very definite idea which he wishes to communicate in every canvas on view here. . . Caricature crops up occasionally, with particular success in *Hitch Hiker,* and deepens to satire in such examples as *Chauffeur* and *For Great Is Your Reward in Heaven.* . . Far less happy is his work when the bitterness that he feels against the social order swamps his expression. But he will be interesting to watch, for he has force in his painting language and something to say."

Still protesting for the Negro, Gwathmey won the water color prize of the Associated Artists of Pittsburgh in 1941 for a "tricky but effective experiment in textures and angularity" called *Share Croppers,* "in which two bleak figures are outlined against a barren background." This same picture took the First Purchase Prize in the Contemporary Water Color Show held in the San Diego Fine Arts Gallery during the summer of that year.

Cotton Pickers, a nervously brushed canvas depicting Negro farm laborers in the field, was purchased by the Boston Museum of Fine Arts in 1942. Unlike the Whitney Gallery of New York, the Boston Museum had given little support to the art of today until the Gallery of Provisional Acquisitions was established in 1941 and the museum became increasingly active in the contemporary art market. Purchases are hung provisionally in the museum's special gallery and, after a trial period, either added permanently to the collection or exchanged for another work by the same artist. Mr. Gwathmey is also represented permanently in the Albright Art Gallery of Buffalo, the Carnegie Institute of Pittsburgh, the Pennsylvania Academy of Fine Arts (Temple Purchase), and the San Diego Fine Arts Gallery.

Since the autumn of 1942 Gwathmey has been a member of the faculty of Cooper Union, where he teaches painting. Recently he has been very much interested in the silk screen process. One of his prints—*The Rural Home Front,* a composite picture of the various contributions of the farmer toward victory—took first prize in the silk screen section of the graphic arts show "America in the War." This exhibition, arranged by Artists for Victory, the wartime association of leading art organizers which has been instrumental in enabling artists to contribute to the war effort, was an attempt to recognize a number of promising young talents in the modern print field and appeared simultaneously in twenty-eight cities.

Public recognition of Robert Gwathmey is increasing, for in addition to the important show at Pittsburgh in October 1943, where his prize painting excited so much comment, he was included in the 54th Annual Exhibition of American Painting and Sculpture at the Art Institute of Chicago with a canvas entitled *Another Day,* showing Negro laborers tired after their work. He was also represented in the Whitney 1943-44 Annual Exhibition of Contemporary Art with a symbolic picture called *The South,* very modern in idiom and infused with social consciousness. In 1944 Herman Baron, of the A.C.A. Gallery, expected to exhibit some new "Gwathmeys" in a group show.

After viewing the bitter, satiric content of his painting, it is surprising to find Mr. Gwathmey young and amiable, with delightful Southern manners and a pronounced Southern accent, which he has retained despite the many years that he has been away from his native Virginia. He is married to the former Rosalie Hook, of Charlotte, North Carolina, whom he met in art classes at the Pennsylvania Academy. Mrs. Gwathmey's chief interest is photography. She has taken a number of documentary photographs in the South, where her genuine interest in humanity has given her access to the homes of the people; and she has had notable success in her work at the Stage Door Canteen. She frequently photographs details to be used later in her husband's painting. The Gwathmeys like functional architecture and furniture of the Saarinen [42] type, and their apartment is done in the modern manner Their small son Charles seems to take after his father, for he spends a great deal of time drawing pictures. Mr. Gwathmey, who is six feet tall, dark, and weighs 175 pounds, describes himself as gregarious, interested in the moving social scene and the maturing of democratic ideals. He is fond of the theatre and motion pictures and also likes football and baseball.

Who's Who in American Art 1940-41

GWENN, EDMUND Sept. 26, 1875- Stage and screen character actor

Address: h. Beverly Wilshire Hotel, Beverly Hills, Calif.

Who's Who in the Theatre devotes almost five columns of small type to the voluminous theatrical career of Edmund Gwenn. Yet at the start of that career, his father predicted that if Edmund entered the theatre ("that sink of iniquity"), he would inevitably end up in the gutter. Some generations later, the elder Gwenn admitted he had been wrong.

When Edmund Gwenn was born in London on September 26, 1875, "Queen Victoria was still knitting with the ladies-in-waiting in Buckingham—a fact which explains a good deal of Gwenn's early trials," says Theodore Strauss in the New York *Times.* "As the oldest son, and therefore the only one who mattered, in the household of a government civil servant, Gwenn was carefully groomed for a position of consequence in the Empire." An early inclination to the sea was thoughtlessly scotched by a maternal forebear in the Queen's Navy who was court-martialed for habitually exceeding his "Wine Bill." Added to that was the fact that young Gwenn was the "apple of his mother's eye," and she had heard too much about sea fights and shipwrecks. His father urged the civil service, but to Edmund it seemed a "continent of unexplored boredom."

"Then like a girl who is jilted and marries the man's best friend," explains Gwenn, "I turned from my mother's pet aversion to my father's—the stage." One reason was that young Gwenn had admired Sir Henry Irving from childhood.

When the stage-struck young man, who had been a student at St. Olav's College, and had later attended King's College, London, told his father what profession he had chosen, "in a scene without parallel in Victorian melodrama" his father "quite literally showed him the door. During a dismal all-night crossing from Dublin, where his father was then stationed, to England, the embryo actor had occasion to reflect." He was penniless; his experience consisted of a few performances in

EDMUND GWENN

amateur productions; and he knew that if he failed he could not return home.

"Among the thunderbolts hurled from the summits of his father's rage was the prophecy that his son 'would die in the gutter, a rogue and a vagabond.'" And in *Rogue and Vagabond* (1895), with a group of amateurs turned professional, Gwenn made his first appearance on the English stage at the age of twenty, playing two roles, those of Dodo Twinkle and Damper. It was the beginning of a long and a distinguished career that spanned two continents.

Acting jobs were scarce, and many times the ambitious youth who had cut himself off from his family found himself lacking in rations. By 1899, however, he had progressed sufficiently to make a first appearance on the West End stage in London in *A Jealous Mistake.* Gwenn says all he remembers of it is how frightened he was. After that came ten years in the British provinces, with stock and touring companies. During those years the best engagement Gwenn had was with Edmund Tearle, who headed a company which presented a repertory of fourteen Shakespearian plays during forty-eight weeks of the year. The troupe traveled light—whatever scenery was available in each local theatre was used. "One thing about Shakespeare," says Gwenn, "if it's played well, you don't need any backgrounds." Each actor supplied his own tights, wigs, and shoes; the management supplied the actual costumes. From walk-ons and small parts during the first season Gwenn progressed to better parts.

Gwenn trouped about the countryside appearing in old melodramas like *Trail, the Anarchist,* and in other plays. Each season found him on the road, and Christmas found him in that perennial British favorite, a series of pantomimes. The audience received its money's worth; after the play a variety show was frequently given during which Gwenn sang comic songs, and still later he boxed three rounds with a fellow actor to finish off the evening.

After the end of the Tearle engagement in 1901 J. C. Williamson invited the young actor to Australia for a year. He stayed for three and returned to London in 1904 to appear in a series of small parts, one in Schnitzler's *In the Hospital.* A few days after the opening Gwenn was amazed—and delighted—to receive a postal card from George Bernard Shaw, offering him one of the leading roles, as Straker, the Cockney chauffeur, in *Man and Superman.* Needless to say Gwenn accepted, and the play, under the management of Granville Barker and J. E. Vedenne, was a notable success.

"I was grateful to Shaw," said Gwenn in speaking of his professional godfather in both the theatre and in motion pictures during an interview with Helen Ormsbee of the New York *Herald Tribune.* "Mind you, though," and the eyes behind the glasses twinkled, "you're just as good an actor on the day before you make a hit as on the day after; but nobody knows it. I acted in several Shaw plays after that—*John Bull's Other Island, Major Barbara,* and *You Never Can Tell.*

"Then came *Captain Brassbound's Conversion,* and he cast me for Drinkwater, another Cockney part. . . We had an argument. Writing the play, Shaw had set down Drinkwater's language as it sounded to his Irish ears. Then he put the plain English of it in brackets. For instance, he wrote, 'Aw sy, Gav'ner,' and explained in parenthesis that it meant 'I say, Governor.' As my Cockney accent had suited him perfectly in *Man and Superman* I suggested to Shaw that . . . it might do if he were there with his brackets at the performance but since he wouldn't be, perhaps he might trust the accent to me." Unfortunately for Gwenn, Shaw held out for his own version, even upsetting the highly nervous actor with last-minute suggestions just before curtain time on opening night. The result was that Gwenn blew up in his lines and received a set of bad notices, a rare thing for him. Shaw, who knew he had caused the poor performance, never mentioned it to Gwenn. At rehearsals Gwenn recalls Shaw as "charming—diabolically charming." He would say: "Good morning, ladies and gentlemen. The management wants us to do this little piece. I can't imagine why; it's quite worthless. But as you have been good enough to come down here, we may as well get on with it."

Gwenn points out that Shaw's plays "were the money makers that supported the repertory company. We did other good things, but they couldn't be counted on to draw. Shaw never failed. I was with the company for three years—the happiest I've ever had in the theatre. Galsworthy, Masefield, and St. John Hankin were new playwrights at the time and we did their early plays. Masefield's *The Campden Wonder* was so powerful that the audience sat silent and horror-stricken at the finish." Gwenn, who later had roles in Galsworthy's *Justice* (1910), *Strife* (1909), and *The Skin Game* (1921), also appeared in the cast of the author's first play, *The Silver Box.* He remembers Masefield as a "shy, sailorish fellow."

A familiar figure in the new plays of all the noted English playwrights, Gwenn in 1908 appeared in the first production of Barrie's *What Every Woman Knows* and later in his *The Twelve Pound Look* (1910). Earlier he had appeared in Ibsen's *The Wild Duck* and in Barker's *The Voysey Inheritance* and *Prunella.*

When the famous actor tried the combined role of actor-manager for brief periods he was utterly unsuccessful at it. One period as a manager was cut short by the War. In 1915 Gwenn, despite faulty eyesight, was accepted in the British Army, and he "drew supplies up to the front lines under fire." After one year's service as a private he was advanced until he became a captain.

In 1919 Gwenn returned to the stage, and two years later he made his first appearance in the United States in *A Voice from the Minaret* and in *Fedora.* Back in England he essayed his first film role, again under the aegis of Shaw in the latter's *How He Lied to Her Husband.* This was followed by a tremendous personal success in the film made from Priestley's *The Good Companions.*

The years since then have found Gwenn either on London stages or Elstree film stages, in Broadway theatres or Hollywood film studios. He has appeared in such hits as *Lilac Time* (1922); *The Great Broxopp* (1923); *Charlot's Revue* (1925); *And So to Bed* (1926) (he was Samuel Pepys for a whole year); *The Scarlet Pimpernel* (1928); *Bulldog Drummond* (1932); and *Laburnum Grove* (1933). After a year's successful run as George Radfern, the amiable counterfeiter in the last-named play, the whole British company went to New York in 1934 for a long and equally successful run. Critics liked the play very much, one declaring that the years "had graced Gwenn with such persuasive charm that even persons in the audience to whom counterfeiting is repugnant react to him, and go home possessed of a glow which was not part of them when they entered the theatre."

In 1941 Gwenn portrayed the title role in *The Wookey,* a tale of a little Cockney tugboat captain "who runs his East End family with as much assurance as Winston Churchill '42 runs the British Empire," during the days of the great London Blitz. "The audience loved it," commented *Time* Magazine's critic. "Half the life in *The Wookey* comes from Edmund Gwenn, an actor with a capacity for making mediocre parts seem masterpieces of playwriting. . . The play is handed to him and he runs away with it."

A very different sort of part was Gwenn's next choice for Broadway in December 1942. He played the role of Chebutykin in Chekhov's *The Three Sisters* with Katharine Cornell '41, Ruth Gordon '43, and Judith Anderson '41. "Magnificent" was Lewis Nichols' verdict on Gwenn's acting, while Richard Lockridge '40 said Gwenn was "superlatively good. His version of the drunken scene probably is the most realistic since Disney '40 was at work with the pink elephants." In the summer of 1943 the play closed its New York run and took to the road.

Gwenn has appeared during the years in a wide variety of film characterizations. In England he appeared in *Hindle Wakes; Tell Me Tonight; The Skin Game* (1920); and *Laburnum Grove* (1941), among other films. In Hollywood he had parts in *The Bishop Misbehaves* (1935); *Anthony Adverse* and *Sylvia Scarlett* (1936); *Parnell* (1937); *Foreign Correspondent, Pride and Prejudice,* and *The Earl of Chicago* (1940); *A Yank at Eton* and *Charley's Aunt* (1942); *The Meanest Man in the World, Forever and a Day,* and *Lassie Come Home* (1943). He is the sort of actor from whom one can expect an excellent characterization in practically every film appearance. *Time* comments that "in many of his film roles he stole whole scenes from the principals"—high praise indeed.

Although interested in doing Somerset Maugham's *Sheppey,* Gwenn's long-term film contract with Metro-Goldwyn-Mayer prevents him from making any commitment on the play. In October 1943 he was loaned to Warner Brothers for the role of Scrubby in their production of *Outward Bound.* The high praise he won for his acting of the traveling tinker, "who enjoys life and the love of dogs," in Metro's *Lassie Come Home* inspired that company to draw up a new contract with Gwenn and to announce that his next picture with them would probably be a sequel to *Lassie Come Home.*

Gwenn is described as having a "squarish sort of face, its firmly modeled features and broad jutting nose accented by a pince-nez that somehow make him resemble a business tycoon who has gotten culture. The lower lip drops a little to the right side of his mouth. He has that uncompromising sort of English humor that betrays itself only in the eyes and at the corners of the mouth. He has a rigid attachment to the more modest virtues of living. He has a sturdy, broadbacked strength . . . the sort of robust health a man might build at an early age in Rugby matches and boxing bouts."

The story is told that the boy who played the role of Gwenn's son in *The Wookey* asked for extra padding in his trouser seat after Gwenn (strictly in the line of duty) had given him several parental taps during the play's tryout. Gwenn chuckled when he heard of it, saying, "I've always been blessed with a fine constitution!"

Like his home in the stage play *The Wookey* Gwenn's real home in London has been reduced to ruins by the Luftwaffe. It was one of the houses built by the celebrated brothers Adam in the eighteenth century, in Adelphi between the Strand and the Thames. "All that remains of my house, I'm told, is an Adam fireplace, in front of which I used to sit and talk with friends," Gwenn says. "Fortunately the caretakers—a man and his wife—weren't hurt." Gwenn feels keenly the loss of his memorabilia of the famous actor Irving which was lost in the bombing—a ducat the actor carried as Shylock, a handkerchief he used in *The Lyons Mail,* and the spectacles he wore as Robespierre.

Gwenn's marriage to the actress, Minnie Terry, of the famous Terry acting family, has been dissolved. Gwenn's brother, whose stage name is Arthur Chesney, is a well known actor, formerly the husband of Estelle Winwood, the actress. Gwenn tells interviewers that he sits back now and quietly calls his "a good life." His pleasures, he says, are unspectacular, and he still talks

GWENN, EDMUND—*Continued*

of sails and freighters, and voyages in little coastal boats. He has, he says, come close to contentment. "At sixty-eight a good wine ought to mellow, after all," he says upon reflection. "When I was twenty I thought that fifty was a frightening age. And yet I've been happier since I was fifty than I ever was at twenty. It's the small pleasures that count in the long run."

HAAS, FRANCIS J(OSEPH), BISHOP

(häs) Mar. 18, 1889- Clergyman; educator; labor mediator

Address: b. Catholic University of America, Washington, D. C.

Although Monsignor Francis J. Haas had been dean of the School of Social Science of the Catholic University of America, it was not so much his academic background as his extensive practical experience in the field of labor-management relations that qualified him for the chairmanship of the newly reconstituted Fair Employment Practices Committee, to which he was appointed in May 1943. Long used by John R. Steelman '41 of the United States Conciliation Service for handling his most ticklish labor disputes, the priest is a born conciliator who believes that it is "a triumph of democracy" every time mediation is successfully used. He believes that any Federal program for real industrial peace must include the principles of full production, fair distribution, price-income balance, personal liberty, representative conferences, and collective bargaining as well.

BISHOP FRANCIS J. HAAS

In the fall of 1943 Monsignor Haas was appointed bishop of Grand Rapids, Michigan, and on October 15, accepting his resignation from the FEPC post, President Roosevelt '42 wrote: "In all the posts of responsibility in which you have served your Government you have shown a humanity and a skill which both church and country greatly need in these difficult days."

Born in Racine, Wisconsin on March 18, 1889, Francis Joseph Haas is the son of Peter F. and Mary L. (O'Day) Haas. He attended St. Francis Seminary in Milwaukee from 1904 to 1913, and he was ordained a priest in the Roman Catholic Church. From 1915 to 1919 he served as a professor of English at the Seminary; from 1920 to 1921 he was a member of the Economic Seminar at Johns Hopkins; and in 1922, when he received a Ph. D. from the Catholic University of America, he became dean of the College Department of St. Francis Seminary, at the same time serving as professor of sociology there and at Marquette University and editing the *Salesianum*, a quarterly. He held these positions until 1931, when he became president of the National Catholic School of Social Service in Washington, D. C. There he remained until 1935.

For many years this socially-minded priest had also been active in public affairs. In 1925 he had served as impartial chairman of the Milwaukee Newspaper Industry; from 1925 to 1931 as general secretary of the Milwaukee County Association for the Promotion of Old Age Pensions; in 1929 as a member of the examining board of the Milwaukee County Civil Service Commission; from 1929 to 1931 as president of the Catholic Association for International Peace. In 1927 he became a member of the advisory council of the American Association for Social Security, of which he has been a director since 1933, and since 1929 he has been a member of the Committee on Cultural Relations with Latin America. In 1933, after some months abroad studying labor conditions in Germany and in France, he became a member of the National Labor Board (the predecessor of the National Labor Relations Board) and of the Labor Advisory Board of the National Recovery Administration. He served on this first board until 1934, and on the second for a year longer. In 1934 he was credited with ending the industrial war between truckmen and their employers in Minneapolis.

Rector of St. Francis Seminary from 1935 to 1937 and dean of the School of Social Science of the Catholic University of America since 1937, when he became a domestic prelate with the title of Right Reverend Monsignor, Bishop Haas is also said to have settled something like 1,500 labor disputes since 1935, when he became special commissioner of conciliation of the United States Department of Labor. From 1935 to 1939 he was a member of the Labor Policies Board of the Works Progress Administration; from 1935 to 1936 a member of the committee to report on Changes in Labor and Business Standards of the National Recovery Administration; from 1937 to 1939 a member of the Wisconsin Labor Relations Board. Since 1939 he has been chairman of the Boot and Shoe Committee and of the Leather Committee of the Wage and Hour Division of the same department, and in 1940 the result of his investigations was a 35¢-an-hour minimum wage to shoe workers. That same year, as chairman of the Puerto Rico Wage Committee of the Wage and Hour Division, he went to Puerto Rico to investigate the needlework industry, and a new wage scale was again the result.

On June 25, 1941 President Roosevelt issued an executive order declaring it official United States policy "to encourage full participation in the national defense program by all citizens of the United States, regardless of race, color, creed, or national origin," and set up the Fair Employment Practices Committee to enforce the order that all defense contracts between the Government and private firms embody an anti-discrimination pledge. There was, however, mounting Southern political pressure against the Committee, and in July 1942 the President announced that it had been merged with Paul McNutt's '40 War Manpower Commission. Up to that time the FEPC had been independent and responsible only to the President, but now its powers were curtailed. Although McNutt finally granted it what appeared to be virtually autonomous status, when the State Department objected to hearings on discrimination against Mexican laborers in Texas the scheduled hearings did not occur, and in January 1943, after protests from Southern railway magnates and "lily-white" unions, McNutt indefinitely "postponed" the FEPC's exposure of the management-labor coalition to drive Negroes from their present railway jobs and to bar them from future ones. This act paved the way for the FEPC's collapse.

For some time the FEPC remained inactive and headless. The President reportedly offered the post to a succession of well qualified men, all of whom turned it down. Then, on May 19, 1943, after a visit to the White House, Monsignor Haas revealed that he had accepted the chairmanship of the Committee. On May 28 Roosevelt issued an executive order setting up a new FEPC which could require subcontractors as well as prime contractors to include a clause in their contract with the Government forbidding discrimination, and which was removed from McNutt's jurisdiction and again made responsible to the President alone. Monsignor Haas was given the authority to appoint personnel and the "power to promulgate such rules and regulations as may be appropriate or necessary to carry out the provisions of this order." Sworn in as chairman of the Committee on May 31, Monsignor Haas announced that he was giving up his duties at the Catholic University in order to devote all of his time to the FEPC; but it was not until July 1 that the appointments of the six additional members who were to work under him were announced, and all hearings on racial discrimination had to be called off until that time. By then the need for the FEPC had been made more obvious than ever by the tragic race riots in Detroit and elsewhere. Monsignor Haas immediately set out for Detroit, where the Committee was also planning to investigate eight plants accused of discriminatory hiring practices.

After a three-day investigation of the Detroit situation Monsignor Haas, who has a sociologist's approach to such problems, held a press conference in Washington in which he announced that there was no sign of organized fifth column activity behind the race riots, although undoubtedly the Klan and similar organizations had tossed extra matches into the powder keg of native racial tension. The true causes of race riots, he said, were lack of adequate housing, transportation, and recreational facilities. At the same time he told reporters that the Committee had decided to establish twelve regional offices, and that it would have about one hundred employees and an annual budget of about $500,000.

By September 18 the FEPC had completed hearings involving twenty-three railroads and fourteen major railway labor unions which were accused of collusion in discrimination against Negroes. The unions neither sent representatives to the hearings nor presented any evidence, and three days later, speaking before a convention of the United Rubber Workers (which, like most C. I. O. unions, had taken a firm stand against such discrimination), Monsignor Haas warned the rest of labor to drop its racial bias. On October 2, when he revealed his appointment as bishop of Grand Rapids, he announced that the FEPC was losing no time in acting on the charges against the railroads and railway unions, and that same week he pleaded with delegates to the A. F. of L. convention to accord full union status to Negroes and other minority groups.

When Bishop Haas announced his resignation as chairman of the FEPC he declined to recommend a successor, but Malcolm Ross, who had been his assistant, was sworn in as new chairman on October 19, 1943. On November 18 Bishop Haas was installed in his Michigan diocese in a ceremony at which scores of prelates, 250 nuns, and 1,200 of the laity were present.

Bishop Haas is six feet tall, weighs 220 pounds, and has a fair complexion, brown hair, and blue eyes. He has written a great deal on social and labor problems: is the author of *Shop Collective Bargaining* (1922); *Man and Society: An Introduction to Sociology* (1930); *The American Labor Movement* (1937); *The Wages and Hours of American Labor* (1937); various pamphlets; and several NRA and WPA publications. He is also a frequent contributor to such publications as the *American Ecclesiastical Review*, the *American Federationist*, and the *Catholic Charities Review*. He is a member of the American Economic Association, the American Association for Labor Legislation, the National Conference of Social Work, the advisory council of the League of Nations Association, and the Catholic Conference on Industrial Problems (of which he was a founder); and he is a director of the Carnegie Church Peace Union.

His social aims are concisely expressed in the speech he delivered at the National Catholic Social Action Congress at Cleveland, Ohio in June 1939: "We the People: Our Rights and Duties." "American citizens," he announced, "have the right to full production

HAAS, FRANCIS J., BISHOP—*Continued*

of goods, to security of livelihood, to freedom, to industrial peace, and to industrial morality. . . the American people are not, in varying degrees, enjoying these rights at present. . . I do not affirm that private initiative and private enterprise are to be throttled, let alone abolished. Rather, they are to be harnessed to promote the common good." It is both our right and duty, he said, to "destroy the economic slavery that is the latest fetter in the chain that holds back man from his God-given destiny of freedom."

HABE, HANS (hä'be) Feb. 12, 1911- Author

Address: h. The Alden, 225 Central Park West, New York City; Thayer Hotel, West Point, N. Y.

For some months (beginning in February 1942) a young Hungarian-born soldier-author was lecturing in United States Army camps on how to lose a war. The young writer spoke from bitter personal experience: he is Hans Habe, born Jean Bekessy, whose spectacular book, *A Thousand Shall Fall* (1941), told the story of the defeat of France as he, fighting with the French Army, witnessed that tragedy. In January 1943 Habe reported to Camp Upton, but not as a civilian. For the second time during the Second World War he prepared to fight against the Nazis, and it was not many months before he was given his opportunity to do so. Loaned by the United States Army to General Montgomery's '42 staff, he was sent with the British forces to the Italian mainland as member of a combat propaganda unit.

Berenice Abbott

HANS HABE

Readers of Habe's autobiographical *A Thousand Shall Fall* will not soon forget those events and adventures which he experienced in 1940. And prior to that his life had been varied and exciting enough for any young man. He was born in Budapest, Hungary on February 12, 1911, the son of Imre—who fought on the German side in the First World War—and Bianca (Marton) Bekessy. He comes of an old Hungarian family. One of his ancestors was the first interpreter of Latin and German at the court of Joseph II. Since there had been both scholars and fighters among his forebears, Habe came naturally by his dual heritage and role. His family was apparently in comparatively comfortable circumstances, and during childhood he spent his summers on the Lido or at the Hungarian resort, the Balaton. He remembers, as a schoolboy, living through the period of inflation in Central Europe. He writes that he and other boys of fourteen were big speculators on the Stock Exchange. "In our class no one boasted of having made a goal in a football game but everyone told how he had ordered his broker to buy 500 shares of *Veitsche Magnesite* or to sell short 1,000 *Trifailer*." He recalls that the schoolboys were asked to bring coal instead of money for tuition.

Having been graduated from the Franz Joseph College in Vienna in 1928, Habe studied further at the University of Vienna and at Heidelberg University. His career as a journalist began when, at the age of eighteen, he became Vienna correspondent for a Hungarian newspaper. From 1929 to 1933 he was editor of *Wiener Sonn & Montagszeitung*, Vienna. At twenty-one he was the youngest chief editor in Europe—editor of the Vienna paper *Der Morgen*. His work as a foreign correspondent started when he began doing free-lance work in Geneva as League of Nations correspondent for the *Prager Tageblatt*, leading democratic newspaper of Czechoslovakia. He then traveled considerably throughout Europe, interviewing rulers and statesmen.

Violently anti-Nazi since the rise of Hitler '42 in 1932, Habe is credited with the discovery and publication of Hitler's original name, Schicklegrüber, and his unromantic family background. "My report was published in the middle of [Hitler's campaign for election against Hindenburg], and thousands of copies were sent to Germany, where it made the Nazis very angry. My editor and I were shot at in a Vienna cafe, but our assailants were acquitted." Habe had also branded himself as an enemy of greater German *Kultur* when he published Nazi-inspired plans for a German-Austrian customs union. Then, before the outbreak of the Second World War, Habe wrote two books which the Nazis considered worthy of burning: *Drei über die Grenze* (*Three over the Frontier*, translated by Eric Sutton in 1939) and *Sixteen Days*. The latter (translated by Basil Creighton in 1940) was an account of the "peace" of Munich—a refutation of the Munich philosophy—but was primarily a love story which Habe called "also a lament: we could no longer love. It was the first novel of the War."

When war broke out Habe immediately left his post in Geneva to enlist with the *Chasseurs Alpins*, a regiment of foreign volunteers in the French Army. With the rank of sergeant in this regiment, he participated in the action of the Battle of France up to June 22, 1940, when he was captured. All this Habe narrates in *A Thousand Shall Fall.* His regiment, stationed at Alsace, was ordered west in May 1940. At Ardennes they held the front against the Germans for three weeks, then joined the general retreat. The Army streamed south along the roads from the Meuse and the Argonne. The men in Habe's own regiment were soft from inaction, their gas masks and other equipment inadequate, their helmets misfitting, their weapons antediluvian; Habe himself used an 1891 Remington. On the retreat their motto became *sauve qui peut* (every man for himself). Everywhere looting went on, and desertion was taken for granted. The best officers, Habe writes, those who took the war "seriously" and stood up against the enemy, were sent home "on leave." The French Army was an army "defeated without a fight; it was not a war, but a hunt." In other words, it was a betrayal—the leaders in French military circles did not want to fight Germany. The civil conflict within France between liberals and reactionaries had divided France on the eve of war, and Hitler's conquest was made easy.

The latter part of his book concerns Habe's imprisonment in a camp near Dieuze (Occupied France), where he lived under a false name for several weeks, and his subsequent escape. Early in September 1940, dressed in a stolen German uniform and armed with a forged pass, he escaped in a French ambulance, swam the river Doubs between Occupied and Unoccupied France, was sheltered by various French people. Once free, his first stop was at Riom where he saw and interviewed those famed French prisoners awaiting trial—Gamelin '40, Reynaud '40, Daladier '40, Mandel '40, Blum '40. He then made his way across Spain to Portugal. Observing life in Spain, he wrote in one of his later articles: "Formerly the Spaniards used to laugh, love, and play in the streets. Today they starve in the streets—just as loudly and conspicuously. In certain regions one is struck by the complete absence of dogs and cats: they have been eaten by the hungry population." He noticed few people in the streets in some sections because of a law passed forbidding them to appear without shoes. "Spain has become a land of beggars and policemen."

Hans Habe's first wife, Erika Levy, whom he had married in 1934, went from their home in Switzerland where his parents were living to join her husband in Lisbon. Habe was given a special emergency visa by President Roosevelt '42. They sailed on the American export liner *Siboney* and arrived early in December 1940 in New York. On his arrival Habe, who is tall, thin, and blond, said he hoped to remain as a visitor for several months and to write a book about his experiences. He said, also, that he would do all he could to help anti-Nazi France. He made his particular concern relief for French soldiers in prison camps. During 1941 in New York he spoke at luncheons given by the Coordinating Council of French Relief Societies, describing how, through miserable food and constant propaganda, the Germans sought to break down the morale of the young Frenchmen held captive. Weak tea, a cup of thin soup, and a bit of bread was the daily menu; if a prisoner gave evidence of listening with favor to the high-pressure propaganda, he was given a little better fare.

During 1941 Habe also lectured before various groups and universities, and several times at West Point, near which he had taken rooms in order to go on with his writing. He said he was "gratified to find the cadets keenly interested in problems of post-War reconstruction, as well as in training for war." He wrote, too, a number of articles for American periodicals on France and conditions in general in Europe, and for a time appeared on the radio as a war analyst.

Early in 1942 Habe began a series of lectures, sponsored by the War Department's Bureau of Public Relations, to Army camps throughout the country. Speaking on "How to Lose a War," he told American soldiers the story of France "so that thousands more may not fall." Habe has said he has been accused of being anti-French because of what he wrote in *A Thousand Shall Fall.* He vehemently disclaims this, stating that he was only against the Vichy Government and all it stood for. He wrote as he did, and spoke as he did, because he felt it important for America to "understand the tragedy of France." (His book was bought by Metro-Goldwyn-Mayer and released in November 1943 as *The Cross of Lorraine.* In the picture version —which was highly praised by critics— MGM also incorporated parts of a story by Lilo Demert and Robert Aisner.)

Habe stated in an interview that, despite his own years, he thinks and feels with the older generation, the generation of the First World War. "In Europe," he said, "the young people are of two kinds: the Nazi kind, living just for the State and therefore unhuman, and the frivolous kind, interested only in self. I think the best way is to have the soul remain as usual, without pretending that one can live as usual." He added that he was not "crazy about youth here either," but in America "youth is learning the truth now and is changing. In Europe youth is hopeless. There is hope only in the little ones."

On April 22, 1942 after a divorce from his first wife he became the fourth husband of Mrs. Eleanor Close Sturges Gautier Rand. She was formerly the wife of Preston Sturges '41, Hollywood scenarist and producer, and is the daughter of Mrs. Marjorie Post Hutton Davies, General Foods heiress and wife of Joseph E. Davies '42, ex-Ambassador to Russia.

It was in January 1943 that Habe left his comfortable Manhattan apartment overlooking Central Park to enter the Army as a private. At the time his final citizenship papers were only a few days away. Of draft age, he had been deferred because of dependents, but had asked to be moved up to 1-A. By July, when he became the father of a son, he was in Africa, commissioned a 2nd lieutenant. It was then that he was loaned to General Montgomery's staff and sent with the British forces to Italy. In September, when his novel *Kathrine* was published, he was with the United States Army there.

Kathrine, which had been written in German while Habe toured the nation's Army camps and translated into English by Harry Hansen '42, is a "fictionalized account of the French civilian front in the curious years preceding the collapse," centering around the character of Kathrine, the Viennese mistress of a French automobile manufacturer, whose chief aim is respectability for her illegitimate daughter. According to Maxwell Geismar, Habe's novel "does not quite come off. . . His attempt to convey the collapse of the French Republic through the Lacoste family is oversimplified—just as Lacoste's sons are not altogether valid members of that 'younger generation' whose failure Habe laments." L. S. Munn, however, called the book "a brilliant conception of warring conflicts between personalities and generations."

HALL, FLORENCE (LOUISE) Aug.(?), 1888- National director of the Women's Land Army

Address: b. Women's Land Army, Extension Service, United States Department of Agriculture, Washington, D. C.; h. 3060 16th St, N. W., Washington, D. C.

The director of the Women's Land Army is dimpled, smiling, and ageless Florence Hall, senior home economist in the Department of Agriculture's Extension Service. Interviewers, foiled by her urbane refusals to reveal the auspicious year of her birth (as well as other personal biographical details), have retaliated by underscoring her urban characteristics—her "stylish earrings," her apparel distinguished by "color and sophisticated line," her smart Washington apartment furnished in early American antiques, her lack of a spot of earth for a Victory garden of her own, and the absence of personal farm experience in her life. Neverthless, she protests that farm women nowadays are as sveltely turned out as city women, and to some she typifies a "rare combination of homespun and chic," the "very symbol of that unity of farm and city which she believes must and will underwrite the Women's Land Army of the United States Crop Corps."

Florence Louise Hall was born in 1888 and grew up in Port Austin, Michigan—not on, but near, a farm owned by her family on which her father, James A. Hall, lawyer and banker, raised blooded stock. She never churned or patted butter or drove a tractor (there were none in those days), but she can milk a cow and ride a horse, and in her childhood she took on such odd jobs as selling milk and working in a canning factory. After receiving her B. S. in home economics from Michigan State Agricultural College in 1909 (she also merited a state teacher's certificate), Miss Hall took special work in nutrition at Teachers College, Columbia University, and was granted an honorary M. A. in home economics by her Michigan Alma Mater in 1932. Before entering public service (she has been a government girl since the last War) she taught mathematics in a high school at Lansing, Michigan.

In 1917 she became a home demonstration agricultural agent for Allegheny County, Pennsylvania, "to teach women the familiar lessons of the First World War, 'meatless and wheatless' recipes, canning, and clothes conservation." Fortified by four years' experience in Pennsylvania, she came to Washington in 1922 to work as assistant to Florence Ward in the Bureau of Dairy Industry of the Department of Agriculture. In this position she continued to make personal contacts with numerous farm families and she worked particularly closely with farm women in her travels through thirty-two states to organize a national "milk for health" campaign. Since 1928 she has been Extension field agent in the twelve Northeastern states—from Maine to West Virginia. She has worked with farm organizations, women's clubs, consumer groups, and Extension groups in her task of coordinating home demonstration work and, of late, supervising the extension wartime programs such as nutrition, home food supply, and conservation in the home. Her position has kept her in close touch with labor activities such as the Connecticut Women's Land Army, the American Women's Voluntary Service activities in Maryland and the District of Columbia, and the Women's Farm Service Corps of Maine.

According to the Department of Agriculture Extension Service, "she has always been greatly absorbed in her work, which has taken her into hundreds of rural homes, talking to groups of home demonstration clubs, always vitally interested in their problems of home furnishing, feeding the family, and planning their wardrobes. She likes to try out the practices recommended in her own home and on her own clothes. It is safe to say that thousands of these farm women feel that they know her personally, and the local home demonstration agents feel that her enthusiasm and practical way of looking at any problem gives them a new lease on their jobs. She is always a popular speaker at farm and home weeks and other big gatherings of farm people, because of her radiant friendliness and her logical, practical way of looking at things."

Since her appointment by the War Food Administration of the Department of Agriculture as head of the Women's Land Army on April 12, 1943 (before that body officially existed—the bill was passed on April 29), Florence Hall has been kept busy answering the innumerable questions about the WLA by prospective applicants. The WLA as planned will eventually consist of 60,000 women, 10,000 year-round "hands," and 50,000 seasonal workers who will bend their backs for a month or longer in the planting, cultivating, and harvesting of "flash" crops which would otherwise rot in the fields for lack of labor. It is one division of the United States Crop Corps, a "mobile, migratory land army," recruitments for which, it is hoped, will reach 3,500,000 workers—including high-school students, imported foreign labor, regular skilled farm workers, and city men and women for part-time work. (Women who work for less than a month are not eligible for the WLA.)

Miss Hall's work is largely that of coordinator. The administration is decentralized, responsibility being divided between the Extension Service of the Department of Agriculture and the state agricultural colleges. Both farmers and "hands" apply locally on a voluntary basis to the county agents of the State Extension Service (in the cities, to the United States Employment Service). Once hired, wages are paid by the farmer on the current local level according to the qualifications of the worker, the sleek city sophisticates becoming for the most part "unskilled" farm labor. The pay varies with the locality, averaging about $40 a month plus room and board, but running as high as $6 a day for seasonal workers. In general "farmerettes" are placed as near the recruitment areas as possible, and every attempt is made to weed out glamour girls, escapists, and lovers of the great outdoors who are seeking a pleasant vacation on a farm. Applicants must be over eighteen (no upper age limit) and must present a doctor's certificate of fitness for hard physical labor.

As long as she has the desired qualities of "dexterity, speed, accuracy, patience, interest, curiosity, rivalry, and patriotism" quoted by Miss Hall, no applicant need be deterred by lack of skill or experience, for year-round workers are given courses of from two to six weeks at a college or university to learn farm tasks and to harden up their muscles, while the "seasonals" are trained on the job. The regular "hand" lives for the most part on the farm, often only one member of the WLA to a farm, since her work requires her to be up and doing at dawn or shortly thereafter. The temporary workers usually live in labor camps such as YWCA, CCC, or private camps, converted schoolhouses, and the like, and work in crews as they are needed on nearby farms at such jobs as the harvesting of perishable fruits and vegetables requiring quick handling to prevent spoilage.

Florence Hall says, "One of our biggest problems is to persuade the farmers to take on the girls—they still look askance at the female invasion of field, orchard, and stable—but the girls are winning them over by their efficiency and enthusiasm." Many farmers have already admitted that they are well pleased and are asking for more girls to help. Reports have come in to Miss Hall of the usefulness of the WLA at such varied jobs as picking beans in Maryland, strawberries in Connecticut, and fruit in Maine, pitching hay in South Dakota, detasseling hybrid seed corn in Illinois, working in onion fields in Michigan, picking peaches and hoeing vegetable gardens in Ohio. WLA members may also do dairy and poultry work—milking cows, feeding livestock, keeping production records on cows and hens, cleaning and washing dairy utensils, and gathering, candling, and packing eggs. Not all work is done in the fields, for women and girls can release the experienced farm woman for field work by taking off her hands such home duties as care of children, cooking meals, canning, drying and preserving, washing and ironing, sewing, and washing dishes.

Ackerman

FLORENCE HALL

In addition to applications from numerous college girls (composing the greater part of the WLA on the East coast), applications have been received from artists, writers, department store saleswomen, office workers, and teachers. Patriotism plus a desire to learn about farm life appear to be the chief motives—few hope to profit financially by volunteering. "One woman gave up her job at a jewelry counter because she wanted to be in the fight. 'I'm sick of being tired at the end of the day and yet knowing I've accomplished nothing,' she said. 'This way I'll be tired and won't earn much, but at least I'll be doing something for the War.' From the farm she expects to go into a factory." City girls in New York State found out what went into the dish of strawberries they had eaten so casually all their lives when they started to pick them. "But the women went through initiation with Spartan coolness. Hair that started in trim curls soon turned into Medusa's locks. Shapely red nails dried and split. Peaches-and-cream complexions took

HALL, FLORENCE—*Continued*

on a leather texture. Life had much in common with that in the Army. They lived and ate as a unit. The sun knocked them out, and they slept untroubled."

To the other inducements of outdoor life the Department of Agriculture adds a certificate of service to all members of the United States Crop Corps at the time they are placed for work on a farm or in a food processing plant, and for the WLA a "sloppy but swagger" uniform (not obligatory) designed to be "sensible, comfortable, and safe" by Clarice L. Scott of the Bureau of Home Economics. (Miss Hall says that she will not wear it.) At a cost of $6.20 the WLA member may purchase a pair of navy blue denim overalls with straps at the ankles, a light blue long-sleeved shirt with convertible collar, and a cap in the same two shades of blue with the letters WLA in red on a white ground. Optional are the "extras" of loose navy blue hip-length jacket with large pockets, butcher-boy in effect, and dark blue cotton socks. Still a major problem is the selection of a comfortable sturdy shoe; several girls working in New York State are trying out various types.

In August 1943 Miss Hall made a ten-day field inspection trip to New England farms, camps, and training centers. There she saw for herself how women were taking to the farms and how farms were taking to women, and she was deeply impressed. By this time more than 60,000 seasonal and more than 5,000 year-round workers had responded to her appeals. Congress, however, had been so late with appropriating money for her that the first 146 uniforms for her workers had just been shipped out!

Aside from her job, which takes up much of her time, Florence Hall, who is described as having hair that is wavy and blonde and bright blue eyes, and as habitually wearing "more lipstick than rouge," is chiefly interested in her home, an apartment in one of the "older, roomier, and homier apartment houses on 16th and Irving Streets, N. W.," where she lived with her mother before Mrs. Hall's death several years ago. Another absorbing interest are her sister's children, two nieces and a nephew, who live in Washington and visit her frequently. Miss Hall is said to have a large circle of friends among the professional women of Washington, and she entertains them frequently in her living room, furnished with early American antiques of cherry, walnut, and mahogany, some of which she brought from her old Michigan home. She also has an interesting collection of old copper and copper luster, and she was quite touched recently when a Kentucky woman, seventy-four years old, who had read about the collection wrote and offered her an old copper cake stand. Miss Hall, whose living room has been featured as a cover photograph on one of the New York homemaker bulletins, has brought her fondness for pleasant surroundings right into the office, where her files are covered with gay wallpaper.

HARRISON, EARL G(RANT) Apr. 27, 1899- United States Government official

Address: b. 1904 Franklin Trust Bldg, Philadelphia, Pa; h. Rose Valley Rd, Moylan, Rose Valley, Pa.

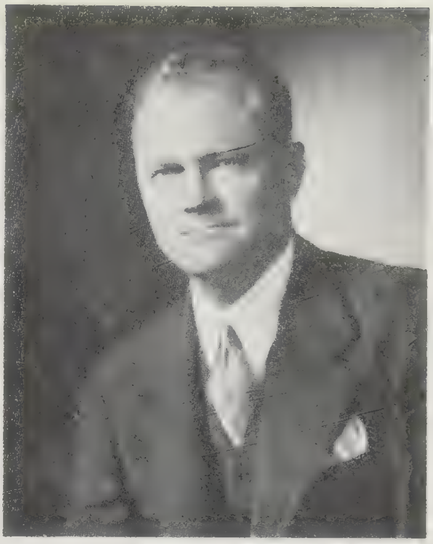
When an able, energetic young Philadelphia lawyer named Earl G. Harrison became director of alien registration in 1940, Pennsylvanians at least knew that the management of this big and difficult job was in good hands. So capably was the program carried out that a year later Attorney General Francis Biddle '41 placed Harrison in further charge of the issuance of certificates of identification for approximately one million enemy aliens. When the United States entered the Second World War, Harrison was the logical choice of the Attorney General and President Roosevelt '42 to fill the vacant post of commissioner of immigration and naturalization. And, in April 1943, the annual award of the American Committee for Protection of the Foreign Born went to Commissioner Harrison for his "outstanding contribution to the mobilization of the foreign born for the victory program."

The fact that both his parents were immigrants may account in part for Earl Grant Harrison's sympathetic interest in and devotion to the problems of the foreign born. His father, Joseph L. Harrison, was born in England and came to America when he was three; his mother, Anna (MacMullen) Harrison, came from Ireland at the age of five. She became interested in the stage and played parts in leading stock companies; her son, when he was a child, had a part in *East Lynne* with her. Harrison's father was a grocer, and they lived in a section of Philadelphia that is largely industrial. Born there on April 27, 1899, Earl Grant Harrison went to the public schools and was graduated from the Frankfort High School where later, to help work his way through college, he taught a class for the foreign born.

He was always a popular leader in school affairs. In the eighth grade he became president of his class after campaigning for a friend for whom all the boys promised to vote. But the girls, who outnumbered the boys by one, got together in a block and elected Harrison. In high school he was on all the athletic teams except the cricket team, and he was president of his class in his freshman, sophomore, and senior years. He entered the University of Pennsylvania, where he continued to lead in student activities. He was a member of the varsity soccer team, captain of the university debating team, a member of the Mask and Wig Club, and managing editor of the college paper, the *Daily Pennsylvanian*. He was elected to Phi Beta Kappa, and was the valedictorian of his class on his graduation in 1920. During his college years he had also served as a 2nd lieutenant in the Infantry from July to December 1918.

After receiving his B. A. degree Harrison had the problem of deciding whether to be a newspaperman, accept the offer of an assistantship to the dean of the University, or take up law. He made his decision when he was awarded a faculty scholarship at the University of Pennsylvania Law School, where he took his LL. B. in 1923. In that year he also was married to Carol R. Sensenig, whom he had met when she was a scholarship student at the University of Pennsylvania: they were in a campus play together in which both had leading parts, she as the heroine and he as the hero. The Harrisons have three children: Paul, Joseph Barton, and Earl G., Jr. A daughter, Carol Hope, is deceased.

Harrison's first position out of law school was with the prominent Philadelphia law firm of Saul, Ewing, Remick, and Saul. He has continued with that firm ever since; and in 1932 he was made a partner. He also worked as legal secretary for Justice William Schaffer of the Pennsylvania Supreme Court, holding this position for thirteen years. He had another position, too, doing legal work for a judge of the Common Pleas Court. Harrison soon became known as a brilliant trial lawyer. He gained more than local prominence when he was named to serve as "friend of the Court" in connection with a special grand jury investigation into vice and crime conditions in Philadelphia. He has also served as an instructor at the University of Pennsylvania Law School from 1932 to 1933 and from 1936 to 1937. An "Independent Republican," he made his one essay into politics during the municipal election of 1939 when he was campaign chairman of a Fusion movement to oppose the re-election of the Republican incumbents. The Fusionists lost.



Bachrach

EARL G. HARRISON

During his years of active law practice Harrison became increasingly prominent in social and philanthropic organizations interested in the welfare of the foreign-born. In 1940 the Alien Registration Act was passed, empowering the Department of Justice to conduct the registration and fingerprinting of the entire alien population of the country. Harrison was appointed director of alien registration by Attorney General Jackson '40. It was a big and difficult job which faced him. Few liberals supported the Act, believing it would antagonize a large section of the population. Harrison also had to start from scratch to build up an organization that could handle the registration and complete it in four months. Some five million aliens were fingerprinted and registered on schedule; and the efficient and tactful job he did as director of the program led Attorney General Biddle to say that he regards Harrison as "one of the ablest administrators in government service." Instead of antagonizing the alien population, the registration actually succeeded in bringing about a better understanding between citizen and non-citizen. Further, it "gave the nation a foundation of information on which educators and legislators can intelligently build a strong and satisfactory relationship with our non-citizen groups."

This work completed, Harrison returned in 1941 to his law practice, while continuing to serve as advisor to Attorney General Biddle

HARRISON, EARL—*Continued*

on alien matters. A year later he was called back to active government service again—this time to supervise the program for issuance of certificates of identification for some 1,000,000 German, Italian, and Japanese enemy aliens. This large administrative job Harrison carried out as smoothly as he had the alien registration program. Again he returned to his law firm. But not long afterward Biddle asked him if he would accept the appointment of United States commissioner of immigration and naturalization service, a post that had been vacant since 1940 when the Service was moved from the Labor to the Justice Department. Harrison turned the offer down: working full time for the Government meant a considerable financial sacrifice, and he had a large family to support. But the morning after Pearl Harbor the Attorney General called him from Washington and said: "I'm no longer asking if you would like to fill the post of commissioner. I say to you that it is your duty to fill it."

President Roosevelt nominated Harrison to the post in March 1942. There was just one hitch to the proceedings: Pennsylvania's Senator Guffey who, for reasons known only to himself, opposed Senate confirmation on the grounds that Harrison was "personally obnoxious" to him. He claimed that Harrison was "a silk-stocking Republican and a rich Main Liner," of the multimillionaire Harrison sugar clan. Guffey was adamant even after it was shown that he had confused his Harrisons: Earl G. was the son of a grocer and by no means a "rich Main Liner." The President finally wrote Guffey a letter: "As one old friend to another, I want to ask you to forego your fight on the Harrison appointment. Will you do this for me?" Guffey withdrew his opposition; and Harrison was sworn in as commissioner of the immigration and naturalization service on July 20, 1942.

The job is said to have been the biggest one ever to face an immigration commissioner. New duties and responsibilities brought about by the War resulted in an enormous body of work. The number of initial applications for citizenship during 1942 totaled 350,000, the greatest on record. At the same time the service was obliged to expand its detention facilities to care for thousands of enemy aliens placed in its custody; to enlarge the personnel of the border patrol to guard more adequately against the illegal entry of aliens and enemy agents; and to make a seven-fold increase in its certification facilities in order to supply the many thousand requests for proof of citizenship received from persons seeking employment in war industries. The Service is currently charged also with the detention of all enemy aliens ordered interned for the duration, which was formerly an Army charge.

Most important, the basic conception of our immigrant policy, according to Harrison, has been changed. The concept of the "melting-pot" has been scrapped because of "our gradual realization of its fallacies. A melting pot is decidedly nihilist . . . you boil the very soul out of it." Instead of requiring immigrants to change, it is the policy of the service to help them retain the value and importance of their own culture, along with their beliefs in freedom and democracy, thus building in America "a combination of layers making up a firm foundation on which to build our future."

In less than a year Harrison "has made outstanding contributions to the efficiency and organization of the service and won the respect of its more than 8,000 employees. He has already visited each of the twenty-two district offices in the country and many of the sub-offices, an unusual thing for any commissioner to do." To streamline the work he has put into effect reorganization plans in the central office (moved to Philadelphia in March 1942), and he is applying those plans to the district offices. Another accomplishment has been to speed up the naturalization procedure and at the same time to provide for more intensive investigation of the loyalty of those who seek United States citizenship. In the year ending June 30, 1943 alien travel to and from the United States was the lowest in eighty years.

Discussing the problems of the alien in wartime, Commissioner Harrison has pointed out that in the present War there is much less alien baiting and a much more integrated outlook than during the First World War. Present problems affect two groups of aliens: those who have been in the United States for a great many years and cannot be naturalized because they are unable to meet such requirements as educational tests; and those who have come here in recent years, such as refugees. Among the latter there is much wasted manpower because of restrictions in granting citizenship status. Much needs to be done to make needed adjustments; and, besides the Service and its work, "I recognize the place of and need for private social, civic, and community agencies."

Harrison said further: "Our ability to meet and solve these problems now, within our own borders, offers in a very real sense a measure of our ability to lead in the solution of problems that will arise beyond our borders. . . Certainly if we prove unable to exercise the humanity, the understanding, and the good sense necessary to bring our ideals into reality within this field, we shall have cast a serious doubt on our fitness for the role of collaborator in finding a way to lasting peace for the world at large."

On April 17, 1943 the American Committee for Protection of the Foreign Born, at a "United Nations in America" dinner, awarded Harrison their annual medal for—in the words of Representative Marcantonio—"his recognition and application of the policy and statesmanship of Jefferson and Lincoln and for his efforts toward a realistic contribution to a people's victory in a people's war."

Commissioner Harrison, "lean, square-jawed, bristle-haired," and blond, has blue eyes and "a smile that makes you realize that he can't be as stern as he seems to be when he is not smiling. He can be tough all right, but mostly he is sympathetic, understanding, and entirely approachable. Stenographers and executives alike feel free to explain their problems to him and get an intelligent and sympathetic reaction." The Harrisons live a few miles out of Philadelphia, where their twenty-one acres include a tennis court which Harrison uses whenever possible. He likes the game and plays unusually well. Up until recently he had no difficulty winning from his seventeen year-old son Paul, whom he taught. But now Paul gives him a real run for his money and occasionally beats him. Not long ago Paul, playing on the University of Pennsylvania team, won the only game by his team in a match against the Navy. Speaking of his father's brilliance as a lawyer, Paul recently said that the only place where his father loses his arguments is at the dinner table, "not because he isn't right, but because we manage to outshout him."

HARRISON, SHELBY M(ILLARD) Feb. 15, 1881- General director of the Russell Sage Foundation

Address: b. 130 E. 22nd St, New York City; h. 370 Riverside Drive, New York City

Shelby Millard Harrison is a living refutation of the notion that social workers are impractical. Having entered the field of social work more or less by accident, he has since 1931 held the position of general director of the Russell Sage Foundation, the "largest research center in social work, operating on a $15,000,000 endowment."

Born on February 15, 1881 in Leaf River, Illinois, Shelby Millard Harrison is the son of James Franklin and Mary Ellen (Helman) Harrison. His father was a schoolteacher much of his life. Interrupting his high-school education, Shelby worked in a small town bank for three years, doing everything from janitor work to cashiering and making small loans. He also worked his way through Northwestern University "tending professors' furnaces" and for a while assisting the comptroller of Evanston, Illinois. From his experience acquired in bank work, Harrison also began to teach bookkeeping and penmanship.

He majored in English language and literature at Northwestern. Though never much of an athlete, he did play on his class baseball teams. At home, moreover, he was known as the owner of one of the very first bicycles in his small Illinois village. Having received his B. A. in 1906, he did postgraduate work in economics and sociology at Boston and Harvard Universities from 1906 to 1909 and spent his summers in bank work, social work, and working as a counselor at boys' camps. Once he worked as a bookkeeper in a bakery.

In 1908, while he was still a postgraduate student at Harvard University, Harrison was invited to join the staff of the Pittsburgh Survey, "the most intensive inquiry ever made into the living conditions of an industrial town." The survey was financed by the then newly formed Russell Sage Foundation, established by the widow of the financial magnate. It was Harrison's job to study city taxes. He appeared with the well-documented revelation that the Pittsburgh tax structure was a highly illogical system that taxed the richest real estate only lightly, laying the heaviest levies on the slum districts.

From 1910 to 1912 Harrison was a member of the editorial staff of *Survey* Magazine and was in charge of the Department of Civics and Community Developments. When the Russell Sage Foundation's Department of Surveys and Exhibits was created, he was called in 1912 as its director. He still holds that position in addition to his general responsibilities in the foundation. This department conducted surveys from 1914 to 1915 in different cities in the United States, the most representative being one made in Springfield, Illinois. As one of the first comprehensive surveys made in America, it comprised nine main divisions: public schools, public health, charities, housing, mental hygiene, delinquency and corrections, recreation, labor and industrial conditions, and city administration. It clearly demonstrated the possibilities of survey technique in fact-finding and in making facts dynamic.

As director (1922-30) of the Division of Social Studies made as a part of the Regional Plan of New York and Its Environs, Harrison was in charge of one department of this endeavor which "combined the work of architect, engineer, and city planner with the social and economic elements characteristic of the community survey." These studies included surveys of playgrounds, parks, and recreation units; they pertained to planning of neighborhood units, provision for maximum sunlight in housing construction, and other problems of general housing.

During the summer of 1921 Harrison taught sociology at Columbia University and in 1923 he was appointed lecturer at Teachers College, Columbia University, New York, a position which he held until 1931. From 1922 to 1932 he taught a course in social surveys at the New York School of Social Work. In 1924 Harrison became vice-general director of the Russell Sage Foundation and on May 25, 1931 he was named its general director.

In 1929 he became a member of the President's Research Committee on Social Trends, "a committee appointed by the President of the United States to study tendencies during recent years which have had a bearing upon human welfare in the United States." Northwestern University in 1932 conferred upon Harrison the honorary degree of Doctor of Laws, and Boston University ten years later awarded him the degree of Doctor of Letters.

As president of the National Conference of Social Work, 1941 to 1942, Harrison gave the keynote address at the opening of the Conference's sixty-ninth annual meeting at New Orleans in May 1942. Looking beyond the immediate war services and the day-by-day activ-

Blank & Stoller

SHELBY M. HARRISON

ities of this program, he pictured social work's part in "the world the democracies are striving to bring into being." He explained that social work was responding to the world crisis along three main fronts: the immediate war program, the maintenance of its normal duties, and post-War reconstruction.

Among the activities directly related to the requirements of the war effort, Harrison listed services to the men of the armed forces, their families, and to those that were rejected because of physical handicaps, "both to recover as many of them as possible for active and efficient service in these critical days, and to safeguard others from similar remediable defects." Special services are needed for the maimed and injured upon their return from the battlefields, and for the dependents of those who will not return. In addition to those duties, plans for the possible evacuation of civilians from combat areas of war-disorganized communities will need special attention.

Harrison called social work "the modern implementation of faith in humanity, the modern agency for transmitting this faith into works," and a discipline that seeks to serve all those in need. He stressed the idea and necessity of peace. "Our first job is to win the War. But, however desperately we need to win this War, we need even more desperately to win the peace—a phrase by which people mean assuring a sound, just, and durable peace, with all its implications for social and economic conditions worth fighting for."

To assure a stable peace and to strengthen the war effort, Harrison asserted, it is necessary to start work now on "sound, just, and enduring solutions in the interest of every race, color, and creed. . . With a resolute determination to help reduce the likelihood of war, America must not again shun a place of leadership and responsibility in organized world efforts to promote economic justice on a world scale."

Writing in the *Journal of the National Education Association* in May 1943, Harrison listed among "wartime social gains" increased manufacturing capacity; industrial decentralization; the development of mass construction methods for wartime housing; a growing toleration and respect for other races; job opportunities for the handicapped; adult education; and, above all, the recognition that the "whole world has become a neighborhood."

Harrison is the author of books on sociological subjects such as *Social Conditions in an American City* (1920) and *The Disproportions of Taxation in Pittsburgh*; and co-author of *Public Employment Offices: Their Purpose, Structure and Methods* (1924); *Welfare Problems in New York City* (1926); and *Bibliography of Social Surveys* (1930), written with Allen Eaton. He also is a frequent contributor to social science journals. A member of the Phi Beta Kappa honor society, the American Economic Association, the American Sociological Society, the American Association of Social Workers, and the American Statistical Association, Harrison also is a fellow of the American Association for the Advancement of Science and chairman of the executive committee of the Social Science Research Council. He belongs to the National Arts and Harvard Clubs of New York City, and the Gipsy Trail Club at Carmel, New York.

Harrison's hobbies are lantern slide making, wood working, skating, and map making. He is five feet nine inches tall and weighs 155 pounds. Of fair coloring, he has hazel eyes and black hair which, he writes, is "getting thin." In 1910 he married Patti Rodgers of Charleroi, Pennsylvania, like himself a graduate of Northwestern University. They have two sons, James Shelby, a physician and an alumnus of Brown University and McGill University's Medical School; and Rodger Scott, a graduate of Dartmouth College and of the Graduate School of Journalism, Columbia University, who in 1943 is a captain in the United States Army.

HAYS, WILL H(ARRISON) Nov. 5, 1879- Motion-picture executive; attorney

Address: b. 28 W. 44th St, New York City; h. Sullivan, Ind.

"When you make a woman cross her legs in the films, maybe you don't need to see how high she can cross them and stay within the law, but how low she can cross them and still be 'interesting.'" Thus spoke Will H. Hays to a motion-picture director in the early days when Hays had still to be named "czar of the movies." Despised by some moralists for being too liberal and despised by some liberals for being too moral, Hays, president of the Motion Picture Producers and Distributors of America, and virtual screen censor for the entire industry, holds possibly the most powerful and certainly the most criticized position in the film business. He is, remarked the late George Eastman, head of the Eastman Kodak Company, "the cat's whiskers of the motion-picture industry," in that "the industry relies on Hays to guide it through tight places and around dangerous corners the way a cat relies on its whiskers for approximately the same purposes." "The United States cinema industry," according to *Fortune* Magazine, "represents an investment of about $2,000,000,000, and does an estimated annual gross business at the box office of $1,000,000,000. It is an exceedingly fat cat, in other words, and by that token it requires luxuriant and highly sensitive whiskers."

Like his father, Hays is "an elder in the Presbyterian Church, a teetotaler, a non-smoker, and a small-town boy who [has] kept the common touch." Will Harrison Hays was born in Sullivan, Indiana, on November 5, 1879, the son of John T. and Mary (Cain) Hays. The elder Hays, a lawyer, came to Indiana from Ohio, and established one of the finest law firms in the state, of which his son is now senior member. Mrs. Hays was a descendant of Robert Peak Cain of the House of Hanover. Will attended Wabash College, Indiana, was graduated in 1900, and was admitted to the Bar in the same year. Four years later he received his Master's Degree from the same institution. As a member of the law firm of Hays and Hays, he practiced law successfully from 1900 until 1910. On November 18, 1902 he was married to Helen Louise Thomas. (They have one son, Will H., Jr., now a captain in the Army.) Hays entered politics early, for he was elected representative precinct committeeman before he was twenty-one. From 1904 until 1908 he served as chairman of the Republican Committee of Sullivan County and as a member of the Republican State Advisory Committee. From 1906 until 1908 he was also chairman of the speakers' bureau of the Republican State Committee.

WILL H. HAYS

In the year 1910 Hays became both district chairman of the Republican State Committee, 2nd District, Indiana, and city attorney for Sullivan County. He held the former position until 1914 and the latter until 1913. From 1914 until 1918 he was chairman of the Republican State Central Committee in Indiana. When the United States entered the World War in 1917 he became chairman of the Indiana State Council of Defense, and he remained in that post until the following year. By this time Hays was one of the foremost political figures in Indiana, but in February 1918 he was elevated to nationwide importance: he became chairman of the Republican National Committee. At the Republican Convention of 1920 he was "a sort of dark-horse Presidential possibility, [although] another dark horse [ran] ahead of him." Harding, the other "dark horse," was put into the White House, the first Republican President of the United States for eight years. It was said that Hays had spent over $1,200,000 above the Republican National Committee's receipts to win the Presidency for Harding.

On March 5, 1921 Hays received the customary reward for his services: Harding appointed him Postmaster General of the United

HAYS, WILL—*Continued*

States. Three months later Hays resigned his position as chairman of the Republican Party. A year, almost to the day, after he had accepted the Postmaster Generalship, Hays resigned to become head of the Motion Picture Producers and Distributors of America.

The reasons for the creation of such a position harked back to the early '20's, and sprang "from the peculiarly unedifying nature of the Hollywood film colony and its product at that time. A wide-open flush town where million-dollar profits could be rolled up in a few months on cash investments of a few thousand, but where bankers' money cost producers as much as fifteen per cent, Hollywood had a naturally raffish appearance that had been exploited to the utmost by the press. Hollywood life was one never-ending drunken orgy, according to the papers, and in the public mind the city had become the greatest fleshpot since Babylon." Furthermore, the films that Hollywood turned out, according to Leo C. Rosten,'42 "left little to the imagination and less to their credit." The series of scandals after the War culminating in the notorious Fatty Arbuckle case "detonated an explosion of public opinion, an organized remonstrance championed by women's clubs, church organizations, patriotic societies, youth movements, and assorted uplift and reform bodies of every kind." Since these groups ran to tens of millions and their influence extended to perhaps half the population of the United States, the motion-picture industry was, naturally enough, worried. In addition, "the attack on Hollywood's morals was," maintained Rosten, "deliberately abetted by European propaganda. . . Hollywood was the target of allegations initiated in European countries by European manufacturers, film producers, and government agencies. The motion-picture interests of Europe were eager to rebuild their own industry after the First World War, during which their production all but shut down, and they had to break the near-monopoly of American films in their own and the world market."

In order to combat all this pressure of public opinion at home and abroad, it occurred to the motion-picture industry that it needed an independent public relations counsel, "someone outside the industry who had the public's confidence, who could sell the legend of a cleaner Hollywood, who could head off the censorship legislation, who could stop the agitation against movies."

There were three choices for the "Man to Remake the Movies," after the field had narrowed down—Herbert Hoover '43, Hiram Johnson '41, and Will H. Hays. Hays was an "extraordinary publicity man, a man who had friends everywhere, especially among politicians who might be helpful in fighting censorship." He belonged to "practically every known oddfellow's and businessman's organization on Main Street" and stood high in the Presbyterian hierarchy. By treating newsreel men with unaccustomed respect during the campaign, Hays had ingratiated himself with the film industry, and, moreover, he was acquainted with several top-flight Hollywood executives. In December 1921 a committee called on Hays in Washington, offering him the job at a $100,000 annual salary. Hays requested time to think it over and finally accepted the post in March 1922, resigning his postmastership in order to undertake his new duties. Nothing was said about censorship in the official invitation extended to him by the great men of Hollywood. They merely stated that they "realized the necessity for attaining and maintaining the highest possible standard of motion-picture film production in this country and were striving to have the industry accorded the consideration and dignity to which it is justly entitled, and proper representation before the people of this country, so that its position, at all times, may be presented in an unbiased and unprejudiced manner." "To this day," wrote Gilbert Seldes, "the official position of the Hays Office is that it exercises no censorship." (The MPPDA was also organized as a board of arbitration, to which trade disputes were to be submitted.)

Hays established his office, consisting of a five-man staff and himself, in New York City. There it remains, far from the "Hollywood atmosphere," but close to the headquarters of the producing companies. At first the articles of incorporation of the Motion Picture Producers and Distributors of America (which at that time represented over eighty per cent of all motion-picture producers and still does) gave Hays no official power, "and in the beginning, his only weapons were his persuasiveness and the terror that gripped the industry and made its separate units, ordinarily hostile, amenable to cooperative action." In order to meet the threat of reformer-inspired censorship, Hays called together a meeting of representatives of, according to varying reports, from sixty-two to seventy-three of the most powerful of the national reform-minded agencies, ranging from the Boy Scouts of America to the National Council of Catholic Women. Hays pleaded with these delegates to "help the movie industry to purify itself," and urged them to abandon support of censorship bills until the film industry "had a chance to prove its good intentions." Impressed by Hays' seductive oratory, the delegates agreed, and formed a Public Relations Committee to act as intermediary between the reform organizations and the industry.

The committee system's functioning soon proved to be cumbersome, and a representative chosen by the Committee was installed in Hays' office, with a salary paid by the MPPDA. In 1926 this representative was transferred to Hollywood to continue his work there. The whole system, however, lost much of its value in 1924 when, following Hays' refusal to black-list "a well known actor of questioned moral status," a number of the organizations withdrew their members on the Committee. Some said that they withdrew merely because they "did not want to be engaged in such inconsequential work." Others, on the other hand, said that they withdrew because the Committee was a "smoke screen, an obvious camouflage, an approval stamp for the salacious films and for the questionable, if not criminal, conduct of the industry and its employees."

Out on the West Coast Hays' efforts were chiefly directed toward securing better publicity for Hollywood from "the great press to which we look as an elder brother." ("America," wrote Paul Rotha, "fights half her film battles with publicity campaigns.") Publicity men were advised "to cut out references to champagne baths, solid gold plumbing fixtures, $25,000 automobiles, and the rest of the cinema luxuries that plain people associated with immorality." "Relatively few first-rank actors, producers, or directors," says Rosten, "were discovered to be practicing vices different enough from those of the public at large to call for drastic measures." At a conservative estimate, about half a dozen important persons, "addicted to wild parties," disappeared from pictures. The names of "ladies of flexible virtue" were dropped from the rolls of the movie extras and "certain romances were translated into marriage under pressure from the producers." From this campaign eventually arose the famous "morality" clause in studio contracts, a stipulation that could be used to void agreements with actors and actresses who involved themselves in scandal. Hays accomplished all this through his persuasive personality, and succeeded so well that the press was soon demanding: "Is it not . . . time to stop heckling the movies about cleaning up?"

Hays' achievements brought him personally not only spiritual gains, but material ones as well, for in 1924 his original $100,000 a year was raised to $150,000 (since cut to the original sum), and his office became a permanent Hollywood fixture. There had been some attempts to force Federal regulation and supervision of the motion-picture industry in 1926, but they failed, since President Coolidge felt that the Hays system of voluntary censorship was sufficiently effective. It was not until 1927 that the association formed its first comprehensive list of specific rules as a guide for producers. In 1930, following the introduction of sound films, these "don'ts" and "be carefuls" were recast into "the Twelve Commandments of the Production Code." It was not until 1934 that the Code was implemented.

Even at that early date, Hays' efforts toward cleaning up films were unappreciated by those who regarded the motion picture as potentially an art rather than an industry. In *The Film Till Now* by Paul Rotha, published in 1930, the English author wrote: "The powers exercised by the Hays organization extend over a wide area, embracing the selection of movie subjects, general trading in films, international dealings with companies, the relations of the general public to the film industry, censorship, and taxation. Mr. Hays himself looks after the general interests of the cinema with loving kindness, by taking a hand in almost every affair, and a large salary."

Up until 1932 or 1933, when the nation hit the worst part of the depression, the major units in the industry "had been fairly conscientious in following the Hays Office edicts, even though they were still backed up by nothing but persuasion." The only type of film that the moral arbiters of the public's taste found objectionable was the gangster picture which, they alleged, showed youth the way down the primrose path. Hays' answer, which apparently satisfied them, was to publish statistics proving that motion pictures consistently emphasized the fact that crime does not pay.

In the early '30's film attendance began to fall off, and some producers "tried to reverse the trend with liberal applications of sex, this technique reaching its flower in the Mae West pictures that appeared in 1932 and 1933." The leaders of the motion-picture industry met in New York to reaffirm the Code, but immediately afterward the same reform organizations that had campaigned so fervently before Hays took office began to be active against the films once more, and "there was a new and formidable film-reform society" of Catholics who called themselves "the Legion of Decency." These last let it be known that they would review films and instruct all good Catholics to stay away from all the evil ones. The press would have been interested in seeing just how effective the Legion of Decency would have been, but its power was never put to the test, for, goaded to action, the MPPDA "put teeth into the Production Code through a resolution to levy $25,000 fines against recalcitrants."

All pictures, it was then established, must have the stamp of approval, the "Purity Seal" of the Hays Office, before they can be distributed through MPPDA affiliated theatres. The privilege of buying the stamp of approval was accorded to non-members also, who pay the same fees as members for the service. The reason that the outside and foreign companies submit to this censorship is that the MPPDA-affiliated theatres account for nearly thirty per cent of the gross box-office receipts of the motion-picture industry in the United States.

Film advertising had always been one of the chief reasons for public criticism of the industry, for even when films themselves had been cleaned up, posters, trailers, and other advertising had continued to be as lurid as they had been in the early days. An Advertising Code containing the general principles and many of the specific points of the Production Code was presented by the MPPDA in 1930, and became binding with a penalty in 1935. The producers authorized the MPPDA to pass on all advertising and provided fines ranging from $1,000 to $5,000 for failure to honor its decisions. Film advertising still, however, continues to be much more sensational than the films. Both advertising and film decisions can be appealed if it is felt that they are unfair, but such action is comparatively infrequent. It is not unusual for a film company to protest successfully against a provision of the Code that seems particularly unfair.

"Most of the actual work of 'servicing' films under the Production Code," according to *Fortune* Magazine, "takes place in the Hollywood office of the Hays organization. . . The Production Code Administration is the most publicly celebrated department of the MPPDA, but it represents only one phase of the organization's work, and possibly not the most important one." Other phases are the Community Service Department, headed by Carl E. Milliken, a former Governor of Maine, which deals mainly with the public—its "most specific work is the coordination of the civic, religious,

HAYS, WILL H.—*Continued*

educational, and other organizations"; the Title Registration Bureau, which arbitrates disputes over title infringements; The Conservation Department, which campaigns to eliminate fire hazards in the handling of film; the Foreign Department (also headed by Governor Milliken), which "has the twofold duty of trying to keep foreign distribution channels open for United States films, and of informing Hollywood about the idiosyncrasies of foreign censors"; and the Theatre Service Department, which "devotes itself to the study of trade relations, theatre operations, and various practices incidental to film distribution and exhibition."

Toward the end of the '30's the United States Government brought an unsuccessful anti-trust action against the MPPDA. "It is conceivable that through its . . . action, the Government may ultimately force Paramount, MGM, RKO, Warner Brothers, and Twentieth Century-Fox," said *Fortune*, "to divorce themselves from their theatres. That would have the effect of somewhat limiting the scope of the Hays Office, but it would have practically no effect on the standing of Will H. Hays. For . . . Hays has progressed from hired figurehead of the motion-picture industry to something like its master, and the industry might have to think a good many times before deposing him, even if it wanted to." In 1941 he was given a new five-year contract, and in 1942 and 1943 he was re-elected president of the MPPDA.

Something of the power of the MPPDA is indicated in the report of the Temporary National Economic Committee made public in 1941. It reads: "The Motion Picture Producers and Distributors of America, Inc., better known as the Hays organization from the political figure employed to be its head, is an illuminating example of the cooperation of large business units for self-protection.

"It was then (when formed), and it is today, supported exclusively by the large companies. It was conceived in fear of regulation of the industry by the public and dedicated to the proposition that outsiders should never dictate its policies. . . Through the many divisions and services of this organization, the major producer-distributor-exhibitors engage in many common activities, and present a united front against any influence which would tend to change the status quo. . . Today it is a regular function of the Hays organization to represent the larger companies before State and Federal legislative bodies. . ."

Early in 1941, before the United States entered the War, the motion-picture industry was accused by Senator Wheeler '40 of "carrying on a campaign intending to incite the American people to the point where they will become involved in war." This Hays categorically denied in a six-page letter to the Senator. Later in the year Hays discouraged film "propaganda," asserting that the function of the motion picture is to entertain, not to back any cause. After the United States entered the War he declared that the primary function of films in helping to shape a post-War world would be in "promoting mutual understanding and sympathy" among peoples of all creeds and nationalities. As an aid in defense he considered the motion picture merely a help to morale. He also declared that freedom of expression on the screen, as in the press and in speech, was "indispensable," but emphasized that this did not mean that the Production Code would be abridged. (Typical Hays orders: that the white hero of *China Girl* should not marry his Chinese sweetheart; that stills of a scene from *The Moon Is Down* showing a Nazi pinned to a wall by a Norwegian bayonet should not be published; that Paul Lukas '42 should not go scot-free after killing the Nazi agent in *Watch on the Rhine*; that Americans should not be shown with Fascist tendencies in *Brooklyn, U. S. A.*)

In the fall of 1943 there were still complaints of "propaganda," however—this time New Deal propaganda. Republican Congressmen, particularly irritated by *Mission to Moscow, This Is the Army, Keeper of the Flame*, and the newsreel shot of Mrs. Roosevelt '40 in the South Pacific, therefore had a conference with Hays, and a voluntary propaganda code was proposed. The MPPDA president promptly promised to take the matter up with heads of the motion-picture industry.

At present most of the procedure of the Hays Office is delegated to the department heads, while Hays primarily concerns himself "with the larger aspects of industry policy both in the United States and abroad." He works in a building within earshot of Times Square and ordinarily puts in at least a twelve-hour day on the job.

"To look at him," according to *Fortune*, "Will H. Hays might not impress you a great deal. He is . . . slightly graying and of no great physical stature." "Everything about him," wrote Allene Talmey, "is small . . . with the exception of . . . his ears. . . The ears are famous in the movies. Not matching, the right one spreads with a tendency futuristic and triangular, while the left has a conservative roundness." "His features [*Fortune*] lend themselves readily to caricature—at which Mr. Hays himself is the first to laugh. His voice normally is somewhat shrill, but when needed he can command the suave persuasion of a supersalesman or the frenzied roar of a Billy Sunday. His well-tended hands are synchronized with his words and voice. When the voice is persuading, the hands lie passively folded or point outspread toward the listener. But when Hays shouts every inch of him becomes part of his voice. He does not merely wave a forefinger; his whole arm describes a haymaker and deposits his fist on the desk with such a thump that it seems nearly to jerk him off the ground." He is, said Talmey, "jam full of quotations, of references to Plato, Juvenal, the Cynic, Shakespeare, Milton," and loves "long, rounded sentences." Hays sees practically all pictures and does much serious reading, especially along historical lines. He does not drink, swear, or smoke, and sleeps only about five hours a night. He can dictate to four stenographers at the same time. An extraordinarily busy man, he "never reaches a train until the conductor's hand is raised in a signal to start." Telephoning is his greatest passion. Hays was married for the second time on November 27, 1930 to Jessie Herron Stutsman.

Hays is "the greatest wirepuller in the country. Not that Will Hays would ever be so crude as to yank at a wire. He only twitches. Whatever is done has the finesse of a Machiavelli."

As "the defender of the eternal verities of American ideas," Hays takes his responsibilities very seriously. He is especially conscious of his responsibility toward what he terms "that sacred thing, the mind of a child, toward that clean and virgin thing, that unmarked slate." He is respected by the heads of the industry and by the masses of motion-picture addicts, although the "lay intelligentsia" and "a faction of Hollywood directors and writers" criticize him "for being an inartistic prude who stifles the cinema's creative impulse."

"Until now," wrote Theodore Strauss in the New York *Times,* "Mr. Hays, whatever his other shortcomings, has managed to limit the spread of censor boards to six states and a few cities. By the deletions of his office he has managed to forestall fairly effectively a cry for external censorship. . . Hays probably stands midway . . . between the bluenoses who charge him with having failed in his 'sacred trust' of making the movies safe for two-year-olds, and the other side—the writers, directors, and the 'high-hat' public, which says his heavy Presbyterian hand has made cadavers out of more than one living masterpiece. But Mr. Hays probably is not so interested in masterpieces. He is no cosmopolite or rube, he is a grassroots American with a distinctly Main Street outlook."

HEFLIN, VAN Dec. 13, 1910- Film actor
Address: b. Metro-Goldwyn-Mayer Studios, Culver City, Calif.

"High on anybody's list of discoveries made by Hollywood would be Van Heflin, former New York actor, who was disregarded by the film colony for many years only to come into prominence when MGM took him under its wing." Strangely enough, Van Heflin is an actor because he is so good at it that he just can't afford not to be—but by preference and instinct he is a wanderer. "He shipped out of Long Beach, California as a high school boy and followed the sea to many ports before he finally drifted back. As a successful Broadway stage star, he gravitated between New York and Hollywood. Now, having won acclaim in pictures that equals his high rating in the theatre, Heflin appears to have dropped anchor. But he continues to carry his ticket as a third mate."

Of French-Irish descent, the son of Emmet Evan Heflin, a dentist, and Fanny Bleeker (Shippey) Heflin, Van (whose full name is Emmet Evan Heflin, Jr.) began his checkered career on December 13, 1910 in Walters, Oklahoma. When the boy was a year old the Heflins moved to Oklahoma City, where Van attended school, reaching the seventh grade before they settled in Long Beach, California. It was there that young Heflin first saw and was fascinated by the ocean, and he decided to make seafaring his career. During the school year his worthy ambitions were thwarted by his family and he dutifully attended Long Beach Polytechnic High School. But vacations made him his own master, at least so far as family obligations were concerned, and three successive summers found him shipping on schooners bound for Mexico, Hawaii, and South America, respectively.

After receiving his diploma, when his classmates were planning post-graduation parties, our untrammeled hero was on his way to Liverpool in the fo'c's'le of a tramp steamer. He finally returned to register at the University of Oklahoma, but he remained there for only two years before "the call of the running tide" got him again, and he shipped on a coastwise cargo boat for New York via the Panama Canal. That the theatre (in the guise of a role in *Mr. Moneypenny*) intervened in his seafaring career at this point is certain, but the stories of just how it came about are varied. One version has it that upon arriving in New York, he decided to call upon some sedate relatives, rather colorfully attired in an outfit that included a sailor's kit on his back and a pair of cowboy boots dangling over one arm. He found himself in the midst of a "cocktail party of smart people going full blast. One of them, telling about a part he'd turned down that morning, eyed the greenhorn speculatively and spotted the makings of a gag. 'Why don't *you* try out for it?' It became a collective enterprise. They told him what to say and how to comport himself, they primed him with the names of plays in which he was to say he'd appeared. Only a Methuselah could have appeared in them all. Moreover, to ripen the joke, they slipped in three or four plays produced by the very man they were sending him to see. . . Van hied him down and rattled off his list of plays. As it happened, Channing Pollock, producer and author of *Mr. Moneypenny,* thought this very funny. He tried the fresh kid out," and the result, much to everyone's astonishment, was that Van got the part. Another version states that when Van met Richard Boleslavski by chance, the "strange mixture of college-bred gentleman and two-fisted sailor" intrigued the famous director, and that it was Boleslavski who cast him in his first stage role.

In any case, the show failed and, though Van got good notices, he didn't care very much. Van had always thought of the stage as a glamorous dream world, and he was completely disillusioned by the reality. "It's like Hawaii," he is quoted as saying. "You dream you can reach up and pick mangoes or beau-

VAN HEFLIN

tiful babes out of the trees. You find it's just another place." Berths were plentiful, and he signed on a ship bound for the South Seas. In the next three years he sailed through the Orient, back to South America, and up to Alaska, finally rating a third mate's ticket. Parental pleas eventually brought him back to finish his course at the University of Oklahoma, after which he joined the Hedgerow Theatre outside Philadelphia. Deciding he needed additional training, or, as some reports have it, "in preparation for the dire possibility of a teaching career," he then left the stage for a year's course at the Yale Dramatic School, followed by a season of stock in Denver. His research into drama continued, with appearances in a "series of bad plays, short runs, and failures" from which, discouraging as they were, he gained valuable experience. He returned to Broadway as an understudy in *Sailor Beware,* a prophetic title, for he never did return to the sea. Instead Katharine Hepburn['42] saw him in Behrman's['43] *End of Summer* (in early 1936), the first hit he appeared in, and she got RKO to sign him for *A Woman Rebels* (1936), which was sad for them both.

"Sadder still for Heflin were the 'B's' that followed. [Van acted in *The Outcasts of Poker Flat, Flight from Glory, Annapolis Salute,* and *Saturday's Heroes* in 1937.] If he had to do bad roles, he preferred doing them on the stage. So he asked for, and was given, his release. 'What I thought of them,' he observes, 'is exactly what they thought of me.' He went back to New York at pretty low ebb. 'I felt like a failure and, come to think of it, I was.' Stay away from the stage a couple of seasons and you're dead. Van was dead to Broadway, but radio took the corpse in. He became a voice on soap opera three times a day," taking part in some 2,000 performances altogether until Philip Barry rescued him by writing *The Philadelphia Story* with Van in mind as the reporter.

Playing opposite Katharine Hepburn once again in 1939, Van Heflin took the part of "the sardonic and sudden journalist with Leftist leanings and a susceptible nature." Van Heflin almost didn't keep the role which started him once more on the road to fame, for "he went through one rehearsal and quit because he didn't like the way he was treated in the third act. 'Which gives you at a glance the measure of my brains,' he says." Nevertheless Barry persuaded him to stay, and the success of the play along with his own favorable notices brought him once more to the attention of Hollywood.

Van Heflin appeared in *Santa Fe Trail* for Warner Brothers in 1940 while on vacation from the play and was immediately told that "heavies" were obviously his métier and that he should never play anything else, "oblivious of the fact that for months he'd been mowing them down as a sex-appeal boy. 'Okay,' he said wearily, 'I shouldn't play anything but heavies!' He enjoyed the picture thoroughly. It was like playing cowboys and Indians, with a horse instead of a broom to ride on. Still he was glad to get back on the road with the play. Hollywood was a shell and a mockery. . ." He preferred the strenuous life in New York, where, to quote the *Daily News,* he was "probably the busiest actor in town. . . No sluggard, he. Up at seven for one radio commercial, back at noon for another, and to the theatre for matinees and night shows. And available for more radio work, too." At the same time he owned a percentage in another Broadway production, *Family Portrait.*

Heflin was not asked to act in the film version of *The Philadelphia Story,* which Hollywood had decided was a suitable vehicle for a comeback for Katharine Hepburn, who had once been accused of being "box-office poison." "To protect an allergic public," it was found necessary to bolster Miss Hepburn with two of Hollywood's most popular male stars, Cary Grant['41] and Jimmy Stewart['41] (who got Van's part). Heflin was nervous about seeing the film for fear of consciously or otherwise imitating Stewart's rendition and did not do so until the play had closed. When finally he did see it he was overwhelmed at finding it better than the play, and, deciding that he had misjudged Hollywood and the entire film world, he gave up a role in another play forthwith to try his fortunes on the screen.

"Thus chastened and cleansed of error, he betook himself again to Hollywood, resolved to break in like any novice. For the renegade of *Santa Fe Trail* that was hardly necessary. Clutching hands reached, bent on roping and branding him heavy. He thinks heavies are fine," as such roles make it "relatively easy to impress an audience." But Van Heflin decided that he wanted variety in his film career, and so phoned Billy Grady, casting director of Metro-Goldwyn-Mayer, and asked for a screen test. They tested him with Donna Reed, and, Van says: "It came out remarkable for her and good for me." Director Billy Grady felt that "It came out a 'piperoo' for them both." In any case it was apparently good enough so that Van Heflin has been able to draw substantial roles ever since. *The Feminine Touch* in 1941 was a "hackneyed husband and wife fracas," but showed both Rosalind Russell '43 and Van Heflin in top form, the latter taking the part of a will-o'-the-wisp male escaping from a lady with a torch (Kay Francis). In *H. M. Pulham, Esq.* (1941), a mild, sincere, but rather dull tale of a Boston Brahmin, Van Heflin played "a cynical advertising man with cynical emphasis."

In *Johnnie Eager* (1942) Van Heflin found a role which really tested his capacities in the part of Jeff Hartnett, who served as a drunken, Shakespeare-quoting conscience to the warped, sadistic criminal, Johnnie. Reviewers were enthusiastic over his performance. *Newsweek* stated that Van Heflin "steals any number of scenes, cast as Johnny's literate and liquor-sodden stooge—a sort of male Cassandra who alternately cries, 'Woe!' and 'Whoa!' to no avail." Robert W. Dana in the New York *Herald Tribune* congratulated Mervyn LeRoy on utilizing "to some extent the talent of Van Heflin, who portrays with insight and sincere feeling a boozy scholar of apparent good family from the Rocky Mountain country who is attached somehow to Eager's sadistic life and acts as his foil throughout the film. When these two are together on the screen *Johnny Eager* achieves a certain greatness." *Commonweal* praised Robert Taylor as convincing—"but as Johnny's Greek chorus, as his Boswell who explains his deeds and picks up the minutiae of this strange character, Van Heflin, never drawing a sober breath throughout the entire film, practically steals the picture. Perhaps his performance is too good. So strenuous, sincere, pathetic is the characterization he builds that one is concerned more over his abnormal life than Johnny's." The Academy of Motion Picture Arts and Sciences added its accolade to the chorus of praise by bestowing upon Van Heflin its award for the best supporting performance by an actor in 1942 for his work in this role. One curious result of so realistic a performance was that Van Heflin, who is really of a rather moody, retiring nature, is now hailed as a blood brother "by every genial soul who's downed a few."

As Gordan McKay in *Kid Glove Killer* (1942), a "B" picture, Van Heflin departed from misanthropic parts to take the role of a "listlessly likable young scientist." The *Times* reviewer complained that his wan smile and dry drawl had tended to type him, but sugarcoated it by adding that he "can create a character with intelligence." His fans admired his acting wholeheartedly, especially in the one scene in which he pantomimed the cooking of a fish. In *Seven Sweethearts* (1942), an unfortunate vehicle, Van Heflin played his first romantic lead. The producer, Joseph Pasternak, quieted his tremors about taking the role by saying: "Yes, yes, I know you're not handsome. I don't want a glamour boy. I want a human being, a guy a girl could fall in love with. I also want an actor." The impression left by *Seven Sweethearts* with one reviewer was that of "a confectioner's dream of a many-tiered wedding cake covered with pink icing with sugar figures." *Time* brooded bitterly over it, calling it "unconscionably quaint," and described Van Heflin's part as that of a wandering photo-reporter who gets "sucked into the cultural air pocket" of an inn run by an old Dutchman and his seven daughters, who are immediately after him "like a pack of soprano hounds. In the course of working out these difficulties *Seven Sweethearts* shrinks the talents of nearly everybody in it," presumably including Van Heflin. *Commonweal*, however, felt that he was adequate, "sufficiently annoyed and blasé about all this Dutch charm and cuteness."

In *Tennessee Johnson* (1943) Van Heflin found himself involved in a controversial film, but reviewers agreed on his admirable portrayal of the difficult role of Andrew Johnson. Bosley Crowther in the *Times* speaks of the "tremendous intensity" of Van Heflin's performance and, in discussing the difficulties of portraying history in the films, particularly the necessity of changing the characters of historical personages to conform with the idiosyncrasies of the stars, pays him a genuine compliment. "The dangerous necessity of shaping history to sit well on a particular star was sidestepped in this case by the casting of Van Heflin in the title role, Mr. Heflin being an actor who acts and doesn't just conform to type." In another *Times* review Van Heflin is said to have carried "the film through its more wordy scenes by the sheer sincerity and strength of his performance. Mr. Heflin, in a full-bodied, carefully delineated portrait of a passionate man, gives decisive proof that his talents have thus far been haphazardly used."

While this last film was still in the making, Director William Dieterle '43 (according to *Newsweek*) "was berated by the Negro press and the Communist *Daily Worker* 'for casting the allegedly Negro-hating Johnson as a homespun hero while excoriating his adversary, Thaddeus Stevens, who had belligerently espoused the Negro's rights.'" At length there were so many protests that Lowell Mellett '42 of the OWI motion-picture branch looked over the unedited film, then called *The Man on America's Conscience*, and advised that the heavy villain characterization of Stevens "not only did violence to history but might impair racial harmony." As a result various changes were made in the film by MGM "to present Stevens as a statesman who, however misguided, fought for principles in which he sincerely believed." Various groups were still unsatisfied with the results, but Mellett was obliged to inform them that he was not a censor and had done all he could.

Heflin's last picture before he went into the Army, *Presenting Lily Mars*, was a return to the all too familiar formula of a "typically maudlin motion-picture treatment of backstage life," with "MGM in the role of a doting Mama pushing Judy Garland '41 out front and telling her to knock them dead," scarcely giving Van Heflin a chance to distinguish himself. His casting troubles are over for the time being, however, as he is now a 2nd lieutenant in the Artillery. His wife is Frances Neal, film actress, whom he married on May 16, 1942, with Joseph Pasternak as best man. An earlier disastrous marriage which lasted just six months with a girl merely identified as "an

HEFLIN, VAN—*Continued*

actress named Esther" took place very early in Van's career.

The Heflins live (when he is at home) in Beverly Hills and spend their time when alone of an evening listening to records (both symphony and swing) or playing gin rummy. When they go out Van watches his wife dance with more nimble partners, for he has never been able to learn how. The sea has had to become just a memory in Van Heflin's life, his only contact with it of late having been occasional week ends on Errol Flynn's yacht—before the War and before his marriage. Of other sports he has none, being much too interested in acting, which is for him vocation, avocation, and hobby. Described as a sandy blond with gray eyes and a "face nobody could call handsome," he stands six feet one inch tall and weighs 150 pounds. He attributes his consistently fine performances to necessity, and to his observation of the varied human beings he met during his life as a sailor, for "I just don't have the looks—and if I don't do a good acting job, I look terrible."

HÉLION, JEAN (āl-yon') Apr. 21, 1904-
Artist; author

Address: b. c/o E. P. Dutton Co, 300 Fourth Ave, New York City

In January 1940 Jean Hélion was neither warrior nor best-selling author, but a non-objective painter of some reputation whose work was represented in the Museum of Modern Art and the Chrysler Collection, and a lecturer and expert writer on theory and technique in painting. Living in Virginia with his American wife, the former Jean Blair, he still did not want to feel that he had failed to play his part in the central event of our times, and so he returned to his country as a volunteer with the French Army. He was taken prisoner by the Germans only a few months later.

They Shall Not Have Me (1943), his narrative of what happened from the time of his capture until, as an escaped prisoner, he first set foot on the soil of unoccupied France, has been called by *Time* Magazine "one of the half-dozen most remarkable books of the Second World War." "Though he is telling his own story, he gives a picture of France in defeat, and it is," according to Malcolm Cowley, "curiously heartening. You feel that the French, humiliated and starving, have nevertheless survived a moral crisis; they have stumbled through a morass that we may still have to cross." Perhaps, after all, Hélion's part in the fight against Fascism (he has often wondered whether he actually killed so much as one Nazi) was not so small as he believed. One reviewer describes *They Shall Not Have Me* as "a document that no Goebbels '41 will be able to dispute; a weapon that shall help destroy Nazism."

Jean Hélion was born in Normandy at Couterne (Orne) on April 21, 1904, and began professional life as an architect's draftsman. His paintings were first exhibited in Paris in 1928 and 1929. According to one critic, he was at first a disciple of Mondriaan, but soon abandoned his master's tenets and about 1935 began to introduce into his paintings curved and broken lines. Still later paintings "illustrated a new trend toward angularity. The planes intersect at sharp angles instead of rounding off in a cylindrical shading of tones; the colors are brighter and more acrid. . . [There is a] movement toward space projection, first by round planes and then by forms. Hélion reflects influences from Picasso's '43 Bimorphism and from Léger's '43 machine esthetic."

Anatole Jakovski, who sees in Hélion's work an affinity for architecture, writes more analytically in the *Supplément au Dictionnaire Biographique des Artistes Contemporains* (1936). He says that Hélion's non-objective painting "was born through a process of abstraction both scientific and experimental. For a long time, with passion and obstinacy, he drew and painted lemons, heads, bottles. One day the bottles, the heads, and the lemons disappeared from the canvas, leaving behind in their places amazing rhythmical structures.

"The transition was, in Hélion's case, very logical, gradual, and almost without fits and starts. The last still lifes of 1929 in which one can still recognize likenesses are entirely constructed around the rapidity of the glances, the speeding-up of the perception of the painter, who omits details for the benefit of an exact condensation of the color and who releases the rhythm which was lurking in the object.

"The color-object thus created has a visible tendency to become an autonomous world. Going on from there, upheld by a voluntary integrity and inspired by a strong instinct, Hélion passes from the old quantity into a new quality, from the concrete world of resemblances to another sort of concrete world without either objects or abstractions from objects. . . His first researches into rhythm and space without objects have been carried out under the banner of that ornamental planimetry which is generally called Neo-plasticism. To that period belongs a beautiful series of pictures that would best be described as rhythmograms and spectograms. In them he sets and solves for himself difficult problems on the reciprocal opposition of colors, on the dialectic of the divisions of the surface.

"In his more recent works of 1931 and 1932 he maintains a kind of framework of black bars, into which is thrust and spread a frontal system of colors. From one picture to the next he varies the elasticity of that framework and the order, the position, the importance, and the rhythm of his color edifice."

Art News, however, commented rather unenthusiastically on an exhibition of Hélion's paintings in New York City in 1936: "Untitled, impersonal, they convey their significance obliquely. They add no warmth to the room—their contribution is their cool and esoteric presence. . . Like that of many of our young and recently seen Concretionists, Hélion's imagery seems poised in a limpid dehumanized stratosphere in which carefully painted shapes bear the burden of esthetic language, but unless one is initiated to the particular symbols of the painter's subconscious, the amount of enjoyment to be found in the work is limited."

Married to a girl from Virginia, before the outbreak of the Second World War, Hélion was living and painting on a farm in Rockbridge Baths, Virginia, and he had taken out his first citizenship papers. In January 1940 he left the United States, his wife, and their newborn son because he "could not resist going back to fight the Nazis," although he had few illusions about the sort of war that France was fighting. Early that same year an exhibition of his work was arranged with the approval of the French Minister of Education "to encourage cultural relations with France."

Hélion begins *They Shall Not Have Me* by observing bitterly, "I was not sent to war. It came to me in Mézières en Drouais, a charming village west of Paris, where, for months, I had crawled upon the hills, ducked under blank shots, dug model trenches, and absorbed soporific chapters from the infantry sergeant's handbook, very peacefully." After a few days of confused retreat carried on under the illusion that the Army would make a stand at the Somme, he and some 2,000 others were captured by Germans in armored cars shouting that the War was over and that prisoners would be sent home in a few days. Then began the first ordeal. The first day they were marched fifteen miles and given nothing to eat. The second day, still without food, they were marched twenty-five miles. The third day it was thirty miles, still without food; the fourth day, thirty-five miles, still foodless; the fifth day, forty-two selected miles, fortified with a tiny plate of soup; the sixth day, fifteen miles, but without the soup. On the sixth day, as the survivors staggered into the big prison camp at Orléans, they were presented with a little French tobacco wrapped in a thin brown paper, but many of them dropped as well-fed Nazi guards, mounted on motorcycles and shooting at their heels, gave the incredible order, "Run!" Throughout the hunger march the only thing that sustained Hélion and his comrades was the thought that their deaths would simplify matters for the Germans. "They shall not have me!" was the one thought that carried them on.

After seven weeks in the prison camp at Orléans, where further attempts were made to break the men's spirit, the prisoners were sent to the Stammlager IIB in Hammerstein, Pomerania, a great receiving camp. In August 1940 Hélion found himself a farm worker on a great feudal estate in Pomerania—where, incidentally, he and his fellow prisoners succeeded in making friends with the peasants, who realized "that we stood together on the same side of the castle: the slave quarters." But it is the many months on the prison ship *Nordenham,* an old banana boat moored in Stettin harbor, where he was transferred in the spring of 1941, that take up the greater part of his narrative.

On the *Nordenham* 750 French prisoners were confined in the stinking, lice-and-flea-infested hold, and were rented out to work in the daytime. The better part of their food (the absolute minimum necessary to keep them working) was taken by the overseers and kitchen help, and every week the civilian head of the camp held a great feast with what he stole from their rations. Their wages were seventy *pfennigs* a day, the prison-camp administration getting the rest of their pay; and Hélion estimates that the German Government actually made a net cash profit of more than 2,000,000 marks a day out of 1,300,000 French prisoners—a good enough reason for not sending them home.

JEAN HÉLION

Yet even in these miserable conditions the men found ways to combat the Nazi sabotage of their morale. "One should not train an army for victory only," says Hélion; "instructions should be given for the reverse also. No one had any doctrine about what could be done in captivity by the captives for themselves and for their country." The forging of that doctrine was a part of the task that Hélion and others set themselves. The artist, after industriously polishing up his schoolboy German, had been appointed official interpreter to the *kommandoführer* and prisoner's representative aboard the *Nordenham,* and he was in a unique position to help his comrades. Classes were held; plays were given. A "Central Committee" of three met secretly to formulate plans for outwitting the Nazis and to compose striking slogans. Notes were kept of the movements of warships in Stettin harbor and the number of troop trains passing through Stettin to the Russian Front. Statistics were compiled through smuggled newspapers. Prisoners formed clubs to torment their jailers in all sorts of subtle small ways. And always there was a small group busy plotting escape, procuring clothes, forging papers.

In August 1941 Hélion himself had begun making preparations for his escape. On the black market he sold tins of the American coffee and tobacco sent him by his American wife and with the proceeds gradually managed to collect a civilian wardrobe, strange but complete. One man stole a passport for him; another forged the necessary police stamps; dozens furnished items of information on the

HÉLION, JEAN—*Continued*

technique of escape, learned painfully through the failures and successes of their fellow prisoners. On Friday, February 13, 1942, he was ready, and two volleyball teams staged a free-for-all fight near the gate so that he could slip past the guard.

But the most difficult part was ahead. How Hélion escaped from Stettin to Berlin and across Germany to Cologne, still masquerading successfully as a Flemish worker, is a story which, according to *Time*, "ranks with the escape of Casanova from the Leads, or Peter Kropotkin from the fortress of Peter and Paul." "Escaping is really all a matter of keeping your nerve, distracting attention at the crucial moment," Hélion says; but the help of more than one unknown friend encountered on the way was a factor at least equally important. It was with the help of many such friends that he finally reached Aachen and crossed the Belgian border to go on to Lille and Paris. There he found others to help him across the border into the unoccupied zone, where he reported to the Vichy police. Deloused, sent to a demobilization camp for escaped prisoners, given full pay for his twenty-one months of captivity, and presented with 2,000 francs by the French War Minister, he was finally given permission to leave France for the United States.

Upon his return to his Virginia farm, Hélion began writing the narrative of his prison experiences, parts of which were published in the *Yale Review* and the *Atlantic Monthly* before appearing in book form. He also continued his painting. "I have been able to start exactly where I left off," he said, "partly because my wife has kept my unfinished pictures on their easels just as they were when I went away." In February 1943 this artist, who has had twenty one-man shows since 1932 in the United States and abroad, had a retrospective showing at the Art of This Century Gallery in New York, which included thirty-five samples of his compositions. James J. Sweeney wrote the analysis of his work for the catalog preface, which read, in part: "Painting for Hélion is a language of relationships in which the artist embodies certain intimate sensations which cannot be expressed to the eye in other media. Such relationships could, of course, be expressed as well in the conventions of naturalistic representation as in less familiar forms. But today the facility with which we have come to read the symbols of naturalistic representation has a tendency to sweep our attention over the painted symbols to their external references at such a speed that the formal qualities of the symbols themselves and their interrelationships are completely lost sight of."

Of the works themselves, *Art Digest* commented: "More mechanical than literal, these works deal with intricate shifting patterns in brilliant flat surfaces which are combined with steel-gray cylindrical forms modeled in three-dimensional exactness. By their sureness of execution Hélion's machinal variations speak for themselves, being complete in their assembled patterns and thoughtfully chosen color passages. Too much similarity in design, however, tends toward monotony, but this the gallery has overcome by cleverly juxtaposing the pictures." The New York *World-Telegram* critic added that they were "painted with logic, sensibility, and taste," and characterized by "precise line, clear colors, massive shapes, animated design. The amazing thing is that they also have an indefinable lyric quality."

"Stocky, open-faced, likable," Hélion is "a little man with glasses, and a fixed expression of polite surprise. He might be taken for a modest schoolteacher were it not for a singular air of authority, an energy showing itself in every word and gesture, and a bush of hair which, when coaxed by its owner to help save his life by lying down flat, flatly refused to do so." If his book is evidence, he possesses "a native shrewdness, a wry humor, and a wisely tolerant, quite humanistic appreciation of man in all shapes and sizes", "a painter's eye for the people he meets," and "a painter's passion for accuracy" which prevents him from ever falsifying a situation to produce a political or dramatic effect. According to Orville Prescott, "if many more artists as resourceful, ingenious, courageous, gifted with such prowess of leadership as Jean Hélion could be found, it might be well for the world if they were entrusted with governments and armies."

HENDERSON, SIR NEVILE (MEYRICK) June 10, 1882—Dec. 29, 1942 British diplomat; Ambassador to Berlin from 1937 to the outbreak of the War; see sketch 1940 Yearbook.

Obituary

N Y Times p15 D 31 '42 por

HENREID, PAUL (hen'rēd) Jan. 10, 1908- Film actor

Address: b. Warner Brothers' Pictures, Inc, Burbank, Calif; h. 255 Chadbourne Ave, Brentwood Park, Los Angeles, Calif.

In Paul Henreid Hollywood has an actor who, most of his admirers agree, manages to combine the charms of Charles Boyer '43 and the unswerving nobility of the better Christian martyrs without, somehow, alienating masculine audiences. This is an unusual if not impossible feat, and ever since his appearance in *Joan of Paris* (1942) Henreid has probably been the busiest leading man in Hollywood. In July 1943 the *Hollywood Reporter* announced: "Warners is launching a quarter of a million dollar exploitation campaign to clinch the *femme* rage (and stardom) for Paul Henreid."

His original name was Paul George Julius von Hernreid. He was born in Trieste (which was given to Italy after the First World War) on January 10, 1908, the son of Baron Carl Alphons and Maria-Luise (Lendecke) von Hernried. The Baron was a native of Sweden who for many years had been a prominent Viennese banker and who before the First World War was financial adviser to Emperor Franz Joseph. He died during the War, and by 1927, when his son was graduated from the exclusive Maria Theresianische Academie, there was very little of the family fortune left. Paul, who had acted quite creditably in some school plays, told his family that he wanted to become an actor, but he was shouted down. As Henreid tells it: "They protested: 'Dear Paul, there has never been an actor in our family, so you may not reach the top. Do you want to be a medium actor? Neither you, nor we, would like that.' So I went to the Graphische Academie of Vienna, where you can learn to become a publisher . . . the production end of the business—types, chemistry, printing, photography. Then I was four years with a book publishing house [A. G. Strobl] in Vienna."

Henreid joined A. G. Strobl, which put out the first German translation of Pearl Buck's *The Good Earth,* in 1929, and a year later became manager of the printing and bookbinding department. He saved, became independent, meanwhile attending the Dramatic Academie of the Neues Wiener Konservatorium from 6 to 10 p. m. to study acting. During one of the school's performances he was discovered by Otto Preminger, then the late Max Reinhardt's managing director—and from then on publishing was forgotten. Reinhardt gave him a contract in 1933.

The young actor's first role on the professional stage was that of the schoolboy in *Faust.* Next he played the role of Dr. Ferguson in the German translation of Sidney Kingsley's '43 *Men in White,* which ran for 135 performances in Vienna—almost a record. He then appeared in Franz Molnar's *The Unknown Girl.* But without any doubt his most successful Viennese role was in a play called *Mizzi,* in which the London manager of the Ritz Hotel's Cafe Chantant discovered him and gave him a contract with the London night club. He played for four months in London in 1936, then returned to fulfill a contract in Vienna. Perhaps there was another reason, too—on January 1, 1936 he had been married to Elizabeth Camilla Julia Gluck, an attractive young Viennese dress designer, and she was none too anxious to leave Vienna.

The Henreids did not stay in Vienna long. In 1937 Gilbert Miller, after seeing the actor in a play there, hired him to succeed Carl Esmond in the role of Prince Albert in *Victoria Regina,* then playing in London. Henreid played that role for eight months in London, then for five more in the provinces. One of his most terrible moments during those thirteen months was the time when Lady Jane coyly dropped her rose, and the theatre cat stalked on the stage and made a leap for it. To the great delight of the audience, Prince Albert had to race the cat! There were difficulties with timing, too: Henreid found that he had to pause longer for his "laughs" than he had been accustomed to in Vienna. Nor was the English language easy for him. Although the story went around that he knew it so well that he was receiving special speech lessons for the role of Albert, which demanded a Teutonic accent, this was "pure press-agent." And the British cooking! Why, these people seasoned their trout with anchovies so strongly that its original taste was unrecognizable!

PAUL HENREID

But none of these minor inconveniences meant anything to the Henreids when Hitler '42 marched into Vienna in 1938. Lisl (Henreid's name for his wife) flew back to Vienna on the first plane to collect her family, the dresses from her shop there, and several thousand dollars worth of jewels that friends wanted smuggled abroad. Detained for twenty-four hours by the Gestapo, she procured her release by persuading the Germans that it would be unwise for them to inflame British public opinion by mistreating the wife of such a popular actor.

It is doubtful, however, if Henreid could have procured his own release with such ease. He had been uncompromisingly anti-Nazi ever since 1934, when he had gone to Berlin to consider a UFA film offer. "For a German-speaking actor a UFA contract was the goal," he said later. "We were excited when UFA sent for me. But we had been in Berlin only two days when an old friend, a Jewish comedian, very successful, came to see me. He was crying. When I asked him why, he said he had just received a notice that he could no longer act. I couldn't believe that at first. So we drove around the Jewish quarter. When we arrived back at the hotel, I said to Lisl, 'Let's get back to Vienna at once.' She replied, 'That's what I hoped you would say.'" In 1936 Henreid helped Otto Wallburg, the Jewish comedian, to escape from Berlin to Austria, and he is quite correctly enrolled on the Nazi black list as "Paul, Baron von Hernried. Minorities sympathizer. . . Official designation, enemy of the Third Reich." His fortune of more than $100,000 in Austrian banks has been confiscated by the Nazis.

(Continued next page)

HENREID, PAUL—*Continued*

In spite of his hatred for the Third Reich, in England the Austrian actor seemed doomed to play German roles. In his first British motion picture, *Goodbye, Mr. Chips* (1939), he played the young German professor who accompanied Mr. Chips on his vacation. In *Madman of Europe* (1940), he was Victor Brandt, the Nazi officer. In Carol Reed's *Night Train* (1940), begun in December 1939, after the outbreak of the War, he was Karl Marsen, the young German who turned out to be a Gestapo agent. And in *The Jersey Lily* (1940), his first play after *Victoria Regina,* he had the role of Prince Louis of Battenberg. Only in the motion picture *Under Your Hat* (1940), with Nova Pilbeam, was he permitted to change nationality: his name was Boris.

Yet Henreid did not object. As he said later of his Nazi roles: "If I can show how really rotten they are, then I'll consider that I am doing my bit." He was "doing his bit" in other ways, too. In England in September 1939 he was given a "C" rating, meaning that he was classed as a "friendly alien," and he promptly became an air raid precautions warden. With the fall of France, however, even "C" aliens were restricted—obliged to be home at midnight, not permitted to own cameras, etc. "The little man who used to wash my car offered to sponsor me, to guarantee my integrity," Henreid says. "The people were kind to us. It was the Lords and Fascists themselves who started that propaganda against us. . . They did it to distract attention from the English Nazis and appeasers by interning the harmless and the helpless—those who can be used as targets."

Finally, in July 1940, the Henreids read the headline: "All aliens to be interned." There were three chances of escape: a commercial film contract, a job in a propaganda film, or an exemption order from Sir John Anderson '41. Unsuccessful in obtaining any one of the three, the actor attempted to get an Austrian visa for the United States. The Austrian quota was full. Then he was asked: Where were you born? It turned out that since Trieste, his birthplace, had been ceded to Italy after the First World War, he was eligible for an Italian visa—and the Italian quota was not full. Gilbert Miller offered to be financially "responsible" for him after he arrived in the United States, and so in the summer of 1940 Paul, Lisl, and their rather ancient Skye terrier, Maxi, sailed for New York.

The Henreids arrived in New York on the *Scythia* on August 12, 1940. No bands played. "Together," wrote Cecilia Ager in *PM*, "they had twenty pounds, and a lot of wealthy friends in town. The wealthy friends were very sorry they could lend them no money. Luckily, the Henreids had some poor friends here, too. The poor friends were very glad they could lend them $300." Just the same, their financial situation was not too good. Layoffs of six months between shows were required of actors of alien status, and for some time the highest guaranty Henreid could get was $3,000 on one play, which he expected to be a failure. He played the role of Prince Albert opposite Helen Hayes '42 in *Victoria and Albert* at the opening of her Radio Theatre in 1940, but the first good stage part that presented itself was in *Flight to the West,* which opened on December 30, 1940. Until then Lisl kept them eating. Well known as a dress designer, she had no difficulty in finding employment.

As the insufferable and bombastic Nazi consul in *Flight to the West* Henreid (still known as Hernreid) was an immediate success. "Brilliantly played," commented Richard Watts, Jr. "A player of strength, skill, and personal attractiveness, Mr. Hernreid is a welcome addition to the local stage." Early in 1941 Henreid joined the cast of Columbia network's *Joyce Jordan, Girl Interne,* a radio serial, playing the part of Steffan. And it was not long before Hollywood discovered him—through his work in *Night Train* as well as in *Flight to the West.* In 1941 RKO Radio Pictures gave him a contract, and Henreid felt that his judgment had been vindicated. He had refused to sign a Hollywood contract in London when he had had several offers, wanting to come to America "with enough reputation and a sufficient salary to command respect." This time, in order to accept the Hollywood contract, he had refused the lead opposite Helen Hayes in *Candle in the Wind.*

Hollywood apparently felt that Henreid had a sort of audience appeal that it was almost seditious to attribute to the Nazis. (After *Night Train,* for example, a woman in Dubuque, Iowa had written wanting to know who "that cute Nazi was"—in spite of Henreid's attempts "to show how deceitfully sinister the Nazis can be.") At any rate, in his first Hollywood picture, *Joan of Paris* (1942), Henreid played a heroic Free French R. A. F. pilot shot down near Paris with his bomber crew. The picture starred Michele Morgan, but it did not take the producers long to realize that in Henreid they had a property at least as valuable as Miss Morgan. That Henreid was an excellent actor had been obvious all along, but the exact extent to which feminine audiences would respond to his talents could hardly have been predicted.

The ease with which Henreid himself graduated from roles of villainy to those of practically unadulterated nobility showed his own feelings in the matter. When in 1942 he signed a contract with Warner Brothers there was a provision in the contract that he would not have to play any more German roles. "Now that the United States is in the War it is unnecessary to do more," he said. "Also, I am still Austrian, and we Austrians do not have much to do with Germans if we can help it, and as the War goes on I do not care to be thought of as German, even in a motion picture. Besides, one can't tell how the German will be portrayed, what sort of character he may have in a picture, so I would like to be clear of such roles altogether."

In *Now, Voyager* (1942), which *Time* Magazine called "Warner Brothers' solemn contribution to the study of the mother complex," Henreid played opposite Bette Davis '41—and almost stole the show from her. In *Casablanca* (1942), in which he played Victor Laszlo, "leader of the European underground, still breathing hard after three escapes from the Nazis," Humphrey Bogart '42 took the main masculine honors, but Henreid's fan mail continued to increase. In *Devotion* (1943) he played Arthur Nicholls, an Irish patriot, in a story about the Bronte sisters with Olivia de Haviland and Ida Lupino '43. And other pictures followed in rapid succession, among them *In Our Time*, the story of an English girl deprived of her memory during the German Blitz of London of 1940; *China Sky*; *Outward Bound* (in which he played Henry, the concert pianist); and *Mrs. Skeffington* with Bette Davis. Henreid was even scheduled to do what he calls a "zoot-suit dance" in the revue *Thank Your Lucky Stars*, but this didn't come off. "I got the words even when they went something like 'zogaree zo zo,'" he says. "But I couldn't get the steps. I could have got them, you know, with weeks of practice. I don't dance when people just dance."

Henreid is six feet three, weighs 182 pounds, and has "soulful blue eyes" and light brown, wavy hair. In Howard Sharpe's words, he "has the physique of a college track star and the face of a sophisticate, with two deep lines that have etched their way to the corners of his mouth and which feminine admirers consider 'interesting.' They disappear when he is bored and when he is eating Vienna schnitzel at Chasens, where the dish is made with thin slices of meat, as it is in Vienna. The lines are deepest, on the other hand, when he is at odds with a director over the method of playing a scene, or when he's angry at his studio over some fancied injury."

His continental manners and charm (lady interviewers in Hollywood can look forward to having their hands kissed) may make him the ideal screen lover in the eyes of many of his admirers, but Henreid himself is neutral on the question of continental versus American technique. "The difference between the continental and the American screen lover is that the American is faster and more direct than the European," he has been quoted. "He does not go in so much for the niceties. The timing makes all the difference. Someone like Clark Gable, for instance, grabs the girl and kisses her. Charles Boyer, on the other hand, pauses slightly between the grab and the kiss. He waits a few seconds for the girl to catch up to him." Which technique is the proper one depends entirely on the girl, Henreid says.

And in private life he is concerned with only two girls, his wife, Lisl, and his daughter, Monica. In private life the Austrian actor is, as a matter of fact, thoroughly domesticated. The Henreids live in Brentwood, Los Angeles in a pleasant colonial bungalow—"not too large, not too small"—which was "practically a gift" from the Henry Fondas. Their household includes Maxi (the eleven-year-old Skye terrier); Lucie, an elderly nurse who has cared for Lisl since childhood, and who knows no English; Willie Mae Lee, a Negro cook from the South who graciously consented to learn German; and a sophisticated young male secretary (Austrian). It is Paul Henreid, however, who paints the furniture, paints the fence around the place, and tries unsuccessfully to mend the ping-pong table. He and his wife are seldom seen at the gay night spots around town, and the actor's hobbies—food, glass table bells, music, books, swimming, tennis, and horseback riding—are indicative of the kind of life they lead. In March 1941 Paul Henreid received his first American citizenship papers, and he promptly dropped his title. As a contribution to the war effort in 1943 he participated in a bond-selling tour throughout the United States during which over one million dollars' worth of bonds were sold.

HESS, MYRA Feb. 25, 1890- Concert pianist

Address: b. c/o Annie Friedberg Concert Management, 251 W. 57th St, New York City; h. 48 Wildwood Rd, London N. W. 11, England

The statement "She is not merely a great woman pianist: she is a great pianist without limitation" is about the best concise description to be found of the accomplishment of Dame Myra Hess. After beginning her formal musical training at the age of five Myra Hess walked off with all sorts of prizes and scholarships available to English music students, and she has been receiving honors from the entire music-loving world ever since. For over thirty years Dame Myra has gained the enthusiastic approval of audiences throughout the world for her interpretations of Bach, Mozart, Beethoven, and the moderns. Since the outbreak of the War Miss Hess has been bolstering British courage by organizing and generously participating in the daily benefit concerts at London's National Gallery.

Myra Hess was born in Hampstead, near London, on February 25, 1890. She was the youngest of four children, whose parents carefully observed the Orthodox Jewish faith. Miss Hess recalls that her father taught Hebrew to his youngsters and familiarized them with the traditional melodies of the Sabbath service.

Myra Hess' musical education was not undertaken for the ordinary social reasons which

DAME MYRA HESS

prompt mothers to grind their daughters through the music mill. Rather, her parents observed that she displayed an unusual musical aptitude at a very early age: when Miss Hess was only about five years old she was able to play bits of tunes at the piano, improvising her own accompaniment, although she had never studied piano.

A local music teacher then began to give the eager youngster a weekly lesson in the rudiments of music and of piano. Before long both teacher and parents were impressed with her progress and love of music. Daily practice became a joy rather than a chore, and within two years the pupil had noticeably surpassed the teacher. When Miss Hess was seven she was sent, "a dark, earnest little girl with glossy braids," to the Guildhall School of Music. There she continued her studies under Julian Pascal and Robert Orlando Morgan. Meanwhile she had taken and passed with outstanding success the entrance examinations at Trinity College, London. At Guildhall she was awarded a gold medal for her pianistic proficiency.

In 1902 Miss Hess won a scholarship at the Royal Academy of Music, where she worked under Tobias Matthay for five years. Miss Hess responded immediately to the influence of her great teacher. She says: "The turning point in my career . . . came at the age of thirteen when I began lessons with Tobias Matthay, whom I consider the greatest inspirational teacher I know of. I immediately discovered that I had merely touched the fringe of musical art. I had a startling awakening to all the beauties of music of which I had not even dreamed. This association proved the most wonderful influence on my piano work and on my ideas concerning art. Matthay stressed, ever and always, the musical ideal as the only basis upon which to build a successful career. He taught me the habit of enjoying my music as music, and that was the chief factor in finally molding me into a pianist." A few years ago when it was claimed that Miss Hess had studied with instructors other than Matthay, Miss Hess quickly denied the rumor: "I like to remind people that I never have studied with any one else, rumors to the contrary notwithstanding." On graduation from the Royal Academy Miss Hess was made an Associate and Fellow.

Miss Hess made her debut in November 1907 when she appeared at Queen's Hall, London, as soloist in the Beethoven G Major Piano Concerto, played with the Philharmonic Orchestra under Sir Thomas Beecham '41. Critics acclaimed her at once. To quote one: "A new star has arisen in the musical world, whose light should burn brilliantly for many a year to come. . . I restrict myself to a consideration of her work judged by comparison with that of those who are now occupying a prominet position as executants. . . By that standard, Miss Hess must be placed in the front rank of the pianists of today. . . Miss Hess has the divine gift of music in her soul. . . To sound its [Beethoven Concerto in G Major] uttermost meaning is the gift of a few, and in that select circle Miss Myra Hess takes her stand."

Several engagements with other symphony orchestras followed but helped little in gaining for her the recognition which was her just due. There followed a period of study and incessant practice before recognition finally came. Miss Hess returned to the recital hall and awakened a hitherto lethargic audience into "discovering" her. Her complete success was confirmed by many recitals and engagements to appear with the chief London orchestras and chamber music groups.

Since then Miss Hess has made extensive concert tours in England and on the continent. She made her American debut in 1922, when she was acclaimed for her magnificent musicianship. On that occasion it is reported that the veteran critics, Henry Edward Krehbiel and Richard Aldrich, "sat with heads together from the opening number to the last encore, growling to each other in whispers." On the following day, however, favorable reviews appeared. Her playing has been described by one reviewer as "the absolute and indispensable superiority of true pianistic art over mere virtuosity." Some years later Lawrence Gilman proclaimed: "It is a pleasure and a privilege of an extraordinary kind that Miss Hess' playing affords. . . She was always a poet, sensitive and exquisite, finely touched and richly gifted, an interpreter of the sacerdotal kind—dedicated and absorbed and self-effacing. But she has ripened from a lyric poet to an epical one. There are splendors and immensities in her playing that were not evident before."

Although she possesses a superb technical equipment, the musicianship of Myra Hess is grounded upon a meticulous taste and an unerring artistic discrimination which never permit virtuosity to obtrude itself upon the unfailing distinction of her interpretations. She is especially noted for the excellence with which she plays the music of Bach, Mozart, Scarlatti, Beethoven, and Brahms. It has been said that Miss Hess introduced Bach as a composer of delightful music: "Bach, in Miss Hess' hands, is not a forbidding academician. . . His music sings with warmth and tenderness and gusto; here is lyricism whose discipline makes it more direct and cogent."

A short time before his death in 1936 King George V awarded Miss Hess the rank of Commander in the Order of the British Empire. The order, open to both men and women, was designed to honor civilians for outstanding war services. Although conductors, composers, and singers have, in the past, been thus royally honored, Miss Hess is the first instrumentalist to have received this distinction. Miss Hess received a still greater mark of royal favor in 1941 when she was made Dame Commander by King George VI '42 Her rank is now equivalent to the male Knight Commander and next to the top rank of Dame Grand Cross. The title was bestowed upon Miss Hess as a reward for her founding and organizing popular lunchtime concerts held in London's National Gallery. These concerts were begun to benefit British morale and to raise funds for needy musicians through the agency of the Musicians' Benevolent Association. At these concerts, to which admission is only a shilling, well known artists donate their services so that younger and lesser known musicians may be paid. Since the inauguration of the series Miss Hess has devoted both time and talents to the cause, appearing in a recital each week. On July 23, 1943 Miss Hess appeared in the one-thousandth concert in this series. On that occasion Miss Hess was personally congratulated for her "wonderful work" by the Queen of England. The music critic of the *Daily Telegraph* said of that occasion: "These National Gallery concerts have done much to familiarize the public with Mozart's chamber music. Moreover, no composer except perhaps Schumann makes so intimate an appeal as Miss Hess. The outcome was a celebration worthy of the great occasion."

In 1942 the gold medal of the Royal Philharmonic Society was awarded to Dame Myra. It was the second time in 130 years of the society's existence that a woman pianist had been so highly honored.

Unlike many of her colleagues who care more for easy popularity than artistic integrity, Dame Myra is keenly aware of the performer's responsibility to his audience. "Many people, on both sides of the Atlantic," she states, "think that the bulk of the concert-going public likes only so-called popular music and that success can only be won by playing programs which make a quick appeal, but my experience is entirely to the contrary. It is the great classics that are most appreciated and enjoyed everywhere. It is we artists who train the public. My experience here and abroad has convinced me that music is appreciated everywhere. Concert givers are to blame for whatever mediocre public tastes exist. The public puts its trust in the artist. He owes it to his audience to respect this trust."

Completely unassuming, Dame Myra is "a handsome, reposeful woman, with dark blue eyes." In normal times Dame Myra spends most of the year touring the world, but she spends summers at home, often at her cottage in Devonshire, swimming, driving, playing tennis, studying: "I do so love the quiet of the country, long walks, and motor trips. And my tennis, I love that most of all!" Though she is not superstitious in the least, she admitted, on the occasion of her thirteenth and "artistically happiest" tour of the United States, that thirteen has always been her lucky number.

For the most part Dame Myra dislikes jazz, terming it "just a lot of noise generally. Only once did I hear a jazz orchestra which I could listen to with some interest, and that was in Havana."

Apropos of Havana, Dame Myra remembers an amusing incident which she hopes will help disprove the naïve faith in the power of music over the "savage beast". "I was scheduled to appear at the *Gran Teatro Payret*, when I encountered a new sort of experience. The theatre is the only one available for concerts and shows, and when I came for rehearsal I was confronted by a cage of lions, who had just performed in a circus the night before and were awaiting removal. They were evidently anything but pleased with my music, if I was to judge by their continuous roaring, which was answered by other lions housed in the basement of the theatre. I have never played for such an ungrateful audience."

HEWITT, HENRY K(ENT) Feb. 11, 1887- United States Naval officer

Address: b. c/o Navy Department, Washington, D. C.; h. Hackensack, N. J.

When the United States invaded North Africa (November 1942) heavy Naval resistance was expected on the Atlantic coast off Casablanca. In charge of American Naval forces was Rear Admiral Henry K. Hewitt, who at once put his warships and dive bombers into action there and, in a violent and decisive battle, destroyed strong forces of the French Navy. When the French battleship *Jean Bart* in Casablanca harbor was also put out of action, the way was cleared for the entry of American land forces. For his victory at Casablanca, Hewitt was promoted by President Roosevelt '42 to the temporary rank of vice-admiral on November 20, 1942. Next, as commander of all the American Naval forces in the Mediterranean, he was in charge of Naval operations during the Allied landings in Sicily in July 1943 and at Salerno in September. All in all, he has made the most use of tank- and infantry-bearing ships, which are really an American innovation.

U. S. Navy

VICE-ADMIRAL HENRY K. HEWITT

Born in Hackensack, New Jersey (where he still makes his home) on February 11, 1887, Henry Kent Hewitt is the son of Robert Anderson and Mary (Kent) Hewitt. He was appointed to the Naval Academy from New Jersey in 1903. After his graduation (1906) Hewitt first saw service on the U. S. S. *Missouri* (1906-10), the U. S. S. *Connecticut* (1910-11), the U. S. S. *Flusser*, a destroyer (1911-12), and the U. S. S. *Florida* (1912-13) as watch and deck officer. From 1913 to 1916 he was an instructor in mathematics at the Naval Academy. His first command was on the U. S. S. *Eagle* (1916), a converted yacht employed on survey duty in the Atlantic. The following year he was transferred to the command of another converted yacht, the U. S. S. *Dorothea*.

Hewitt was married to Floride Louise Hunt of San Francisco, California on August 23, 1913. There are two daughters: Floride Hunt, who is married to Lieutenant LeRoy T. Taylor of the Navy, and Mary Kent Hewitt.

During the First World War Hewitt was in command of the destroyer U. S. S. *Cummings*, engaged in patrolling waters infested with enemy submarines and mines, and in escorting important convoys of troops and supplies through the war zone. For this command he was awarded the Navy Cross for distinguished service. Early in 1918 he was transferred to the command of the destroyer U. S. S. *Ludlow*.

He then went to the Naval Academy at Annapolis for duty in the Department of Electrical Engineering and Physics, during this time also serving as secretary-treasurer of the United States Naval Institute. From 1921 to 1923 he served as gunnery officer on the U. S. S. *Pennsylvania*, and he was then ordered to the Navy Department for duty in the Fleet Training Division. In 1926 he was appointed fleet gunnery officer and aide on the staff, Battleship Divisions, Battle Fleet; and the following year he had similar duties on the staff of the Commander of the Battle Fleet.

After completing the Naval War College course in 1929 Hewitt served for two years on its staff. He was commander of Destroyer Division Twelve, Battle Force, during 1931, and in 1932 he was appointed force operations officer on the staff of the commander of the Battle Force. From 1933 to 1936 he was head of the Department of Mathematics at the Naval Academy, Annapolis, Maryland.

He was then made commanding officer of the U. S. S. *Indianapolis*, and he served as such during President Roosevelt's cruise in her to South America in 1936. The following year he was ordered to duty as aide and chief of staff, Commander Cruisers Scouting Force. From July 1938 to June 1940 he was inspector of ordnance in charge of the Naval Ammunition Depot at Puget Sound, Washington, and he was commander of the Special Service Squadron on duty at the Canal Zone from July 1940 to October of that year, when he became commander of Cruiser Division Eight. On April 28, 1942, he took command of the Amphibious Forces in the Atlantic Fleet, and in July he was given the job of planning the Moroccan landings. It was he who designed the armored force landings, organized the transport divisions, trained 3,000 amphibious boat crews, and sent the huge force across the Atlantic to invade North Africa.

According to Admiral Hewitt's report, naval operations off Casablanca began early in the morning of November 7, 1942 when American forces came close to their landing sites. "Four destroyers moved in close to the shore, under orders not to fire until fired upon. Support boats were ordered to shoot at the shore searchlights if they were turned on, and that was the first thing that happened when batteries on both sides of the beaches were warned and started shooting." Hewitt's cruisers and destroyers were busy for some time trying to silence the French batteries, including those in the turret of the 35,000-ton *Jean Bart*. The

French destroyers moved out to the attack, but the American fleet opened fire and drove them back. By the time daylight came American dive bombers were active on both sides of Casablanca and Fedala.

"We lost all track of actual days through continuous fighting Sunday, Monday, and Tuesday," said Admiral Hewitt. The French came out again to attack, and again were driven back. French submarines were bombed in Casablanca Harbor. On Tuesday at noon two American destroyers engaged two French destroyers in combat, sinking one and badly damaging the other. "The *Jean Bart*, which was reported burned, opened up, shooting entirely too close for comfort, so we were forced to zigzag for safety." Thursday night Hewitt planned a grand assault, with both aerial and naval bombardment of the port at daybreak. But just before the order to fire was to be given, official word was received that an armistice was expected. Hewitt had special praise for the crews of the destroyers which conducted operations against Safi, where landings were difficult because of the lack of beaches beneath the cliffs.

In January 1943 Hewitt was back in the United States conferring with Secretary of the Navy Knox '40 and the President, who presented him with a Distinguished Service Medal. Then returning to duty, in June 1943 the Vice-Admiral accompanied Britain's King George VI '42 on his inspection tour of the combined British and American Fleet in the Mediterranean.

Never in all history had there been an amphibious operation like the one that took the Americans to Sicily the next month under Hewitt's command. A thousand ships were in the American western task force; the British, off to the east, had just about the same number; and all had set out from different ports, at different speeds, on different courses. (On the eve of the Sicilian invasion a forty-knot westerly gale had been so bad that Hewitt had considered ordering the landing craft to stay offshore, but then the storm abated enough to let every one of his ships reach the "transport area" just before the crucial hour.) The Naval force used to carry American troops ashore in the Allied invasion of Italy that followed in September was almost as spectacular; and again it was Hewitt who directed operations of the huge fleet. Working hand in hand with General Mark Clark '42 of the American 5th Army, he has helped to illustrate how dependent the Army is on the Navy.

In September 1943 Vice-Admiral Hewitt received a gold star in place of a second Distinguished Service Medal. "Chunky and sharp-featured," he is "'Navy' of the old school," noted for "a dignified reserve verging on pompousness." He insists that his poundage went up even while he was directing the historic African convoy.

HEYM, STEFAN (hīm) Apr. 10, 1913
Author

Address: b. c/o G. P. Putnam's Sons, 2 W. 45th St, New York City

"To the distinguished company of German writers in exile who maintain the nobler traditions of their nation and continue the good fight against those who are so horribly debasing all things German," Orville Prescott wrote, "a new name must be added. The name is that of Stefan Heym; and the book with which he makes his first appearance is *Hostages*, a book that unquestionably will be ranked with the finest novels of 1942, if not of a much longer period."

Goska

STEFAN HEYM

Stefan Heym was born in Chemnitz, Germany on April 10, 1913. He attended the Staats Gymnasium in Chemnitz, the Heinrich Schliemann Schule in Berlin, and the University of Berlin. Before the Nazi advent to power he had done some writing on liberal themes and had studied science, taking part of his work under Karl von Ossietsky, who later received the Nobel Peace Prize while he was in a Nazi concentration camp.

In 1933, when Hitler became Reichschancellor, Heym was still in school. It is reported, however, that his reputation as an anti-Nazi had already marked him for Nazi displeasure, and he found it necessary to leave the country. He returned to his birthplace, Chemnitz, and from there crossed the mountain, skiing part of the way, into Czechoslovakia. It is said that his father, a textile manufacturer, was held in Germany as hostage for a time and that he committed suicide upon his release.

From 1933 to 1935 Heym lived in Prague, earning a meager living through writing and

HEYM, STEFAN—*Continued*

odd jobs. In the latter year the University of Chicago offered graduate scholarships to two brilliant students whose education had been interrupted by the coming of National Socialism to Germany. Heym won one of these, but for a time it seemed that he would not be able to take advantage of it because he did not have the money for passage to the United States. Finally a group of Czech writers and journalists pooled their resources and amassed enough cash to get Heym to Chicago.

In 1936 Heym received his M. A. from the University of Chicago and in the next year he accepted the editorship of a small German anti-Nazi weekly (*Deutsches Volksecho*, published in New York) at a salary of $20 a week. Heym's duties ranged from those of chief editor to those of office boy; he wrote, gathered material, took care of all the technical details, and at times set the type himself. Even so, the publication failed after two years' existence, but not before Heym had a chance to aid in an exposé of the activities of the Nazi Bund in America. Heym's publishers report that his was the first paper to report Fritz Kuhn's embezzlement of his organization's funds. His findings were brought together in a pamphlet, *Nazis in the U. S. A.*, published in 1938. The year before, a dramatized version of Mark Twain's *Tom Sawyer,* in which Heym had collaborated with Hans Burger, had been produced in Vienna and Prague.

From 1939 until the publication of *Hostages* in 1942 Heym worked as a printing salesman, writing only in his leisure moments. Although he had not known English before coming to America in 1935, by this time he was sufficiently competent in his control of the language to write a book-length novel with considerable dialogue in fluent, idomatic English, praised for its literary style as well as for its content.

Hostages is a story of the Nazi occupation of Prague in terms of the experiences of a group of hostages who are to be shot for the death of a Nazi which was publicized as a murder but which the Nazi officials know to have been a suicide. The reviewers agreed on the whole that the book was hair-raising and a "terrifyingly effective narrative." A few of them felt that the characters did not emerge clearly; that the writing was uneven; and that it did not measure up to the standard of Koestler's '43 *Darkness at Noon,* which handled a similar situation. *Hostages* was found by them to have "the suspense and narrowing sense of pursuit of a top-notch detective story" and to be strongest on atmosphere. Although Diana Trilling, writing in *The Nation,* found the book for the most part "only a grand scale thriller," the New York *Times* reviewer, Orville Prescott, called it the best novel he had seen about life under the Nazis. "Compared with it," he writes, "most other novels about similar material seem like mere romantic thrillers or overly optimistic examples of wishful thinking. Even Anna Seghers' '42 *The Seventh Cross* . . . gives no better picture of the warped and twisted psychology of the Nazi tyrants or of the unswerving heroism of their victims; and as a work of fiction and as an example of storytelling, *Hostages* is vastly superior, tense, tautly constructed, swift, and terrible."

When the editors of G. P. Putnam's Sons read the manuscript of *Hostages* they recognized immediately its potentialities as a best seller, and the first printing was 25,000 copies, the largest printing the firm had ever made of a first novel. The story was sold to Paramount Pictures and was produced in the fall of 1943. It was also brought out in Yiddish, Portuguese, Spanish, and Swedish translations, and the Army purchased 50,000 copies of it for distribution to soldiers overseas.

In 1943 Heym was working on a second book, this time with an American background. Since the success of his book he has been in great demand for lectures, both because of his firsthand knowledge of the conditions he describes and because of his engaging personality. Heym speaks English fluently and with ease, although there is still a slight trace of a German accent. He is five feet nine inches tall, with receding blond hair, blue eyes, and sharply cut features. He is unmarried. In early March 1943 he entered the United States Army as a private.

HIGGINS, ANDREW J(ACKSON) Aug. 28, 1886- Shipbuilder

Address: b. 521 City Park Ave, New Orleans, La; h. 3105 Prytania St, New Orleans, La.

Andrew J. Higgins has been called a "shipyard Bunyan" and America's "number one boatbuilder, money-maker, and 'hoopla artist.'" Donald M. Nelson '41 has publicly expressed himself as wishing that the United States had "more men of the Higgins type participating to a greater extent in our production," and

Rear Admiral Land '41 has permitted himself "unreserved enthusiasm" in talking of the work of Higgins Industries. Writing in the *American Magazine,* Don Eddy confides that "many folks in New Orleans are serenely confident that Andrew Jackson Higgins is going to win the War. They are matter-of-fact about it. They consider it inevitable. Mr. Higgins will do it, they say, with boats—boats to carry tanks and planes and guns where the shooting is to be done." Higgins claims to be the world's largest manufacturer of motorboats, including power landing barges and PT's (fifty-knot patrol torpedo boats), and it was his landing boats and barges which spearheaded the assault on North Africa and Italy.

Andrew Jackson Higgins was born in Columbus, Nebraska on August 28, 1886, the son of John Gonigle and Anna Long (O'Connor) Higgins. The two sons and four daughters of Judge Higgins, a famous jurist and close friend of Grover Cleveland, Herman Deutsch relates, "have all achieved distinction in literature, medicine, dramatics, or engineering." Andrew was a shrewd businessman at the age of nine, legend has it, when he owned seven lawn mowers and ran the town's lawn-mowing business. His chief interest from the very earliest days, however, was in boats. He designed and built his first craft in the basement of his home when he was twelve; he built it larger than any window or door leading out of the basement, so that he had to knock out the bricks between two windows in order to get the boat out and then had to re-lay them.

Higgins attended the local elementary and high schools and then enrolled in Creighton University, where he studied from 1903 to 1906. Although he left college without taking his degree, one observer relates that "he can still recite passages of the *Anabasis* in the original Greek, and occasionally, when bringing a difficult task to a successful close, actually does so."

It was Higgins' interest in boats which led him into the lumber business. Until 1915 he worked for various lumber companies, and he owned and operated lumber mills in Alabama and in Mississippi. Then he moved to New Orleans (because his namesake Andrew Jackson is the local hero, he says), where he set himself up in business as a lumber broker and exporter. In 1922 he organized the Higgins Lumber and Export Company, of which he was the president, to export pine and rare woods of all kinds. "Within three years," according to *Fortune,* "he owned one of the largest fleets of sailing ships in the American registry." But his big schooner *Jacksonville* foundered in the hurricane of 1926, and the export-import business fell upon evil days. In 1930, therefore, he organized Higgins Industries, Inc. to build motorboats, tugs, and barges.

Higgins first began building boats for his lumber business: three- and four-masted schooners and five-masted brigantines to carry his Louisiana pine to South America and to bring back hard woods. Soon, too, he was making boats to sell: motorized work boats for oil drillers and for farmers who needed specially designed craft that could be used in shallow water and in swamps. Higgins had begun designing such boats because of navigation problems of his own involving the moving of logs in shallow waterways. These "tunnel boats" have propellers in a tunnel which is recessed into the hull.

ANDREW J. HIGGINS

Higgins built racing boats which broke the New Orleans to St. Louis record; he built boats that could "jump over logs and even small spits of land without injuring propeller or other vital organs." It is said that during prohibition days some of Higgins fast boats were bought by rum runners, but he outwitted them by designing faster boats for the Coast Guard. By 1935 his boat business was bigger than his lumber business. The *Eureka,* "a thirty-six-foot motorboat with a spoon-bill bow, a V midship section, and a semi-tunnel protest in the propeller so sturdy that it can rush right up on a beach without hurting itself," was favored by the Navies of the United States, Great Britain, and Finland. (Higgins was made Finland's New Orleans' consul for "services rendered.")

When American defense activity was quickened after War broke out in Europe in 1939, Higgins sold numerous small craft and gadgets to the Army and Navy. He made motor torpedo boats, landing boats, Coast Guard patrol boats, anti-submarine boats, tank carriers, and a special amphibious craft known as the *Crocodile.* The Higgins Industries also produced torpedo tubes, power gun turrets, sound communicating devices, mechanical steering devices, and other items along the same lines. The Higgins Industries has been awarded the Army and Navy "E" for distinguished industrial service.

As his orders increased, Higgins developed an assembly line method of building boats. Like automobiles, the boats move in a procession while each of 80,000 workers does one small task as the ship passes him. The assembly line passes down one of New Orleans' residential streets to the horror of some of the residents, but Higgins had the cooperation of the municipal authorities.

(Continued next page)

HIGGINS, ANDREW J.—*Continued*

As early as 1935 Higgins had designed a tank landing boat (or lighter), and early in 1941 the Navy, after seeing a working model which had been converted from another ship in two days and two nights, ordered fifty of them. They were finished at record speed and delivered, but despite their satisfactory performance the Navy later decided to buy a large number of modified Bureau of Ships lighters, giving Higgins a contract for only a few more. When a major program was announced in the spring of 1942 he was entirely ignored, and this time he insisted on having competitive tests made. "Thenceforth Higgins' design has been the basic design for all tank lighters," and the Truman '42 Committee has condemned the "negligence or willful misconduct on the part of the officers of the Bureau of Ships." General Eisenhower '42 sent a telegram to Higgins after the North African invasion saying: "Thank God for Higgins Industries' labor and management, which has given us landing boats with which to conduct our North African campaign. More power to you."

In May 1942 it was announced that Higgins' assembly line for boats was going to be enlarged to build 10,500-ton Liberty ships. The initial order, issued late in March 1942 by the Maritime Commission, was for 200 ships which were to start coming off the assembly line in November 1942 and to proceed at the rate of one a day. The shipyard where this large order was to be filled was still a swamp, and Higgins got busy immediately building the yards. By July the yard was still in the pile-driving stage, and the Maritime Commission called a halt to the building operations and canceled the contract for Liberty ships on the grounds that the steel necessary to complete the yard and to build the ships the next year was needed for that year's cannon. When the cancellation order came through Higgins immediately charged discrimination, and a Congressional investigation was ordered. Several members of the committee did issue a statement to the effect that there would have been enough steel if it had been properly divided between the existing yards and the proposed Higgins project at New Orleans, but the committee as a whole accepted the Maritime Commission's original explanation of the order. All Higgins protests and efforts to convince that Commission that the shortage of steel was due to a "black market" and that the A. F. of L. would finance the building of the yard if the Commission would allow him to go ahead failed to get the contract back. The A. F. of L., after investigation, has concluded that Eastern industrialists were instrumental in canceling the contract because they feared Higgins' post-War competition. The Truman Committee also investigated the affair, but for some reason its report was never published.

Higgins did not allow his failure with the Maritime Commission completely to discourage him, however. He announced that he would continue with his plan to canalize the Amazon and Orinoco River basins with special river boats, thus helping to open up a vast and hitherto inaccessible rubber supply. He also announced that if he could not build Liberty ships he would like to build cargo planes. In October 1942 President Roosevelt '42, on his tour of the United States war plants, spent more than an hour in the Higgins yards and was sufficiently impressed to direct the WPB, the Maritime Commission, and the Army to make some use of the abandoned shipyard in which ten million dollars and considerable steel had already been invested. As a result Higgins landed one of the biggest plane contracts in American history, one calling for the construction of 1,200 Curtis C-46 commando cargo planes. Higgins had brought to Washington a design for a monster cargo plane, a ten-engined, 150-ton, land-based air freighter, but the Army told him they would rather he made known and tested models. The planes he is making are two-engined transport planes, large enough to carry four jeeps and field artillery. Higgins formed a new corporation, the Higgins Aircraft Corporation, after the contract.

The new contract which Higgins signed with the Defense Plant Corporation totaled more than $200,000,000. Under terms of the lease Higgins was to pay the DPC $1 a year rental for the New Orleans property. (The original title was held by the Maritime Commission, which transferred it to the DPC.) Higgins said he would have no problem in assembling the 50,000 to 60,000 new workers he would need at the peak of his new construction project. He announced that he would hire eighty per cent women and forty per cent Negroes. "And that won't raise any race problem, as some people, even in New Orleans, have suggested," he added. "Negroes always have worked for Andrew J. Higgins and at the same rate of pay that white workers get for the same work. We are going to provide the same kind of housing for them that we will for the white workers, but the two groups will be separated, just as they are in the plants."

Under date of January 11, 1943 another $40,000,000 contract was awarded to Higgins Industries for the construction of a hundred new-type steel cargo ships, all required plant facilities being provided without government subsidy. ("We pledge to build these ships faster, better, and cheaper than previously conceived to be possible," promised Higgins and his workers. "Let this war be fought on foreign shores!") Furthermore, in August 1943 Higgins announced his expansion into the field of helicopter production. His total sales for that year promised to be well over $120,000,000, although in 1935 they had been only $400,000. Before the War, he says, "I was like a flower, more or less blushing unseen. I wasted a lot of my talents on the desert air."

Andrew J. Higgins was married on October 16, 1908 to Angéle Colsson. They have six children, four sons who are all executives in the Higgins firm (Edmond C., Andrew J., Frank O., and Roland C.) and two daughters, Angéle (Mrs. Charles S. Dana) and Dawn. Higgins has been described as a "big barrel-chested, slim-hipped, square faced, curly gray-haired, foghorn voiced" individual who "exercises a genius for picturesque profanity." He wears dark, tailored gabardine shirts, drinks bourbon almost exclusively, and "radiates belligerent authority. When President Roosevelt told Higgins he wanted to talk to him Higgins is said to have rapped back, 'That won't do at all, Mr. President. I want to talk to *you*.'"

According to *Fortune* Magazine, his "talents might be described with considerable accuracy as a cross between those of Huey Long and the industrial propensities of Henry Ford." He knows all his foremen personally, pretends to know every one of his thousands of workers, and talks to them frequently over a loudspeaker system. "Whenever there are some of these emergency calls asking for apparently the impossible," Higgins says, ". . . I have a loudspeaker system and the labor bands get up and play a few stirring pieces, including the *Star Spangled Banner*, and somebody gets up and makes a speech. When the tears are running down their eyes then I have a silver-tongued labor leader tell them what's expected of them. Then I ask them how they are going to do it . . . and we get along fine." "Don't relax," Higgins says to everybody—and they don't. Strict discipline is maintained, but there are also generous rewards for superior work, and Higgins himself works twice as hard as any of his men.

"The Boss," as his men call him, has always maintained a large research staff which in 1943 numbers around a hundred men and costs him nearly $1,000,000 a year. "They're nuts, they're geniuses," Higgins says of this staff. It has developed Higgins smoke generators, Higgins water purifiers, Higgins high-capacity turbine pumps, "Higite" ("the most powerful explosive of all time," whose formula has been turned over to the Chinese); and in June 1943 an amphibian bridge was patented by Higgins.

The end of the War will not depress Higgins at all. "It is my obligation and particular pleasure to see that these vast plants do not become barracks for bats," he says. He plans to manufacture planes, houses, transportation systems, packaged power. "There will even be a cure for dandruff," he says. "We will make everything from yo-yos to houses that can be bought a room at a time—verminproof, weatherproof; only thing you'll have to do is tie them down." Higgins and the Chinese Government have already negotiated a corporation to develop his transportation system on Chinese rivers.

Nor do prospects of greater government control depress him. "Suppose the national debt goes up to 400 billion dollars, so what? . . . With the trained people and technology of the United States we could build wonderful homes for the Negroes of the South, for the denizens of the East Side. Everybody could own a Higgins helicopter." "There's too much talk about a balanced budget," he goes on; "what we need is a balanced economy. . . And the day will come when people will be paid to get an education—and that would be a damn good investment. That last one outdoes Henry Wallace '40, eh?"

Higgins used to be anti-union, but that was long ago. Now the A. F. of L. has a closed shop in Higgins Industries, and Higgins expounds on the rights of labor publicly, was photographed with Mrs. Roosevelt '40 at the liberal Southern Conference for Human Welfare, and has plumped for a fourth term for the President. Whatever the future holds, he is not afraid of it. Although in 1942 Higgins' profits before taxes were around $8,000,000, he pays himself a salary of only $25,000 a year. It is, on the whole, easy to understand why he is not so popular with everyone as he is with his employees.

HILL, LISTER Dec. 29, 1894- United States Senator

Address: b. Senate Office Bldg, Washington, D. C.; h. 106 Gilmer Ave, Montgomery, Ala.

"The United States alone cannot prevent war. The United States must recognize that peace can be maintained only through a collective security system of nations, backed by armed forces. We would form a world organization of the United Nations strong enough to enforce order and righteous enough to administer justice among nations. We would build an enduring framework against aggression." So spoke Alabama's Senator Lister Hill, in explanation and defense of the Ball '43-Burton-Hatch-Hill resolution (dubbed B2H2 by Washington reporters), a post-War policy statement which in 1943 stirred up a minor tempest in Congress and in the press. Known as a non-political, sincere, and earnest effort (Senators Ball and Burton are Republicans; Hatch and Hill, Democrats) and widely hailed in many quarters as a good first step toward winning the peace, it was attacked by others as controversial and therefore detrimental to national unity, tending to divert attention from the vital current task of winning the War. The work of the four Senators nevertheless helped to pave the way for the revised Connally '41 resolution, passed by the Senate in November, which endorsed the principles of the Moscow Declaration.

Twice elected Democratic whip of the Senate, an office for which "tact, patience, good humor, and unfailing courtesy are required," Lister Hill's political course has been an unbelligerent one on the whole. In a sense he was born to his career, for his wealthy and numerous family "pretty well ran city politics" in Montgomery, Alabama. His father, however, is Dr. Luther Leonidas Hill, noted surgeon, still practicing and holding regular office hours in Montgomery at the age of eighty-one. Before the birth of his son on

LISTER HILL

December 29, 1894 he had studied in England under the great Lord Joseph Lister, and was shortly to become famous for performing the first successful suture of the heart in the United States' medical history. Small wonder, then, that he hoped to have his son follow in his footsteps, and signified his desire to make his boy a doctor by naming him Lister. "Unfortunately for Dr. Hill's plans, young Lister when he was thirteen went to the hospital to see his father remove a patient's jawbone. The operation was so ghastly that young Lister grew pale, ran out of the room and promptly became ill. After that, he had no desire to study medicine." (The other children of Dr. and Lilly [Lyons] Hill were apparently not so squeamish—two daughters are married to doctors, and Lister's younger brother, Luther Leonidas, Jr., practices surgery next door to his father on Perry Street in Montgomery.)

Though Lister did not inherit his father's love of medicine, he was a true Hill in academic brilliance. Educated at the Stark University School in Montgomery, from which he was graduated in 1911, he entered the University of Alabama at the age of sixteen. "In four years he had a Phi Beta Kappa key and his B. A. [1914] and Bachelor of Law [1915] degrees which normally require six years' study. It was an all-time record for the University." According to Malcolm Logan in the New York *Post*, "The law was his own idea, and his decision to enter politics grew out of an experience in his senior year at Alabama. The students decided to establish a student government association while he was there, and he became interested and helped draft the constitution. Then he determined to be the first president of the body. In those days before the First World War, women's suffrage was being hotly debated on the campuses. Hill decided that if he could get the vote of Alabama's coeds he would be elected, so during his campaign he came out for equal rights for women. He was elected by such a resounding majority that the university president, Dr. George H. Denny, advised him to go into politics when he left the campus, and Hill took his advice." Before putting his ideas into practice, however, he spent the summer of 1915 taking special courses at the University of Michigan, and then enrolled at Columbia University Law School. "In those days credits from Southern universities were superciliously regarded at Columbia, but Hill was such a brilliant student that, instead of being required to take the full course, he got a second L.L. B. in a year and a half [1916]."

Not a man to let the grass grow under his feet, Lister Hill hied himself to his native heath immediately upon his graduation and hung out his shingle in October 1916. In early 1917 he broke another record by being appointed president of the Montgomery Board of Education at the age of twenty-two, and he continued in that position until 1922. A year after he had begun practicing law, in August 1917, he enlisted as a private with the 17th United States Infantry, but he found the War almost over when he got to France. Although his formal military career ended in January 1919, at which time he was a 1st lieutenant in the 71st Infantry, he has always been deeply interested in military affairs.

Upon his return from France, Lister Hill picked up the threads of civilian life and practiced law for four years in Montgomery before his chance came to enter national politics. On August 14, 1923 he was elected to the Sixty-Eighth Congress (1923-25) as Representative from the 2nd Alabama district, to fill out the unexpired term of John R. Tyson, who had died. From that time on he held his office with extraordinary ease, being renominated and re-elected without opposition to the Sixty-Ninth through the Seventy-Fifth Congresses. It was during his third term as Representative, on February 20, 1928, that he was married to Henrietta Fontaine McCormick at Columbus, Georgia. The Hills have two children, Henrietta Fontaine and Lister Luther.

During his fourteen years in the House, Lister Hill's activities were hardly headline news. With years of campaigning and speaking in Congress he developed into "quite an orator in the somewhat ornate Southern style." This gift, along with his championship of TVA as chairman of the House Military Affairs Committee and his early reputation for being a bitter-end New Dealer, were his chief claims to fame.

It was in 1937, when Lister Hill announced his candidacy for the Democratic nomination for the Senate seat vacated by Justice Hugo Black '41, in opposition to Thomas Heflin, sixty-eight-year-old veteran politician, that he first became good copy. The nomination "meant a seven-year job because it tacitly carried with it a good chance for the nomination for the full term [the] next year." (Democratic nomination is equivalent to election in Alabama.) According to *Newsweek*, "Beneath the . . . hurly-burly lay two nationally significant social and political questions: whether the Ku Klux Klan's recent growth had progressed sufficiently to return Heflin—avowed spokesman of Klan policies—to the Senate;

and whether—despite the business recession and the administration's frequent setbacks since the Supreme Court plan's failure—the New Deal retained sufficient Southern strength to promote an ambitious disciple from the House."

The campaign was stormy, colorful, and marked by Southern oratory studded with invective on both sides. Hill was reputedly the candidate of Governor Bibb Graves' machine. (The Governor's wife, Dixie Graves, was keeping the Senate seat warm until the election decided things.) His chief liability was his "New Deal enthusiasm" which had led him to break with his Southern colleagues over wages and hours legislation, opposed by Southern industrialists because it would destroy the South's favorable wage differential and by Southern farmers because politicians had persuaded them that it would increase hired hands' pay and would cause sharp increases in the cost of manufactured commodities. "Consequently, Hill has found his greatest strength in President Roosevelt's '42 endorsement and in the rank and file of the industrial districts; his stiffest opposition in Alabama's agricultural counties. To oppose Hill on this basic question Birmingham 'big mules'—politico-industrial powers—turned reluctantly to Heflin." Nevertheless, "early in the election drive, the two Democratic factions assumed an odd alignment: neither side liked its own candidate—and the campaign became a contest to decide which man was least disliked." Toward the end of the campaign Heflin was struck a double blow—he was bogged down with lobar pneumonia and could not continue his campaign, and the Birmingham *News* and *Age-Herald*, which had at first ignored the fight, came out reluctantly for Hill: "It is with some regret that [we] feel obliged by duty . . . to oppose so pleasant a man as Tom Heflin. These newspapers would not have chosen Mr. Hill, but even had they liked him far less than they do, when the choice is limited to Hill and Heflin, God helping them, they could do no other than appeal to the voters not to cast lasting shame upon Alabama by choosing Heflin."

The voters must have heeded the warning, for Hill soon swelled the New Deal bloc in the Senate chamber, taking his seat in January 1938. (He polled 88,000 votes to Heflin's 48,000.) True to the prognostications of the Alabama crystal-gazers he was unopposed for renomination in May of that year and was elected for the Senate term, 1939 to 1945.

Lister Hill's role of "consistent New Dealer" did not change at once with his switch to the Senate, as demonstrated by the fact that it was he who nominated Roosevelt for a third term in 1940. (In September 1938 he had suggested Representative Bankhead '40 as the Democratic Presidential nominee.) During his early years in the Senate he concerned himself chiefly with the TVA, and in 1939 introduced a bill for a Federal business loan agency. His interest in military affairs manifested itself in January 1940 when he presented a bill for Army reserve injury benefits, and in August of that year when he backed the Burke '40-Wadsworth '43 draft bill.

In January 1941 Hill's popularity was shown by his election as Democratic whip, in which office, according to the late Senator Ham Lewis of Illinois, first Democratic whip, the incumbent "is not supposed to introduce bills lest they may divert attention from his floor duties." No such scruples deter Senator Hill, who has taken a very active part in initiating and supporting legislation. In various speeches on the floor of the Senate and to outside groups in 1941 he advocated speedy passage of the Lend-Lease Bill, stressed the danger of Western Hemisphere invasion, spoke for the defense program, urged the establishment of United States convoys and the repeal of the Neutrality Act, and defended the United States' role in the Finnish-U. S. S. R. war. In July 1941 he offered a military service extension bill to the Senate. After the United States' entrance into the War, in May 1942, he suggested that United Nations representatives be included in the proposed British Parliament-United States Congress conference. Malcolm Logan in the New York *Post* wrote the next year: "Not only has he introduced bills instead of merely rounding up the boys to vote for the Administration's measures, but he has been several jumps ahead of the Administration recently in matters pertaining to the conduct of the War. More than a year ago [1942], for example, he advocated a war strategy board headed by a single commander in chief of the Army and Navy, an idea which is still in advance of any Administration thought on the subject of unified command. Last September [1942], on his own account, he introduced the first comprehensive national service act in Congress [a manpower mobilization amendment to the draft act]. But President Roosevelt thought it was premature, and it died in committee."

In 1943 Hill sponsored, together with Senator Elbert D. Thomas '42, Democrat, of Utah, legislation to authorize $300,000,000 Federal aid to education annually: $200,000,000 to the states on a school attendance basis for payment of increased teachers' salaries and other unusual expenses during the War, and $100,000,000 as a permanent fund for allocation to states on a basis of financial need to equalize teachers' salaries and strengthen the school systems of the poorer states. *Time* points out that in spite of the widely recognized educational crisis, "observers held out little hope for the bill." Among others, "voices from richer states (California, Connecticut, Delaware, New York, Nevada)" opposed the bill. Also opposed were states' rights diehards, in spite of the fact that distribution of Federal funds was left to state authorities and Federal control of schools forbidden. According to *PM*, Hill's bill "would be particularly beneficial to Negroes of the South, where educational standards are lowest, because of a provision that children of racial minorities must receive their pro rata share of the Federal aid." In October Hill himself helped to put it out of the running indefinitely after an anti-discrimination amendment had been appended to it by its opponents.

In 1943 Lister Hill continued to support many of the Administration policies. He defended David Ginsburg, OPA general counsel, from the charge of draft-dodging, led the Administration fight for the National Resources Planning Board, opposed the compromise Ruml '43 tax collection plan, objected to the McKellar bill requiring Senate approval

HILL, LISTER—*Continued*

of virtually all Federal employees making $4,500 or more. He voted for continuing the loan powers of the Farm Security Administration, for $100,000,000 for soil conservation, for another appropriation for crop insurance, for money for the National Youth Administration, for extending the reciprocal trade agreements; against the prohibition of Commodity Credit Corporation funds to keep prices down and of Federal funds for a price rollback, against the abolition of the domestic branch of the OWI, against dismissing Watson, Dodd, and Lovett '43, and against the Taft and Wheeler bills to defer pre-War fathers. He also defended subsidies for farmers.

On the other hand, like his colleague, Senator Bankhead '43, whose voting record in 1943 was virtually identical with his, he voted against the Administration on many important issues. He voted for the Bankhead bill to defer farm workers from the draft; he voted for the Smith '41-Connally '41 anti-strike bill and, while in the position of acting majority leader, he voted for overriding the President's veto of the same bill; he voted for including farm-labor costs in parity; he opposed the $25,000 limit on salaries; and, perhaps most important of all, he voted with the Southern poll tax bloc to kill Federal soldier-vote legislation. He had previously ranged himself with the conservative Southern bloc in the Senate at least once: in November 1942, for example, he voted against limiting debate on the anti-poll tax bill. Yet in May 1943 when Negro President Edwin J. Barclay of Liberia visited the Senate he was escorted by Alabama's Lister Hill, while most Southern Senators were conspicuously absent from their seats.

The Ball-Burton-Hill-Hatch resolution, according to the *Herald Tribune*, "is a proposal obviously carefully and thoughtfully considered. . . The resolution would merely record the Senate as 'advising' that the 'United States take the initiative' in calling together representatives of our Allies 'for the purpose of forming an organization of the United Nations.' The kind of organization which the Senate would thus indorse would have 'specific and limited authority' to do five things only. These are: To 'assist in coordinating' all resources for the prosecution of the War; to establish temporary administrations for territories freed from the Axis; to administer relief and 'assistance in economic rehabilitation' where such may be needed; to 'establish procedures and machinery for peaceful settlement of disputes between nations,' and to 'provide for the assembly and maintenance of a United Nations' military force and to suppress by immediate use of such force any future attempt at military aggression.' That is all. There is no commitment to any specific plan or system. There is no commitment to anything except these very general objectives." Opposition to the measure came from several quarters, though largely from former isolationists. President Roosevelt "agreed with its principles but wouldn't want 'the *i*'s dotted and the *t*'s crossed' on any precise program now." Wendell Willkie '40 stole a march on the President by telegraphing congratulations to the four sponsors, adding, "Let me know if there is anything I can do to help." The President later gave his support to the bill.

In July 1943 Senators Hill, Ball, and Burton gave notice to the Senate that they would insist on prompt action on their proposal after the Congressional summer recess. "Senator Hill noted that many members of Congress held that we should wait for a time to set up machinery for settling international disputes. 'Wait for what?' he asked. 'For war weariness and disillusionment, economic rivalry, nationalistic feelings, and pressing domestic problems to make impossible the formation of an association of nations to secure an enduring peace? Wait for the return of that isolationism which allowed us to be swept into two terrible wars?' "

By October 1943 a post-War peace resolution (the Connally resolution) had actually been introduced in the Senate, drafted by a Foreign Relations subcommittee after the House passed the Fulbright '43 resolution; but Hill and his colleagues did not feel that this resolution was either strong or clear enough. Their fight for "strengthening and clarifying" amendments delayed the vote on the bill until after the Moscow Conference, when a modified Connally resolution with which the B2H2 group announced themselves satisfied was passed by a vote of eighty-five to five. The work of supporters of the Ball-Burton-Hill-Hatch resolution had not been wasted.

Senator Hill has been described as a man whose "air of dignity seems a bit self-conscious and [whose] collars are stiff, too." A hard worker, he gets to his office about 9:30 a. m., is always on the Senate floor when it is in session and usually leaves for home around 7 or 7:30 in the evening. Every letter that comes into his office must be answered before the day is over. Senator Hill is a Methodist and a member of the American Legion, and in 1941 he was elected Knight Commander of the Masonic Court of Honor.

Address: b. and h. United States Marine Hospital, Stapleton, Staten Island, New York City

One of the greatest advances in modern medical science, the discovery of a safe and painless method of childbirth, has been achieved by two young officers of the United States Public Health Service, Doctors Robert A. Hingson and Waldo B. Edwards. The announcement was made in the January 23, 1943 issue of the *Journal of the American Medical Association* after two years of experimentation during which it had been applied in nineteen medical schools and teaching hospitals in the United States, and had been endorsed by leading obstetricians of the country. The new method, called continuous caudal analgesia, is sensational and dramatic in its effect.

In an article in *Hygeia*, Dr. Morris Fishbein['40], former president of the American Medical Association, says: "During 1942, in more than a score of hospitals in the United States, 589 women gave birth to babies with none of the labor pangs or suffering traditionally associated with childbirth. These mothers rested comfortably in their beds, reading, sleeping, or receiving visitors until their time came. Then their babies were delivered normally, safely, but without travail. . . In the shortest confinement reported the baby was born within thirty-five minutes of the first injection. In the longest case, a mother having her first baby, the method was continued for thirty hours without the slightest pain to the mother, and without any danger to either mother or child."

Dr. Fishbein's *Hygeia* article tells us that continuous caudal analgesia is "a logical development based on step-by-step progress in medicine. The first step was the development of local anesthesia. Surgeons found that cocaine and drugs derived from it, injected around the nerves, would block pain impulses from reaching the brain, hence prevent their being felt. Then came spinal anesthesia, which was proved to be safe when properly applied by those trained in the method. Local anesthesia and spinal anesthesia induced among obstetricians the idea that the nerves leading from the uterus (in which the child grows before birth) could be blocked similarly.

"These nerves originate in the lowest portion of the spinal cord. In 1912 German doctors successfully used a local anesthetic in that region. Many American doctors took up the technique and developed it further. . . This method of 'single-blocking' only reduced the pangs of childbirth; it did not eliminate them. The prospective mother passed through a considerable number of hours of preliminary pains before the single-nerve-blocking injection was attempted toward the end of the labor period."

The next step toward the discovery of a safe and painless childbirth was made by Doctors Hingson and Southworth while they were working in general surgery at the Staten Island Marine Hospital. Combining the ideas of spinal anesthesia and caudal analgesia (which had been successfully used in surgery for forty years), Southworth and Hingson made a simple but radical and important step forward in the use of anesthetics in an operation for varicose veins on a Scottish merchant seaman. Hooking a tube on the needle, instead of removing the needle after the injection, as was the established procedure, they left the needle in, and so originated continuous caudal analgesia.

DR. ROBERT A. HINGSON

Dr. Hingson describes the discovery of painless childbirth as a combination of an idea, a technique, and an instrument. While continuing to work with Dr. Southworth in general surgery with the new anodyne, Hingson studied its potentialities as a painkiller in childbirth with Dr. Waldo B. Edwards, chief obstetrician in the Staten Island Hospital. "They made an exhaustive anatomical study of the caudal (the very base of the spine) region to determine where the needle should be inserted in order to block the nerves concerned in childbirth without placing the anesthetic in the spinal fluid or the spinal cord itself."

In January 1942 a "life and death" case impelled them to carry their studies into practice. The wife of a Coast Guardsman entered the hospital as a maternity case. Since she suffered from rheumatic heart disease, it was the opinion of medical men that the patient would not survive the pains of labor and that her heart condition would not permit an anesthesia for a Cesarian operation. The only hope of saving her life lay in the use of the new anodyne to free her from pain during the entire labor period. On January 6, 1942 the experiment was made by Doctors Hingson and Edwards. The mother lived, and a live baby was delivered. A safe and painless method of childbirth had been discovered.

"However," says Dr. Hingson, conscientiously wishing to give credit where it is due, "we never would have had the success we've had if the perfect instrument had not been designed." One of the dangers of the method during the experimental period was that of needle breakage. The need for a special needle was requested by the doctors (but without specifications on how it should be made) to several firms dealing in that line. The perfect instrument was designed by Oscar Schwidetzky['43], a Pole, working as an instrument-maker with the firm of Becton, Dickinson, and Company. Doctors Hingson and Edwards have had no breakage with this type of needle in over 400

DR. WALDO B. EDWARDS

cases. Special training in giving the new anodyne is required of anesthetists.

The combination of "idea, technique, and instrument" was complete. Prospective mothers the world over owe gratitude to the work of the four men responsible—Hingson, Edwards, Southworth, and the Pole, Schwidetzky. Hingson, the prime man in the discovery, was born in Anniston, Alabama, the son of Robert Andrew and Elloree Elizabeth (Haynes) Hingson. Of Scotch-Irish-English extraction, his family has lived in the South for more than 200 years; nine members saw service in the American Revolution and two in the Civil War. He became fascinated with the career of a physician at the age of five because of his reverence for the family physician, a "pillar-of-the-community" type of man. Their friendship began with young Robert holding the buggy reins while the doctor made his sick calls. During his boyhood his ambition was crystallized through the reading of biographies of eminent physicians given him by his doctor-friend.

"I had a tough job getting an education," says Dr. Hingson. "If it hadn't been for a scholarship I won on my graduation from the Calhoun County High School I could not have entered college." The scholarship gave him $100 in cash and the privilege of borrowing $1,000 from the Foundation. Entering the University of Alabama, he supported himself by waiting on table for his food, firing the furnace for his room, and doing secretarial work for his tuition. There was little time left for study but in 1935 he received his B. A. degree. Entering the University's School of Medicine, he won a two-year diploma in May 1936; his degree in medicine was obtained from Emory University's School of Medicine in 1938.

While at medical school he had supported himself by working as an orderly, as an X-Ray technician, and as a dietetics assistant. On visits to his Alabama home his old friend, the doctor, promoted the young medical student from the buggy reins to a position as observer in the sick rooms. "Watching him deliver little colored babies" aroused Hingson's interest in obstetrics, but opportunity for special training in anesthesia at the Mayo Clinic (1940-41) led to his specializing in that branch of his profession. He served his internship at the United States Marine Hospital on Staten Island, New York (1938-39) and he was commissioned assistant surgeon in the United States Public Health Service in June 1939. He saw service as a medical officer on the United States Coast Guard cutter *Campbell* on North Atlantic patrol in 1939.

Special training in anesthesia at the Mayo Clinic followed. In 1942 Hingson was commissioned a passed assistant surgeon and assigned to the Marine Hospital in Staten Island, where he was appointed in 1943 to the post of chief of anesthesia and gastroscopy. All experimental work in continuous caudal analgesia and its application to obstetrics has been conducted at the Marine Hospital.

Possessing a warm and sympathetic personality with the simplicity and charm of the Southerner, Hingson is adept in the art of his profession, more popularly called "the bedside manner." As an example, there is the story of his treatment of an old seaman who required a blood transfusion. The transfusion was made, and then the seaman was introduced to the donor, a beautiful young woman. Hingson explained in his soft Southern voice that the blood of one so young and beautiful would surely make him well again. "The psychological effect," said the observer, "probably had as much therapeutic value as the actual blood infusion." His associates at the hospital say that Hingson is a tireless and conscientious worker who possesses vision, courage, and a high degree of intelligence. It is not surprising that he has made his mark in the profession.

Hingson has light brown wavy hair, hazel eyes, is five feet ten, and weighs 180 pounds. His hobby is gardening, and for recreation he enjoys tennis, horseback riding, and football, the latter as "a fan now." While working at the Mayo Clinic he married (March 2, 1940) Gussie Dickson, the niece of his professor in pediatrics at medical school. At the time she was doing postgraduate work in dietetics at the Roanoke (Virginia) Hospital. Their son (born on May 28, 1942) is a "continuous-caudal-analgesia" baby. He was named Dickson James, the James for Dr. Hingson's brother, an Annapolis man now serving as a submarine captain in the Pacific. The Hingsons live in a two-story private house on the hospital grounds, government property.

Dr. Hingson is a member of the Baptist Church and a fellow of the Gorgas Medical Fraternity, University of Alabama (1935). His commission of passed assistant surgeon in the United States Public Health Service ranks with that of a 1st officer in the Navy and rates the same in pay. His published articles include: "Continuous Caudal Anesthesia in Obstetrics," *American Journal of Surgery* (September 1942); "Continuous Caudal Anesthesia," *American Journal of Sur-*

gery (October 1942); "Continuous Caudal Anesthesia During Labor and Delivery," *Anesthesia and Analgesia* (November-December 1942); "Continuous Caudal Analgesia in Obstetrics," *Journal of the American Medical Association* (January 23, 1943); "Continuous Caudal Analgesia in Surgery," *Annals of Surgery* (March 1943).

Dr. Waldo B. Edwards, co-discoverer with Hingson of the use of continuous caudal analgesia in obstetrics, was born on November 30, 1905 (Thanksgiving Day) in St. Louis, Missouri, the son of Dr. Thomas Burton and Nellie (Moorman) Edwards. On both sides of his family he is from old American stock of English-Scotch-Irish and Norman French ancestry. "An Edwards has served in every American war," says the Doctor. His great-grandfather migrated to the West. During his boyhood he lived in St. Louis, where his father practiced medicine. After graduation from a St. Louis high school he attended Washington University in the same city for one and one-half terms.

Edwards then entered Westminster College (Fulton, Missouri), where he obtained his B. A. degree in 1929. His degree in medicine was received from the University of Arkansas School of Medicine in 1934. "It was my Dad's wish," says Dr. Edwards, "that I should train as an obstetrician." To encourage him to work his father promised to give him as much as he earned until he was twenty-one—after that he was to be on his own. During his college days Edwards worked in machine shops, gravel pits, with construction gangs in road building, and on farms breaking in horses and harvesting crops. After graduation from medical school he interned at the Baptist Hospital in St. Louis.

In 1935 he entered the United States Public Health Service at El Reno, Oklahoma, at the United States Southwest Reformatory, as a second-year intern. In 1936 he was commissioned an assistant surgeon and assigned to the United States Marine Hospital, Louisville. In 1939 he rose to the rank of passed assistant surgeon and he was assigned to the United States Quarantine Station, Angel Island, California. Later he served as a medical officer in the patrol force in the Bering Sea, his station being Una, Alaska. The United States Marine Hospital at Pittsburgh was his next assignment. In 1940 he was appointed chief obstetrician in the Staten Island Marine Hospital.

Prior to Dr. Edward's connection, the Marine Hospital had had no more than four maternity cases a year. During 1942 the number increased to 300 cases. Though the hospital is open to the Mercantile Marine men and the Coast Guard, only the Coast Guardsmen's wives and the wives of staff physicians are admitted as maternity cases. At present Dr. Edwards has only two assistants in obstetrics, but the hospital is planning to increase his staff. The discoverers have not received any advancement in rank nor any financial or honorary award for their important contribution to medical science. And in addition to doing the added work that their discovery has made for them in the Marine Hospital they have traveled to distant parts of the United States to teach the technique to different hospitals and medical schools. The following are among those visited: Mayo Clinic, Rochester, Minnesota; Brook General Hospital, Fort Sam Houston, Texas; Walter Reed Hospital, Washington, D. C.; the Philadelphia Lying-In Hospital; and the Syracuse (New York) University College of Medicine.

The discoverers are almost the antitheses of one another. In contrast to the slow manner and sympathetically appealing personality of Hingson is Edwards' Midwestern breeziness and gusto. Though he denies vehemently having any regard for the humane aspects of the profession, Edwards admits he likes obstetrics because "I get great satisfaction from delivering a vigorous and normal child and in seeing a mother happy and not injured through the delivery." Then he quickly adds, lest you think him sentimental: "All of which is very satisfying to my ego." He is five feet, nine inches tall and weighs 195 pounds. His eyes are blue, and his silver gray hair (gray since his twenty-fifth year) emphasizes his florid complexion.

On Thanksgiving Day, November 26, 1931 Edwards was married to Lucille Koch, also from Missouri. They have three daughters: Starlin Ann, born in St. Louis on June 18, 1935; Patricia Lucille, born in Staten Island on June 18, 1940; and Joan Ellen, born in Staten Island on August 9, 1942. The new anodyne was used in the delivery of the youngest child. In speaking of the difference between the new technique and the old method, Mrs. Edwards says: "It was the difference between pain and suffering and no discomfort at all." The Edwards live in a private house on the hospital grounds.

Dr. Edwards' hobby is farming, and he hopes some day to retire to a farm he owns in Missouri. For recreation he plays bridge, poker, and softball—softball on the hospital grounds. He is a member of Kappa Alpha. Dr. Edwards shares credit as a collaborator with Dr. Hingson in all published works on the subject of their discovery. Further research in continuous caudal analgesia and in obstetrics are included in his plans for the future.

Dr. James L. Southworth, co-discoverer with Hingson of continuous caudal analgesia, though not connected with its application in childbirth, was born on July 11, 1913 in Siloam Springs, Arkansas. He is the son of J. W. and Beulah Ray (Stites) Southworth. On the advice of his professor in chemistry Southworth chose medicine for his career. From the University of Oklahoma he obtained a B. S. degree (1936) and in 1938 he received his M. D. from the same University. His internship was served with the Emergency Hospital in Washington, D. C. (1938-39). As a second-year intern he entered the United States Marine Hospital, Staten Island, and he was commissioned an assistant surgeon in the United States Public Health Service in June 1940. Twice he has seen service as a medical officer on a Coast Guard cutter: his first assignment came in January 1941 and the second shortly after Pearl Harbor.

Since his first experiment with Hingson in the use of continuous caudal analgesia in general surgery (April 1941), many more cases have been similarly treated. The Marine Hospital is extending use of the method for

DR. JAMES L. SOUTHWORTH

surgery of the lower extremities and is particularly interested in it as a method for cutting down war casualties. "It would seem," Dr. Southworth stated, "that this method is adaptable for use in the treatment of casualties both in civilian and military practice where it would be desirable to have a safe, prolonged analgesia (absence of sensibility to pain) during the transportation and the physical and roentgenologic examinations of the injured."

One anesthetist with several trained corpsmen or medical attendants could handle a large number of patients at one time, Dr. Southworth points out. It might be possible to give this anesthetic to some of the war wounded on the field and to transport them painlessly to a base for treatment, thus perhaps reducing the instances of shock. Southworth also emphasizes that the method might be valuable in preventing the delayed shock condition usually referred to as "crush syndrome." In the new method, "a needle is inserted in the lower portion of the spinal column. The physician is able to give injections of a painkilling chemical at thirty- or forty-minute intervals. The drug temporarily blocks the nerve pathways for pain below the level of the umbilicus but does not cause loss of muscular control or consciousness."

Dr. Southworth explains that the application of continuous caudal analgesia in child delivery is a more spectacular and dramatic discovery, and at the same time more valuable, because there is no other method known that can be successfully used to completely eliminate labor pains, while in general surgery there are many substitutes. In some instances in general surgery, however, it "has proved to be the anesthetic of choice" because of several advantages: "It is a safe procedure, the normal physiologic processes of the patient are little disturbed, and it can be prolonged as long as necessary."

Dr. Southworth is the serious type, less articulate than his co-workers, Hingson and Edwards. One would never guess from his quiet manner that his hobby is "hot music." (Not as a dancer, but as a collector of records.) Before the War curtailed their production Southworth had collected 500 records of "boogie woogie," swing, and other forms of "hot music." His favorite sport is tennis. He belongs to the Democratic Party and is a Protestant. He is five feet, nine inches tall and weighs 175 pounds. His hair is blond and wavy, his eyes blue. On February 29, 1936 he was married to Lois Ellen Gill. They have no children.

The Southworths live in a five-room apartment on the hospital grounds. Dr. Southworth's rank as an assistant surgeon rates with that of a 2nd lieutenant of the United States Navy, and the uniform of the United States Public Health Service officer which he wears consists of a navy blue blouse and trousers with the traditional brass buttons and gold braid. In collaboration with Dr. Hingson, Southworth has written "Continuous Caudal Analgesia," *Journal of Surgery* (October 1942) and "Continuous Caudal Analgesia in Surgery," *Annals of Surgery* (March 1943).

HIRSHFIELD, MORRIS Apr. 10, 1872- Artist

Address: h. 147 Bay 29th St, Brooklyn, N. Y.

One of the largest manufacturers of boudoir slippers in the United States until his retirement, Morris Hirshfield, at the age of sixty-five, became a painter. Although he is entirely self-taught, Hirshfield has achieved a retrospective exhibition at the Museum of Modern Art in New York City as a modern "primitive." Hirshfield never painted before 1937, but in his youth, in the small town in Russia-Poland where he was born on April 10, 1872, the son of Philip and Lena (Sarnet) Hirshfield, he began carving Biblical characters in wood at the age of twelve. Conspicuous among these was a noise-maker to be used in the Jewish *Purim* festivals at the synagogue. It was carved all over with figures, and the furor that this unique toy created, says Hirshfield, "was so great that the rabbi of that congregation was compelled to go to my father pleading that he hide my work of art in order that prayers could be rendered." At fourteen Hirshfield carved for the local synagogue a six-foot prayer-stand with two huge lions holding the Ten Commandments between them—the whole covered with gilt and paint. "Unless destroyed by the ravages of recent warfare," commented its creator, "it still holds its place of honor in the synagogue, for I have been told by kinfolk recently arrived from my home town that when they left it was still standing."

In 1890 the young man came to the United States where he began his career at eighteen as a worker in a woman's coat factory in New York City. He lived the normal life of a clothing worker, rose to be a dress manufacturer, and finally became a highly prosperous slipper manufacturer, owning the largest plant of its kind in New York City. In the course of the years he married (in 1897), and he and his wife, Henrietta Hirshfield, have three children, Kenneth, Hannah, and June—two of whom are married and have children themselves. "During all these years," says Hirshfield, "although busy manufacturing, I never quite stifled my strong urge to produce artistically . . . although I never quite actually managed to settle down to work on anything. I did turn out several inventions, however, patented in Washington."

Then in 1935 ill health forced Hirshfield's retirement from the slipper business. He was still active, however, and, "determined not to become a crotchety ward of his family," he turned once more to art—this time painting. In 1937 he bought colors and brushes, but, instead of buying canvases, he painted his first two pictures, *The Beach Girl* and *Angora Cat*, on top of paintings from his own walls, leaving one detail from each of the original paintings in his pictures. He worked in his bedroom, using his bureau as an easel—and still does. At the time, he told Sidney Janis later, he received little encouragement from his family. After two years of struggling with his art he was enabled "to reach the mark he had set for himself: to achieve a result he believed entirely literal, a precision 'better than the camera can do.' "

In 1939 Hirshfield took his first work for critical appraisal to the curator of paintings at the Brooklyn Museum, who sent him to a Manhattan gallery. It was there that Sidney Janis, a collector of modern paintings, an author of articles on modern art and a book on American primitive painting, and, most significant, a member of the Advisory Committee of the Museum of Modern Art, saw one of Hirshfield's paintings. At the moment Janis was on the hunt for artists to be included in the Museum's exhibition, *Unknown Americans,* which was under his auspices. He became interested in Hirshfield's work immediately and included his first two oils in the exhibition, which was held in 1939. Hirshfield was very happy, says Janis, that his pictures were shown in "such a grand place." In 1941 the Museum bought two of his paintings, *Girl in a Mirror* and *Tiger*. His work was shown at the San Francisco Museum of Art in 1941, at the Los Angeles Stendahl Galleries in the same year, and at New York's Marie Harriman Gallery in 1942. Some collectors began to buy his paintings. In 1943 the Museum of Modern Art held a retrospective exhibition of thirty of his pictures, his entire work to date. Janis provided comment on the paintings accompanied by, wrote Howard Devree, "photographs and criss-crossing threads leading from the text to the photographs to explain the simplicity of this primitive painting, in a highly complicated manner." Typical of Janis' comments are:

Hirschfield Exhibition
Museum of Modern Art

MORRIS HIRSHFIELD

"Contributing to the singular quality in Hirshfield's art are many extraordinary elements. Among them his occupational and racial backgrounds unconsciously play a vital role. In his paintings, for example, he may without intention represent the profile of a female figure in terms of a dressmaker's dummy or, reverting to the technique of the cutting room, draw the outlines of his main forms on separate papers and then fit and trace them, pattern-like, upon his canvas. Racial reminiscences are sometimes to be seen in the nature of his color, which corresponds to that of colors used in ceremonial objects, and in various motifs that are in effect transmuted Hebraic symbols.

"Hirshfield paints realism; not the realism of outer representation but that of the inner life of the individual. The memory-image and his fancy are persistent enough to infuse his pictures with a magical quality whereby they look real only to himself. The fascination for the observer lies elsewhere: in the very distance between the newly created world and that of everyday reality. Hirshfield believes passionately in his work."

Critics called all this "the hunting down of butterflies with the aid of caterpillar tractors." Emily Genauer in the New York *World-Telegram* found the pictures "the utterly untutored expressions of an apparently gentle soul with possibly more deeply felt artistic

HIRSHFIELD, MORRIS—*Continued*

aspirations than many of us, but with little gift for expressing them more than an instinctive (or occupationally developed) sense of design, and with less taste. In some of them, notably the landscapes, there are evident an ingratiating development of pattern and a rhythmic linear flow. In most of the others, principally nudes, there are chiefly a cast-iron rigidity of outline and a hard and ungracious use of color." Most critics found the show "interesting."

Hirshfield is a short, stocky man, "spry of step and with hair still a reddish blond." He has no recreation but painting—he draws from 9:00 in the morning until 7:00 or 8:00 at night. After each of his pictures is framed he takes it to the Brooklyn Museum where his friend, the curator, has it photographed. The Museum has a complete photographic record of Hirshfield's work to date with the exception of his first three pictures. Although his painting has been classified as "modern art," he believes it to be realistic and representational and thinks "modern art" is "crazy." Hirshfield's choice of subjects is varied, but animals and nude women predominate. He has never used a model. "How can I?" he asks. "If I paint a tiger, can I have a tiger pose for me? And I couldn't very well bring a nude woman in and paint her. It wouldn't look right."

HOOVER, HERBERT (CLARK) Aug. 10, 1874- Former President of the United States; engineer

Address: h. 623 Mirado Rd, Palo Alto, Calif.

Herbert Clark Hoover, thirty-first president of the United States, was born in West Branch, Iowa on August 10, 1874, the second son of Jesse Clark and Huldah Randall (Minthorn) Hoover, both Quakers. His father died when he was six, and when four years later his mother died it was financially impossible for the children to remain together. Sent to his uncle Allan Hoover, young Herbert lived on a farm in Iowa until he was eleven, when another uncle, Dr. John Minthorn, who was managing the business of a Quaker colony's land company in Newberg, Oregon, sent for him. For three years Hoover worked as a choreboy in Newberg. Then, taking advantage of a land boom, Minthorn merged the Quaker development with the Oregon Land Company and moved to Salem to take charge of the company's offices there. His nephew went along as office boy.

When he was sixteen young Hoover determined to become a mining engineer and to supplement the rather sketchy education he had received at the Quaker academy he began to study mathematics at night. He failed the entrance examinations for Leland Stanford, a new university which was to be opened at Palo Alto, California in the fall of 1891, but was given the opportunity to get special coaching there before it opened and to try again. This time he passed in everything but English composition—a subject in which he was "conditioned" until the very eve of graduation. He did particularly well in mathematics.

The seventeen-year-old boy had to earn all of his own expenses at college, but he had been working nearly all of his life and had a good head for business. At Leland Stanford he worked as a clerk; he handled and delivered the San Francisco papers on campus until he could hire another boy to do the legwork while he managed the enterprise and kept the books; he operated a laundry agency; and during the second semester of his freshman year his geology professor made him his part-time secretary, keeping him as his assistant the next summer while making a survey and typographical map of Arkansas. Soon the enterprising young student became one of the leaders of the "barbs" (the nonfraternity men), and in his junior year, after a summer spent working for the United States Geological Survey, he instituted a new system of student affairs management as treasurer of the student body. The next year, following a second profitable summer with the Survey, he took over the management of the Tuesday evening lectures and concerts as a money-making proposition.

At the end of May 1895 Hoover received his engineering degree from Leland Stanford. Though highly recommended by his professors in the Engineering Department he was unsuccessful in getting a mining engineer's job in Nevada City, and he worked there as a laborer until 1896, when he made his way to San Francisco to ask the famous Louis Janin for a position. Janin soon recognized the ability of the youngster whom he had hired as an office boy, and before the year was out Hoover was assistant to the superintendent of Janin's southwestern properties. When in 1897 a British firm with international interests asked his employer to send them an expert engineer who could introduce Californian methods into their Western Australian properties, Janin immediately thought of Hoover.

In Australia, too, Hoover's ability was quickly recognized, and he was soon appointed to the management of a new mine purchased on his recommendation. He had already passed from technical to highly administrative work, and his next opportunity offered an even larger scope for his organizational talents: he accepted a position as director of the Chinese department of mines and railways. Before going to China, however, Hoover returned to California to marry Lou Henry, who had been a fellow student at Stanford. The date was February 10, 1899—the very day his boat for China was sailing. The new Mrs. Hoover was in for a little excitement. They had not been in China long when the Boxer Rebellion broke out, and for weeks they were in besieged Tientsin—weeks during which Hoover helped to plan the defense of the city and also organized food and water supplies.

The Boxer Rebellion and the foreign occupation, in northeastern China killed the imperial Department of Mines, for which Hoover had been looking into the prospects of iron, copper, and lead, and the young engineer therefore accepted another job: getting the European bondholders in a Chinese mining enterprise to refinance the company. Successful, in December 1900 he was given the position of chief engineer for the reorganized company, with 25,000 workers under him. After the company had fallen under Belgian control he resigned, however, and became a partner in the important firm of Bewick, Moreing, and Company, consulting and managing engineers in London. By 1908 one of the best known consulting engineers in the world, "Boy Hoover" severed this connection, too, surrounded himself with a staff of young engineers, and began accepting commissions to reorganize and rehabilitate sick mining properties in almost every considerable mining field in the world. Soon his name could be found on the doors of office suites in San Francisco, New York, London, Melbourne, Shanghai, St. Petersburg, and Mandalay. By 1914 he was the managing director or chief consulting engineer in a score of mining companies, and a heavy investor of many of them. He was the author of *Principles of Mining* (1909) and, with his wife, of a translation of Agricola's mining treatise, *De Re Metallica* (1912). Not yet forty, the Quaker orphan was famous, respected, the father of two sons, Herbert, Jr., and Allan Henry, and already wealthy enough to retire.

But it was about time for his career to take a new turn. In the spring of 1914 he was in Europe to arrange for the participation of the various European Governments in the Panama-Pacific Exposition of 1915. By the time war was declared he was in London. Intending to remain in Europe until September, doing what he could to save his own European enterprises, he was asked by the American Ambassador to take over the organization of the frantic American exodus from Europe. So quietly and efficiently did he do this job that Page immediately thought of him in connection with the problem of the thousands of noncombatants in occupied areas, many of them homeless and nearly all of them hungry, and offered him the tremendous task of administering relief in these areas. After three days of indecision Hoover accepted, and immediately resigned from all his executive positions with industrial concerns. For the next five years he was to pay his own expenses, accepting no salary or fee from any source, although many of the mines in which he had invested his fortune were to prosper during the War.

Genthe

HERBERT HOOVER

As chairman of the Commission for Relief in Belgium from 1915 to 1919 Hoover fed 10,000,000 people in Belgium and northern France, which had been overrun by the German Armies. "Here," as Hoover himself puts it, "was a service that by common consent was a sort of semi-official state. It covered not alone food, but the economic life of these people. It operated within the lines of a hostile Army and moved through the blockade of a hostile Navy. In that service I moved constantly in and out behind the trenches on both sides of the conflict. . . My duties required that I meet constantly with high military and civil officials in England, Germany, France, and the neutral countries in contact with the invisible forces behind the War." It required great diplomacy. Many of the British, including Winston Churchill '42, believed that feeding people in the areas occupied by Germany hurt the Allied cause, and the Germans frequently arrested the members of Hoover's organization as spies. Lars Moën '41, writing in 1940, said that scores of Belgians told him that "perhaps the major" share of food sent from the United States to Belgium during the First World War had been diverted to feed the Germans, but this opinion is not generally shared.

By March 1917 Hoover realized that he would have to close up all American supervision over the work of the Relief Commission. He managed to get his Americans out of Belgium, and then, after the American declaration of war, returned to Washington to report on the food shortages of the Allied countries and to outline the fundamental measures which he believed necessary for securing a supply. In June Hoover became United States Food Administrator as well as a member of President Wilson's War Council, and the Food Administration—a kind of public company

HOOVER, HERBERT—*Continued*

authorized to buy crops, borrow money, and sell its purchases—was set up. An exponent of voluntary methods to get the public to avoid waste, he offered the people the motto "Food will win the War!" Soon a new verb, "to hooverize," came into the American vocabulary, and when the Armistice came in November 1918 the hooverized United States, prepared for a longer war, had a great food surplus.

Even after the Armistice the Allied blockade was kept tight around Germany. Hoover, in Europe again, devoted his efforts to getting it relaxed, partially because the American farmer would suffer if the surpluses of wheat and pork were not disposed of, and he was eventually successful. Made administrator of the economic restoration of Europe at the Peace Conference, he became, in the words of one writer, "what the poor little Russian Czar was reputed to be, what the vain and futile Kaiser imagined himself to be": an all-powerful dictator. He was fighting not only famine and plague, but "anarchy and bolshevism," while distributing some 20,000,000 tons of food to some 300,000,000 people, running a fleet of overseas ships, directing the railways and coal mines of Central Europe, reopening ports, canals, and other communications closed by war.

As an American member of the Supreme Economic Council, Hoover was also frequently consulted by the late President Wilson on other matters. He was one of those who strongly advised against recognition of the new Russian Government—recognition which he opposes to this day. He had counseled against Wilson's going to Europe and personally leading the American peace delegation, and as peace negotiations dragged on he became more and more disillusioned. In April 1919 he wrote the American President: ". . . if the Allies cannot be brought to adopt peace on the strength of the fourteen points, we should retire from Europe lock, stock, and barrel, and we should lend to the whole world our economic and moral strength, or the world will swim in a sea of misery and disaster worse than the dark ages." Lloyd George wrote later: "Mr. Hoover . . . ruffled French sensibilities. . . He had a surliness of mien and a peremptoriness of speech which provoked a negative answer to any request he made. . . Mr. Hoover has many great qualities, but tact is not one of them." Yet, according to John Maynard Keynes '41, "this complex personality . . . with his habitual air of a weary Titan . . . imported into the Councils of Paris . . . precisely that atmosphere of reality, knowledge, magnanimity, and disinterestedness which, if they had been found in other quarters as well, would have given us the Good Peace."

The final signing of the Versailles Treaty was on June 28, 1919, and in August of that same year, although the Inter-allied Economic Supreme Council was still in London discussing economic and financial cooperation between the Allies and the associates, Hoover departed for California and a rest. (Meanwhile the books of the Belgian Relief Commission had been closed, and the surplus of several million dollars used to establish the "C. R. B. Foundation," of which Hoover is director. One of the first things done through the Foundation was to rebuild Belgian universities.) By the time he arrived in the United States his prestige was such that it looked as though either the Democrats or Republicans would have to accept him as a Presidential candidate in the coming election. Hoover, who had at first implied that he supported principles rather than any political party and who had then flirted with the Democrats, announced shortly before the party conventions of 1920 that he had always been a Republican. This was probably a blunder, for the Republicans, relieved of the fear that their candidate might have to run against Hoover, promptly nominated Harding. Hoover had to be content with the post of Secretary of Commerce, formerly as inconspicuous as any in the Cabinet.

He set out to make an inconspicuous post important, and he did it. Reappointed by the late President Coolidge, in seven years he completely took over the Bureau of Mines and of Patents, the All-American High Commission, and the Radio Division. He worked closely with chambers of commerce, boards of trade, and trade associations, calling conferences that resulted in agreements for the reduction of varieties of manufactured articles and for the adoption of new standards.

Holding the theory that business should control itself with a minimum of governmental interference and a maximum of government assistance, he even called in representatives of the munitions industries to confer before the Geneva Disarmament Conference of 1925 so that the American representative to the conference might "be able to safeguard their interests." He strove particularly to assist the export trade, quarreling with the Romanians over oil, with the British over the rubber restriction question, with Brazil over her "coffee defense" policy. He sternly upheld the rights of American creditors. He clashed often with Secretary of Agriculture Wallace (Hoover opposed the McNary '40-Haugen plan, testified against the Norris plan for emergency farm relief) and had his finger in so many departmental pies that he was jokingly called "Secretary of Commerce and assistant secretary of every other department in the Government." Nor did he lose his reputation as the "great humanitarian." During the Russian famine of 1922 to 1923 he organized and directed the distribution of more than $75,000,000 worth of American food, and he administered relief again after the Mississippi flood of 1927. Never involved in any of the oil scandals of the Harding Administration, known as tireless, hard-working, and an organizer, he was the Republicans' obvious candidate for the Presidency by the time the 1928 convention rolled around. "Engineer, scientist, minister of mercy to the hungry, administrator, executive, statesman, beneficent American, kindly neighbor, wholesome human being"—that is what John L. McNab called him at the Kansas City Convention. The Republicans raised $9,433,604 for his Presidential campaign.

Quotes from Hoover's 1928 Presidential campaign were to ring unpleasantly in his ears long afterward, but they rang pleasantly and convincingly in the ears of the American people at the time. "The outlook of the world today is for the greatest era of commercial expansion in history." "We shall soon with the help of God be within sight of the day when poverty will be banished from this nation." "Were it not for sound governmental policies and wise leadership, employment conditions in America today would be similar to those existing in many other parts of the world." The author of *American Individualism* (1923) accused Al Smith, the Democratic candidate, of socialistic tendencies, and announced that the "fundamental contribution" of the Republican Party was resistance "to every attempt to inject the Government into business in competition with its citizens." He was elected President by the greatest majority in any national election up to that time and began his term on March 4, 1929 with a Congress overwhelmingly Republican in both branches. Twenty months later, the Congressional elections placed control of the legislature in the hands of his opponents.

What happened was, of course, the depression. But that was not all. It was generally agreed that the "Hoover honeymoon" with Congress was over by May 1929. The Federal Farm Board, which revised agricultural tariff rates upward and which was criticized on all sides, was one of the Administration's main troubles. The Hawley-Smoot tariff bill, opposed by nearly every leading economist in the country and described by Hoover himself only a few days before he signed it as vicious, extortionate, and obnoxious, was another. There was prohibition, too. Even before the crash there had been vague mumblings that perhaps the Great Engineer had been "oversold," that perhaps government in a democracy was not a cold science after all. And with the stock market collapse there were many to point out that when the Federal Reserve Bank of New York had attempted to stop the financial hysteria that brought it on, the Bank's efforts had been vetoed from Washington by a board on which Hoover's Secretary of the Treasury sat.

The real storm did not break until later, however. Hoover was reassuring, and at first many were ready to be assured. "The fundamental business of the country, that is, production and distribution of commodities, is on a sound and prosperous basis," he announced on October 25, 1929, and soon a series of conferences of labor, agricultural, and industrial leaders were being held at the White House to discuss "continued business progress." Important industrialists authorized the President to state "that they will not initiate movements for any wage reduction"; labor was pledged to negotiate for no wage increases. On December 14 Hoover declared that the volume of shopping reported to him indicated that the business of the country was "back to normal"; by January 22, 1930 he was sure that the "trend" of employment had changed upward; on March 8 he assured America that the crisis would be over in "sixty days"; and he had enough faith in this prophecy to confide to a group of businessmen who called on him that summer to do something drastic to relieve unemployment: "Gentlemen, you are six weeks too late. The crisis is over."

These statements were all, presumably, part of a campaign to "restore confidence." More concrete were a national unemployment commission set up to "coordinate" employment activities; the new Reconstruction Finance Corporation, which was given command of enormous funds for the support of existing corporations and industrial concerns; a $5,000,000 extra subsidy for the Merchant Marine to stimulate shipbuilding; a $118,000,000 appropriation for an emergency construction fund.

But such measures, which Hoover believed would eventually help relieve unemployment, hardly consoled the growing army of unemployed. The President vetoed the establishment of a national employment exchange system, although he had previously associated himself with a very similar recommendation, notably when he had been chairman of a conference on unemployment in 1921. In early 1931, still fearing any interference with the "normal process of recovery," he came out in opposition to governmental relief for famine sufferers in Arkansas, insisting that for a government to provide food and direct relief for human beings was a "dole," was "playing politics with human misery." The Red Cross should take care of the human beings, he insisted; governmental funds should go only for seeds and stock feed. He also opposed Federal grants-in-aid to the state governments for relief of the unemployed, although he finally signed a bill passed by Congress which urged the States to apply to the Federal Treasury only under compulsion of necessity. The Army's rout of the ragged Bonus Expeditionary Force in Washington in the summer of 1932 did not increase the President's popularity with most Americans, either. Perhaps the only act of Hoover's Administration almost universally praised was the action taken in June 1931, when the President reversed his policy toward America's debtors and announced a one-year moratorium on German reparations and Allied war debts. "Only tough old John Quincy Adams had gone out of the Presidency so thoroughly unpopular," *Time* Magazine remarks.

Franklin Delano Roosevelt '42 was overwhelmingly elected in November 1932, in spite of Hoover's prophecy that "grass will grow in the streets." In the spring of 1933 Hoover, back in private life, settled down in his California home, bitter that Roosevelt had abandoned the Economic Conference which he had called in London. Five months after leaving the White House he told a reporter: "What do I do all day? I get up fairly early and take a look from the Palo Alto place into the Santa Clara Valley. It's very pleasant. Then I have breakfast and a walk. Then I get my mail and read the newspapers. Then I take another look down the valley, thanking Providence I'm in California." He also fished, took long motor trips, helped to raise money for Stanford University (of which he is a trustee), and spent a great deal of time building up a library of 175,000 books and pamphlets which, now known as the Hoover Library of War, Revolution, and Peace, he presented to his Alma Mater. But he had not forgotten politics. In 1934 his *Challenge to Liberty* appeared, an attack on the New Deal in which he prophesied that "the penetration of Socialist methods even to a partial degree will demoralize the eco-

HOOVER, HERBERT—*Continued*

nomic system, the legislative bodies, and in fact the whole system of ordered Liberty. . . In the United States the reaction from such chaos will not be more Socialism but will be toward Fascism." In October 1935 George Creel wrote that the ex-President "regards himself as the titular head of the [Republican] Party, and under no circumstance will he consent to have himself pushed aside or minimized." In the 1936 Presidential campaign Hoover supported Alfred Landon.

Early in 1938 Hoover visited Europe—Belgium, France, Switzerland, Austria, Czechoslovakia, Germany, Poland, Finland, Estonia, Sweden. In Berlin he had a forty-minute talk with Hitler '42, luncheon with Göring '41 at Karin Hall. After his return to the United States there were a great number of speeches in which the ex-President spoke against collective security or attempts to enforce peace through measures that might lead us into war. "The face of Germany is turned more east [toward Russia] than toward Western Europe. The face of Japan is turned west into Asia," he assured people, and he remained just as reassuring after the outbreak of the Second World War. "The Allies can defend their empire," he told Roy Howard '40. "I do not see any possibility of their defeat. They will control the seas, and sit there until their enemies are exhausted." At that time he advocated that the American embargo be lifted only on "defensive" weapons, and that the Allies be denied "bombing planes or their ammunition." In 1939 he organized the Finnish Relief Fund to aid Finland, whose fight he felt was "a star illuminating the No Man's Land of civilization."

By the time of the 1940 Republican Convention Hoover controlled a block of delegates, and, according to David Lawrence '43, "the betting inside the New Deal [was] that an isolationist platform may well mean a Hoover-Lindbergh '41 ticket." In his speech at the Convention Hoover once again talked of "mismanagement" of government and of national defense, and blamed the "totalitarian liberals" of the New Deal for "stabilizing depression." It was reported that in private conversation about this time he was saying that he expected "peace" before November 1940. But, as he said in September 1940: "Free men can compete with any forced system if they will organize their intelligence. . . We could produce probably two-thirds of our present imports if we have to."

Early in 1941 Hoover participated in a conference at the home of William R. Castle, his close friend and his former Under-Secretary of State, on Congressional strategy against the Lend-Lease Bill. In May 1941, however, he announced that if we stayed out of the War we could give Britain more tools and take more risks in parting with them, whereas if we decided to invade Hitler's Europe it would take us "ten years" to build the ships and to train and equip the 5,000,000 men that we would need in addition to the British Army. He painted an even blacker picture of the results of intervention after Germany invaded Russia. In September 1941, announcing that "the dangers of ultimate totalitarian success are very much less than even ten weeks ago" because Germany and Russia were destroying one another, he asked: "What happens to the millions of enslaved people of Russia and to all Europe and to our own freedoms if we send our sons to win this war for Communism?" In November he stated his conviction that Hitler "cannot be overcome by armies, by starvation, or by air power," that we could not land an invasion force in Europe even after we spent the necessary time preparing it (five years or more), but that internal pressures would be sure to spell the doom of Nazism sooner or later, and he hinted that if we were reasonable and stayed out of the War "we might summon the whole world to reason."

Along with his pleas for non-intervention in the War, in the spring of 1940 Hoover also had begun making pleas for feeding starving Europe, and by August of that year the European Food Distribution Commission which he heads was conducting negotiations with Great Britain and Germany in an effort to supply food under American control to the conquered Netherlands, Belgium, Poland, and Norway. (The feeding would be financed by funds those nations had on deposit in America and guaranteed by Germany against German diversion.) Some food was supplied to Poland and later to Greece, but the British Government refused to countenance even a test feeding of 1,000,000 adults and 2,000,000 children in Belgium from soup kitchens under neutral supervision. It was noted that Belgium was being used by the Nazis as one of the most important bases for attack on Britain, that the Belgians were working under German direction, that the official German radio had warm words for the plan, and that "none of the statesmen of the little democracies who have escaped from Hitler's slavery are in favor of the Hoover plan." General Pershing, W. H. Chamberlin, and many others endorsed it, however, and Hoover's European representative announced that history would hold us responsible for the deaths of millions of innocent children.

About a month after Pearl Harbor Hoover's *America's First Crusade* was published. An historical critique of America's role at the Paris Peace Conference, it was not well received by most critics. Walter Millis' comment was typical: "Shallow criticism and singularly slipshod history . . . a repetition of the hackneyed and ill-sustained thesis that a selfless and idealistic America went to Paris in President Wilson's person, only to have the great principle of world reconstruction he had announced debased and defeated by the narrow-minded politicians of France and Britain, who had pretended to accept them . . . invaluable to the sleepless enemy generals of the psychological war."

The Problems of Lasting Peace, written with Hugh Gibson and published later in 1942, was much better received. Singling out the seven dynamic forces which in their opinion make for peace or wars, in this book the authors trace the influence of those forces down to 1914, apply them to the War and to the post-War periods, and from this foundation make general conclusions about the nature of a lasting peace. "Victory without vengeance," the nurturing of representative government and "economic freedom," the restoration of international trade to "free enterprise," total dissolution of the military establishments of enemy nations, extensive and instant relief to friend and foe alike—these were some of their prerequisites. They particularly advocated dividing peacemaking into two or three stages, first settling problems that won't brook delay, then allowing a time for "the rebuilding of political life and economic recovery," the victorious powers maintaining order in the world by military force until some final form of international cooperation is worked out.

The Problems of Lasting Peace was highly praised by commentators like George Sokolsky '41, Mark Sullivan, ex-Vice-President Dawes, and Arthur Krock '43, but Rebecca West, writing in the *Atlantic Monthly* in June 1943, created a major controversy among *Atlantic* readers by her caustic attack on it. "Doubtless as a compliment to the dove of peace, the book is written chiefly in pidgin English. . . If a Channel fog wrote history, it would have much the same attitude to time and the sequence of events. . . We have been bitten by the hand that fed us," she quipped, adding that "By a wholesale sacrifice of the exact truth [Hoover] tells the story of the last twenty years in Europe and the rise of Nazism and Fascism in such a way as to suggest that nobody is really deserving of blame. . ." The ex-President's good friend William Castle promptly answered, in a letter-to-the-editor: ". . . we should have been ashamed . . . of any American who wrote of Chamberlain in the terms she has used in writing of Mr. Hoover. . . Miss West makes it hard for the friends of England in America." At the same time writers like Dorothy Thompson '40, Herbert Agar, and Walter D. Edmonds '42 leaped to Miss West's defense; and in the ensuing melée Hoover's and Gibson's proposals got knocked around a bit more.

This free-for-all probably only brought Hoover and Gibson more readers for their series of articles published in *Collier's* in the fall of 1943, "New Approaches to a Lasting Peace," in which they developed the same ideas in further detail. During the "conditional peace" which they advocate the Axis nations would surrender their arms, demobilize their armies, return loot, repatriate prisoners. (They would, however, be given the right to resume trade and shipping, and pre-War commercial treaties would be restored!) Only afterward would Axis leaders be punished, reparations and debts settled, and final boundaries determined; and only after the complete disarmament of the Axis nations would any sort of permanent world institution be set up. In December 1943 Hoover added a foot-note to his peace plans in a newspaper interview in which he announced that the United States must obtain outright possession (or at least 999-year leases) on the military bases she had built all around the world.

But since Pearl Harbor the ex-President has been giving America advice on many other problems than those of the peace to come. He has continued to plead that the still-neutral countries be allowed to feed occupied Europe, continued to criticize the Roosevelt Administration, although in May 1942 he advocated giving Roosevelt "dictatorial economic powers." (He claims that "the economic measures necessary to win total war are just plain Fascist economics.") At the National Association of Manufacturers' convention in December 1942, where he was introduced with the comment that it was "a national calamity" that "his judgment and experience have not been made available to the nation in this emergency," and where he received more applause than any other speaker, he advocated single-headed administration of the war effort, the securing of maximum production by bringing the "high cost producer" into action and by doing away with "rules of labor that restrict or retard effort or output beyond those that safeguard health."

In January 1943 he wrote a series of articles "appraising the situation on the belligerent, occupied, and home fronts" which at his request was sent out to newspapers all over the country by the three major news services. In these he gave it as his opinion that the War would be one of "aggressive attrition and the creation of conditions favorable for major combat blows" for "some time to come," that the Axis Armies, "behind their control of the whole European seaboard and with their interior lines, greatly exceed any land force that the United Nations could bring to bear in 1943," and he suggested postponing "decisive blows against their central citadels." He also said that ships and manpower were both major bottlenecks and that our "excessive drafts of manpower from agriculture" were endangering food supplies to ourselves and our Allies. On February 8, 1943, testifying before the Senate Appropriations Subcommittee investigating manpower facilities, he once more emphasized these points, announcing that "time runs in our favor in this war" and "the knockout blow to Germany can be delivered more certainly in 1944 than in 1943," and suggesting that it was "doubtful wisdom" to enroll 11,000,000 men and women in the armed forces in the face of home front demands both in agriculture and in the oil and metal fields. The next day Senator Wheeler '40 urged that Hoover be appointed Food Administrator "to inspire more confidence in the Government," and Hoover's views received support from other quarters. According to the Democratic Floor Leader in the House of Representatives, however, " . . . for anyone to take the position 'time is our ally' is to take a position in favor of a negotiated peace—of unadulterated appeasement." Vice-President Wallace '40 and Senator Green charged that in October 1917 Hoover had also been urging "that we send to Europe food and munitions, but that we avoid dislocating our civilian life at home by sending men. His advice, if it had been followed, would have allowed Germany to win that war in the summer of 1918." Hoover claimed indignantly that the memorandum referred to had really been written in February 1917, two months before the United States entered the First World War, but Green checked his facts and replied that there were two such memoranda, this one dated October 27.

Hoover favored the Bankhead '43 bill to defer farm workers from the draft which was passed in February 1943, and in March he repeated his plea that the Army furlough men to help plant and harvest essential crops during the

HOOVER, HERBERT—*Continued*

summer. In other gloomy speeches on the food situation he advocated a policy of "controlled inflation": increases in prices to the farmer; the abolition of retail and wholesale price ceilings; the abandonment of government subsidies to either farmers, trades, or consumers; the exemption from rationing of nonessential foods. A single food administrator should also be appointed, he said. Continuing to picture the War as "a race of exhaustion between nations," with the ultimate victory going to the group that can outlast the other on the home front, on July 4 he announced that it would be best to assume that the War would last a minimum of four years more.

As an adviser of the Republican Post-War Advisory Council, Hoover has joined his voice to the chorus of those who praise "nationalism" and oppose not only any military alliance but any post-War international organization to enforce peace that involves the surrender of the slightest portion of America's "sovereignty." "The primary safety of America will always rest on our strong right arm," he has announced, and in an attempt to show that "nationalism" does not necessarily mean "isolationism" points out that even in our nationalist days we fought a war with Mexico (to "free" Texas and California), a war with Spain (to "free" Cuba and the Philippines), and the First World War (to establish the independence of nine new countries in Europe). "We are told that we have had no foreign policy. Perhaps future historians will say that America had the most powerful of foreign policies. That is, helping other nations to gain freedom and independence, and protecting those who have secured it." The ex-President says he approves of the Moscow Pact, however, "inasmuch as it adopts the transition period and other principles which I have advocated for the past eighteen months." In December 1943, when Alf Landon announced that it "would be disastrous for the country if the Republican Party endorsed the Moscow political arrangement," Hoover came to the rescue with the flat statement that Landon had not taken a position "in opposition to the Moscow Pact" any more than he himself had—that both of them were simply opposed to committing the Republican Party to advance pledges on peace settlements.

The ex-President was described by *Time* Magazine in 1939 as looking younger than when he left the White House. "He is red-faced, cherubic, and still wears the high collars, high shoes, the slightly pained and embarrassed smile that have always made him an easy target for cartoonists. His only political characteristic is that he smokes cigars. But he hates to be photographed doing it. He sometimes drinks a cocktail. . . He cannot tell a joke, seldom even laughs at a good one." He is a great reader of detective stories. Usually silent and incapable of small talk, "he can be, if he cares to arouse himself, a charming monologist and autocrat of the table. . . He can be quite a raconteur." Even his enemies agree that he has an encyclopedic memory, thinks with amazing rapidity on financial matters, has an "extraordinary talent for publicity," and that he does admirably a specific job where attention to detail is required—organizing standardized production, for example, or "inquiring into a specific problem whose contours have been defined." In 1943 his prestige—among non-Willkie '40 Republicans and even some Right-wing Democrats—is perhaps greater than at any time since he left the White House, described in press stories as a "broken man."

HOROWITZ, VLADIMIR Oct. 1, 1904-

Concert pianist

Address: b. Annie Friedberg Concert Management, 251 W. 57th St, New York City; h. Beverly Hills, Calif.

Were Vladimir Horowitz living in the Middle Ages he would have been suspected of being "possessed" by some extraordinary power, if not actually by the devil, for only a demon could have inspired such a combination of limitless technique, flawless finish, and serious musical understanding. When he made his New York debut in 1928 everyone in the audience rubbed his eyes and wondered if what he had heard was a reality.

Perhaps the most talked of pianist anywhere (his fame is in no way diminished by his being the son-in-law of Toscanini '42), Vladimir Horowitz began his study of music when he was six years old. He was spared the life of a child prodigy by the intelligent direction of his father. When he did begin his public career it was in revolution-torn Russia, where his art was appreciated but not often paid for, at least not with rubles. Sometimes his devoted but destitute countrymen paid him with flour and butter. By contrast, in 1943 Toscanini and Horowitz together broke all records by raising over $10,000,000 in United States War Bonds at a single concert.

Vladimir Horowitz (Gorowiz is the Russian spelling) was born on October 1, 1904

VLADIMIR HOROWITZ

in Kiev, Russia—on Musikalnyi Pereulok (Music Street). His father, Simeon Gorowiz, was a successful electrical engineer who provided his family with all the traditional comforts of a well-to-do Russian household. His mother, an excellent pianist, was a Conservatory graduate. It was probably from her that young Vladimir derived his initial interest in music, for as a child he manifested promise of great musical ability. He received his first lessons from his mother when he was six years old. When his rapid progress made necessary more specialized training than his mother alone could give him, he was sent to the Kiev Conservatory, where he studied piano with Felix Blumenfeld, who had been a pupil of Anton Rubinstein. At seventeen Horowitz was graduated from the Conservatory with very high honors.

Vladimir's father wisely opposed all attempts to exploit his son as a child prodigy; though he had intended Vladimir's formal education to last until he was twenty-four, the revolution prevented the fulfillment of his plans, for the family lost their home and money. Vladimir was even forced to part with his favorite companion, his piano.

In 1922 an uncle of Horowitz who was a music critic arranged for his nephew's first public appearance, which brought him immediate fame in his native land. During the next season he gave seventy concerts in Russia, twenty-three of them in Leningrad alone. In 1924 he opened his first European concert tour with an appearance at Berlin which was followed by concerts in Holland, Italy, France, Spain, Belgium, England. He appeared as soloist with the important orchestras in practically all the capitals of Europe, playing under nearly every great conductor—Wilhelm Furtwängler, Karl Muck '40, Bernardino Molinari, Pierre Monteux, Bruno Walter '42, and others. He gave command performances for many crowned heads and was received by the King and Queen of Belgium and by the royal family of Italy. Everywhere he went he created a sensation. Even the most jaded listeners sat up and took notice. In Berlin he was hailed as Busoni's successor. The noted French critic, Henri Prunières, stated: "He has all the technical gifts in addition to exquisite musical sensitiveness. He excels in the interpretation of Bach and Liszt, but he can play Ravel and Debussy to perfection . . . one can only compare him to Busoni and Paderewski. Those who heard Anton Rubinstein think they have rediscovered the Russian pianist in Horowitz."

After enjoying several seasons of uniformly successful European tours Horowitz decided to go to the United States. He made his American debut at Carnegie Hall in January 1928 when he played the Tschaikowsky B-Flat Minor Concerto with the New York Philharmonic, under Sir Thomas Beecham '41. On that occasion the slim, dark-eyed Russian electrified the audience with his phenomenal technique: he smashed out chords and spun filigree trills, played runs so rapidly that the eye could not perceive the movements of his fingers. The instrument was made to growl and purr, always under his command. Olin Downes '43 immediately proclaimed: "It has been years since a pianist created such a furor with an audience in this city. . . His treatment of the work was a whirlwind of virtuoso interpretation. Mr. Horowitz has amazing strength, irresistible youth, and temperament."

Within a short time the story of his success became almost commonplace: capacity audiences, ovations, "rave notices" are the invariables for him. The astonishing fact is that his very unusual achievement is not the result of drudgery. The "ninety-nine per cent perspiration" factor of genius does not apply at all to Horowitz: he rarely practices more than three or four hours a day, although he will *play* endlessly for his own enjoyment. "It is literally true," wrote an interviewer, "that he has not played an exercise, scale, or arpeggio since he was fifteen. Nature is the only source." When he is tour he does not practice at all. "When I practice I get worse", says Horowitz.

During the 1932 season in New York, Toscanini was presenting his now historic cycle of Beethoven concerts. The series was concluded with the *Emperor* concerto, for which Toscanini selected Horowitz as soloist. In order to rehearse the work with the Maestro, Horowitz went many times to Toscanini's hotel suite. Before long he became a great favorite of the Toscanini family and was invited to visit them the following summer, on their island villa on Lake Maggiore in Italy. One year later Horowitz was married to Wanda Toscanini, the younger daughter of the Maestro. The Horowitzes are the parents of Sonia, who mischievously mimics her famous grandfather, and who early displayed the signs of musical promise that one would naturally hope for in a child of her heritage.

In 1936, quite unexpectedly, Horowitz retired from public life, secluding himself in Switzerland and Paris for nearly two years. It is reported that he did not touch the keyboard during that time and gave no recitals until 1938, when he played at Zurich. Meanwhile, his protracted absence had given rise to ru-

HOROWITZ, VLADIMIR—*Continued*

mors that he had retired permanently. The official explanation of the absence was that it was necessitated by a delayed recovery from an appendectomy; but the rumors persisted until the moment the virtuoso himself resumed his recitals at Paris in 1939. The long period of inactivity had apparently no ill effect on his playing, for he returned a greater pianist than he had been before: new depths and a more comprehensive scope were discernible in his style.

When Horowitz returned to the United States in January 1940 after a five-year absence he was described by a New York *Sun* reporter as "a very different person from the too thin, hot-eyed young man" he had been previously. "Although he is still far from overweight, his face has lost the drawn and tired look . . . and he has obviously discovered how to be a reasonably happy human being while continuing to meet the demands imposed upon him by his gifts."

Horowitz admitted that his vacation was the first one he had had since he was eighteen. Of his long "intermission," Horowitz stated, "I think I really began to live then. For years I had been playing constantly. I gave nearly a hundred recitals on my last tour, you know. Actually, I played certain works so often that I couldn't hear them any more, even while my fingers were performing them." He said that throughout his convalescence he "had nothing to do except concentrate on music—music itself. . . I think I grew as an artist. At any rate, I think I have found new things in my music. I know that I have learned more than I could possibly have learned if I had been continuing the exhausting round of practicing, rushing for trains, and giving concerts month after month."

The loud and joyous reception with which he was welcomed at Carnegie Hall on January 31, 1940 threatened to last almost as long as the recital itself. The review of Samuel Chotzinoff '40 was typical of many. He stated: "It was apparent early in the evening that the art of the eminent pianist had undergone an important change since he was last heard here. Mr. Horowitz returns to us as extraordinary a virtuoso as he ever was, but a far greater artist. He is still a dazzling player with a command of the piano and a mastery of its resources that are uncanny even in these days of technical prowess. But he is now bent solely on expression, at whose service he has placed his prodigious pianistic equipment." Olin Downes remarked that he had "never heard two of the Chopin mazurkas played as subtly and poetically as they were played by Vladimir Horowitz."

The almost solitary example of adverse criticism is afforded by Virgil Thomson '40 who wrote recently: "If one had never heard before the works Mr. Horowitz played . . . one might easily have been convinced that Sebastian Bach was a musician of the Leopold Stokowski '41 type, that Brahms was a sort of flippant Gershwin who had worked in a high-class night club, and that Chopin was a gypsy violinist." Thomson claimed that Horowitz "is out to wow the public, and wow it he does. He makes a false accent or phrasing anywhere he thinks it will attract attention and every brilliant or rapid passage is executed with a huge crescendo or with a die-away effect." But at another time Thomson himself credited Horowitz with "speed, accuracy, power, control, and flamelike musicality" which, "applied to music of sober mien", "often overreach themselves and fall short of ultimate distinction," but, "vehicled in romantic works of passionate *envergure*", "go places."

Horowitz is a composer as well as a pianist. He has written many works—sonatas, quartets, ballads, études, waltzes, and songs. The songs include settings of poems by the well known Russian poets, Anna Achmatova and Alexander Bloch. None of his original works has been published as yet. Some time ago when he was asked for a reason for withholding his compositions from the public, he replied, "I am not yet satisfied with myself as a composer." In recent years, however, he has introduced to his listeners his *Fantasy* of themes from *Carmen*, a sparkling tour-de-force, and his own arrangement of the Saint-Saëns-Liszt *Danse Macabre*. The latter, according to the New York *Herald Tribune*, "is in every way the berries."

A pen portrait of the "Maestro's son-in-law" in *Esquire* presents him picturesquely, if somewhat informally. "His only fetish is a picture of Liszt. . . It is always beside his bed at night and on a table in the artist's room during every concert. Saturday night was always play night for him during his bachelor days: when in a capital, he would rush with friends from hot spot to hot spot of a Saturday evening, remaining only a few minutes in each, grinning with delight, never dancing, never drinking. . . His favorite diversion is going to the movies; he will go to any movie no matter how terrible it is, and sit contentedly through it." He enjoys mountain climbing, motoring, and swimming. "I could live very happily in the water," he claims, "provided I had a piano." His tastes run to the gaudy: he likes loud ties, luxurious bathrobes, bright-hued automobiles.

For several years after 1940 Horowitz, who is in the process of becoming an American citizen, made his home at Fieldston, New York, not far from the Riverdale stronghold of Toscanini. In 1943 his permanent home is in Beverly Hills, California. According to a recent article in *Newsweek*, Horowitz has become a confirmed hypochondriac who dislikes going out in public. The fact is that he is most at ease when in the company of a few close friends, one of whom was the late Sergei V. Rachmaninoff, whose death was a deep personal loss to Horowitz. Elsa Maxwell '43 states that "he has a wonderful sense of humor, is frank and simple, and, oddly enough, never wears his piano on his sleeve." Horowitz owns a large collection of snuff boxes assembled from all over the world, which he keeps neatly arranged in green silk-lined drawers.

Probably the most awkward moment in the public life of Horowitz occurred during a recital in Pompeilona, Spain. He relates: "When I arose after my first group the chair rose with me. My cutaway had caught in it. There was tremendous applause and laughter. When I realized what had happened I sat down, released my cutaway and then rose again, but, to my disappointment, the applause had stopped."

HOWE, JAMES WONG 1899(?)- Motion-picture cameraman

Address: b. c/o Warner Brothers' Pictures, Inc, Burbank, Calif.

At one time a professional fighter, ace Hollywood cameraman James Wong Howe has been fighting one way or another all of his life. As a member of a racial minority, he has had to cope with more difficulties than the average American, and his success today is therefore all the more amazing. Now, according to report, the highest paid cameraman in Hollywood, he says of his application of the prize-fighting technique to life: "You've got to duck. You've got to move fast. You've got to use your noodle." Using his "noodle," ducking, and moving fast are exactly what "Jimmy" (as all Hollywood knows him) has been doing ever since he was born shortly before the turn of the century in Kwangtun, China.

Mac Julian

JAMES WONG HOWE

At an early age, James Wong Howe was brought to Pasco, Washington, by his father, who had opened a successful restaurant there. The boy's name was originally Wong (his family name) Tung Jim, but a teacher with a passion for anglicization combined it with his father's name, Wong Howe, and evolved James Howe. Later, as a successful cameraman, Howe reinserted the Wong, in the middle, to give his name distinction.

The only Chinese boy in school, Jimmy thought the American children were grotesque, and they thought him laughable. He managed, however, to get along fairly well with the others, especially after they had learned that he was adept with his fists. In order to keep in good with them he even took to stealing things out of his father's grocery store (at the height of his affluence the elder Wong owned two restaurants, four hog ranches, a grocery store, a hardware store, and a great deal of real estate) and "in general running a bit wild." As a consequence, the boy was shipped off to a farm belonging to a family friend (formerly Mayor of Pasco) in Oregon, and he stayed there four years. He returned to Pasco upon learning that his father was dying.

Young Howe did not care much for the restaurant business, and he was so successful with his fists that he decided to make fighting his profession. He took boxing lessons in earnest when he was sixteen and developed

HOWE, JAMES WONG—*Continued*

into a moderately good fighter, fast on his feet and quick to avoid blows. For several years he fought throughout his native Northwest at from $10 to $100 a fight—whatever he could get. As the only Chinese pugilist in the United States he gained a certain amount of popularity. In 1916, however, he came to Southern California already tiring of the fighting racket. He had forgotten to duck a few times, and there had been other times when the other fellow had been just a little bit faster on his feet than the diminutive Chinese. Finally Howe quit the ring and got a job as bellhop at the Beverly Hills Hotel —a job that lasted just two weeks. He was fired for "smacking a Korean whose looks didn't appear quite right."

Out of a job and out of funds, Howe was wandering around the Plaza in Los Angeles one day when he happened on the making of a Mack Sennett comedy in a downtown park. The business interested him. A friend of his, an old-time fighter, who had obtained a job at the studios, urged young Howe to become a cameraman. He painted the picture of a cameraman's life in glowing terms and added his clinching argument: "And the pay is terrific. I only work twelve hours a day and I get ten bucks a week." This convinced Howe, and he decided to take up photography.

Howe's early struggles to establish himself in Hollywood as a cameraman were tremendous. His first step was to obtain a job with a commercial photographer. His next step was to hit the studios. He pulled some strings, annoyed many people, and finally got a job at Lasky's. Entitled a "camera assistant," he had the duty, primarily, of picking up the camera and moving it from place to place. Soon he was promoted to be assistant to Alvin Wyckoff, "one of the great cameramen of all time," at a $5 increase in salary.

Young Howe was curious and wanted to know what was inside the object he was carrying all over the lots. Besides, he cagily noted that the man who turned the crank of the apparatus made much more money than the one who carted it about. Howe promptly decided to get himself a camera and started to accumulate some savings by living on rice, scrimping on recreation, and generally pinching pennies. Meanwhile his trouble was living. His home was in Los Angeles, miles from the studio. Wyckoff was Cecil B. De Mille's '42 cameraman, and De Mille, according to Kyle Crichton in *Collier's*, "had no idea what short hours meant. They would shoot until eight at night, and then it was the work of the assistant cameraman to reload the cameras for the next day, clean them, fix up the still cameras, get the extra cameras in shape, and do a little dusting about the set. By this time it would be after midnight, and he would have missed the last car. De Mille was featuring Gloria Swanson in those days and he usually had a bedroom set which had come straight down from Marie Antoinette or Madame Pompadour. It was summertime, the weather was mild, and Jimmy slept every night in Gloria Swanson's bed."

Howe finally saved up enough money, bought himself a camera, and experimented with it. He played with lights, studied lenses and films, and finally reached the stage where he thought he was ready to get into big time. The then famous Mary Miles Minter was associated with his studios. The young cameraman walked up to her one day and asked her to pose for him. She graciously consented. When she saw the prints she was astounded; she had never been photographed so magnificently before. Upon finding out that Howe could do the same thing with a motion-picture camera as with a still camera, she immediately demanded that he be made her cameraman.

At the end of three years Howe was a full-fledged expert, since the camera at that time was much simpler than it is now. "They used the split screen and the double exposure, but otherwise there were not many tricks." Because there were reflections from the white shirt fronts of the leading men, they wore blue shirts which photographed white. The vogue has never died.

The greatest obstacle in Howe's pathway was racial discrimination. Because he was Chinese "he was supposed to stick in the background and accept a certain number of insults." He was also given the worst equipment on the lot. When, however, the producers saw what miracles he could work with his wreck of a camera, they gave him a contract. After that Howe was practically able to write his own ticket in the motion-picture industry.

Occasionally, however, there have been setbacks in Howe's professional career. The biggest of these occurred shortly after 1929, on Howe's return from a visit to his native China. During his absence sound had come into pictures—a whole new camera technique had developed around it, and Howe was out! He was unemployed for a year, spending the time in making a sound film for the Japanese market. "He put his own money into it, raised other money, and found when it was finished there was no place to show it. . . "Only two theatres in Japan were wired for sound." Meanwhile William Howard, a Fox director, was also in a difficult position. He was a good director, but out of favor with his company. They were paying him a large salary, but giving him no opportunity to do anything, and he seemed to be heading fast toward oblivion. Howard and the Chinese cameraman met and decided to combine their talents in experimenting with new techniques. Howard tried some new directorial methods. Howe "monkeyed around" with new lenses and new types of film. They produced a picture, *Transatlantic* (1931), which was a smash hit and put the two back "on top of the heap," where they have remained ever since.

Howe's job has not been an easy one. Working in a field notorious for the quantity and variety of its temperaments, he has occasionally been put in some very ticklish situations. From a technical standpoint alone motion pictures present difficulties which overwhelm lesser men. The photographer's task is "to make old stars young, plump stars thin, ordinary faces beautiful, and to convert terrible defects into gorgeous assets," and his work can either make or break the person he is photographing. So far Howe's work has "made" them. "Every woman," says Howe, "has irregular features. It's just a matter of trickery with lights, shadows, and the right accent of make-up to make them right. Full lips and expressive eyes, these are the all-important features. Nose, ears, chin, cheek bones, forehead, necks, shoulders, these do not matter so much." Each actress does, however, present an individual problem: in one it is freckles, in another a good or bad side of the face, or a nose which is difficult to photograph well.

In addition to coping with these technical problems, the cameraman must have the tact of an international diplomat. Howe has on occasion been fought over by two "prima donnas" of the screen, each wanting him to be her cameraman. At times like these Howe wisely practices Oriental inscrutability and keeps his mouth shut. He lets the producer make the choice, and then accepts whatever assignment is made. In this way he avoids arousing an antagonism which might lead to unpleasant results.

A situation of this sort presented itself just as Howe was preparing to leave for England to work with William Howard on *Fire over England* (1937). Marlene Dietrich was appearing in a Technicolor film, and photographers were having difficulty in getting good results. She asked Howe to see what he could do. Although he told her that he had a previous commitment, she asked him to try anyway, just for experimental purposes. Howe went over to the lots and made some test pictures of her which turned out to be excellent. Dietrich asked him to remain as head cameraman, but, as he had already told her, he was assigned to another picture. The next day, however, when he went to the station to entrain for the East, he found three thugs waiting to escort him. Certain they were kidnapping him, he made no resistance, but accompanied them silently. He was relieved when they escorted him to his train. William Howard had heard of his success with the Dietrich shots, and, wishing to avoid any possibility of Howe's being shanghaied into the job, had hired him a bodyguard!

Howe is not only supposed to be the highest-paid cameraman on the lots, he is also generally considered among the ten best. Some critics have even called him the finest cameraman in the world. He has not earned this distinction without hard work. As head cameraman, he no longer handles the camera personally, but acts as director of photography, supervising lighting and technical details of developing and printing. In order to maintain his status he is constantly on his toes; every time there is some new discovery in motion-picture photography Howe is the first to try it out. In addition, he himself has made several technical advances in the camera: he has invented a counter which accurately determines the number of feet of film exposed, and he has invented a silencer.

Among the screen beauties, present-day and past, who have passed in front of Howe's lens have been Marlene Dietrich, Vera Zorina '41, Myrna Loy, the Lane Sisters, Norma Shearer, Clara Bow, Estelle Taylor, Bessie Love, Merle Oberon '41, Colleen Moore, Pola Negri, Gloria Swanson, Joan Crawford, and Loretta Young. He has worked on a large number of pictures, including *Laugh Clown Laugh* (1928); *The Thin Man* (1934); *The Trail of the Lonesome Pine* (1936); *Algiers* (1938); *Dr. Ehrlich's Magic Bullet* and *Saturday's Children* (1940); and *The Strawberry Blonde* (1941). In the fall of 1943 his work as cameraman for *North Star* won him a great deal of favorable critical comment.

Disappointed at not being chosen to photograph *The Good Earth* (1937), Howe hopes some day to photograph and direct a documentary film of his own about the Chinese people. In February 1943 it was reported that he was returning to China to film the progress of the war against Japan for the Chinese and American Governments, but this project apparently did not come off.

Not quite five feet in height, Howe has straight dark hair and dark eyes. His strength of character makes up for his diminutive stature; affable, he nevertheless will take no joking about his work. "Hollywood's only Chinese cameraman," as he is inevitably known, has worked hard to reach the position he occupies and he is determined to stay there. As a raincheck, however, he owns a Hollywood restaurant called Ching Howe that is supposed to serve the best Chinese food in its locality.

HOYT, (EDWIN) PALMER Mar. 10, 1897- Former United States Government official; publisher

Address: b. Portland Oregonian, Portland, Ore; h. 3601 N. E. Maltby St, Portland, Ore.

When Palmer Hoyt, publisher-on-leave of the Portland *Oregonian*, arrived in Washington on June 20, 1943 to take over his new duties as director of the domestic branch of the OWI, he found to his nervous bewilderment that his job had been "half shot out from under him" while he was en route from the Pacific Coast. (The House of Representatives had voted only two days previously to abolish all OWI domestic operations. Senate action had not yet been taken.) Accustomed as wartime Washington is to the administrative tangles, red tape, and accumulated ill will which many a businessman has had to face in taking over a difficult and controversial government post, observers agreed that Hoyt's position was a new high in awkwardness. Ignoring as best he could both the controversy over whether he was to have a job or not and the complete demoralization of the 1,500 members of his office personnel, many of whom were out looking for new positions, he girded up his loins and called a press conference immediately, stating decisively what he thought the domestic policies of the OWI ought to be. "I didn't come down to take a job. I came down to do one, and if that isn't indicated, then I'll go back. But there's a job to be done, and somebody is going to

Photo-Art

PALMER HOYT

do it." The job remained open, but five months later the OWI was forced to announce the new director's resignation, effective January 1, 1944. Hoyt had come East on a six months' leave from his newspaper to fill the OWI post; and, despite efforts of government officials to retain him, the proprietors of the *Oregonian* refused to extend his leave. The post was filled by George W. Healy, managing editor of the New Orleans *Times-Picayune.*

Edwin Palmer Hoyt was born on March 10, 1897 in Roseville, Illinois, the son of Edwin Palmer and Annie Marie (Tendler) Hoyt. A member of the First World War generation, as a lad of twenty he was sent to France with the American Expeditionary Force, advancing from private to corporal, sergeant, and finally sergeant major. Upon his discharge in 1919 he returned to America and married Cecile de Vore on May 18, 1921 in Vancouver, Washington. In taking up the threads of civilian life again he decided to resume the formal education which had been interrupted by the War, and matriculated at the University of Oregon. He received his B. A. in 1923, the same year his first child, Edwin Palmer Hoyt, III, was born (August 5, 1923). In that year, too, he made his first connection with the newspaper field, for he became telegraph and sports editor of the *East Oregonian* in the town of Pendleton, Oregon. His chance at a big city paper came in 1926 when he started as a copy reader on the Portland *Oregonian,* working his way slowly up the ladder of success through the ranks of reporter (1928-29); drama editor (1929-31); night city editor (1931-32); executive news editor (1932-33); managing editor (1933-38); and, finally, publisher (1938). His second son, Charles Richard Hoyt, was born on January 17, 1928.

When Elmer Davis '40 announced on May 14, 1943 that Palmer Hoyt was to take over the position vacated by the resignation of Gardner Cowles, Jr. '43 (who left to "give attention to his several publications"—the Des Moines *Register* and *Tribune, Look* Magazine, the Minneapolis *Star-Journal*—as well as the Iowa Broadcasting Company) he expressed his pleasure at Hoyt's acceptance. "Mr. Hoyt is a competent, experienced newspaperman who enjoys the respect of newspapermen throughout the country. He knows particularly well the problems and point of view of the West, which should be helpful to all of us here in Washington." Gardner Cowles stated on the same occasion that the appointment of Hoyt "strengthens OWI and will be applauded by newspapermen everywhere."

As a matter of fact, Elmer Davis and the policies of the OWI had been under fire for some time before Palmer Hoyt appeared on the scene. Criticism of the OWI on the home front centered on the fear that the agency's "coordination" of government news "actually meant controlling the news output of the Government, to some degree controlling what the press, radio, and motion-picture companies do with it." Statements were made by Republicans and anti-New Deal Democrats that the OWI "mixed New Deal propaganda with the facts" in its releases on such controversial subjects as the Ruml '43 plan. Moreover it was alleged that the OWI had appointed some incompetent and possibly disloyal persons, paying them needlessly high salaries, and that Davis' offices had been used as a haven for draft dodgers. Elmer Davis replied to these charges by citing figures to prove that most of the OWI "draft dodgers" were deferred because of dependency; that most of the employees in question would have had a better chance of being declared essential in the positions they had dropped on newspapers and radio stations to do "jobs that somebody has to do in promotion of the war effort"; that the key men's salaries were much below their former incomes (his own had dropped from "about $53,000" with CBS to $12,000). Admitting "culpable negligence" in one instance of meddling with partisan domestic issues, Davis stated emphatically that such was neither the policy nor the common practice of the OWI.

Criticism of the efficiency of the organization was more widespread than any of the other accusations leveled against it. Prominent newspapermen (including Palmer Hoyt) and government leaders attacked OWI vigorously for its failure to coordinate news, for incomplete and inaccurate reporting, for occasional rash and ill-advised statements. The tremendous difficulties inherent in the job of working with seventeen different government agencies were not overlooked by all commentators, however, for when the House voted to abolish the domestic branch of the OWI, various individuals and groups (Dorothy Thompson '40, the New York *Times, PM,* the C. I. O., the War Agencies Correspondents' Association, etc.) sprang to its defense. OWI head Elmer Davis, who had been called a "Goebbels" by Representative Joe Starnes, emphatically denied this, stating that on the contrary he had no coercive powers and for this reason could not prevent conflicting and contradictory reports from percolating out to the press from various government agencies. The OWI has no authority to force administrators to agree on policies which have not been determined by a higher authority, nor can it influence what officials say personally to reporters. The New York *Times'* comment on the issue was typical: "This domestic organization, if it has made mistakes, has also done much useful work. It has succeeded in making available to the public much more information, much more promptly, about the activities of the military and naval services than was available before Mr. Davis went to work. It has eliminated a good deal of the duplication and confusion which formerly prevailed in the public announcements of the Government. It has checked, if not entirely dammed, the immense torrent of propaganda that once poured from competitive press agents in Washington."

This, then, was the situation which Palmer Hoyt faced upon his arrival in Washington. Himself a Republican, he could scarcely agree with the 160 Republican members of the House who had voted to discontinue the agency. At his first press conference he read from a prepared statement, apologizing for doing so but feeling that the delicate circumstances warranted caution. (It was assumed in Washington that his statement was designed among other things to influence the Senate to restore the appropriation for the domestic branch.) Hoyt made it clear that he had taken a six months' leave of absence from his paper "to do this job with the clear understanding that I would have full authority to operate the domestic branch according to the freest standards of the American Press." He promised to obtain the release of the fullest possible news as quickly as possible; to eschew all "propagandizing" and "pamphleteering"; to give the nation straight information about the War without sugarcoating; to yield to no political pressure and to serve no political interests. "This is an Office of War Information; it will deal only with information about the War."

Whether the Senate was impressed by Hoyt's speech or by the thought of the chaos that would result when each government agency got its press agents busy again, an appropriations subcommittee voted on June 29, 1943 to reverse the decision of the House and to give the domestic branch of the OWI $3,000,000 (of the $5,500,000 recommended by the budget bureau) in specially earmarked funds. Operations permitted to continue included the news bureau, program requirements, radio division, office of the director, the motion-picture bureau, and the special services bureau. (Hoyt promoted Philip Cohen to chief of the radio bureau.) This eliminated the publications bureau and field operations bureau. The OWI immediately (June 30) closed down its twelve regional and thirty-six branch offices throughout the country, feeling, quite rightly, that the Congressional conference committee would be unlikely to liberalize the appropriation. (The bill as finally passed cut the appropriation to $2,250,000 of the $8,800,000 originally requested by the division.)

On July 6 Hoyt showed the cooperative and diplomatic spirit in which he intended to attack the problems besetting him by announcing the appointment of nine newspaper editors and managing editors to act as an advisory committee, some of whom had been very critical of OWI policies. He stated that his office would "not issue any printed matter directly to the public," but would "work entirely through the accepted media of information." Commenting on the "pretty tight budget," he remarked that "some business firms spend $10,000,000 to tell the public what they are doing. Within the next ten days, therefore, we will discuss our problems with representatives of the press, radio, outdoor and card advertising, and with magazine and book publishers. We want to get their views on what we can do. Until we have completed these conversations we can't tell what OWI's program will be."

On July 13, after a day's meeting at which Roy A. Roberts, managing editor of the Kansas City *Star,* was elected chairman, the advisory committee issued a statement agreeing in the main with the principles outlined by Hoyt and questioning the wisdom of abolishing the field service. "The committee will request OWI to poll newspapers and radio stations as to their desire for the recreation of a field service operating under the same principles that govern OWI's Washington activities. The committee feels that a streamlined, effectively conducted field service might be more economical to the Government, in both money and man power, than for the separate agencies to employ information men of their own." In late July 1943 Hoyt was in Hollywood for conferences with the producer organizations on what type of help they wanted from the OWI and whom they wished to suggest to take over Lowell Mellett's '42 unsalaried job as chief of the domestic film bureau. (Mellett resigned on July 9.) On September 25 Hoyt announced that the opening would be filled by Stanton Griffis, chairman of the executive committee of Paramount Pictures. Griffis' appointment was calculated to win industry-wide approval and was one for which Hoyt had worked particularly hard. At the time of the announcement he made it clear that the OWI had no intentions of producing films of its own for domestic consumption—in competition with the film industry. "The already . . . effective cooperation between the Government and the film industry," he emphasized, "has made obvious a point I made some time ago when I said that there was no more need for the OWI to produce its own films than there was for it to publish its own newspaper." As outlined by Hoyt, Griffis' job included "supervising the relationships between the Government and the film industry, coordinating all Government requests to the industry, and channeling all the film industry's requests for information from the Government."

On September 13 Hoyt had also announced a reorganization of the domestic branch of the OWI which commentators had accepted as reflecting the desire of his agency to get more realistic war news from the Army and the Navy and to get it faster. According to Hoyt, "newsreel coverage is one of the keys to the log jams that block realistic war coverage. . . It is generally conceded that the highest home-front morale exists in Russia. If you have seen Russian motion pictures of the War as

HOYT, PALMER—*Continued*

they are shown to the Russian people you will remember that they take the War as it comes. The dead are part of the battle, and the maimed and wounded civilians tortured by the Nazis are shown, too, as well as the punishment given the Nazis for rape, loot, and murder. . . With the facilities this country has it can produce a play-by-play story of the War, with pictures, that will make each of us an eyewitness. The fact that it isn't being done is a responsibility, first of OWI, second of the military services, and third of the newspapers, motion pictures, and radio." On October 4 Hoyt asked for cooperation in showing the horrors of war now, leaving as few of them as possible for "pacifist circles" to pounce upon in after years and use as propaganda.

In November, in a symposium written for the University of Missouri School of Journalism, he added to this when he said: "Some of the practices indulged in [by the censors] under the excuse of military or naval security smack of the thought processes of the Middle Ages. . . The present system of the application of censorship filters down through military, naval, and civilian 'authorities,' many of whom are unfamiliar with the wartime censorship code; in fact, there are some cases where military censors have never heard of it." On November 29, in a press interview, he was able to report his progress in "obtaining the cooperation of the military authorities in releasing photographs of American soldiers killed in action and speeding up news coverage of military engagements, such as the recent landing on the Gilbert Islands."

Palmer Hoyt's energetic and practical approach to his job and his desire to work smoothly with industry were no surprise to his acquaintances. This "big, bass-mouthed man in the neat blue suit" (he is five feet nine and one-half inches tall, weighs 190 pounds, and is of "medium coloring") was hailed by *Time* as an "up-from-the-ranks editor and publisher" who is "patient, smart, and has a rare knack of making and keeping friends. . . Given half a chance, he could click." Though in August 1942 he said in a radio speech, "I wouldn't hire the Government as a reporter because it does a bad job of reporting the biggest story in history," he was quick to say upon his arrival in Washington that he thought OWI had improved a lot in the last year and that from where he sat he thought Washington reporters had done a fine job. During his own brief tenure he was able to cut off much of the Congressional criticism of the agency. Under his management the staff was whittled down from 1,300 to 495 employes "and continued to function efficiently." His task was threefold (in addition to his struggle with the Army and Navy over their news releases): "to issue news of the various war agencies and to compile over-all studies of controversial problems and to distribute war information of all kinds through the media of the press, radio, and the screen."

A representative of the West, a Baptist, a "lifelong Republican," Hoyt has not confined himself to journalism alone but has written a number of Western novels and over fifty published short stories. In his lighter moments he likes to fish and play golf. Like many a gregarious American he is an inveterate "joiner," holding such varied offices as director of the Portland Symphony Society, trustee of the Multnomah Amateur Athletic Club, member of the Portland Chamber of Commerce, president of the Oregon press conference, president of the Oregon Newspaper Publishers Association (1943-44) Rotarian, national president of Sigma Delta Chi (1941-43), and state chairman of the Oregon War Bond Staff (1941-43). He is also a member of Chi Psi, Sigma Upsilon, Hammer and Coffin, and of his local Breakfast, Golf, and University Clubs.

HUBBARD, BERNARD (ROSECRANS), FATHER Nov. 24, 1888- Priest; explorer; lecturer; writer; scientist

Address: b. University of Santa Clara, Santa Clara, Calif; Zitz Management, 415 Lexington Ave, New York City

"A Jesuit who is more often in parka and hip boots than in his cassock and who has become known to scientists, Eskimos, thousands of college students, and those interested in frontiers beyond their reach as the Glacier Priest" was the way the *Literary Digest* described Father Bernard Hubbard in 1935. Explorer, geologist, volcanologist, ichthyologist, oceanographer, paleontologist, the author of two books, and a photographer of note, half the year Father Hubbard is "the highest paid lecturer in the world," his lecture tours financing jaunts and swelling his Alaskan missions fund; the other half he is "a wanderer among treacherous craters and glaciers." And at all times he is the priest, "never missing his Mass though he may have mushed eighty-five miles in sixty-seven hours 'practically without sleep,' never failing to recite his breviary though he bends beneath his 100-pound pack." According to Father Talbot of the Jesuit weekly *America*: "He does not court danger for danger itself, not for the thrill of it, the dare or the love or the vanity of it. He faces danger because it has to be faced for a higher end." Since the United States entered the Second World War he has been serving in what he calls "a civilian advisory capacity" to the American armed forces and at the same time he has been carrying on his coast-to-coast lecture tours.

Bernard Rosecrans Hubbard was born in San Francisco, California on November 24, 1888, the son of George Milton and Katherine

Cornelia (Wilder) Hubbard. He "began his exploring career as a frail youth climbing California's Santa Cruz mountains with gun, camera, and dog." Dubbed "Fossil" Hubbard by classmates, from 1898 to 1906 he attended St. Ignatius College in San Francisco, from 1906 to 1908 the University of Santa Clara, and in 1908 he became a member of the Jesuit Order. He then taught science and literature in various Jesuit institutions for several years, "puttered about the geological formations of a half-dozen States," took his B. A. from the Jesuit Novitiate of Los Gatos in 1913 and his M. A. from Gonzaga University in Spokane, Washington in 1921. That same year he went to the University of Innsbruck, Austria, to complete his theological studies.

It was not the first time Father Hubbard had lived in Austria: before the First World War he had served as chaplain to Empress Zita for a time. But the reason he gives for having attended the University is, to say the least, original. "As a youngster I was always in great difficulty because I was always arguing with my teachers. I received indefinite leaves of absence, without diploma, from two far western universities. I decided the only way for me to succeed was to go somewhere where I didn't know the language well enough to argue, so I went to the University of Innsbruck and passed with flying colors. This is my academic background, and I don't brag about it." Remaining at the University for four years, Father Hubbard climbed nearly every precipitous peak in the Alps, and won the sobriquet of *Gletscher Pfarrer*, or "Glacier Priest."

Since 1926 Father Hubbard has headed the Geology Department of the University of Santa Clara, "one of the schools that did without my valuable services as a boy, and now proud of me." "I didn't have any professors to argue with," he says, "so I had to argue with my textbooks. I had geology, ethnology, paleontology, and all that. Finally the president of the University said: 'Why don't you write your own textbook?' That is what started me going to Alaska. I got two young fellows, built like I am, like a battleship. For that kind of work there are four qualifications you need: a strong back, a strong stomach, a dumb head, and a good guardian angel. We went to Alaska and for five years studied glaciers and for five more years we studied Afognak. Then we picked on the Eskimos for five years, and I was all ready for retirement from Santa Clara University when the big emergency broke. . ."

Who's Who in America makes Father Hubbard's contributions to science sound considerably more pretentious: "Scientific studies in volcanology, Aniakchak, 1931-32; in glacier geology, Alaska Peninsula and Southeastern Alaska; in meteorology and oceanography, Arctic Ocean north of Alaska and in islands of Bering Sea; in ethnology, tracing primitive Asiatic migration to North America; in anthropology, locating many buried village sites of stone-age man; in ichthyology, studies of salmon runs bound for Bering Sea; in paleontology, discovery of new genera fossil jurassic marine life in Katmai."

FATHER BERNARD HUBBARD

Either account, however, ignores the adventurous aspects of Father Hubbard's career. In one of his first annual trips to Alaska, in 1928, he and his party climbed the face of the Mendenhall Glacier, arriving three days and three nights later, nearly exhausted, at the end of the Taku Glacier. In this way the existence of a huge interior mass of ice several thousand miles in area in a hitherto unexplored region not far back of Juneau was confirmed, and much interesting data on glacial geology contributed to science. In 1931 they flew over Aniakchak, the Alaskan "moon crater," which had been giving the greatest eruption of modern times, and were nearly sucked into this volcano within a volcano, whose inaccessibility had previously prevented any complete record of its specimens and behavior from being made. They got motion pictures of Aniakchak, however. In the summer of 1934, making their way westward to the Aghileen Pinnacles, a group of weird needlelike peaks that had never before been explored or climbed, they discovered that the needles were merely part of the rim of a great volcanic crater even larger than Aniakchak. The party scaled the needles, obtaining important specimens and geological data as well as a motion picture of the climb.

Finally, in the spring of 1937, Father Hubbard set out on his longest Arctic trip—eighteen months. The winter of 1937 to 1938 was spent with the 190 Eskimo inhabitants of King Island, who are cut off from the mainland by the rigors of the Arctic winter from September to June. Movies of the natives' Ice Bowl football game were made, and Father Hubbard studied their language, habits, and health thoroughly before embarking in the spring of 1938 on a trip along Alaska's northern coast to the Canadian border.

In his last trip to Alaska before the outbreak of the Second World War, in the summer of 1939, Father Hubbard spent three weeks on one of the largest of the Alaskan volcanoes. According to the New York *Times*, it was after this expedition that he almost acquired a hatred

HUBBARD, FATHER BERNARD—*Cont.*
of one of the miracles of modern science. The three weeks had been weeks of "rain, cold, mist, and fog. Three weeks when their clothes were continually wet and they were soaked to the skin. They returned to their base camp—cold, wet, miserable, and nearly snow-blind. Father Hubbard turned on the radio and idly twirled the station dial. Finally, he tuned in to a program coming from a Hollywood night club—and almost threw away his short-wave receiver when he heard a lady songstress emoting with a then-popular tune called *With the Wind and the Rain in Your Hair.*"

Besides thousands of feet of film, two books, amply illustrated with photographs, were by-products of Father Hubbard's explorations. The first, *Mush, You Malemutes!* (1932), had previously been published in installments in the *Saturday Evening Post.* It was praised by the New York *Times* for its "rapid, vivid, economical style" and for its "interestingly told information about dogs and Eskimos, mushing and camping, life in Alaska in both winter and summer, glaciers, mountains, volcanoes, the animals and the flowers and trees of the region." The second, *Cradle of the Storms* (1935), was equally well received. The New York *Times* said: "Father Hubbard has a more complete equipment for his work than most explorers, for he sees beauty and wonder and humanity against this ample scientific background. His book is seasoned with rich philosophy and good humor." Said the *Literary Digest*: "There is no soft glamour about his North, such as one finds in the writings of Rockwell Kent '42, for instance. A peak of rock, capped by snow, is bait to his insatiable meteorological curiosity."

Since the outbreak of the Second World War, Father Hubbard's knowledge of Alaska has been in particular demand by the United States Army. In October 1940 he scored the rumors of a submarine in the Arctic regions, and as early as April 1941 he gave it as his opinion that an invasion of Alaska from Siberia would be "suicidal," since constant winds keep the Arctic from freezing over and blizzards cut down flying visibility. He still holds to this opinion. That same spring he prepared a report on his fourteen Alaskan expeditions for the Federal Government before leaving on a Coast Guard cutter to help the Army organize Alaskan defenses, and he offered to the Army his specially-bred Arctic dogs, raised by his brother on a ranch near Chico, California, for use in the defense of the far northern frontier. Other equipment developed by the glacier priest which was offered to the Army that year included alpaca-lined jackets of light, weather-proof fabric for use by soldiers, trousers of waterproof linen lined with kapok, fawnskin boots, and a stormproof tent that sleeps eight and weighs only nine pounds.

After Pearl Harbor, Father Hubbard says, "I naturally wanted to do everything that an American citizen can do who can not only sing

My country 'tis of thee,
Land where my fathers died,

but 'Land where my fathers and grandfathers died,' and so I put at the disposition of the armed forces over one million feet of standard sized film and over one hundred thousand still pictures of the terrain. Likewise, I turned over all the material or reports that were the only ones in existence on the Bering Sea weather, and all other tricky areas, trying to do my part." In the spring of 1942 he was on his way back to Alaska to serve in a civilian advisory capacity to the armed forces. "I have nothing official whatsoever," he says. "I am a member of the Jesuit Order. I am an auxiliary chaplain in the armed services. In that connection I have done quite a bit of traveling. Among other places, I have gone to Washington by their request, two or three times. But in all these adventures I have paid my own expenses and everything, and that means I am not official."

In September 1942, Father Hubbard says, "when I came back from my sixteenth consecutive year of work, Vice-Admiral Freeman, lately retired head of the 13th Naval District, and a submarine master in the First World War, approached me in a very delicate way, as the Navy always does, and said, 'Father, the boys go up to Alaska not afraid of the Japs but afraid of the country; I would like to have you go up to the stations and just teach them not to be afraid of the country.'" And to the Aleutians Father Hubbard went, in December 1942, but first he set out on another of his strenuous lecture tours in the United States. "When you've lived in the north, come in to find your camp torn up by bears and had to eat your dogs when you ran out of food, you don't mind a little thing like a lecture tour," he says.

Father Hubbard returned from the Aleutians in January 1943. He had gone down in submarines, flown in Army planes, and been on board mine-laying vessels, all the time serving as auxiliary chaplain and advisor on terrain, weather, clothing, and food. Then he promptly set out on another lecture tour. In his lectures and newspaper interviews since that time he has consistently praised the morale of American troops in Alaska and the Aleutians, saying that they are "probably better fed and clothed than ever before in their lives." But the main content of his speeches has been an attack on Russian neutrality toward Japan, and a plea that the United States concentrate more on the Pacific War and less on the European.

"We are focusing our attention on the Atlantic practically to the neglect of the Pacific," Father Hubbard says. He is not even sure that the European war is any of our business. "Whether we mixed up in somebody else's business in Europe remains to be seen. History will tell us that, but this war in the Pacific has been inevitable for a number of years." Yet the only way to attack successfully in the Aleutians is probably "to use the Soviet bases at the end of Kamchatka, near Vladivostok," and the Soviet Union remains neutral toward Japan. "We have declared war on all their enemies, but they have not declared war on all of ours. There is a neutrality and an understanding there, but when that neutrality between Japan and Soviet Russia kills our boys—they might be your sons or your husbands or your menfolk—if you want that to happen, O. K." Furthermore, when the Russians renewed to the Japanese the rights to the Kamchatka Fisheries, "they gave the Japs the key to the Aleutian Islands because they could attack any time they wanted to . . . they know what the weather will be and we don't know that." "There's nothing we can do about the treaty now," Father Hubbard admits. "But we do need an intelligent public opinion so we can exert a little pressure on Russia if we have to. If Russia would give us landing fields and be as friendly to us as she is to Japan we would be more convinced of her friendship to us." He says that the American soldiers up in the Aleutians "don't trust the neighbors on the other side of the Bering Sea any more than we do, and that is constantly brought out when you get a group of Soviet officers and our officers visiting up there."

Father Hubbard's ideas have, naturally, caused some controversy. In general, only those who are anxious to divert attention from the European theatre of war seem to agree with him. "If we thought Russia were so strong that she could fight simultaneously and successfully against both Germany and Japan, we might agree with Father Hubbard's argument," wrote an editorial writer in the Milwaukee *Journal*. "It would be wonderful if Russia could smash Japan as well as Germany. But how many Americans would like to see Russia fight all our battles for us? . . Few Americans, we believe, feel as Father Hubbard does." The Office of War Information denies that Russia made any weather reports available to Japan that are not also available to us.

Although his father was a native of Montreal, Father Hubbard is aggressively American. "Every time our boys bomb Kiska they have to fly a greater distance from Dutch Harbor than the R. A. F. does when they leave London to bomb the cities in Italy. The R. A. F. gets the headlines and our boys don't," he has said, for example. In acknowledging an introduction at the Executives' Club of Chicago he expressed his gratitude "for that very courteous and real American introduction to a group of real Americans," and shortly afterward in his speech he referred to New York City as a city "that used to belong to the United States." This brand of Americanism apparently does not make him unpopular with his lecture audiences, who also appreciate such witticisms as: "Maybe the higher strategy was to let them [the Japs] stay there [in the Aleutians] long enough to take out their first citizenship papers. Then they would go on relief and we wouldn't have to fight them." Father Hubbard is an extremely informal speaker who is not afraid to use words like "hell" and "lousy," who has reportedly referred to the Chinese as "Chinks," and whose favorite expression is "ants in their pants." ("We get ants in our pants to finish the War in two years," he has said. "The Chinese have that Oriental patience. They're in no hurry; they know they'll win in 200 years.") Another characteristic generally thought of as unpriestly is his enthusiasm for football: he had a lightweight team at Santa Clara.

From July to September 1943, Father Hubbard served as chaplain on Attu Island in the Aleutians. On his return he commenced a coast-to-coast lecture tour which will terminate in the spring of 1944. In order to undertake his war duties, Father Hubbard has been granted a leave of absence from Santa Clara University.

"I am in the middle 50's, weight over 216 pounds, but I am not concerned about that," Father Hubbard describes himself. "I have a Ph. D., which means 'phenomenally dumb' in so many cases, and I don't brag about that." Neither does he boast about the honorary D. Sc. degree presented to him by Marquette University in 1937. But he is at least a little proud of his Eskimo name, "Atatapoc," or "Big Father," and his American Indian name, "Mikwamiwigigik," or "Father Who Works in the Icy High-up." And he must be proud of the feeling that the American Army has for him.

HUGHES, PAUL (JOSEPH) May 1, 1916- Author; radio commentator

Address: b. Station KTAR, Heard Bldg, Phoenix, Ariz; h. 1668 E. Earll Dr, Phoenix, Ariz.

While he was working as night editor on the Ada (Oklahoma) *News*, twenty-seven-year-old Paul Hughes one night edited a story about Marshal Timoshenko's '41 defense of Rostov. The young newspaperman suddenly got an idea: "Here was one of the most stirring events of the War—and a man sitting anywhere in the world could write about it." So, although he had never witnessed a battle or even handled a rifle, had never been outside the United States, and never seen a Russian, Paul Hughes decided to write a modern historical novel about the war in Russia. *Retreat from Rostov* (September 1943), a "big, sprawling novel" which has been called an "attempt at the *War and Peace* of the Second World War" and which contains "enough melodrama to burn

PAUL HUGHES

out every fuse in Hollywood," centers about the thirty-four-day battle in which the Germans suffered their decisive defeat in November and December of 1941.

"I was born May 1, 1916 at Roff, Oklahoma and still regard myself as a thorough Oklahoman," writes Paul Hughes. "My father [Victor Hugo Hughes], who died in 1927, was a banker. My mother [Arlene Harbert Hughes], who reared four of us, is secretary to the manager of a cement factory in Oklahoma. In 1932 I was graduated from high school at Ada, Oklahoma. The next four years I alternated going to the teachers' college in Ada and working at a radio station, at a glass plant, and on the Canon City (Colorado) *Daily Record*." He received his B. A. degree from the college in 1936.

Hughes had always wanted to write—"for at least ten years I have been writing in almost every form of prose and verse"—but he had to make a living while collecting the usual rejection slips. After college, and two years as cub reporter, he became, between 1936 and 1940, program director of station KADA in Ada; news editor of KVOR, Colorado Springs; production manager of the Oklahoma Network, Oklahoma City; and night editor on the Ada *News*. In 1940 he married Marjorie Nell Higbie of Oklahoma City; they have a son, Paul Marcus.

"Outside the *News* office in the long night Paul would listen to the lonely wail of the locomotives that brought the world to Ada and took Ada to the state capital eighty-five miles away. Inside the *News* office Paul boiled down facts and figures about the teeming life of Oklahoma's oil wells, zinc and lead mines, cotton and alfalfa fields, stockyards and cement mills into daily news for Ada's readers." And from much farther away came news of the European War fronts, of events that impelled the night editor to write *Retreat from Rostov.*

After deciding to write his novel, Paul Hughes "read a lot of Tolstoi and all available news about the Russian Front. He studied standard works on Russia, combed encyclopedias. Since his book was to be a novel, Paul added to his research 'some understanding of human nature and a little imagination.'" Then he set to work and within eight months had written 586 pages. According to Random House, his publishers, the unsolicited manuscript was an accidental office discovery. "On a quiet afternoon last February [1943] one of our salesmen, who was in between selling trips, started through a stack of unsolicited manuscripts to see if there was anything there worth publishing. There almost never is. He was about half way through when he came upon a whopper of a script by an unknown writer. He read the first page and was about to start skimming through it when he found himself trapped. He was reading every word and reading fast. After he had tasted enough of it to be sure that it was all good, he rushed into the editorial department with as much of the manuscript as he could carry."

In November 1941 the Germans captured Rostov-on-the-Don, gateway to the Caucasus. A week later the Russians drove them out, inflicting the first defeat suffered by Hitler's ['42] armies. *Retreat from Rostov* tells the story of that invasion and defeat largely in terms of the individuals who took part in it—"a Russian rodeo of heroes, heroines, Nazi villains, foreign correspondents, soldiers, civilians." There is a Russian traitor, Colonel Blazonny, who from a secret cellar broadcasts information to the Germans until he is shot by the Russian heroine, "whose loveliness is matched only by her courage." There is Boris Guidenny, the tough guerrilla "who lives with danger and plays Cupid right through two armies." There is a philosophic German colonel and his Polish mistress; there is a temperamental musician who plays the great organ in Rostov Cathedral: when he touched the top note hidden machine guns began "electrically muttering"; their "nasty chatter of death" polished off fifty Nazis sitting in the front pew. And finally there are two young American correspondents: beautiful Bess Elsenberg, who "experienced a glorious, cold twitching throughout her body" when she heard Stalin's ['42] voice on the radio, and her red-headed lover, Roger Dameron. When they both get pretty desperately involved in the War, Bess disguises herself as a Russian peasant and saves Roger and herself from being shot as spies by sending her photograph to Timoshenko (whom she had once scoop-interviewed). He replied: "Please release Bess Elsenberg and her companion at once." "What could possibly stop us now?" exulted Bess. "Now I'll have something to tell my grandchildren," replied Roger.

Critical comment on *Retreat from Rostov* ranged from high praise to depreciation. Lewis Gannett ['41] wrote that "it holds your interest and your respect despite the splashes of melodrama from the first page to the last. . . He succeeds in making the living and genuinely melodramatic realities of war on the great, grim Russian Front seem real and to give the Rostov campaign its true place in the chronology of the War." Another reviewer said: "It is not his [Hughes'] fault that more ink than blood flows through the veins of his Germans, Russians, Czechs, and Poles." Wrote the *Yale Review*: "There is no unifying all-over conception, and there are no characters interesting in themselves. . . The result is an enormous and ardently ambitious failure . . . a super-thriller filled with clumsy dialogue and mechanical plotting." That Hughes has succeeded in overturning the old dogma that history cannot be written "at its moment of ebullition" was the opinion of the New York *Times* reviewer, who added: "*Retreat from Rostov* is the well-told tale of a triumph over the contemporary enemy and is in itself a triumph for the author. For to succeed in being as fresh as this morning's newspaper and yet to extract from the evaporating moment some meaning for tomorrow requires a perspective, a disciplined inner vision, that has nothing to do with time."

Hughes "has a genuine dramatic talent," the *Atlantic Monthly* critic wrote. "And if no Germans or Russians are exactly like the people in the book, we have the pleased feeling that they should be." "No one who opens this book," commented Sterling North '43, "will fail to read to the final page. And although it is not a perfect work of art, it is often effective in its very naïveté."

Since completing his first novel Paul Hughes has been news commentator and production manager of Station KTAR at Phoenix, Arizona. He has not entered active service because "I have suffered from asthma since I was seven years old and hence am not very useful in the present conflict. But I can keep a score." He is convinced that *Retreat from Rostov,* "whatever its imperfections, has shown me that the historical novel is my forte, and I intend to go on writing in that medium. My next book will be about the war in China. God willing, I will write four historical novels on the different theatres of the present War. My ambition is to make the historical novel a more comprehensive form." It is not difficult to understand why Hughes says his one hobby is writing.

HUMBERT, CROWN PRINCE OF ITALY Sept. 15, 1904-

Address: The Royal Palace, Naples, Italy

The Crown Prince of Italy, Prince Humbert, was born on September 15, 1904. The only son of Victor Emmanuel III '43 and of Queen Elena, he learned all the military arts and sciences as a boy, and then passed through the Royal Military Academy in Turin. G. A. Borgese describes him in his youth as "a handsome boy of decidedly Slavic features, with soft eyes and lips," and a decided streak of snobbishness. "He was very fussy about his nobility of blood, taking, however, more stock in the small percentage of Habsburg corpuscles he carried in his veins than in all the thousand-year-old Savoy lineage. It was perhaps this Viennese inclination that made him so fond of musical comedies. He would read the libretto carefully before the performance; and during it, in the purple penumbra of the royal box in a Turin theatre, would consult time and again a significant passage while listening to the music."

HUMBERT, CROWN PRINCE OF ITALY

Humbert was eighteen when his father invited Mussolini '42 to form a Cabinet. In the opinion of Borgese, Victor Emmanuel's worry over his son's future was responsible in no little measure for the King's surrender to Fascism. "He was sceptical as a King, but orthodox as a father"; and he feared that if he did not agree to the so-called March on Rome Mussolini would bring about his forced abdication and the shift of the ambitious Duke of Aosta to the throne. "What he thoroughly disliked was the idea that his son might be dispossessed of his job; perhaps realizing in his subconscious that the young man could never possibly fit in any other job."

Following the custom of promoting the sons of the monarch as rapidly as possible, the Crown Prince was now hurried through the military grades. "He was made a lieutenant at eighteen, a captain at twenty, a major at twenty-four, a colonel at twenty-six. . ." But Mussolini still had a trump up his sleeve. Humbert did not at first take too kindly to the Fascist interloper. In the words of Frederic Sondern, Jr.: "Bored by the provincial aristocracy, he started intrigues with friends in the Army and among the wealthy dissatisfied manufacturers in the north. Finally, after intercepting some messages between Humbert and Italo Balbo . . . Mussolini took action. He decreed that the Fascist Grand Council must approve the qualifications of the heir apparent before he mounts the throne, and that any change in laws of succession must also be approved by that body." For a while the Fascists also caused the rumor to circulate that the Crown Prince (who

HUMBERT, CROWN PRINCE OF ITALY—*Continued*

had been demoted to Prince of Piedmont) was effeminate.

Such methods were most effective. Gaetano Salvemini '43 and George La Piana, in *What to Do with Italy*, wrote of Prince Hubert before Mussolini's overthrow: "Knowing that his future depends upon his good behavior, he has done his best to appear the most docile and devoted of the Duce's subjects and has never let any occasion go by, birthdays and funerals, victories and triumphs, great speeches and the like, without immediately sending to the omnipotent Duce a telegram of congratulation or of condolence or of unlimited confidence and extravagant praise." In turn, the Fascist press was only too glad to emphasize the deeds of the royal family in favor of the Fascist regime; and Mussolini was quite willing to play second fiddle to the Prince on such occasions as that of his marriage to Princess Maria José of Belgium in January 1930. At the four-day wedding celebration, filled with "levees, court receptions, diplomatic soirées, parades, reviews, gala performances at the opera, and the richness of religious pomp," the Duce gave the order to have the royal march played everywhere in preference to the Fascist hymn. Antifascisti were also arrested all along the route of the royal train from Belgium to Italy, for Prince Humbert had narrowly escaped assassination at the hands of an exiled Italian not many weeks before.

During the '30's Crown Prince Humbert made more than one "good will" visit to foreign countries—in January 1936 to Great Britain as Italian delegate to the funeral of King George V; in October 1938, after the Munich Pact, to Hitler '42 at Berchtesgaden. The only score on which he apparently continued to oppose the Duce was on that of Army discipline and organization. Thomas Morgan "once saw him keep two militia officers at salute for a half hour. They had not sprung to attention and saluted him until he had forced them to it by an unmistakable glower. When given, he did not answer their salute until he was satisfied he had administered a lesson." As a stickler for military discipline it was probably to be expected, then, that the Prince would prefer the regular military salute to the Fascist salute. ("Why do they not all salute like the Army?" he asked Mussolini at a review some years before the outbreak of the Second World War, according to Morgan. "Highness," was the reply, "the Fascist salute is as ancient as Rome itself." "So is a chariot, but I would hate to fight a tank with one," the Prince was quoted as answering.) Humbert's disgust at the inefficiency of the various military organizations during the maneuvers of 1939 was also quite natural. Afterward, it is said, he called his staff officers together, and at a private meeting it was decided that the influence of political officers in the Army must be eliminated.

After the beginning of the Second World War, Prince Humbert, who had previously served as inspector general of infantry, was placed by Mussolini in command of Italy's Northern Army in the Alpine frontier region, with the rank of Army corps general. In May 1940, however, he visited the Pope (from whose predecessor he had received the decoration of the Supreme Order of Christ) to assure him of his loyal devotion as a son of the Church and of his hopes for the peace of the world. Stories of his secret anti-Fascism had been appearing periodically in the conservative British press for many years, and this episode was interpreted as confirming them. As late as June 11, 1940, the day after Mussolini declared war against France and England, the London *Times* announced that the Italian King, the Duke of Aosta, and the Crown Prince were all unsympathetic with Mussolini's war policies. If so, Humbert still concealed the fact very cleverly: it was he who was in charge of the large-scale Italian offensive against France when it finally started, only four days before the signing of the French Armistice. It was true that the offensive was not very successful—the Italians advanced a bare ten miles along the French Riviera, and at terrific cost; but no one has accused the Crown Prince of deliberate sabotage.

Yet evidently nothing could destroy British confidence in the House of Savoy. Winston Churchill '42, on December 23, 1940, asserted that "one man and one man alone, against the crown and Royal Family of Italy, against the Pope and all the authority of the Vatican, against the wishes of the Italian people," had ranged Italy in deadly struggle against the British Empire. Humbert's wife promptly announced that she had been received as a registered member of the feminine section of the Fascist Party, and in January 1941 Humbert himself was promoted to the rank of Army general, with more Black Shirts under his command than ever before. Nevertheless, a dispatch from Lisbon to the London *Daily Telegraph* in February 1942 confided that Fascist leaders in Italy were exerting every pressure to keep Victor Emmanuel from abdicating, "for they knew well that should the Prince of Piedmont succeed him, he would immediately issue a call to the people in an endeavor to make peace." Two months later Mussolini, apparently unworried, made the Crown Prince commander of a group of armies designated as the "Central-Southern and Insular"; at the end of May 1942, while Mussolini was demanding territories from Laval '40, both Victor Emmanuel and his son went in person to review Italian troops massed near the French border; and in October 1942 Humbert was given the rank of marshal in the Italian Army on Mussolini's recommendation.

Late in May 1943, not long before Mussolini's overthrow, the Crown Prince still remained loyal to the Duce. At that time he issued an order of the day admitting that Italy had been unable to equip her troops properly because of lack of raw materials ("quite rightly one of the reasons for her entry in the War"), but at the same time appealing to his men to stand firm in their resistance to the Allies.

According to the authors of *What to Do with Italy*, the Vatican, in accord with the American State and War Departments, wanted an Italian Army faithful to the Monarchy and to its own chiefs, so that in case of an anti-Fascist revolution in Italy the Army would not hesitate to machine-gun the rebels. When the American forces have hold of all key positions of communications and public services, these writers prophesied pessimistically in the spring of 1943, "the old King would abdicate, and his son, the new King, would issue a proclamation promising the restoration of the pre-Fascist constitution. Following a regular procedure, he would invite [Dino Grandi '43] the President of the Chamber of Fasces and Corporations, which is supposed to have taken the place of the old Parliament, and therefore, to be a representative body, to act in the interim as head of the Government. . . Meanwhile, all Fascist titles and emblems will have disappeared, a mass conversion will have taken place by means of which all former Fascists will appear as champions of the constitutional monarchy and will thus remain in control of all the offices in the central and local administrations. The Chamber of Fasces and Corporations will be called the Parliament. It will be convoked, together with the old Senate, and will give a unanimous vote of confidence and grant full emergency powers to Grandi and his Cabinet, thus regularizing their position."

This, however, was written before the Italian surrender. By December 1943 Victor Emmanuel had shown no signs of stepping down; most of those who favored the King's abdication seemed to have little more love for his son; and it was Pietro Badoglio '40, not Grandi, who headed the Government. The Royal Family had escaped from German-occupied Italy in September. As Humbert tells it: "I was with my troops just south of Rome when I decided, on a whim, to go to Rome for the evening. That was the night of September 7. . . Late that night we heard the Germans were moving into Rome. My father, the King, decided he must carry on his duties in a place not occupied by the Germans. The Germans did not stop us when we reached their lines. . . When Mussolini fell, the German soldiers in Italy heard a rumor that Hitler was killed. They were fairly jumping with joy. They believed the War was over. I think that is why our cars got through without interference." (An aide-de-camp ventured that perhaps the Germans mistook the occupants of the royal car for army officers moving up to the front.) By the end of November, with Premier Badoglio still resisting demands that the King abdicate and Humbert repudiate the throne in favor of his son, the Prince of Naples, it was reported that a new political party pledged to support a government headed by Humbert was being formed in Naples, its members drawn largely from aristocratic families and military and naval officers. On December 10 Americans gave much publicity to the fact that Humbert had flown over German lines in a "flying jeep" with an Italian general.

Humbert's wife, Maria José, is said to be the most popular of the royal family in Italy, and while Italy was at war with the Allies she was surely its busiest and most photographed woman. She served as inspectress general of the Italian Red Cross and as patroness of innumerable organizations and associations connected with the War, including the Italo-German Association. In December 1941 she paid a secret visit to her brother, Leopold III of Belgium (interned by the Germans at Laeken Castle), and was present at his marriage to a commoner. Humbert and Maria José have four children: Princess Maria Pia (born in 1934); Victor Emmanuel, Prince of Naples (born in 1937), in line for the Italian throne after his father, on whose behalf men like Count Sforza '42 and Benedetto Croce would support a regency under Badoglio; Princess Maria Gabriella (born in 1940); and Princess Maria Isabella (born in 1943).

Like his mother, Humbert is a natural athlete who rides, skiis, swims, and plays tennis. Six feet two, resembling Hollywood's Robert Young in features and coloring, he is a very personable representative of Europe's nobility. But he is also said to be somewhat lacking in personality, and although he is a linguist of some ability he is seldom credited with great intellect: irreverent Italians call him the "National Cretin." According to *Life* in 1940, "His favorite occupations are playboy amusements—fast cars, skiing, and the ladies of the international set at the Lido and on the Riviera. He is a pet of Elsa Maxwell's '43 [Elsa, however, emphatically does not support him as a future ruler of Italy] and whenever he can get away from his wife . . . he streaks for one of his playgrounds." This information may be a little out of date; according to other sources, after sowing the wild oats of youth rather generously Humbert has settled down to the role of respectable husband and father. Whether he will ever have any more important role than that is a question of some concern to the Italian people.

HUTCHESON, WILLIAM L. Feb. 7, 1874- Labor leader

Address: b. 222 E. Michigan St, Indianapolis, Ind; h. 3743 N. Meridian St, Indianapolis, Ind.

William L. Hutcheson, general president of the powerful United Brotherhood of Carpenters and Joiners and first vice-president of the American Federation of Labor, has been described by *Time* Magazine as "just as hard-boiled, almost as ambitious, as John L. Lewis '42." A Republican and a one-time member of the America First Committee's national

WILLIAM L. HUTCHESON

council, he has other characteristics in common with Lewis, whose application for readmission into the A. F. of L. he sponsored in May 1943.

Hutcheson was born in Saginaw, Michigan on February 7, 1874, the son of Daniel O. and Elizabeth (Culver) Hutcheson. His father was a ship carpenter, caulker, and joiner who taught his son his trade. In 1890, after a minimum of schooling in rural Michigan, young William himself began work as a carpenter. In 1902 he joined the Brotherhood of Carpenters, and by 1906 he was business agent for the vicinity of Saginaw. In 1912 he was elected second vice-president of the Brotherhood; the following year he became first vice-president; and when in 1915 the head of the Brotherhood died Hutcheson automatically succeeded him. At the convention the following year he was elected to his present post—at a salary of $200 a week and expenses.

Virtual czar of the Carpenters, Hutcheson has never been reluctant to use his powers. He can revoke local charters, grant "dispensations," decide points of law, appoint organizers, suspend officers, and expel or fine duly elected convention delegates—and throughout his career he has systematically removed critics and expelled rebellious locals. In 1916 he demanded the cancellation of a strike called by the New York locals to extend a 50¢ increase in daily wages to 3,000 workers not benefited by a contract which had been negotiated. Meeting secretly with the employers, he then signed another contract invalidating the wage increase already won by most of the carpenters. When sixty-five of the locals involved objected to this method of eliminating the differential he suspended all but one of them and started to recruit strikebreakers. The locals won the strike in spite of Hutcheson and were later reinstated; but in most other cases Hutcheson managed to keep the rank and file in line.

In 1918, when Hutcheson was a member of the War Labor Board, he heeded President Wilson's request to call off a strike of carpenters in an East Coast shipyard, refusing to allow the members to vote on the question. In 1921 he threatened to suspend any local that aided a general strike in the San Francisco building trades. In 1924 he and his lieutenants signed an agreement with five leading contractors which for all practical purposes duplicated the Landis award, an attempt to turn the carpentry trade of Chicago into an open shop, against which the carpenters had waged a bitter strike two years before with Hutcheson's full support. Anyone who protested was expelled.

Hutcheson made enemies—and not only because of his "autocracy." In 1920 he was called an "evil influence" by Samuel Untermeyer [’40] at the time of the Lockwood investigation of the high cost of living in New York City, when Robert P. Brindell, czar of the New York building trades and a crony of Hutcheson's, was sent to jail for racketeering along with many of his associates. At about the same time it was shown that the Brotherhood had excluded non-association millwork from the Chicago market, thus enabling manufacturers to raise the cost of millwork 300 per cent; and the Brotherhood's opposition to the introduction of prefabricated parts did not win the hearts of consumers either.

He won friends by his conservatism, however. In December 1919 he refused to censure the Government for having aided the steel corporations in the recent labor troubles, saying that there was enough I. W. W.-ism in the labor movement and that he, as an American citizen, would not go on record as calling government agencies autocratic and repressive. In 1924, along with John L. Lewis, whom he also helped in swinging William Green's [’42] election as Samuel Gompers' successor, he supported Calvin Coolidge for the Presidency after the A. F. of L. had endorsed La Follette. In 1932 he was in charge of the Labor Division of the National Republican Party, supporting Herbert Hoover [’43] for the Presidency. In 1935, during the chance absence of most of the delegates from the A. F. of L.'s convention, he steamrollered the defeat of a proposal for a Federal constitutional amendment safeguarding social legislation. In 1936 he resigned as vice-president of the A. F. of L's executive council, which had given perfunctory support to Roosevelt's [’42] re-election, and once more headed the Labor Division of the Republican Party. Opposed to social legislation, including labor's demand for a thirty-hour week, he was praised by Republicans for his "experience in the labor field and his liberal views and fairness to all parties concerned," and a Liberty League spokesman announced that he "represents the forward progressive element in the ranks of organized labor in America."

By this time Hutcheson and his old friend Lewis were at sword's points. Hutcheson stoutly opposed the principle of industrial unionism, and at the 1935 A. F. of L. convention he and Lewis had actually come to blows. (The next day Lewis received a telegram from a union carpenter: "Congratulations, sock him again.") In August 1936, while still a member of the A. F. of L.'s executive council, Hutcheson was one of the judges at the "trial" of the ten C. I. O. unions.

He insisted that his membership was demanding "action" and proposed a verdict of guilty; and as the head of the largest craft organization in the A. F. of L., entitled to 3,000 votes at A. F. of L. conventions, his word carried much weight. When the unions were later expelled he became known as one of the foremost opponents of peace between the two organizations on any basis other than "unconditional surrender."

There were good reasons for his opposition. That "God made the forests and gave them to Bill Hutcheson" was well known. The Brotherhood took it for granted that "once wood, it is always the right of the carpenter to install it, no matter what the material is"; and its constitution allowed its president to "issue charters to auxiliary unions composed of persons working at an industry where organization would be a benefit to the Brotherhood." As a result cabinet makers, mill carpenters, furniture workers, members of machinists' and coopers' unions, bridge workers, brewers, longshoremen, metal lathers, and sheet-metal workers were annexed by the Brotherhood, with or without the consent of those concerned. As a result, too, Hutcheson found himself engaged in many jurisdictional disputes with even his fellow A. F. of L. chieftains—particularly with Harvey Brown of the International Association of Machinists, who in 1943 was to quit the A. F. of L. after a thirty-year jurisdictional row with Hutcheson over such work as the dismantling and installing of machinery. (Ever since the organization of the Brotherhood in August 1881 men employed as millwrights have been members, Hutcheson says, and so the Brotherhood claims jurisdiction over "millwrighting.") Hutcheson was therefore in earnest when he said that if "all workers were organized on an industrial basis it would mean the elimination of our organization."

Those who did not already know it soon learned that it seldom paid to tangle with Hutcheson. Late in 1936, when the first convention of the Brotherhood in eight years was called at Lakeland, Florida, all critical resolutions were labeled "Communist," and any member who signed them was threatened with expulsion. Among the dissidents present were members of the Northwest Federation of Woodworkers, which until the summer of 1935 had been organized in the Federal locals of the A. F. of L. but which had been turned over to the Brotherhood without the members being given the right to share in its financial benefits or to have a voice or vote in the affairs of the union. (There were 130,000 such dues-paying "non-beneficial members.") At the convention they demanded democratic rights within the Brotherhood, and when refused, they formed a rival International Woodworkers' Union, chartered by the C. I. O. in July 1937. Hutcheson promptly instructed the members of his union not to handle "C. I. O. wood" and persuaded the head of the teamsters' union in the West to keep his people from hauling or trucking or loading or storing it. By December 1937 the A. F. of L. boycott had forced eight sawmills around Portland, Oregon to close down; by early 1938 thousands of woodworkers had become discouraged enough to quit the C. I. O. and join the A. F. of L. again.

When in 1936 Hutcheson resigned from the A. F. of L.'s executive council his "understudy," Frank Duffy, secretary of the Brotherhood continued to serve. At the 1939 A. F. of L. convention Duffy resigned and placed Hutcheson in nomination as first vice-president. In that strategic position during the early days of the War the burly head of the carpenters swung his weight against the New Deal (in 1940 he was reportedly promised the post of Secretary of Labor in the event of a Republican victory), upheld his reputation as one of the chief opponents of the reconciliation of the A. F. of L. and the C. I. O., and outdid Lewis in his isolationism. In October 1941 he startled everyone by an address to a Democratic club urging aid to Britain and Russia, but almost immediately afterward the America First Committee announced his appointment to its national council.

In January 1942 Hutcheson was elected to the A. F. of L. "peace committee" together with Harry C. Bates and Daniel J. Tobin, taking the place of Matthew Woll '43. Obviously he and Lewis were in agreement on matters of national policy—and Lewis had by this time become anathema to most of the C. I. O.

Lewis' "peace" proposal to the A. F. of L. later that month was therefore interpreted by President Roosevelt as an understanding between Lewis and Hutcheson to retire William Green from the presidency of the A. F. of L., to outflank the C. I. O.'s Philip Murray '41, and to seize control of the American labor movement. The President consequently sent for Murray and set up a six-man committee, from which both Lewis and Hutcheson were conspicuously omitted, to consult with him on all questions of labor participation in defense work. He seemed justified by the fact that in April 1943 Hutcheson blocked an agreement for joint A. F. of L.-C. I. O. action: all members of the joint peace committee except him were able to agree on a declaration which would have outlawed "raiding" and laid the basis for common political and legislative action. It was pointed out that Hutcheson could better urge the A. F. of L. to turn its attention to Lewis if he could argue that all hope for amicable relations with the C. I. O. was dead.

Once more he apparently had his own way. On May 19 William Green announced that Lewis' 600,000 United Mine Workers had applied for reaffiliation with the A. F. of L., with Hutcheson sponsoring the motion to readmit the miners to the Federation. If Lewis were readmitted, Hutcheson's alliance with him would not only break the ground for a fight to the death with the C. I. O., but would greatly increase the importance of the two men in the American labor movement. The A. F. of L.'s decision on the United Mine Workers' application for readmittance was deferred without recommendation until the Federation's October 1943 convention, at which time Hutcheson urged the passage of a committee report vesting full authority in the A. F. of L.'s executive council to arrange for the "early reaffiliation" of the U. M. W. The report was adopted by the convention.

(Continued next page)

HUTCHESON, WILLIAM L.—*Continued*

In the summer of 1943 "Big Bill" Hutcheson tangled with the War Labor Board and was finally obliged to bow to the WLB after being threatened with a subpoena if he refused to send a representative to one of its hearings. The hearing was held publicly to investigate "the issues in the thirty-year-old jurisdictional dispute between the Carpenters and the International Association of Machinists. Both unions claim exclusive right to represent employees who install machinery." (Hutcheson says that the action of the Board was taken as per the suggestion made by the Brotherhood that an employer be permitted to employ whomever he saw fit to do the work of millwrighting on the job in question.) Hutcheson's delay in sending a representative to the hearing proved a test case for the Board's authority. When he finally sent George C. Ottens as "general representative" (Ottens' contribution "consisted of a declaration that he knew nothing about the case"), the WLB's subpoena power, granted it by the Smith['41]-Connally['41] Act, was put to its first effective use.

Six feet three, "tall, meaty-faced . . . with a mop of brown hair graying at the temples," this "hard-boiled . . . 300-pound, bellowing czar of the Carpenters" was once called by William Green "a strong personality, an outstanding character, a dynamic, forceful man." He is fond of beefsteaks and beer, smokes good cigars, and is a member of the Chamber of Commerce, a Methodist, a Mason, and an Odd Fellow. He is also director of the Home for Aged Carpenters in Lakeland, Florida, built on land which he purchased during the Florida boom. He is married to the former Jessie Tufts Sharon.

IBN SAUD, KING OF SAUDI ARABIA

ib′ən sa-üd′) 1880-

Address: Riyadh, Nejd, Saudi Arabia; Mecca, Hejaz, Saudi Arabia

The Kingdom of Saudi Arabia includes more than 700,000 square miles, but its population is less than 5,000,000. Its ruler, Ibn Saud, has been likened to Cromwell for his pugnacity, his religiousness, and his administrative ability, and to Hitler['42] for his dogmatic fanaticism, his ruthless seizure of territory, and his social program. It has been pointed out that the absoluteness of his monarchy is modified by the fact that the vast sparsely populated region makes it necessary for a ruler to be respected as well as feared. Many foreign observers returning from Arabia, as a matter of fact, acclaimed Ibn Saud for his statesmanship and for his unselfish devotion to Islam.

"In the East," the Sirdar Ikbal Ali Shah wrote, "life leap-frogs. One cannot just say of a man, as one can of so many prominent figures of the Occident, he did this and that; he started with a bicycle and now pounds metal into motor cars, so many to the hour, or that he ran away before the mast and ended as a belted earl." In the Eastern world the individual is part of a family and a clan; his destiny is bound up with theirs and his actions are the outgrowth of their history. Since the beginning of the eighteenth century the clan of Saud exercised in Arabia "an effective domination varying in territorial extent and administrative authority with the political vicissitudes of more than 200 years."

Ibn Saud's great-great-great-grandfather, Muhammad Ibn Saud, ruled in the valley around Riyadh in the first part of the eighteenth century. One day a reformer, Muhammad Ibn Abdul Wahhab, came to him for sanctuary. Wahhab was a Mohammedan Puritan; he desired to end the corruption of Islam and purify the religion until it conformed to the letter of the Koran. With Wahhab's preaching and Saud's armies, the "Wahhabis," as they were called, conquered so much territory that they challenged the Ottoman Empire. The Turks undertook effectively to suppress the Wahhabi revolt. When Ibn Saud was born, in 1880, Riyadh was under the control of a Bedouin chief, and Ibn Saud's uncles and his father, Abdur Rahman, were struggling for the privilege of leading Riyadh in revolt. The ruler of Riyadh, Rashid, exiled them and they lived a wild and primitive life in the desert until they obtained permission from the Turkish Government to settle in Kuwait on the Persian Gulf. Here Abdur Rahman brought up his children in the belief that it was their mission to recreate the empire of Saud the Great.

Ibn Saud is the name by which the Arabian ruler is commonly referred to in the Occidental press. (His real name is 'Abdul 'Aziz Ibn 'Abdu'r-Rahman Al-Feisal Al Sa'ūd. 'Abdul 'Aziz are his first names. Ibn 'Abdu'r-Rahman means son of 'Abdu'r-Rahman. Saud and Feisal are the tribe and clan names.) As a boy Ibn Saud was something of a solitary, it is reported, because he was so thin and tall that his playmates made fun of him. Ashamed of his stature, he would carry his head bent in public in order to appear shorter. His adolescence was a particularly unruly one, and he spent a good part of his time lounging about the cafes and streets of Kuwait. "He was growing up into a gigantic, swaggering buck, with inexhaustible physical vitality and an indomitable will to power." For a long time he urged his father to depose Ibn Rashid, but his father refused until finally, under pressure of his family and with the assistance of the sympathetic Sultan of Kuwait, Abdul Rahman assembled a few Bedouin tribes and attacked Riyadh. The attack was repulsed, and Ibn Saud's father, somewhat relieved, it is said, returned home to spend the rest of his days in peace and renounced all claims to Nejd.

In 1900, when Ibn Saud was just past his twentieth birthday, he gathered a group of forty (some say sixty), including his brothers, cousins, and their servants, and stole into the central Arabian city of Riyadh at night, taking the garrison by surprise and killing the Governor. The next day he announced to the populace that a Saud had come back to power in the city of his fathers. This coup, which gave him control of the chief city of Nejd, "the desolate and impregnable inner heart of Arabia," was but an opening wedge in Saud's conquest of Arabia, but Saud understood the Bedouins well, and his enemies were never much more than raiding Bedouin chieftains who, "worn down by his magnetism, vitality, and patience," rallied to his support. Ibn Rashid, aided by the Turks, was unable to dislodge him.

By 1912 Saud had removed the last vestige of opposition to him in the Nejd and had successfully transformed himself from a Bedouin sheik to the head of a state. The foundation of Ibn Saud's subsequent rise is generally conceded to be the agrarian policy instituted in 1912 which was intended to settle the nomadic population and destroy tribal organization. In order to put this movement on a spiritual basis Ibn Saud revived the austere code of the early Wahhabi, and preachers were dispatched to warn the tribes of the menace of the infidel (non-Wahhabis) and to urge them to join him in defense of the one true religion. Converts were known as Ikhwan, the "Brotherhood in obedience to God," and it was from among the Ikhwan that Ibn Saud drew the bulk of his army. For the first colony of the faithful the wells of Artawiya was chosen. The colonizers were to acknowledge no relations or tribe; they were all of the one brotherhood. The law was the *Shar*, the law of Islam, and the settlers built a small mosque which they surrounded with their mud huts. Gradually the hamlets grew into towns and farming became the prevalent occupation; the Bedouin pattern of life had changed. Each colony, observers point out, weakens the parent tribe and contributes to the agricultural prosperity of the country. At the same time the colonies provide the bulwark of religious fervor, "which in Arabia passes for national spirit."

Before the outbreak of the First World War Ibn Saud had his first real difficulty with Turkey. Hussein Ibn Ali, a Turkish official, and Rashid, Ibn Saud's old enemy, were maneuvering to keep Ibn Saud within the province of Nejd. Aware of their plans, in the spring of 1913 Ibn Saud invaded Hasa on the Persian Gulf and seized the Turkish garrison at Kut. At the moment the Turks were in no position to antagonize either Ibn Saud or Rashid. They therefore compromised, giving both Ibn Saud and Rashid cash and weapons by way of appeasement. Ibn Saud, however, was more interested in securing British than Turkish friendship, and in the winter of 1913 to 1914 Captain W. H. I. Shakespear, the political agent at Kuwait, visited Riyadh to encourage a friendship which the British thought might help offset growing German influence in Turkey's Arabian areas.

In 1914 there were four important noble Arabian families who could be considered rivals for control of Arabia: the Hashimite Sherifs of Mecca led by Hussein, the Ibn Rashids in the north, the Imam of Yemen, and the Ibn Sauds in Nejd. Shakespear and H. St. J. B. Philby, the wartime British envoy at Ibn Saud's capital, favored Ibn Saud for British backing, but there were other European experts who felt his strength was not worth considering. According to Carmichael, the British policy in the Near East was afflicted by a certain "tortuousness of motive" and was executed by many authorities with contradictory tactics. For a time Ibn Saud was leading, but in January 1915 the Wahhabis engaged Rashid's forces in a battle in which the Wahhabis were defeated and Captain Shakespear was killed. Although this was just a minor desert clash, according to some sources the British were discouraged with Ibn Saud's effectiveness as an instrument against the Turks; according to others, Ibn Saud himself recoiled from undertaking any major struggle thereafter, and also suddenly developed religious scruples against opposing the Sultan. In any case the treaty of friendship he signed with the British at the end of 1915 classed him with a half dozen petty sheiks along the Persian Gulf.

IBN SAUD, KING OF SAUDI ARABIA

In 1916, on Colonel T. E. Lawrence's advice, the British decided to cultivate Hussein as an ally. They promised him recognition as a ruler of considerably larger territory than he actually held and their favor for his assumption of the Caliphate in return for a revolt against the Turks in the Hejaz. At this time the British set up an Arab Bureau, the most distinguished member of which was Lawrence of Arabia.

At the end of the War the affairs of Arabia were in considerable confusion. Hussein got no Arab empire, but he was invited to become an original member of the League of Nations. The House of Rashid also received favors, and although the British held nothing against Ibn Saud, the result of their treaties and concessions was to form a belt of Sherifian states which, he felt, would lock him up in the inner desert. When the War was over, therefore, Ibn Saud decided that the total elimination of the House of Rashid was necessary to his own security. In 1924, when Mustapha Kemal abolished the Caliphate, Hussein adopted the title of Caliph, adding to it "King of All the Arabic Countries." Ibn Saud objected and,

IBN SAUD, KING OF SAUDI ARABIA
—Continued

with the excuse that he was protecting the true faith, advanced into Hejaz and captured Mecca. The British, finally recognizing that Arabian destiny lay with Ibn Saud, sent a mission in the fall of 1925 to come to an understanding with him.

As soon as he was firmly established in the Hejaz, Ibn Saud called a Pan-Islamic Conference which assembled in Mecca in 1926. At the Conference Ibn Saud justified his conquests on the ground that he wished to purify Islam, particularly the cradle of Islam, Mecca, from the corruption of the Hashimite rule. (He had had some trouble in preventing the Wahhabis, who are anti-idolatrous, from destroying sacred shrines.) He had announced himself an agent of Islam which was to deliver the Holy Land from oppression and leave it to the Mohammedans to decide the future of the country, but once he had consolidated his power he announced that all he expected from the Conference was help in facilitating pilgrim traffic, and the Conference, which had been based on a misunderstanding, ended without accomplishing much except this. It had formerly been the custom for pilgrims "to be fleeced" going to and from the Holy City by both official and unofficial bandits.

On May 20, 1927 Great Britain recognized Abdul Aziz Ibn Saud as an independent ruler, King of the Hejaz, Nejd, and their dependencies. The treaty recognized Ibn Saud's independence in all external and internal matters and raised the British embargo on arms transported via the Red Sea. For the first time two Wahhabi Princes left Arabia. Ibn Saud's eldest son went to Egypt, and his second son, Feisal, visited England, Holland, and France. The new kingdom was recognized first by Soviet Russia, and other countries followed suit, raising the consulates at Jidda to the status of legations.

There were still some old desert warriors who could not reconcile themselves to the new order and who objected to the use of modern inventions such as the wireless and the motor car, which had not been anticipated in the Koran. For three years there was a series of desert uprisings which Ibn Saud quelled in a decisive battle in 1930. In 1932 he put down a revolt which was supposed to have been instigated from the outside, and in the same year he abolished the dual kingdom of Hejaz and Nejd and renamed it Saudi Arabia, the nucleus of what Saud plans to be a united Arabia of the future. Today he is recognized to be the most important absolute monarch alive—monarch of the largest Arab nation on earth. The huge Arab peninsula (bigger than India) has a few small individual states along the coast, but the rest of the peninsula is Saudi Arabia.

When the conference of Arab states (1937) was called at Bludan to formulate opposition to Palestine, Saud sent no representative. Although he considers Palestine part of the Arab world which he hopes to unite, he has given no overt assistance to the Palestine Arabs. In an interview with the monarch published by *Life* Magazine in May 1943, Saud said: "I know of nothing that justifies the Jewish claims in the Palestine. Centuries before the advent of Mohammed, Palestine belonged to the Jews. But the Romans prevailed over them, killed some and dispersed the rest. No trace of their rule remained. Then the Arabs seized Palestine from the Romans, more than 1,300 years ago, and it has remained ever since in the possession of the Moslems." Rabbi Stephen S. Wise '41 in reply (*Life*, June 21, 1943) said that the Western world has long accepted the connection between the Jews and Palestine and that "fifty-three nations, including the United States, ratified the British Mandate with its specific instruction to the mandatory power to facilitate the creation of a Jewish homeland in Palestine." Regarding the "British Government's famous promise during the last War to make a Jewish home in Palestine," Saud feels that it "was about as realistic as would have been a promise by an Arab government to found a Jewish home in Devonshire. Since Jerusalem has always been a Moslem Holy Land as well as a Christian and a Jewish one . . . Arabs wonder why Palestine was not the least suitable rather than the most suitable spot on the globe for such a venture." According to Pierre Van Paassen '42, such views are more than agreeable to the British, who would like to see a quasi-independent Arab federation which they could control.

Since 1933 the California Arabian Standard Oil Company (in 1936 the Texas Company was admitted into a fifty per cent partnership) has been leasing concessions from Ibn Saud for less than firms of some other countries had offered, but Saud was reportedly afraid of Italian and German political penetration and suspicious that the aims of the British in Palestine and the French in Syria were not in line with his aims for a federation of Arab states under his rule. Standard Oil, he felt, was politically neutral. In late 1943, according to *Time*, the company controlled an area sixty per cent larger than California (254,000 square miles).

The United States opened diplomatic relations with Ibn Saud early in 1940 when the American Minister to Egypt was given credentials to the Arabian King and paid him an official visit. On April 19, 1943 the White House announced that the President had authorized extension of Lend-Lease aid to the Government of Saudi Arabia. This was supposed to reflect official conviction that the Moslem world is now substantially on the United Nations side.

When the Second World War broke out, Ibn Saud, although neutral, favored the British side. In March 1942, after some pressure on the part of Britain, he dismissed the Italian legation.

Ibn Saud is reported to have said: "Let no man tell me what to do with the Bedouins, for I alone know how to deal with them." A boast that few men could fulfill, it has been accomplished by Saud by settling as many Bedouins as possible, by making each tribe responsible for the infractions of its neighbors, by creating the first standing Army in Arabian history, which gave him an effective, trained, loyal police force, and by adopting motorized transportation, wireless, airplanes, and other devices against which the nomads are powerless.

It has been said, too, that Saud is incapable of accepting any authority but his own and that, while he prefers England and America to the Axis powers and may seem to yield to pressure from one or the other, he will look out for his own interests and overlook nothing that may help him accomplish his aim, a federation of Arab states. Aside from accepting technical Western aid necessary for the exploration of oil fields in his own realms, he has tried "to keep the Arab world untouched by modern progress and unsullied from contact with the Western infidels."

"There are several obstacles in the way of any kind of Arab union," pointed out Russell Hill in the New York *Herald Tribune*. "These include vested political interests of rulers and officials in small Arab states, difficulties of communication in the sprawling Arab world, different economic and cultural levels, striving of the Zionists to found a Jewish state . . . and fears of Christian groups, particularly in Lebanon, that in any large Moslem state they would become an insignificant minority."

During the Lebanese crisis in November 1943 King Ibn Saud, after a British request, telegraphed to the Syrian Government in Damascus, urging it to keep calm. Regarding the French action he said that they had created the worst impression upon the Arab peoples. Saud sent messages of protest to de Gaulle '40 and Roosevelt '42, and appealed to Churchill '42 to use his "influence with the French authorities to restore the situation." This critical situation highlighted the latest move for a Pan-Arab federation which has taken the form of a series of informal conferences called by Nahas Pasha, the Egyptian Premier and Foreign Minister. According to *Newsweek*, "while Ibn Saud has always wanted independence and unity of all Arab lands, his nationalism is practical rather than sentimental. His suspicion of the Hasmimites and his fear of a hostile Iraq-Trans-Jordan bloc in the north, with the possibility of Syria, Lebanon and Palestine joining the bloc, puts Ibn Saud in opposition to a political federation."

Ibn Saud is six feet four inches tall and weighs 230 pounds, "every ounce of it bone and muscle." Foreigners like Captain Shakespear, H. St. J. B. Philby, and others who went to Arabia on diplomatic or technical missions have commented on his charm and vigor. "He has a great voice which can either roar or coo. A voluble and witty talker, he loves conversation. He is a shrewd and resourceful debater, with the urbanity of a Parisian and the downright abruptness of a cattle rancher."

In some respects Ibn Saud is a puritan. He is opposed to smoking, drinking, and gambling, and allows no motion pictures to be shown anywhere in his kingdom. The Koran, however, permits him four wives, and he has had, it is reputed, more than a hundred wives, four at a time. John Gunther '41 reports that when he travels he is never accompanied by more than three wives, so that he can always take for a fourth any maiden who happens to catch his eye, or with whose family he would like an alliance. Then when he returns he divorces one of the others. He was first married when he was seventeen, and it is said that the death of his first wife (six months after the marriage) was a great personal tragedy from which he never fully recovered. Divorce in Arabia carries with it no stigma, and by his numerous marriages Ibn Saud has been able to relate himself to many important families. He has, it is said, an incalculable number of children, and he is reported to have remarked: "In my youth and manhood, I made a nation. Now in my declining years I make men for its population."

The "current estimates which place the number of living princes born in wedlock at thirty-one are wildly conservative." It is clearly understood that Saud, his eldest living son, is the crown prince. Saud is Governor of Riad and one of his father's most trusted executives. Fiesal, the King's second son, acts as Minister of Foreign Affairs, and spends most of his time in Jedda, the Red seaport which is the only town in Arabia where Europeans are permitted to reside, in order to be near its foreign consulates and legations. At an invitation of the State Department, Fiesal, in company with a younger brother, Khalid, came to the United States for a visit in the autumn of 1943. Ostensibly here to study Southwest irrigation projects, official sources in Washington have offered as one reason for their visit the efforts being made to persuade the Saudi Arabians to adopt a more enthusiastic attitude toward the United Nations' war effort. However, in November "a high official of the Government" revealed "that protracted negotiations by Secretary Ickes '41 to obtain participation for the United States in the development of the exclusive oil rights of the California Arabian Standard Oil Company in their father's kingdom had broken down and no agreement was in sight." This plan would have brought about "a departure in this country's foreign economic activities . . . for the first time in its history the United States would have embarked upon a career as a speculative oil magnate on foreign soil"—a career which smacked of imperialism. "Whether the oil deal was imperialism or no," commented *Time* Magazine, "it would bring problems with it; when the United States grasps for Arabian oil it also grasps for the Palestine problem, Ibn Saud, Moslems, rabbis, and all."

IDELL, ALBERT E(DWARD) (ī-del') June 21, 1901- Novelist

Address: b. c/o Henry Holt Co, 257 Fourth Ave, New York City; h. Primos, Pa.

The life story of Albert E. Idell, author of the best seller *Centennial Summer*, would sound much more plausible if it were possible to trace some gypsy blood in his ancestry. For what else can account for the amazing variety of jobs and adventures which this jack-of-all-trades-and-master-of-several has crowded into his forty-odd years? "Looking back," he says, "I find there's hardly a time in my life when I wasn't doing two jobs at once."

ALBERT E. IDELL

A native of Philadelphia and a descendant of mixed pioneer stock, Albert Edward Idell was born on June 21, 1901. His mother, Melissa (Barr) Idell, came of a "Pennsylvania Dutch" family which arrived in the United States back in 1690. Idell's father, Albert Magilton Idell, was of Irish and German descent. The pattern of serving several masters was established during Idell's boyhood. While a student at the Germantown High School he worked evenings on a produce truck, heaving boxes of apples and cases of oranges from midnight till eight o'clock in the morning. Although he really preferred fishing and wrestling to work and school, he managed to get himself graduated from high school in 1919. For the next two years Idell worked his way through the School of Industrial Art in Philadelphia by acting as secretary to its director. Not content with an already full schedule, he also attended evening classes in accounting and related commercial subjects.

The volatile, impatient temperament of Idell caused him to chafe under the yoke of formal studies; he left school and eagerly set out to see the world for himself. During his subsequent adventures he was variously a pin boy in a bowling alley, a cloak-room attendant, a bar boy, a bus boy, a waiter, and a dishwasher. Of his footloose days Idell recalls: "I did many of the fool things any adventurous kid does—a couple of years of hoboing and all that goes with it, harvesting, threshing, laboring, and so forth."

In 1921 the author "settled down" in his own restless way when he obtained employment in the public accounting field. His work, which dealt with matters relating to bank examining and the making of factory time studies, was allowed to occupy only the winter months, when it was too cold for outdoor life. Every spring before the ennui of office routine could catch up with him, Idell would be off again, wandering through every state of the Union, working at anything that caught his fancy, from harvesting crops to swinging a sledge hammer on a Chicago street repair gang. "As a seaman, or a guide to a group of artists, or a buyer of illuminated manuscripts for an American museum, he has visited many parts of the world."

After his marriage in 1926 to the artist, Marguerite Bethulia Borgiano Cadwalader, Idell assumed a more responsible attitude toward his work. He began to specialize in building and loan bank accounting, and later, in 1929, he acquired a partnership in a firm which manufactured fiber specialties. Taking advantage of the slack seasons which his work offered, Idell and his wife toured Europe, Mexico, Venezuela, and the West Indies. "At times, when their travels were prolonged beyond the accounting season, he turned salesman. He has successfully sold accounting systems, real estate, vacuum cleaners, and can openers."

An incurable interest in life and people, rather than financial necessity, propelled Idell into still more diverse activities. After a period as a prize-fight promoter in Asheville, North Carolina, he began to study the restaurant business. In 1930 he organized a lending library in which he still owns an interest. Two years later he was engaged as a consultant in school lunchrooms of the Philadelphia School District, and the following year he was promoted to the office of supervisor. He evidently became sufficiently expert at the restaurant business to conduct courses in restaurant management for the Philadelphia Restaurant Association.

Idell began his writing career some years ago, reviewing books for newspapers and writing articles for magazines. That his hand turned to creative writing was no fault of his, explains Idell. His interest was forced in that direction by Harry Emerson Wildes, a close friend of Idell's and the literary editor of the Philadelphia *Public Ledger*. Wildes, for whom Idell wrote book reviews, insisted that he begin to write fiction. "He is an obstinate man," says Idell, "and I finally gave in. Once I'd begun, his encouragement and criticism were invaluable. He's the reason an old guy almost neck-deep in the restaurant business turned to a career of novels."

In 1941, after having written two novels which remained unpublished, Idell was awarded the $1,000 Bookman Prize for his novel entitled *Pug*. The award was offered by the Greystone Press for the best novel by someone connected with the book trade. Idell was eligible as a contestant in the competition because he owned and operated a chain of lending libraries. He gathered the material for his story, which is concerned with a prize fighter, from firsthand experiences in the world of pugilism. In the same year, 1941, a second novel, *Cross in the Caribbean*, was published. Both novels, however, had been written simultaneously "as antidotes to each other."

Idell's latest, best-selling novel, *Centennial Summer*, is a tale of Philadelphia in 1876, America's centennial year. His publisher states that the author obtained authentic background material for the book from members of his own family and from very old people who recollected details of the great Centennial Exposition. He also delved into the complete files of Philadelphia newspapers and magazines of the period. The idea for the novel occurred to Idell as a result of stories told him by his wife's mother in the form of reminiscences of her youthful days in Pennsylvania. Idell had worked on the book for a long time, having his two other novels published before it was finished. Despite its "moderately sturdy" plot, the book is distinguished by the exactness with which Idell has successfully recaptured an era. In the opinion of one reviewer, *Centennial Summer* is overloaded with period detail, "but it is the gaslight atmosphere which gives the book its charm: the precise descriptions of the girls' 1876 costumes . . . the autograph album, the walls crowded with pictures . . . the scrubbed white marble steps." A review in the New York *Times* was even more favorable: "This novel sets its own fashion, pioneers its own course, and before many pages establishes itself for what it is—a rarely healthy book . . . to be read for pleasure."

Idell and his wife have established their permanent home in Primos, a suburban Pennsylvania town. Their house, which overlooks a part of the Delaware River Valley, is an exact replica of an Italian villa, even to its furnishings. Among its many attractive features is a glass-enclosed penthouse on the roof where he and his wife work, and a swimming pool which was both designed and built by Idell. The materials for the pool were purchased with the proceeds from a magazine article. One of Idell's spare-time hobbies is copying antique furniture; many of these replicas which he makes himself are proudly displayed in his charming home.

In the fall of 1943 Idell was hard at work on his next novel, *Great Blizzard*. "I have a lot of things I want to write about," he explains, "with the purpose of aiding people to understand themselves, if I can."

INCE, SIR GODFREY (HERBERT)

Sept. 25, 1891- British Government official

Address: b. Ministry of Labor and National Service, London, England; h. The Witterings, 138 Copse Hill, Wimbledon, S. W. 20, England

Responsible for the registration, interviewing, and placement of more than 25,000,000 men and women in the military services and in the wartime industries of Great Britain, Sir Godfrey Ince, director-general of manpower, is one of the leading figures in the British Civil Service.

Born in Reigate, Surrey, on September 25, 1891, Sir Godfrey Herbert Ince is the son of G. A. R. Ince, a local justice of the peace. He was educated at the Reigate Grammar School and at London University where he held scholarships in mathematics and in political economy. His Bachelor of Science degree, with first class honors in mathematics, was awarded to him in 1913. His interests were not limited to academic fields, for he took a prominent part in college and university football and even toured Europe as the captain of his team. One of his favorite boasts is that he captained the only English team ever to have played football in Moscow.

Although he had the opportunity to enter the Civil Service upon graduation from college, Ince preferred to enlist in the Army. In 1915 he was commissioned in the Yorkshire Regiment of the Infantry. Shortly after, he was transferred to the East Lancashire Artillery, and he saw service in France as a member of the Royal Engineers. He served through the War, was wounded in action, and after the Armistice, entered the Ministry of Labor as assistant principal.

Since 1919 Ince has served the Ministry in various capacities. From 1920 to 1923 he was private secretary to Sir David Shackleton, chief labor adviser and first permanent secretary of the Ministry. He later became secretary to Miss Margaret Bondfield, the first woman to hold the position of Cabinet Minister in Great Britain, and also served under her successor, Sir Henry Betterton.

During the early '30's, the period which saw the expansion of social welfare legislation in Great Britain, Sir Godfrey Ince was one of the administrators of the Unemployment Insurance Acts. From 1933 to 1937 he was chief insurance officer and during that time visited Australia and New Zealand as special adviser. Upon his return to England his advance in the Ministry of Labor was rapid. When the Second World War broke out Ince became responsible for the whole of military recruiting and for the drafting of men into the armed services. He introduced into Britain from the Continent the system of call-up of age groups according to age of birth.

On May 13, 1940, three days after Hitler '42 invaded the Low Countries, Ernest Bevin '40 became Minister of Labor. A leading trade unionist, Bevin had long been a close friend of Sir Godfrey's, and he promptly put him in charge of welfare in the rapidly expanding war industries. A few days after Bevin's appointment, the second Emergency Powers Defense Act was passed, giving the Government

British Official Photo

SIR GODFREY INCE

the authority to direct to employment every man and every woman of any age. With Bevin as chairman of the Production Executive, Ince became his chief administrator. In June 1941 Ince returned to the Ministry of Labor as director-general of manpower, being in charge of military recruiting, national service, and the supply of labor of all kinds. His gargantuan task has involved not merely the placement of the registered man and woman power, but also arrangements for a personal interview for each woman called for service. Of more than 4,000,000 women interviewed, at least one half have been placed in munitions factories. Ince must also see to it that the quotas for the armed forces are filled and that mobilization for other vital war services goes along efficiently.

The smoothness with which this elaborate conscription program has worked in Great Britain has been generally attributed to Ince's administration. Although he deals with mass movements in industry and the armed services, he views his job as a gigantic human undertaking involving millions of individuals whose needs and abilities must be considered carefully.

In spite of the rather difficult nature of his work, Ince is one of the most popular people in the Government. He has virtual dictatorial control over British manpower but remains an unassuming administrator. King George VI '42 conferred on him the Order of the Companion of the Bath in 1941, and knighted him in 1943. Sir Godfrey was married to Doris Maude in 1918, and has three daughters—the eldest is serving as a radiographer in a London hospital, the second after serving eighteen months in the WAAF now works for the Ministry of Economic Warfare, and the third is still at school. Ince has been described as friendly, understanding, essentially human, and "one of the most likable people in Whitehall." Comparatively little known outside the British Isles, Sir Godfrey Ince has been rightly called "the man behind Britain's manpower."

ISMAY, SIR HASTINGS LIONEL (is'mā) June 21, 1887- British Army officer

Address: b. c/o Ministry of War, London, England

One of England's leading military brain trusters, Lieutenant General Sir Hastings Lionel Ismay, in his capacity as head of Winston Churchill's '42 personal staff, comes as near to being Churchill's Harry L. Hopkins '41 as anyone in the British Government. Ismay also holds the responsible position of secretary of the Committee of Imperial Defense. When Churchill came to confer with President Roosevelt '42 in Washington in June 1942, he brought with him his chief of staff, Sir Alan Brooke '41, and Major General Ismay, with whom "he best likes to talk over the War in its broadest aspects." And at the North African conference between Churchill and Roosevelt as well as at the historic conferences at Quebec, Moscow, Cairo, and Teheran, Sir Hastings Ismay was among the important British officials represented.

Tall, trim, gray-haired, Sir Hastings Lionel Ismay possesses a "charm of manner," it is said, which has endeared him to both colleagues and subordinates. He was born June 21, 1887, the son of the late Sir Stanley Ismay, and was educated at Charterhouse School and at the Royal Military College at Sandhurst. He was commissioned in 1905 at the age of eighteen.

Ismay's active service began when he joined the 21st Cavalry Frontier Force in 1907. In that year the dervishes in Somaliland, East Africa were defeating the British, driving them back to the coast towns. Under Major T. A. Cubitt, Ismay fought in some rough battles against the "Mad Mullah," but it was not until the First World War years that the dervishes were defeated and British rule over Somaliland extended. During his service in Africa, Ismay earned the distinction of being twice mentioned in dispatches, and he was responsible for the exploration of many valuable military routes previously undiscovered. Thus, as a kind of goalkeeper in the Suez Canal region, Ismay from 1914 to 1920 won his rank and garlands.

In 1921 Ismay married Laura Kathleen Clegg of Wormington Grange, Broadway, Worcestershire. There are three daughters of the marriage. In 1922 he went to India, where he had seen previous service, to attend the Staff College at Quetta. The following year he became deputy assistant quartermaster general at Indian Army headquarters. In 1924 he was at the Andover R. A. F. Staff College in England, and he rejoined Indian Army headquarters the following year.

From 1926 until the outbreak of war in September 1939, Ismay was associated at various times in capacities of increasing importance with the high-powered Imperial Defense Committee. This Committee coordinated the work of Sir Alan Brooke, chief of staff and of land forces; Sir Dudley Pound '41, admiral of the fleet; and Sir Charles Portal '41, then chief of the air staff. From 1926 to 1930 Ismay served as assistant secretary to the Imperial Defense Committee, but he returned once again to India in 1931 to act as military secretary to the viceroy, Lord Willingdon, until 1933. From 1933 to 1936 he held the post of general staff officer of the first grade, then he resumed his duties with the Imperial Defense Committee, and he became full secretary to the Committee in 1938.

Observers saw special significance in Sir Hastings Ismay's appointment (1940) as head of Winston Churchill's new personal staff. He was known to be Britain's best informed man on the Near East terrain, having done most of his fighting in British Somaliland, to the southeast and east of which lies Italian Somaliland. It was thought then that in the event of a lightning shift of war to the Near East, General Ismay would be a man for a key post. On November 6, 1942 Ismay was made a lieutenant general.

In his position as adviser to Churchill and also as military secretary to the War Cabinet, Ismay became one of the vital links in Britain's machinery of high strategy. During Allied activities in the Near East and in North Africa in 1942 the increasing efficiency of the British Secret Service there was noted. It was reported that the man responsible for this effective work was Lieutenant General Ismay who, as secretary of the Committee of Imperial Defense, acted as a liaison between the Government and the Secret Service. Ismay was credited with "much swift legerdemain in getting at enemy secrets by this or that clever ruse."

Thus, with a background of solid military achievement in territory which became vital in the Second World War, and with newly held important offices, Lieutenant General Sir Hastings Ismay was a logical choice to accompany Churchill when he went to Casablanca, and to meet with Allied military chiefs in the historic "unconditional surrender" conference. He was also among the British experts who held a series of separate meetings with officers of the United States General Staff during the Churchill visit with Roosevelt in Washington in May 1943. In August 1943 he accompanied Churchill to Quebec during the conference held there. During the Moscow Parley (October 19 to 30), as Churchill's staff chief in the Prime Minister's capacity of Defense Minister, Ismay was the spokesman when the full details of Anglo-American military plans were unfolded to Premier Marshal Joseph Stalin '42 and Soviet Foreign Commissar Viacheslav M. Molotov '40 at a Kremlin conference. "He was accompanied by Anthony Eden '40, British Foreign Secretary, and Sir Archibald Clark Kerr '42." The British party went to the Kremlin "with the full knowledge and approval of Cordell Hull '40." While the details were a closely guarded secret, it was pointed out "that General Ismay's revelations accorded with Churchill's frequent public promises that the fullest details would be made known to Stalin at the first opportunity. . . The disclosures were of such high security value that they could not be entrusted even to the most confidential codes for radio transmission." In November Ismay led the War Cabinet party of forty-two members at the Cairo Conference, at which "virtually every major martial figure from the United States, Great Britain, and China" appeared. He was also present at the Teheran Conference held shortly afterward.

Who's Who 1943

ITURBI, JOSÉ (ē-tür'bē hō-sā') Nov. 28, 1895- Pianist; orchestra conductor

Address: b. Rochester Philharmonic Orchestra, Rochester, N. Y.; h. 180 Riverside Drive, New York City

José Iturbi has made his mark both as a piano virtuoso and as an orchestra conductor. On occasions he has been both at the same time, performing the unusual feat of acting as soloist with the orchestra he is conducting. Although there have been critics who felt that Iturbi was too willing to allow his showmanship to supplant his musicianship, from the beginning of his career he has had a considerable following, always ready to acclaim his performances.

José Iturbi was born in Valencia, Spain, on November 28, 1895, the son of Ricardo and Teresa (Baguena) Iturbi. Destined for a musical career from childhood, he was entered in the Escuela de Música de Maria Jordan when he was five and by his seventh birthday

JOSÉ ITURBI

he was earning money by performing in cinema theatres, at balls, and in recitals. In 1903 he entered the Conservatorio de Música in Valencia, where he distinguished himself as a pianist. He studied privately also with Joaquín Malats.

During his childhood Iturbi's studies were frequently interrupted by his many engagements. Despite his youth he taught adults and he held for a time an extremely lucrative cafe position in Valencia. His neighbors became increasingly interested in his career, and a Valencia journalist raised a subscription of 1,400 *pesetas* to send Iturbi abroad for further study. The young musician left his pupils to his sister Ampar, who was also developing into a fine pianist, and he went to the Conservatoire de Musique in Paris, France.

In Paris Iturbi worked under the noted teacher, Staub, and drew the interest of Emil Sauer, the famous German pianist, and Wanda Landowska, the authority on eighteenth century music. He was graduated from the Conservatory with first honors when he was seventeen. He then went to Zurich, where he accepted a post in a fashionable cafe. There in 1919 the director of the Geneva Conservatory "discovered" him and engaged the young virtuoso to be head of the Conservatory's Piano Department, a position once held by Franz Liszt.

For two years Iturbi devoted his complete time to his educational activities. He then started to give concerts, and his tours were so successful that by 1923 he had severed his connections with the Conservatory and was devoting all his time to performing. Iturbi's playing was acclaimed in all the European capitals, and in October 1929 he made his American debut with the Philadelphia Orchestra under the baton of Leopold Stokowski[41], playing Beethoven's G Major Concerto. He followed this concert with a New York debut as soloist with the Philharmonic, playing the D Minor Concerto of Mozart and Liszt's *Hungarian Fantasia.*

Iturbi made his debut as a conductor in 1933 when he directed an orchestral concert at the Teatro Hidalgo in Mexico City. He "took to orchestra directing with ease and command from the first" and was engaged for eleven additional performances as a result of the critical acclaim. It was his work in Mexico, David Ewen points out, which attracted the attention of the directors of the Lewisohn Stadium, who invited him to direct two special concerts in New York City. During the 1935 to 1936 season Iturbi directed concerts with the Philadelphia Orchestra as well as with the Rochester and Detroit Orchestras, and he conducted in Robin Hood Dell (Philadelphia), at the Academy of Music, in the Hollywood Bowl, and at the Lewisohn Stadium. The young pianist was singled out as "one of the major dynamic baton discoveries of many years."

In 1936 Iturbi was appointed permanent conductor of the Rochester Philharmonic Orchestra, a post he still holds. During the succeeding years, however, he has appeared as guest conductor of most of the outstanding American orchestras, including the New York Philharmonic, and he has appeared as radio conductor on several programs, including the *Ford Sunday Evening Hour.* Before the outbreak of the Second World War he made frequent European and South American tours.

Most music critics agree that Iturbi has all the prerequisites of a good conductor: an excellent memory, a sensitive ear, mastery of a large repertoire, "capacity to excite men, arouse audiences," and an "instinctive flair for baton technique." Remarking on an early rehearsal with the New York Philharmonic Orchestra, Ewen wrote that Iturbi was a "born conductor" with a "clear insight into the music he was rehearsing" and a "facility to transfer his slightest desires to his men without fumbling." At that time he prophesied a distinguished future for Iturbi.

Later, however, Ewen decided that Iturbi was not fulfilling his early promise. He felt the conductor had "permitted one eye to stray toward his audiences and another to Stokowski. He has made too conscious an effort to impress himself on his public as a magnetic personality." "His performances," Ewen continued, "particularly the more recent ones, too often leave the impression of awkward self-consciousness; each nuance and accent seem overcalculated; each climax or rubato, labored. At other times there appears an almost feverish search after effect. In short, what is so outstanding in his piano playing—the feeling of ease, spontaneity, and objectivity which he generates—is not to be found in his conducting."

Iturbi has had considerable publicity in the newspapers, a fact which has been interpreted as the result of an erratic temperament or of a desire for newspaper space. In 1937 he gave an interview in which he made an "extravagant indictment of women musicians," saying that women's physical limitations make it impossible for them to attain the standards of men and that women are also temperamentally limited. The newspapers the same year gave some prominence to another incident. Iturbi, arriving to conduct the orchestra for a concert, the orchestral part of which was to be broadcast, he thought, found the soloists, Jan Peerce '42 and Lucy Monroe '42, about to go on the air with songs by Gershwin, Victor Herbert, Oley Speaks, and Jerome Kern '42. Jan Peerce sang two numbers, and then Iturbi had the concert cut off the air while he told the performers that although there was good American music in existence "all this I love you stuff" was trash. "It is far below the dignity of the orchestra to play such cheap, rotten music." He was appeased by being allowed to conduct the orchestra without singers for the remainder of the broadcast; the songs were postponed until the end. ASCAP hinted that for his insults Iturbi might be barred from playing any of its music, and Iturbi later withdrew his remarks. The same year, too, he was reported to have "had a tantrum in Cleveland because his audience munched hot dogs" during the concert.

In February 1941 during the Philadelphia Orchestra's concert series in Carnegie Hall, New York, Iturbi played Liszt's Piano Concerto in E-flat while he conducted the Orchestra. "José Iturbi has a sure-fire stunt at his disposal," the New York *Times* critic wrote, "and he makes shrewd use of it. . . Naturally, it brought down the house. You can't blame Mr. Iturbi for holding on to a good thing. . . As a pianist he was in fine fettle. His tone was big and resonant and he played with fire and dash. That in itself would have created a stir, but when Mr. Iturbi added to his piano duties a vivid job of leading his band he had his audience at his mercy. Mr. Iturbi did not miss a cue. If his hands were occupied he beat time with his head. If one hand was playing a fragment of music the other beat time or gave a cue." The New York *Herald Tribune* critic wondered "whether the lid of the piano did not bar these signals from the sight of several members of the orchestra. Still, with one momentary exception, Mr. Iturbi and his colleagues kept well together, and the performance, as a whole, gave no ground for cavil on the score of unity and balance."

In July 1941 Iturbi made the headlines again by refusing to appear on the same program with Benny Goodman '42 in Robin Hood Dell. The program as scheduled was to include Wagner, Weber, Liszt, and Benny Goodman's performance of the Mozart Clarinet Concerto, all conducted by Iturbi. Goodman was then to take the baton and lead the men of the symphony orchestra in Stravinsky's '40 *Tango*. After that the Goodman Sextet, "a hot jazz experimental laboratory," was to perform. The management offered to release Iturbi, but Iturbi preferred to have Goodman released. The Dell manager felt that the attraction was Goodman and his Sextet and not Iturbi. The conductor later explained his stand on the grounds that although he did not disapprove of jazz, he did not wish to mix the two on one program. He pointed out that he had appeared on Bing Crosby's '41 program, and had been quoted as saying that he enjoyed swing. Some time later he explained his stand in some detail: "If you are a clear-cut artist you can play anything. It is like arranging a menu. You can arrange for a picnic with hamburger, but when you have a stiff shirt and white tie dinner, you serve caviar; is it not so? It is the same in music. Boogie-woogie for picnics. Beethoven for white tie."

Iturbi has not confined his conducting and playing to orchestral work. In 1942 he gave a Town Hall piano recital in New York which was described by the New York *Times* reviewer as "an evening of almost supersmooth piano playing." He played two Scarlatti sonatinas in a style that was described as "light and crisp," played the Haydn Sonata No. 7 in D (minor and major) with "clarity and cool grace," and played three Gershwin preludes "as alternately sprightly and sentimental tunes with accompaniments that just happen to be in the jazz idiom" rather than giving them their usual interpretation, "jazzy and just a trifle low down." The *pièce de résistance* of the evening, however, was Liszt's *Hungarian Rhapsody No. 11*, to which Iturbi's pianistic technique was found best suited.

In late 1942 José Iturbi was engaged to portray himself in the film *Private Miss Jones* with Kathryn Grayson and Robert Young. When the picture was presented (September 1943) the name had been changed to *Thousands Cheer* and Robert Young had been replaced by Gene Kelley. "The prodigal and sumptuous motion picture" (an all-star musical) was, in Howard Barnes' opinion, "a tour de force in showmanship." *PM*'s reviewer said, "José Iturbi's screen debut, playing anything from Chopin to boogie-woogie and conducting a monster military band in a medley of our swellest marches, is alone worth the price of admission." The New York reviewers were unanimous in their praise of Iturbi's histrionic ability. In October 1943 Metro-Goldwyn-Mayer announced that Iturbi had been signed to a term contract, his first picture under the contract to be *Two Sisters and a Sailor*. Later he was to appear in *Anchors Aweigh*.

"Short, dark, and of an engaging childlike vivacity," Iturbi is "stocky, bulletheaded, and a chain cigar smoker." It is reported that he "frequently conducts rehearsals with a stogie as a baton." He is one of the best groomed conductors, and he keeps himself in good physical trim with gymnastics and boxing.

José Iturbi was married to Maria Giner (now deceased) on June 8, 1916. There is one daughter, Maria, who was divorced from Stefan Hero, formerly a protégé of Iturbi's. On March 24, 1943 Iturbi was appointed by Los Angeles court decree the legal guardian of his two grandchildren, Maria Teresa and Maria Antonia. He charged that his daughter, Maria Iturbi Hero, was not a proper person to raise them. The New York *Times* reported that in the courtroom the concert pianist and his daughter "held hands and threw kisses to each other." The hearing was private, the details of the charges against his daughter not being disclosed.

Iturbi's hobby is flying. It is reported that he flies his own planes to concerts, and in 1939 he flew to Buenos Aires. He has more than 600 flying hours to his credit. In August 1941 he took out his first citizenship papers and the following year he enlisted as a member of the Civil Air Patrol of the United States, offering to take part in patrol work or any other mission assigned to him, regardless of his private or professional affairs. He has also used his playing and conducting talents for selling United States War Bonds. He has been decorated by the Governments of Greece and France with the Order of St. George and the Order of the Légion d'Honneur, respectively.

JAMES, HARRY (HAAG) Mar. 15, 1916- Dance bandleader

Address: b. 1440 Broadway, New York City; h. 2095 Neches, Beaumont, Tex.

" 'At last, at last, it has come, the crack-up in enemy ranks,' said Herr Goebbels '41 over the radio and the teletype. 'The war-weary, deluded American people has turned on its warmongering leaders. . . In front of one well known warmongering newspaper called the New York *Times,* popular demonstrations of an ominous character have been under way.

" 'Photographs which have reached us by secret wireless with accompanying text show the sidewalk in front of the New York *Times* and all the way east to Broadway swarming with crowds of defiant youth. Policemen with swinging batons are tossed hither and thither. Policemen on horseback ride the sidewalk, even as the Czar's Cossacks used to do in former days. What makes the temper of the crowd more formidable is the fact that it is not a sullen mob threatening violence. Rather are the boys and girls who make up the multitude in a joyous, one might say, skylarking mood.

" 'This can only mean that the young people of America refuse to take their warmongering leaders seriously,' continued the good Herr Goebbels. 'The attitude is one of indifference and contempt. Despots like Franklin Roosevelt '42 and warmongering propaganda organs like the New York *Times* and the Paramount Theatre know they have reason to fear this spirit of disdain more than they fear barricades. But the barricades and the gunfire from sidewalks and roofs will come in good time. Our secret dispatches speak of trumpet calls to action sounded at intervals by the popular leader Harry James and the crowds swaying as one to the martial strains.

" 'The hirelings of the warmongering *Times* are swept off the sidewalk by the jeering crowd as they furtively make their slimy way into their poisonous dens. Bending over their forsworn typewriting machines, they turn pale every time there wells up from the streets the sound of exultant cheers for Harry James and his sacred Band. Taps has sounded for our chief enemy,' concluded Herr Goebbels, wiping his brow. 'Their twelve o'clock is struck.' "

Bending over his forsworn typewriter in his poisonous den, the New York *Times* hireling Simeon Strunsky indited the above paragraphs which subsequently appeared on the editorial page of that warmongering propaganda organ in April 1943. The spectacle of 7,500 youths and a sprinkling of adults lined up outside the Paramount Theatre every day, waiting for the doors to open at eight o'clock and admit them into "the current mecca for starry-eyed, moon-faced jitterbugs," apparently did cause the *Times* staff to turn pale, for, besides devoting much editorial attention to the problem, it assigned staff writers Meyer Berger '43 and George F. Horne to cover various aspects of the situation; and music critic Olin Downes '43, film critic Bosley Crowther, and office boy Orlando Suero each offered in print his explanation or interpretation of the phenomenal James' appeal for youth. Other New York periodicals also devoted much space to the problem, but for the New York *Times* it was a major crisis, since, because of the newspaper's proximity to the Paramount Theatre, staff members had to battle their way daily through an estimated 20,000 jitterbugs (as well as the normal quota of innocent bystanders and pedestrians) in order to get to and from their offices. Observers remarked that the published anguish of the *Times* caused neither the Paramount's nor James' press agents to tear their respective hair.

The mild-mannered young man who is the fount of all these perplexities of modern civilization is Harry Haag James, born in Albany, Georgia on March 15, 1916, in a metaphorical trunk, for his parents were show people who had been working with the Mighty Haag Circus (from which he derives his middle name) at the time of his birth. His father, Everette Robert James, led the band, and his mother, the former Maybelle Stewart, was an aerialist, swinging from a trapeze until one month before her son was born, and rejoining the circus when he was thirteen days old.

Soon after he had learned to toddle the infant James was billed as "the youngest contortionist in the business." The outstanding performance of his early circus career was, he recalls, diving through a flaming hoop with a glass of water on his head. At the age of six, his career as a "human pretzel" arrested by an illness, he learned how to play "hot" drums in his father's band. Having mastered the trumpet in the following four years, the boy was soon conducting the second band for the Christy Brothers Circus, in which his father then led the first band. James actually learned the trumpet "on classics," he says, and turned to popular music partly because very little concert music is written for the solo trumpet.

The circus used to winter in Beaumont, Texas, and the James family decided to settle down there permanently. The boy attended high school there and when he was fourteen won a state contest for trumpet-playing. He began "sitting in" with dance orchestras around the Southwest, and soon "his imagination and technical ability" became well known among local orchestras. When he was fifteen he traveled with Joe Gale's orchestra. In 1935 he was hired by Ben Pollack. While with Pollack's orchestra, the young man wrote *Peckin'*—the song which, he says, started a dance craze among a new group of jazz-mad juveniles who developed into the modern jitterbugs. The song "brought few dollars and little fame to Harry," but a recording of it, in which James played a trumpet solo, was brought to the attention of Benny Goodman '42, then "king of swing." In 1937 James went to work for Goodman. The Goodman band, in which James was featured trumpet player, also had Gene Krupa on the drums, Ziggy Elman on the trumpet, and Lionel Hampden and Teddy Wilson in the quartet and sextet. James believes that the departure of those stars is one of the causes for what he considers Goodman's decline.

In 1939 James decided to start his own band, and Goodman lent "his dark-haired, blue-eyed trumpeter" a large sum of money, reputedly $42,000, to give him a start. The new band was not, however, a success. James had begun with a "wild jump" style, emulative of Goodman's, but he had failed to "click." After working for some time as a "hot" band James and his twenty-eight musicians found themselves in the red.

Finally James "laid away his ambitions as a 'hot' man and developed a simple sweet style that features the clear, cool James trumpet against a mass of soft strings. (He added five strings to his band to give it the unswinglike total of eight.) Imperturbably James alternated blues and boogie-woogie with Viennese waltzes and technical specialties out of his own trumpet." Then in January 1942 he recorded Al Jolson's '40 1914 hit *You Made Me Love You.* Despite the fact that, according to Abel Green in *Variety*, "many legit musicians scored James' recording for its 'too schmaltzy' trumpet work," the record sold over a million disks, and the young leader found himself at last in the "big time." By the summer of 1942 he was "the idol of the adolescents." "And, whatever the savants have to say about his aphrodisiacal music," wrote Green, "a close-up of what he does to young America on and off the hoof is something that can only be appreciated with one's own eyes."

James started his literally sensational appearance at the Paramount in April 1943. The youth of New York City and its environs began queuing up outside the box office each morning at four a. m., many prepared, with blankets and lunches, to sit through all the six shows. "Once inside, they sat through show after show, sighing entrancedly during sweet numbers, twitching and squealing ecstatically during the cadenzas of *Two O'clock Jump*. Some jitterbugged in the aisles." Other more daring souls climbed up and tripped the light fantastic on the stage. Unkind press reports suggested that much of this terpsichorean frenzy was press-agent inspired. (Ironically enough, although James had had no success until he resigned himself to playing "sweet," it is the "hot" numbers that his youthful fans demand. His sweet music, however, is popular at hotels and night clubs, and he includes in his repertoire versions of such light classics as *Ciribiribin, The Flight of the Bumblebee,* and *Carnival in Venice.*)

HARRY JAMES

It was difficult to get the ardent youth out of the Paramount before it had sat through all of James' five or six daily performances. A ruse was adopted: it was announced from the stage that autographed photographs of James would be handed out in the lobby after the performance. The more sophisticated of the "hep-cats" realized that this offer would be repeated after each performance, and stayed put, but "the majority of the kids fell for the gag." James himself, during his engagement at the theatre, was in a virtual state of siege, remaining in the Paramount all day, not daring to set foot outside, lest he be mobbed by his over-enthusiastic admirers who lay in wait outside all available exits. Meanwhile "the thirty-five policemen on duty daily averaged a four-pound loss [one had four ribs broken in the crush and didn't notice it until later]. Despite the rubber shortage, eighty-four pairs of rubbers are in the theatre check room in addition to twenty-four raincoats, sixty-five fountain pens, eighteen wrist watches, twenty-seven pipes, and ninety-three porkpie hats." "Vive," commented music critic Olin Downes, "la musique!"

(Continued next page)

JAMES, HARRY—*Continued*

The New York *Times* pundits discussed the problems from all angles. Bosley Crowther concluded that it was not "for this department to muse upon so many kids waiting for hours to shiver to the mesmerizing rhythm of jive. That's one to stick the psychologists—or better, the parents of the kids." Meyer Berger queried a few sample jitterbugs and received such illuminating answers as: "You can't really tell what it is. It's only that shivers run down your spine when that trumpet gets hot." "The music from the trumpet," Berger remarked himself, smugly, "seemed quite ordinary, no different from any blare and bray of the usual jazz band, but this apparently was due to some defect in the adult make-up." Olin Downes, upholding the same thesis more gently, found James "a very good player, no better than a round dozen of his highly publicized colleagues of calling, but as good as most of them. He has the complete command of the full range of the instrument, can summon a heart throb of a vibrato when he plays a melody, do stunts of triple tonguing and virtuoso figuration." George F. Horne appealed to "scholarly authorities on the arts and on human behavior," and received learned discourses on "mob hysteria" and "musical intoxication." James' power to sway an audience of jitterbugs with his trumpet was even compared to Hitler's '42 power to sway a German audience with his oratory.

Other periodicals took up the war cry. Asserted *Time* Magazine: "The modern medical name for it [dance mania] is tarantism, after the wild Italian folk dance, the tarantella. The Italians have a belief that the tarantella drives out the poison of a tarantula's bite by causing perspiration, and that the dance was named for the spider. Actually both dance and spider were named for the city of Taranto, which was hit hard by the dancing mania." One writer on the newspaper *PM* found an analogy in the Children's Crusade of the year 1212; another compared the James saturnalia to the ancient Dionysian revels, "only instead of the radiant young god, Dionysus, you get a tallish young man with a horn." Elsa Maxwell '43 of the New York *Post* declared flatly that jitterbugging was a subject for psychiatrists. "It is organized St. Vitus dance, and anyone who tries to justify this type of frenetic, smirking, hysterical movement as healthy self-expression is hereby and officially invited to be my guest at a coming out party in Mattewan." Abel Green of *Variety* remarked, however, that "there is something healthier about this manifestation of unbridled juvenile spirit than in what we now look back upon as Prohibition's Jazz Age."

Perhaps the most authentic, if not the most lucid, explanation of James' strange drawing power was offered by the seventeen-year-old office boy of the New York *Times*:

"Everybody is asking, 'Why is Harry such a solid sender?' Well, hear my version. As you are seated or are trying to stay seated you feel that sensation that hits every hepcat. First your feet get the sensation, then it runs up your leg and you start to keep time to the music with your feet and you feel like getting up and jiving to that fine music that comes out of the magic trumpet of Harry James.

"Then you feel something come over you that cannot be controlled, your heart feels alive and gay, you jump with jive. You beat on the seat, you sit on the edge of the chair. Why some alligators climbed the window in the back just to get a good look at the Pied Piper."

The lanky trumpeter with the Texas drawl also broadcasts three times a week on the radio, and late in 1942 "trumpeted his band to first place in the New York *World-Telegram* poll of radio editors, displacing Guy Lombardo, who occupied the top spot for eleven years." He also won polls conducted by *Orchestra World*, *Motion Picture Daily*, *Radio Daily*, and *Metronome*. In November 1942 he and his orchestra were honored by the New England Conservatory of Music for "setting a brilliant example in the field of popular music to the youth of America."

On May 10, 1943, after three weeks at the Paramount, James was ill from overwork, and a science short had to be substituted for him, to the vociferous disapproval of his jitterbug admirers. On May 17, he opened at the Astor Roof for a less gruelling grind than his engagement at the Paramount. James actually has a phobia against theatre work, which has frequently thrown him into a state of nervous collapse. He is said to have notified his agents to discontinue booking him for this type of work, and "to confine him to locations, films, and even occasional one-nighters." (He particularly likes film work in California.) His aversion to theatre work costs him, *Variety* estimates, a potential gross of $300,000 yearly in addition to his other work. James may, however, be forced to play the Paramount again in 1944, as the house holds an option on his services.

James' gross income is well over $40,000 a month now, but, observers agree, he works hard for it. In his first week at the Paramount, for example, he played forty-three shows, did three broadcasts, and three rebroadcasts, plus rehearsals. In addition, he generally plays three or four benefits a week. "The only thing that gets him down is his feet. He has to stand while the rest of the band is sitting in comparative ease, and he doesn't like it."

"The World's Number One Trumpeter" was married to Louise Tobin, former Goodman vocalist, on May 4, 1935. They have two sons: Harry Jeffrey and Timothy Ray James. Divorced from his first wife in June 1943, James was married in Las Vegas, Nevada on July 5 to Betty Grable, the former wife of Jackie Coogan. James is tall (six feet two), thin, and "moves with a nervous grace." He has wavy brown hair, a mustache, and "a tired look." He appeared in two motion pictures in 1942, *Private Buckeroo* and *Springtime in the Rockies*, in *Best Foot Forward* in 1943, and is deferred from the Army to complete a third, *Mr. Co-Ed*.

James is a baseball enthusiast. "The chances are," remarks S. J. Woolf, "one of the reasons he organized his own band was so that he would always have enough men with him to start a ball game. One of the first things he does when he strikes a town is to look for an empty lot where they can play."

James doesn't make his band's arrangements any more, but he writes his trumpet solos himself. Personally, he likes music both sweet and hot, although when he plays his phonograph in his dressing room for relaxation, he admits that he doesn't play swing. "Mostly my records are semi-classics, like the Kostelanetz '42 records, and some Debussy and Ravel. No heavy stuff, though. There's no relaxation in them."

James, as he conducts his band, appears composed and unaffected by the orgies in the aisles. "As he lays his trumpet down on the white piano and turns to his band, which is still playing, he snaps his fingers, moves his elbows, and keeps time with the heels of his tan shoes. He reflects Tin Pan Alley rather than the sorcery of sound. The pandemonium in the audience does not seem to register. The piece is finished and he walks over to the microphone and announces the next number—a song or some comic patter. His tone is confidential."

"It's good for them," he has replied to the controversy over the frenzy he has stirred in his youthful followers. "When I was their age I used to play cops and robbers in an empty lot and sometimes I got into fights. This is just good, clean fun. . . And nobody gets into a fight." Later he explained that "listening to music gives them—the kids—a good, healthy outlet." He also said that swing was helping to improve the musical tastes of thousands of boys and girls. "There is more to their enthusiasm than throwing fits on a dance floor." "Youth," says "the modern Gabriel", "must have its swing."

JESSEL, GEORGE (ALBERT) Apr. 3, 1898- Actor; motion-picture producer; song writer

Address: b. 1501 Broadway, New York City

Actor, writer, song plugger, and toastmaster, George Jessel has been a "favorite son" of vaudeville since 1910. His appearances on the stage, over the radio, and as an after-dinner speaker have won him a reputation as a facile wit, as a "sentimental comedian," and as a brilliant master of ceremonies.

Maurice Seymour

GEORGE JESSEL

The son of the late Joseph A. Jessel, a playwright, and of the former Charlotte Schwartz, George Albert Jessel was born in New York City on April 3, 1898. He was named after his relative, Sir George Jessel, who was judge of the first instance of the British rolls court (1873-81) and president of the court of appeals (1881-83). The Jessels were poor, and George left Public School 184 to help earn his living after only six months of formal schooling. "I've learned practically everything I know in the theatre," Jessel said later. "I can remember learning to read and write but I still print. I can speak four languages."

Jessel's grandfather was a tailor and, while his customers were waiting to have their trousers pressed, he brought out little George to sing for them. Encouraged by his success with this audience, the boy proceeded to reach greater heights as an entertainer at his grandfather's lodge meetings. Finally he demanded that his mother (his father had died), the ticker seller at a motion-picture house in Harlem, arrange for her employer to hear him sing. The theatre-owner, as it happened, had decided at that time to try vaudeville in his theatre, and he added Jessel to two other boy singers whom he had already hired, to make a trio. The other boys were Jack Weiner (now a Hollywood agent) and Walter Winchell '43. "In those days," wrote Jessel, "no matter what your right name was, you called yourself something else. So Weiner, Winchell, and Jessel became Leonard, Lawrence, and McKinley, the Imperial Trio. Because we were under sixteen, the Gerry Society prohibited our singing on the stage, so we sang in the tiny little piano pit, to the accompaniment of Harry Carroll, the composer, and later Phil Baker, the accordionist-comedian." Finally the trio was fired because of Winchell's misconduct, but Jessel was retained as a soloist. He got his first billing then. The theatre marquee announced: "It's worth five cents

JESSEL, GEORGE—*Continued*

alone to hear little Georgie Jessel sing." (Some thirty years later Winchell wrote: "And it still goes.")

When he was ten Jessel caught the fancy of the song writer and impresario Gus Edwards and, teamed with Eddie Cantor '41, toured with "Gus Edwards' School Boys and Girls." By the time he was sixteen, however, his voice had changed, "his cuteness vanished," and he was forced to leave Edwards' group (1914). Almost immediately he was offered a ten weeks' engagement at the Victoria Palace in London, England. This led to other engagements in that country. One time, while he was performing there, Zeppelin bombs hit the theatre, demolishing the dressing rooms directly in back.

Jessel's return from London in 1917 found him without an "act," and too old for "kid stuff." He tells the story of the occasion when he was sitting around with "the boys" one afternoon, trying to think of something he could put across. At loose ends, he called his mother and began to tell her funny anecdotes about the day. His friends found his side of the conversation uproarious, and suggested that he use a "Hello, Momma" telephone routine as an act. It clicked, and he has been using it ever since.

For two years the comedian performed in "small time" vaudeville. In 1919 he married Florence Courtney. That same year the Shuberts engaged him for their *Gaieties*. Three hours before the show opened, Harry Lewis, the leading comedian, "obligingly fell ill." Onstage in Lewis' part, Jessel completely forgot his lines. His cue came: "What do you know about this, young man?" To which he replied: "I don't know anything about this. I was only given the part this afternoon. But if you want to know some good jokes, I'll tell you some." The management, however, failed to appreciate Jessel's talent for improvisation, and he found himself again unemployed.

On his own again, Jessel wrote and sang *Oh How I Laugh When I Think How I Cried about You* and *Oo La La Oui Oui*, a marching song. His light banter and satire often had a sober or sentimental twist. *The Troubles of 1920*, a travesty on reviews, which he presented, ended with a producer and his mother lugubriously leaving the stage after his failure. The critics called it "too sad" for a comic act. The first complete musical tabloid presented in vaudeville was *George Jessel's Troubles*, which Jessel wrote and produced in 1922. Next he wrote most of the scenes for the Winter Garden shows, presented *Helen of Troy, New York* (1923), joined the cast of the *Passing Show*, and toured with them until the following year.

The year 1925 marked one of the highlights of Jessel's career: he left vaudeville to play a straight role in *The Jazz Singer*, which had a run of over 1,000 performances. Based on *The Day of Atonement*, a story by Samson Raphaelson, the play dramatizes the conflict between filial and professional duty. Jessel, played the leading role of Jack Robin, the son of a Jewish cantor, who abandons his Broadway show on the opening night to obey his father's dying wish. Although the play was no masterpiece, it had much popular appeal, and Jessel was praised for his poignant performance. "Vaudeville has lost a good comic and the stage has found a good actor," wrote one critic. (As a film with Al Jolson '40 in the leading role, *The Jazz Singer*, 1930, became America's first talking picture.) From 1925 to 1927, Jessel, in addition to his theatrical duties, acted as the official toastmaster for Mayor James J. Walker, one of his best friends, and thus became the unofficial toastmaster of New York.

Jessel's brief motion-picture career began in 1926 when he made *Private Izzy Murphy*, a "sentimental, timeworn, slow-moving" piece reminiscent of *Abie's Irish Rose*. It was said to have provoked "widespread sniffling." Jessel's performance was considered natural and sincere. He played in several other early "talkies," including *Lucky Boy* (for which he wrote the dialogue); *Love, Live, and Laugh; Ginsburg the Great*; and *Happy Days*. During his association with Hollywood, Jessel by no means left the legitimate theatre, but continued to appear in plays as well as in films. *The War Song* (1928) by Bella Cohen, Samuel Spewack, and himself was Jessel's next stage venture. "There were some dry eyes in the audience," a critic commented on this play, "but they were in the minority." The saga of a Jewish song plugger, the play carried him from a New York apartment to a dugout in the German lines. "It is Jessel, the devoted son, the wisecracking philosophical blunderer," one reviewer wrote, "who sustains the drama and carries it through some dreary stretches." In between films and plays Jessel made several appearances in vaudeville at the Palace Theatre in New York City. Hailed as the "prodigal son of vaudeville," Jessel knew what the Palace patrons wanted—"highly amusing comedy and saccharine sentimentality, in equal parts"—and he gave it to them.

During the '30's Jessel continued to appear in motion pictures and in vaudeville, and also made some ventures into a new field, radio. In 1932 he was divorced from his first wife and two years later he was married to Norma Talmadge, with whom he had often acted. (They were divorced in 1939.) Except for *Sweet and Low* (1930) with Fanny Brice and James Barton (songs by Billy Rose '40), Jessel appeared in no Broadway shows for several years. The Jessel Producing Company, formed in 1930, presented *This Man's Town*, and Jessel, as producer, had his chance to be "on the hollering side of the footlights." He continued, however, to entertain audiences with his skits, songs, sentimental reminiscences, jokes, and famous telephone conversations at the Casino, the Capitol Theatre, and the Versailles Night Club with Elsa Maxwell '43. In 1939 he celebrated his tenth appearance at Loew's State Theatre, as well as his thirtieth year in the show business.

Jessel was not as successful with radio as with other fields, even though many listeners enjoyed his spontaneous humor and skill as a master of ceremonies. In 1935, after a fruitless search for a sponsor, he commented: "They aren't interested in whether people can build up a funny gag. They ask: 'Can you make a funny noise?'" (Joe Penner was becoming popular at about that time.) The comedian maintains that radio does not give him the freedom he likes—he is fond of ad libbing, which is not suited to radio, with its dependence upon timing. Jessel's lack of success as a radio wit has been attributed by others to the "local" flavor of his comedy. A good deal of his radio material appealed to a New York audience and was lost on other listeners. He nevertheless appeared with his wife, Norma Talmadge, in a broadcast called *Thirty Minutes in Hollywood* (1937). He was also heard on Reid's Ice Cream program in 1939, and on the Vitalis program (as master of ceremonies) in 1940. In 1942 and 1943 he was guest star on many well known radio programs.

Jessel returned to Hollywood in 1936 as a producer, Warner Brothers having hired him for *The Life of Haym Solomon*, which appeared in 1937. At that time Jessel declared that he was no longer interested in Broadway. "The kind of plays I used to do, the sentimental ones that were successes, reached out to a middle-class audience . . . that . . . doesn't exist any more." The career of Haym Solomon, moreover, had always been his favorite page in history, and he was eager to dramatize it.

When the New York World's Fair opened in 1939, Jessel, who had often spoken of his nostalgia for New York in "the good old days," headed the group which promoted the *Little Old New York* exhibit. Early the next year Jessel was, legend has it, walking near the Loew's State Theatre with a friend who bemoaned the passing of vaudeville. Jessel left his companion in the middle of the street, entered the theatre, walked up the aisle, interrupted the performer on the stage, and said: "I just wanted to step foot once more on this stage before Billy Rose fills this place with water." In that year Jessel married Katherine Lorraine Gourley (Lois Andrews), a sixteen-year-old show-girl. Two years later they were divorced. Jessel has one child, a daughter, Jerilyn, born of this marriage on October 22, 1941.

In 1941 Jessel produced *High Kickers*, of which one reviewer said: "Although *High Kickers* is probably designed to recapture the glow of the show business in the good old days, it is likely to convince a number of people that show business is infinitely keener today." The show failed. Jessel's next venture, *Show Time*, which opened late in 1942, was, however, a success, and has led many to herald the return of vaudeville to the legitimate theatre. According to Jessel, "*Show Time* has more class than any vaudeville I can recall," and vaudeville, he says, is dead and gone. His performance in *Show Time* found him more in his stride, his repartee pared, his script showing more acumen and restraint than he had ever claimed before.

"At his best," wrote Brooks Atkinson '42, "Jessel is a master entertainer. If there ever was a man born for the stage, it is Mrs. Jessel's comic and sentimental son Georgie, who can make an audience sit back and expand and enjoy itself. Add skill and experience to magnetism and enthusiasm and you have in George Jessel a great theatre performer." At his worst, critics find Jessel maudlin, repetitious, and tiresome. His sentimental and off-key singing has been much imitated by comedians.

So Help Me, Jessel's autobiography, appeared in May 1943. In spite—or perhaps because—of what reviewers called its "appallingly bad taste," eight newspapers started serializing it on June 15; *Coronet* paid $700 for a tabloidization, "a fancy figure for such rights"; and the publisher, Bennett Cerf '41, reported that it was "selling like French postcards." Burton Rascoe commented: "If it is bought by all the persons Mr. Jessel believes are out to do him dirt plus all the others whom he mentions by name, the book will be a fair success even if nobody else buys a single copy."

Jessel has also written *Talking to Mother*, a book of telephone conversations, and *We Have with Us Tonight*, a book of after-dinner speeches. The author has been toastmaster for over 300 banquets. "Every time Jessel sees half a grapefruit," Will Rogers said, "he automatically rises and says: 'Ladies and Gentlemen, we have here tonight. . .' " Jessel serves on the board of more than a dozen charity organizations, is vice-president of the Jewish Theatrical Guild, and at the Navy Relief Show in March 1942 at Madison Square Garden played his 1,250th benefit performance. Jessel's special interest, he says, is the study of religion, and he has one of the finest collections of works on the subject in the United States.

In late 1943 Jessel signed a contract with Twentieth Century-Fox as a director and left for Hollywood. His first assignment was to be *Kitten on the Keys*, a musical scheduled for production in January 1944.

Of his work George Jessel says: "I'm a showman . . . a song writer, a producer, a dramatist. You might say I'm a comedian by necessity. Why, my greatest success was a grim tragedy—*The Jazz Singer*." He has worked hard and, at forty-five, said: "Luck? I'm just about breaking even. . . Success? I haven't even gotten anywhere yet."

JOHNSON, CROCKETT 1906- Cartoonist
Address: b. c/o PM, 27 Sixth Ave, Brooklyn, N. Y.; h. Darien, Conn.

On the twentieth day of April 1943, the New York newspaper *PM* celebrated the birthday of a character named Barnaby. It was his first birthday as far as *PM* was concerned; it was in actuality his second, for his originator, Crockett Johnson, had first dreamed

CROCKETT JOHNSON

him up a year before *PM* began to run him. "Barnaby" is, of course, as the cognoscenti well know, a sophisticated comic strip with a small but very fanatical audience, composed primarily of people who disdain the ordinary comic strip. "Not since Synge's *Playboy of the Western World* caused riots in Dublin," contends *Cue* Magazine, "has an Irishman on a paper created such an uproar."

Crockett Johnson says he doesn't like to draw and never intended to be an artist. He was born David Johnson Leisk in 1906, the son of David and Mary (Burg) Leisk of New York City. After finishing high school in Elmhurst, Long Island, where he was reared, he went to the art school at Cooper Union and studied typography at the Fine Arts School of New York University. A position in the advertising department of Macy's didn't last long, for Johnson resigned—just before he was fired—for wearing a soft collar instead of the regulation stiff one.

Then, if at any time, he must have become embittered with his art, for his next job was lifting ice in an ice house. Soon, however, he turned up as art editor for several trade magazines of the McGraw-Hill Publishing Company, and he worked at this and at free-lance designing from 1927 until 1940. In March of the latter year "The Little Man with the Eyes" made his appearance in *Collier's* Magazine. Until "Barnaby" evolved, he was probably the artist's best-known free-lance creation. Johnson continued to produce this character until January 1943, when Barnaby began to monopolize his creator's time.

Barnaby actually was born because of Johnson's desire to find some idea that would guarantee him a steady income without too much effort, and was not "dreamed up at the bottom of the country garden on a midsummer's eve," as one might suppose. Johnson didn't know much about comic strips, according to Chan Norris in *PM*, "but he was certain a new one would have to be different from others. He decided to make his chief character a precocious small boy living in a very proper home." For some reason or other he named this small boy Barnaby. Despite the fact that Johnson has no children of his own to use as model for his creation, the admirers of the strip claim that Barnaby is very real and very modern, "a child so well adjusted to life that he has already learned to accept things as they come, take what good or bad there is in them, and forget them."

After drawing a few episodes of "Barnaby," Johnson decided that a five-year-old boy wasn't enough, so he created Barnaby's godfather, Mr. O'Malley. Mr. O'Malley, a little man with pink wings (for which we have to take Johnson's word, as the cartoon is not printed in color) is, according to Johnson, partly W. C. Fields, "partly Mayor La Guardia '40, and his cigar and eyes are occasionally borrowed from Jimmy Savo." "Mr. O'Malley," wrote Charles Fisher in the Philadelphia *Record,* "is a singularly inept and fumbling fairy godfather. His tricks never quite come off, and the little magic he possesses is likely as not to backfire as it did on that regrettable occasion when he made himself disappear by accident. It took him a couple of weeks to remember the knack of getting his body back again." "And Barnaby," continued Fisher, "was only mildly surprised. We have a feeling he doesn't expect much of Mr. O'Malley." (The pink-winged godfather nevertheless ran for Congress in the fall of 1943 and, reversing his customary ill luck, was elected—"not unanimously," as he remarked dejectedly, "but only by a landslide." "The result," commented one Democratic admirer, "was the only comforting thing about this year's elections.")

After the strip had been running about seven months Johnson "felt another character coming on," and so into the story popped Launcelot McSnoyd, the invisible leprechaun from O'Malley's Elves, Leprechauns, Gnomes, and Little Men's Chowder and Marching Society. Later Johnson presented Barnaby with Gorgon, the talking dog. Wrote Dorothy Parker: "I think the conception of a dog who talks—'Didn't know I could do it; never tried it before, I guess'—and then turns out to be such a crashing bore that they have to lock him away so they won't be obliged to listen to him, is—well, it's only glorious, that's all. You have to love dogs before you can go on to the step of taking them down, understandingly. I think Mr. Johnson must love dogs. I think Mr. Johnson must love people. I know darned well I must love Mr. Johnson."

"Barnaby" first appeared in New York's *PM* in the spring of 1942. It now is syndicated to the Chicago *Sun*, the Philadelphia *Record*, the St. Louis *Star-Times*, and other newspapers. Johnson takes nearly a week to get out one week of the comic strip, complaining that he can't seem to get to work until after the news broadcasts at 11:00 o'clock at night. "It takes me a long time to write—me and Hemingway—and a long time to draw," he says. "I'd like to do strips that were syndicated only in quarterlies." In order to cater to his own indolent disposition, which he fosters by "trips to the beach to watch the tide come in" or to the country "to watch the grass grow—in season," Johnson created an innovation in the art of the comic strip. Instead of lettering the balloons by hand, as is customary, he simply has his set in type. *PM* says they are easier to read. Although a New Yorker, Johnson now lives in Darien, Connecticut, both because he has an allergy to dust and because he thought living in the country would help him concentrate. He found, however, that there was just as much dust in the country and that the distractions offered an artist with an idle disposition were just as great as those of the city, where he had spent a great deal of time washing his brushes and watching the children in the parks.

"Barnaby" has been put out in book form and was published in the fall of 1943 with much success. By November 1943 it had already gone into four editions of 10,000 copies each. Johnson is now working on a second volume. Barnaby will go on the radio as soon as a sponsor turns up. If there is a Barnaby motion picture, W. C. Fields has been suggested for the role of Mr. O'Malley. Barnaby gets a lot of mash notes, most of them, according to his parent paper, "from people who say they've never read a comic strip before." In the spring of 1943 the senior class of the College of the City of New York gave Barnaby sixty-three per cent of their votes as their favorite comic strip character. In the fall an all-"Barnaby" exhibition ran for a month at the Norlyst Galleries in New York.

"Barnaby" has aroused "the enthusiasm of people like William Rose Benét, Max Lerner '42, Louis Untermeyer, Frank Sullivan, and Rockwell Kent '42; and Mr. Johnson has been compared with such widely differing creators as Lewis Carroll, Aristophanes, Shakespeare, Dostoevsky, and Walt Disney '40." "Compared to the grisly realism of most modern cartoon strips," said *Life* Magazine, "'Barnaby' comes as a breath of sweet, cool air"; and Charles Fisher of the Philadelphia *Record* confessed himself to be "in a state of blithering admiration" over the same strip. In Mr. O'Malley, he believes, "Crockett Johnson has invented one of the original and authentic comic figures of his time. We believe, very seriously, that it is in every sense a major creation."

A round-faced, bespectacled young man of Scottish origin, Johnson looks something like a pixie himself. He is a devotee of mystery stories and sailing. He "fancies himself as an authority on Gilbert and Sullivan" and specializes in collecting "odd facts." In 1939 he was married to Ruth Krauss.

JOHNSON, EDWARD 1880(?)- General manager of the Metropolitan Opera Association; tenor

Address: b. Metropolitan Opera Association, Inc, Broadway and 40th St, New York City

Choir boy, matinee idol, and for many years "ranking tenor of the world's first opera house," as general manager of the Metropolitan Opera Association Edward Johnson has proved that his ability in business is as great as his ability in music.

EDWARD JOHNSON

Edward Johnson was born in Guelph, Ontario, the son of James Evans Johnson, a Welsh grain merchant, and Margaret (O'Connel) Johnson, an Irishwoman. Johnson's father's avocation was music, and he saw to it that his son had a musical education. Young Johnson's "introduction to an audience," wrote Robert A. Simon in the *New Yorker,* "took place in a Guelph Sunday School, where his singing of *Throw Out the Life Line* was considered masterful. Not long after that he overwhelmed a great gathering with an aria which Metropolitan audiences never have heard him sing—*Little Annie Rooney.* The burghers of Guelph agreed that the five-year-old son of James Johnson ought to have a remarkable future."

As time went on young Johnson learned to play the piano and the flute and eventually joined his father in the Guelph orchestra as the "first (and only) flute in the band." His soprano voice changed into a first-rate tenor with a "guaranteed high 'C.'" Edward did not at first consider music as a profession, perhaps because his father thought of music as a perfectly good hobby, but not a career. As a boy, the younger Johnson had thought of studying for the ministry, but he changed his mind and began a law course at the University of Western Ontario. "Music, however," according to the *New Yorker,* "seemed to him to be his vocation, and he left the University before the spring examinations—which, he says, he probably couldn't have passed anyhow."

Using the skill as a persuader which later made him "unofficial ambassador" for the Metropolitan as a speaker at luncheons, club meetings, and "save-the-Metropolitan" campaigns, Johnson convinced his father that he ought to lend him his moral and some financial support. At the age of twenty he arrived in New York City with $100, and it wasn't long before his "high 'C' and engaging appearance" brought him a church job. Other church jobs followed, and, wrote Simon, "he

JOHNSON, EDWARD—*Continued*

wasn't much past his twenty-first birthday when he landed one of the most desirable positions in town, that of tenor soloist at the Brick Presbyterian Church."

While still working for various churches, Johnson was engaged now and then on short notice to take the place of eminent tenors unable to sing at concerts for one reason or another. "Starting as pinch-hitter for several illustrious but unreliable chanters, he soon developed a market for his services, and found himself to be a busy concert artist."

If Johnson still could not break into grand opera, it was because he lacked the glamour of a European reputation. As his next step, therefore, he planned study abroad, but, a businessman from the start, he considered it unwise to leave until he had accumulated enough money for a two-way ticket. Church jobs never pay well, and it seemed as if it would be years before Johnson could go to Europe, if indeed he could go at all. In 1905, however, the Oskar Straus operetta, *A Waltz Dream*, was being cast, and the producers were seeking a romantic lead who could sing. Johnson's name was mentioned, and he received an audition. Although he appeared with a volume of sacred music under his arm, he got the role.

He was well paid; the opera had an extremely successful season; and he received many attractive offers to stay on Broadway and star there. The thrifty Johnson, who had saved up enough from his season to finance a trip to Europe, refused—but he admits that he was tempted. He arrived first in Paris, where he was taken under the wing of a fellow inhabitant of Guelph. At this friend's studio he met a young Portuguese viscountess named Beatrice da Verga d'Arneiro. Johnson returned to America "to raise another jack pot through concerts," went back to Paris in 1909, took the lady to England, and there married her. The young couple then moved to Florence, where Johnson studied with Caruso's teacher, Vincenzo Lombardi.

For almost three years he worked to get into opera. His daughter, Fiorenzina, was born at this time. At the suggestion of his music teacher Johnson changed his name to Edoardo di Giovanni to appease European audiences, wary of singers from overseas. In 1912 he finally made his operatic debut at Padua, but he continued to keep his Italian name until he joined the Chicago Opera Company in 1919. "His wife," wrote Taubman, "continued to be known as Signora Johnson. Strangers who did not know that they were married winked slyly after meeting Signor di Giovanni and Signora Johnson." Once only was Johnson billed under his own name in Italy. He had been engaged to sing in Puccini's opera, *The Girl of the Golden West*, in which the protagonist is the bandit Dick Johnson. The enterprising manager of the opera house announced that for this performance he had brought from America "the original Johnson" in person. Johnson had a brilliant career in Italy. "From the beginning, he sang only principal parts. In a few years he had become one of the most popular tenors in Italy, and important composers, including Puccini, selected him to create the tenor roles in new operas." Less than three years after his première in Padua Johnson achieved the goal of all singers who go to Italy: an engagement at La Scala in Milan. He appeared there in the title role of Wagner's *Parsifal*, which was having its first Italian performance.

In the spring of 1919 Johnson's wife died, and he has never remarried. That fall he joined the Chicago Opera Company. As Edward Johnson, he made his American operatic debut in Chicago in the 1919 to 1920 season. Two years later he finally became a member of the Metropolitan Opera Company.

Johnson "became the pride of the late Giulio Gatti-Casazza, then general manager of the Metropolitan. Gatti assigned him to glowing, youthful parts, like Romeo, Pelléas, Peter Ibbetson." Because Johnson was "a tenor with brains," Gatti-Casazza began to groom him for his successor. His favoritism was so marked that envious colleagues of Johnson's called him "teacher's pet." Although Gatti-Casazza, when he resigned in 1935, favored Johnson as his successor, the board named Herbert Witherspoon manager. When, however, Witherspoon died that year, Johnson succeeded him, the first tenor in the history of the Metropolitan Opera House ever to become its sole general director.

A critical consensus, according to the *New Yorker*, undoubtedly would be that Johnson was "one of the ablest and most effective tenors ever to appear at the Metropolitan." He combined "an unusually fine voice and equally unusual musicianship with dramatic skill and a completely intelligent and efficient approach to his job." His interest was "in the opera rather than himself," and his presence in the cast when he was still a singer "helped many a debutant and debutante through the spasms of a Metropolitan first appearance."

Since 1922 Johnson has been a citizen of the United States and, writes Taubman, "his attitude has been strictly American for much longer." He has not held to the old tradition of disdaining local talent, but has engaged as many American as foreign singers for the opera company. Johnson is hopeful that America will supply all the talent that opera in America needs. "He has engaged American scene designers. He has freshened his shows with a shot of Broadway snap." By the opening of the 1943-44 season the company consisted of forty-six American-born singers out of a total of eighty-five. Of the remaining thirty-nine, twenty-eight were naturalized citizens. Since the period sixty years ago when there was only one American-born singer—and she used a foreign-sounding name—the trend has completely reversed. "America," declared Johnson, "is no longer an importer of operatic material, but an exporter."

As general manager of the opera, Johnson has equaled his success as a tenor. "Mr. Johnson's policies," wrote the New York *Times*, "have been commendably practical and clear-sighted. . . His budget has been strictly limited [in 1940 the Metropolitan faced a severe financial crisis and appealed to the public for funds] with the result . . . of a slight balance on the right side of the ledger. Novelties . . . of either European or American vintage have been conspicuous by absence. Revivals of worthwhile masterpieces have been fairly numerous. Works which have been unduly neglected have been restored. . . Mr. Johnson has engaged new and interesting singers, despite difficulties raised by European governments in wartime." And despite being a "nice chap," he's proved himself able to cope with the artistic temperament, in either singers or stagehands. He himself doesn't "indulge in it." He has also done much to popularize opera by continuing broadcasts from the Metropolitan over the radio and by lowering the prices of seats.

Johnson's tastes are simple. He lives in a three-room walk-up at Madison Avenue and Sixty-Second Street. He has no servants, except for a part-time maid. He has no car —he walks from his home to his office at the Metropolitan. Music is not the only art in which Johnson is interested. "His rooms are crowded with pictures, manuscripts, statuary, antiques, and other artistic items which he has collected in his concert tours. His books . . . are stacked in cases that range to the ceiling. His library contains almost everything written about music in the past twenty years, but he doesn't specialize. His preference is for biographies."

In his personal appearance Johnson does not suggest an opera star. "There are," wrote Simon, "only two Johnson characteristics which might suggest to some observers that he has operatic associations. One is a predilection for fedora hats. The other is a quirk of speech not uncommon to English-speaking singers who have lived in Italy—the trick of slipping a trilled Italian 'r' into words like 'very' and 'greetings.' Johnson's normal speech has an attractive Welsh-Irish inflection." Johnson looks many years less than his actual age. Although his hair is gray, it is all there, and he still has the "streamlined" figure that made him a matinee idol in the *Waltz Dream*, as well as the Metropolitan's "prize romantic lead" in bygone days. On April 27 he was awarded the honorary degree of Doctor of Letters by Union College.

JOHNSON, HEWLETT, REV. 1874-

Dean of Canterbury

Address: The Deanery, Canterbury, England

"Today," says Johannes Steel '41 in *Men Behind the War* (1942), "when Britain's very survival depends upon its recently formed alliance with Communist Russia, the pro-Soviet Dean of Canterbury, who had long been a voice crying in the wilderness, has truly come into his own. A little of the aura of the prophet adheres to his bald head. In his earnest, though unassuming way, the Dean helps to create a moral bridge between unbelieving Russia and Christian England." For many years called the "Red" Dean, Hewlett Johnson is the author of *The Soviet Power* (1940), which was first published in his own country as *The Socialist Sixth of the World* shortly after the outbreak of the Second World War.

Hewlett Johnson was born in 1874 at Kersal, England, a fashionable suburb two miles from the center of Manchester. His father, C. H. Johnson, was the head of a manufacturing business which celebrated its one-hundredth anniversary when he was a small boy—"one of those comfortable lesser industrial concerns, always in the hands of a single family, never making vast fortunes, but living on after comet enterprises have flared up and sputtered into obscurity again." His mother, Rosa (Hewlett) Johnson, was the daughter of a noted Lancashire preacher and a believer in outdoor exercise who shocked the Victorians by bathing daily in the sea until she was eighty and by refusing to wear corsets or high heels. She taught her nine children herself until they were ready for school.

Young Hewlett had a happy and comfortable childhood. As the family business expanded his family moved "from smaller to larger houses, from the smoky northern to the sunnier southern suburbs of the town," finally ending up in a "comely grange in the heart of Cheshire, twenty-five miles from the city." As for the long summer holidays, they spent them by the sea in Wales or Scotland. At seventeen, after attending King Edward's School in Macclesfield, he went on to Victoria University in Manchester. There he studied science and engineering. In 1894 he took the Geological Prize; he earned his degree in science before he was twenty-one; and in 1898 he was elected an associate member of the Institute of Civil Engineering upon the presentation of a thesis on hydraulic engineering.

For a long time Johnson had no intentions of making his career in the Church. He had studied geology under a disciple of Darwin, and, as he puts it: "Under the impact of evolution the fundamentalist beliefs of my youth cracked up." His faith returned, however, and the religion he recovered was "more humanistic, more searching in its claims on conduct, less content with conventional Christian platitudes, less divorced from daily living." He read many lives of missionaries, among them the story of Mackay, the missionary engineer in Central Africa, and Mackay's biography "determined my course. I would be a missionary engineer."

(Continued next page)

REV. HEWLETT JOHNSON

This decision was followed by apprenticeship in a Manchester engineering factory. A temporary decline in the family fortunes forced Johnson to live on his wages (thirteen shillings weekly) for a while—and also made him conscious of the hard lives of his work companions, most of them men with families who were attempting to live on seventeen shillings a week. Two ardent young socialists who occupied the lathes next to his had already opened an ideological attack on him, and before long he was questioning his own conservatism. "What right had I, or any other Christian, to live in comfort, as I had done nearly all my life, and as my class did continually, while others suffered constant economic hardship?" he asked; and he could not "equate business with Christianity."

For a time circumstances diverted Johnson's attention from these disturbing thoughts. He was advanced to a position of greater responsibility—assistant manager—and "moved away from the close companionship of the bench." Then prosperity returned to his family's factory, which was embarking on new colonial enterprises, and he went to work there at a much higher salary. But a career of professional engineering could not satisfy his social and religious instincts and interests, and after his marriage to Mary Taylor both he and his wife offered themselves for missionary work in Central Africa. The missionary society which accepted them required a course of higher study, and so Johnson went to Wadham College, Oxford, to study theology for four years. "Literary and historical criticism and philosophy completed what the evolutionary teaching had begun and gave a new release to thought. A close analysis of the evolution of religious and social ideas made me expectant of change and kindled a fresh, but rather academic and dilettante, interest in socialism."

In 1900 Johnson received his honors degree in theology, but he was now rejected by the missionary society as unsuited for their particular theological requirements. In 1905, after founding *The Interpreter*, a theological quarterly journal, which he was to edit until 1924, he rather reluctantly consented to be ordained, and he went as curate to the parish of Saint Margaret's Altrincham. In 1908 he became vicar of the same parish, where he was to remain for sixteen more years.

Although Altrincham is a very wealthy suburb, as curate of the parish Johnson found himself at the lower end of the social scale. This provided "the completion of the process of social education begun amongst the artisans and laborers"; and soon he came to the conclusion, "which Herr Hitler '42 is clear-headed enough to see, that Judaism and Christianity provide the high road to socialism and communism." Among other things, he and his wife began to organize annual camping trips for poor boys, and they later established the first girls' camp in England. By the time of the First World War Johnson's "socialist taint" was so well known that his services as a voluntary chaplain to the overseas forces were rejected. His wife, who had received training as a nurse when preparing for the missionary life, was accepted, however, and she was placed in charge of three hospitals. She eventually contracted an illness and died in 1931, "in a true sense a war victim."

During the War, Johnson worked with Drummond Frazer, manager of the Union Bank of Manchester (and later financial administrator under the League of Nations), interpreting his theories for *The Economist* and writing the speeches which he delivered to London, American, and Parisian bankers. At this time, with new interests in money and banking, he came under the influence of Major Douglas and the Social Credit Movement. ("If later I have moved on to other solutions, it has been on moral and practical rather than technical grounds, and because a wider horizon had, in the meantime, opened up.") The Russian program also gripped him "from its earliest formation," and later he was to make several trips to the Soviet Union to see what was going on.

Johnson's rather unorthodox political ideas did not prevent him from rising in the Church. From 1913 to 1924 he was examining chaplain to the bishops of Chester; in 1919 honorary canon of Chester Cathedral; in 1921 and 1926 select preacher before the University of Cambridge; in 1922 rural dean of Bowden and proctor in Convocation. In 1924, the year in which he preached the Assize Sermon at Oxford, he became Dean of Manchester, and seven years later, in 1931, he became Dean of Canterbury, receiving his appointment directly from the late King George V. His duties were mainly to be the care of the fabric of the historic cathedral and the conduct of worship there in collaboration with his chapter.

His activities were not confined to the cathedral, however. In February 1932 he left England on a one-man mission of sympathy and help to the flood victims of China, where he worked in close cooperation with Sir John Hope Simpson, director general of the National Flood Relief Commission. "The more I penetrated," he said at that time, "the more convinced I became that if China were left alone at this critical moment in her history not only were vast destructive forces in danger of being let loose, but the Western World would also be deprived of one of the greatest opportunities ever presented to her in connection with the East." In 1935 he toured America and Canada for seven weeks, expounding Social Credit theories. In the spring of 1937 he visited Loyalist Spain, and, speaking of the Government's refusal to guarantee safety to British ships attempting to run the Bilbao blockade, was quoted: "Nothing is so un-British as to advise British seamen to avoid risk when they desire to carry foodstuffs to starving children. We can only hope Holland and the Scandinavian countries show greater humanity and courage." He actively supported the Popular Front campaign led by Sir Stafford Cripps '40, calling for unity of all opposition parties against Chamberlain's National Government, and in March 1939 he published a pamphlet called *Act Now!* in which he appealed for resistance to the Fascist dictators.

These activities, as well as Johnson's enthusiastic public endorsements of the Soviet way of life, were not well received by many of his colleagues, who were also displeased because he had once welcomed "pajama-clad women" to his services and had told missionaries that cannibalism was justified to save starving children. Since the only way the Archbishop of Canterbury '41 could possibly get rid of him was by promotion or by a special act of Parliament, for a while his utterances simply were ignored officially. When he continued to support Soviet policy even after the Nazi-Soviet Non-Aggression Pact of August 1939 and the beginning of the Second World War, however, this policy became more difficult. "Communism has recovered the essential form of a real belief in God which organized Christianity, as it is now, has so largely lost," he was quoted, just before the publication of *The Socialist Sixth of the World* late in 1939.

The Socialist Sixth of the World, later published in the United States as *The Soviet Power* (1940), barely received a single favorable critical mention (outside the Communist press) in either country at the time of its publication. W. H. Chamberlin, who reviewed it for more than one magazine, announced in the *Saturday Review of Literature*: "The whole impression of the book is that of a work written in a complete factual vacuum. . . The bright Rollo Book cooperative paradise sketched by the Dean bears no more resemblance to the fear and purge-haunted, poverty-stricken Asiatic despotism which has grown up under Stalin's '42 personal dictatorship than the Beatitudes would bear to *Mein Kampf*." The *Manchester Guardian* critic mourned that "there are times when in reading the Dean's book one wonders whether he has any critical sense left at all." Joseph Barnes commented that "his defense of the Soviets shows more personal courage than political wisdom." And criticism of the Dean himself also reached new heights. In March 1940 five resident canons of Canterbury Cathedral issued a statement censoring him for political utterances which "gravely impair the spiritual influence of the Cathedral . . . give grievous offense to many Christians throughout the world and in our view prove themselves to be incompatible with the proper discharge of the trust which has been committed to him." Such attacks increased when he was elected a member of the Standing Orders Committee of the People's Convention of 1941.

Even before Hitler's invasion of the Soviet Union, however, more than 500,000 copies of the Dean of Canterbury's book had been sold. It had been translated into four other languages, and a cheap abbreviated edition had been published in the United States with a preliminary printing of a million copies. And after June 22, 1941 its sale increased enormously, as did the Dean's audiences in England. In July 1941 Johnson announced that the "moral and economic superiority of Soviet Socialism over Western Capitalism and Fascism—is being demonstrated at this moment in Eastern Europe." In March 1942 he told a mass meeting in Liverpool that "this feeling that the Soviet Union is the salvation of the world is growing. I want it to grow more. . ." In April 1942 the transatlantic telephone even brought his voice to New York City's Carnegie Hall at a meeting in celebration of Red Army successes. His has been one of the most insistent "Second Front" voices in Great Britain.

Extremely "tall, spare, white-haired, and clean-shaven," with an "infectious, boyish smile," the Dean is an impressive figure in his black gaiters and frock coat. In 1938 he married Nowell Mary Edwards, who was responsible for the witty line drawings that illustrate his book on Russia. He has one daughter by his first wife.

JOHNSON, ROBERT WOOD Apr. 4, 1893- Manufacturer

Address: b. Johnson & Johnson, New Brunswick, N. J.; h. Hotel Pièrre, New York City

The plight of the small businessman has been the subject of many political battles in Washington, and for months Robert Wood Johnson was the bone of contention in many of these fights. Since he is chairman of the board of Johnson & Johnson, surgical dressing manufacturers, some claimed that his appointment as chairman of the Smaller War Plants Corporation and vice-chairman of the War Planning Board was a plot on the part of a small band of Big Business "conspirators" to keep war contracts in their own hands and freeze out the small businessman. Others felt that his knowledge of business plus his experience as head of the New York Ordnance District for the Army made him the ideal

ROBERT WOOD JOHNSON

person to take over the placing of Government contracts, subcontracting to small plants wherever possible in order to speed up production. In the fall of 1943 Johnson himself put an end to the controversy by resigning as chairman of the SWPC—because, he said, he had been advised by his doctors to "slow down." By that time he was generally credited with having put up a good, if losing, fight on behalf of small business.

Born in New Brunswick, New Jersey, April 4, 1893, Robert Wood Johnson, the son of Robert Wood and Evangeline (Armstrong) Johnson, received his early education at Lawrenceville School and from private tutors. His father died when he was fifteen, and upon graduation from Rutgers Preparatory School in 1910 young Robert went directly into the family firm. He was vice-president from 1918 to 1930, and vice-president and general manager for the next two years. In 1932 he became president; he resigned in 1938 to become chairman of the board, which position he still holds.

Though his manner is genial, Johnson is a shrewd businessman. For many years he has been convinced of the importance of small business. It happened that during the depression his firm was having difficulties marketing one of its products. After consulting all the experts in the place without satisfactory results, he asked his secretary to call in all the executives who had anything to do with the product so that they could talk the matter over. In came twenty-seven executives! Johnson counted them, and said: "All right, gentlemen. You may leave now. I see what the trouble is!" He realized that the organization had grown so large that there was a great deal of duplication of effort, and he gradually brought about a reorganization. Today the company is composed of a number of small divisions, each responsible for a few products. This is fundamentally the way he undertook his job with the Smaller War Plants Corporation—breaking up large contracts into small units which could be handled by small plants with facilities for specialized jobs.

When the United States entered the Second World War Johnson was appointed rationing administrator for New Jersey by Governor Edison '40. He resigned on April 20, 1942 to enter the Army Ordnance Department. On May 29 he was given an Army commission as colonel (he was later promoted to brigadier general) and on September 14 was placed in charge of the New York Ordnance District for the Army. In January 1943 Lou E. Holland, who had been chairman of the Smaller War Plants Corporation since September 1942, was demoted to director, while Johnson was put in as chairman of the SWPC and vice-chairman of the War Production Board. The switch was made on the recommendation of Donald M. Nelson '41.

The appointment of Colonel Johnson was violently opposed by Senator Harry S. Truman '42, Democrat, of Missouri, who told the Senate that "the largest business monopoly in the history of the world" had been created in Washington. He claimed that just when the SWPC seemed to be making headway under Holland, Big Business stepped in and supplanted him with a man who was a colonel in the Army and the head of a large manufacturing concern, thus assuring continued control of government contracts by large corporations. Senator Murray of Montana, however, approved the appointment of Colonel Johnson, describing him as "a very able man and highly qualified beyond anyone else who could have been chosen." He added that the new chairman was "a small businessman engaged in a big industry whose sympathies are along the lines of the small businessman and in opposition to the trend toward collectivism in the country."

At the time Johnson took over it was claimed that one hundred large corporations had been given seventy per cent of the nation's war contracts, while 175,000 smaller firms had only thirty per cent. Johnson promised that this picture would change in the near future, and that small plants would get from twenty-five to thirty-five billion dollars' worth of contracts. Many of his Washington friends thought those figures very optimistic, but felt that he would at least do his best. Colonel Johnson's plan was that district procurement officers of the Army, Navy, Maritime Commission, Lend-Lease, Treasury, and other Government agencies should meet regularly in district WPB offices to see which agency could best utilize the manpower and other facilities of each of the small factories listed at those district offices by owners who wanted contracts. He authorized the regional SWPC officers to lend up to $25,000 for plant conversion without referring the loan to Washington.

In a speech in March 1943 Colonel Johnson said that America's war effort had been "delayed for six months" by the construction of huge new war plants, overlooking facilities already existing in small plants "across the street." He claimed, however, that during the immediate past the volume of war contracts going to small business through the SWPC had increased from $10,000,000 to $60,000,000 a week. On March 31 the regional office of the SWPC covering New York State and northern New Jersey announced that it was placing Government contracts with small business at the rate of $5,000,000 a week, three quarters of these going to firms in New York City. By that summer Johnson was generally credited, though grudgingly in some cases, with being at least partially responsible for the fact that there had been an upturn in New York as a manufacturing center.

In August 1943 Johnson, by this time a brigadier general, resigned his commission and became a civilian once more to take charge of essential civilian production by those small plants for whose continued existence he had been laboring. It was felt that the point had been reached where further pressure toward the distribution of war contracts to small plants would be uneconomical. Some phases of war production were practically completed, and it seemed the better policy to convert immediately many small plants to peacetime production of civilian goods, thus taking the first step back to normal times and keeping the big companies from controlling post-War planning. Discontented small contractors remained interested in war contracts rather than in post-War business, however, and in September all seven members of the Michigan regional division of the SWPC resigned, charging that the corporation was ineffective.

In September, too, Johnson asked to be relieved of his duties with the SWPC as soon as possible. He claimed poor health as the reason for his resignation, but he later complained that the agency had been "a political football" until its businessmen administrators "picked up the ball and made it a job." Small business, he also said upon leaving the SWPC on October 1, was generally in a stronger position than it had been in twenty-five years. This was still denied by the small contractors themselves, but it was generally agreed that Johnson had done his best for them in the face of all sorts of pressures.

Johnson is a wiry, blond, gray-eyed man who likes to work and to make speeches. He has a vast store of restless energy, and his constant search for new experiences has frequently taken him away from his Princeton home, Morven—a charming place which dates back to Revolutionary days. He has traveled extensively, raced his own yacht from New York to Spain, explored near the Arctic, and flown his own planes, one of them a helicopter. He enjoys tennis, and though he has little time for the sport in Washington, he keeps his membership in the Racquet and Tennis Club in New York and the Pretty Brook Tennis Club in Princeton. Hunting is another favorite sport, and he was at one time master of the Stony Brook Hounds in Princeton. He also belongs to the New York Yacht, Cruising, and River Clubs. By religious affiliation he is an Episcopalian.

He has two children—Robert Wood Johnson, Jr., who is in Army training at Ohio State University, and an adopted daughter, Sheila. Having been divorced twice, from the former Margaret Shea and Elizabeth D. Ross, Johnson was married to his third wife, the former Evelyn Vernon, in August 1943.

One of Johnson's hobbies is small-town politics, and he claims that none of the books he has ever read has taught him so much about psychology as did his experience as member of the Borough Council of Highland Park, New Jersey at the age of twenty-five, and as mayor two years later. He tells this story of that period:

"One night while I was mayor I was having a formal dinner party with about twenty guests. We were all at the table eating when I was called to the telephone. It was a citizen—a woman—calling; and she said I was the worst mayor the town ever had, that the government wasn't any good, that the sooner I got out of office the better, and so forth. I asked her what the trouble was, and she said, 'I put my garbage out three days ago, and it hasn't been collected.' I asked her name and address and told her I'd attend to it right away.

"So—still in my dinner clothes—I went out and got in the station wagon, drove to her house and asked if she was the lady who'd called about the garbage. She said she was. I asked her where I'd find it. She pointed it out to me. So I picked up the can, put it in the station wagon and drove to the dump and dumped it." Johnson admits that "the dry Martinis which preceded the dinner might have had something to do with this outburst of civic pride!"

Johnson's frequently unconventional behavior has often distressed his more conservative business associates, but his genuine liking for people and his keen sense of humor make him a very human person in spite of heavy business responsibilities which he has carried from an early age.

Who's Who in Commerce and Industry 1940-41

JOHNSTON, ERIC A(LLEN) Dec. 21, 1896- Industrialist

Address: b. 123 S. Wall St, Spokane, Wash; h. 615 E. 16th Ave, Spokane, Wash.

Elected head of the Chamber of Commerce of the United States at forty-five, "progressive and aggressive" businessman Eric A. Johnston from Spokane, Washington, represents, according to the *Reader's Digest*, "the youthful spirit of the West." Johnston is, however, not a Westerner by birth. He was born in Washington, D. C. on December 21, 1896, the son of Bertram Allen and of Ida Fazio (Ballinger) Johnston. The family was poor and when, soon after they had moved to Spokane, Eric's father died, the boy, then six years old, went to work selling newspapers to help "keep the wolf from the door." In high school he earned money by reporting school news for a local newspaper. He worked his way through the University of Washington, from which he received an LL. B. in 1917, by acting as a longshoreman. (In 1942 he received an honorary LL. D. from Whit-

Harris & Ewing

ERIC A. JOHNSTON

worth College, in Spokane, Washington, of which he is a trustee.)

Before Johnston could be admitted to the Bar the United States entered the First World War, and he joined the Marines, commissioned a captain. He served from 1917 to 1922 and might have remained permanently in the Marine Corps had not a head injury, received while he was serving as assistant naval attaché at Peking, China, caused his honorable discharge. Johnston returned to Spokane and married Ina Harriet Hughes on October 25, 1922. Under doctor's orders to work out of doors, he started as a door-to-door salesman, peddling vacuum cleaners. In 1923 he and a friend purchased an electrical manufacturing and wholesale concern, changing its name to the Brown-Johnston Company. A decade later the firm expanded into two separate organizations, the Columbia Electrical and Manufacturing Company and the Brown-Johnston Company. Those two companies are now respectively the largest electrical-contracting and the largest electrical manufacturing companies in the Northwest. He is still president of both. In 1933 he was appointed trustee of the Washington Brick, Lime, and Sewer Pipe Company, and the following year he became chairman of the board. That concern, wrote John H. Crider in the New York *Herald Tribune,* had at that time a $265,000 debt, only a few dollars in the bank, and for six months (unable to pay wages) had been giving many of the hungry employees $5 weekly with which to buy groceries. Johnston kept the company out of the courts, and he has paid off nine-tenths of the debt and increased the minimum wage from 37¢ to 73½¢ an hour.

An increasingly prominent citizen of Spokane, Johnston had become president of the Spokane Chamber of Commerce in 1931, and served until 1932. Two years later he returned to the city of his birth as a director of the United States Chamber of Commerce, a federation of 1,550 local chambers with a membership of well over 600,000 federated organizations. He was chosen vice-president in 1941 and in 1942, as the result of a progressive uprising in the reactionary Chamber, he was elected president—the youngest man ever to head the United States Chamber of Commerce. His candidacy had been sponsored by a group which stood for more cooperation with government and labor and less "Roosevelt '42-baiting." Although Johnston is a Republican he is considered somewhat of a liberal, and, indeed, in the opinion of the more conservative members of the Chamber of Commerce, is almost a "radical." After Johnston's election a veteran member of the Washington staff is said to have remarked that the new Chamber president was "like a fresh breeze blowing through the building." Johnston's reply is supposed to have been that he hoped the disturbance would turn out to be something more significant than hot air.

Brilliant and full of personal charm, the trim, youthful-looking president of the Chamber of Commerce manages to keep friendly with both capital and labor. Although he is spokesman for 600,000 American businessmen, wrote Crider, Johnston is on the best of terms with labor chiefs. "He has probably done more than any single businessman in the country," Crider asserted, "to gain support of management for cooperation with organized labor." According to the *Reader's Digest,* Johnston at once startled his Chamber of Commerce board of directors by calling upon the President of the United States, "who had never displayed anything but hostility toward the Chamber." Roosevelt said he would give his visitor five minutes, declared *Time* Magazine, and then was so favorably impressed that he kept him twenty. It had been five years since a Chamber president had visited the White House. The Chamber's leaders had been charged with making no effort to overcome their lack of understanding of the Administration. Johnston, said Crider, "symbolizes the Chamber's awakening."

Johnston then arranged a conference at the White House with the leaders of two of the world's largest labor organizations, William Green '42 of the A. F. of L., and Philip Murray '41 of the C. I. O., as well as with W. P. Witherow '42, then head of the N. A. M. The labor-industry spokesmen pledged their joint cooperation for uninterrupted war production and demonstrated "the unity of purpose and action of American management and labor." The conference was so peaceful that Roosevelt is supposed to have remarked that at last the lions and the lambs had got together, although he had difficulty in distinguishing which were which. In February 1943 the President appointed Johnston to the President's Committee on Deferment of Federal Employees.

"I am for capitalism," wrote Johnston in the *Reader's Digest,* "and almost all labor leaders I know are really just as much for it as I am. They do not go along with the idea that 'capitalism is dead.' They know that either private business or government bureaucracy must save this country when the War is over; and they prefer private business. They have a sound reason. You cannot strike against a government. You cannot even truly bargain with a government. Wages and hours in government employment are fixed by public law. No group of government employees can overturn public law enacted by the Congress and backed by the Army and Navy. In a knockdown contest between a government and a union, the union is beaten from the start."

"Labor and business," Johnston continued, "can be firm allies in preventing the governmentalization of this country. I fear no direct effort by labor to destroy business in favor of government. What I fear is that people in general—including millions who are wage-workers and millions who are not—may forget just what it is that makes business go. For this I very considerably blame the businessmen. We are too mealy-mouthed about the basic principle of our economic system. We have been intimidated by all the tirades against 'bloated capitalists' and 'swollen profits.' We fear that the word capitalism is unpopular. So we take refuge in a nebulous phrase and talk about the 'Free Enterprise System.' And we even run to cover in the folds of the flag and talk about the American Way of Life. . . We stand at a solemn parting of the ways," Johnston wrote in conclusion. "Our business leaders and our labor leaders want freedom. No American wants slavery. But what is the price of freedom? I say it is the capital with which to operate capitalism. The word is capitalism." George Seldes '41, editor of *In Fact*, commended Johnston for his "openly dropping phony phrases and speaking for capitalism."

The President of the United States Chambers of Commerce does not confine his activities to the United States. He is chairman of the United States Commission for Inter-American Development, and in order to secure closer cooperation between business and labor groups of North and South America, or, as *Time* Magazine put it, "to promote United States post-War trade," Johnston flew to South America in February 1943. He conferred with leaders of Brazil, Argentina, Uruguay, Chile, Peru, and Colombia. His visit to Argentina, in the opinion of observers, proved to be "the most successful 'good-will' appearance by an American in Argentina since the start of the War." Johnston's appearance in Argentina also evoked a pro-United States declaration of sympathy from the president of the Argentine Chamber of Commerce. Johnston returned from his trip in March 1943 convinced that "just as the last century was a 'British century,' the next could be an American century if we sent our money, management, and technical skill down the broad avenues of exploration and not the blind alleys of exploitation."

He immediately reported to President Roosevelt on plans for a vast program of post-War development of South America to be carried on through an organization of the Inter-American Development Commission, branches of which had already been set up in all of the twenty-one American republics. The organization was at present being financed by the State Department and by Nelson A. Rockefeller, Jr. '41, but Johnston insisted that after the War it must be financed by private capital. He was particularly interested in the coal fields, petroleum reserves, and undeveloped mining possibilities in almost all the Latin-American countries. In April 1943 he supported extension of the reciprocal trade agreements.

In August 1943, as a member of the Economic Stabilization Board, Johnston visited Great Britain for three weeks. Upon his return he proposed a conference of businessmen of the "Atlantic countries" on post-War problems as a prelude to similar discussions with the Russians. He also proposed that British and American capital be "married" after the War in order to undertake joint foreign investment enterprises, the development of "economically backward countries." He suggested, however, that one difficulty in the way of such a marriage might be the fact that the British were considerably fonder of cartels and monopolies than he thought Americans were.

After the War, Johnston believes, America will have to take world leadership. "No other nation," he wrote in the New York *Times*, "will be physically and mentally capable of doing it. As the most powerful nation on earth, America will have no alternative, in the name of decency or self-interest, but to help bring order out of the chaos brought by the War. . . The immediate task of helping Europe and the rest of the world recover from its shell shock will be complicated by our own problems of post-War readjustment. We can solve those problems—and we will—but it will require wise and unselfish cooperation by all groups in our national economic life. . . But the path of post-War adventure and development does not stop at home. Africa, China, Europe, South America are avenues of American exploration, development, and progress. For the conclusion is inescapable that tomorrow's world will be an international world." This post-War era must be based on a "vigorous" competitive capitalism, he stated on March 24 in a speech in which he warned against ever-increasing Government controls and international "philanthropy." In November, while Congress debated post-War resolutions, he declined to become specific, however. The United States should do its part in maintaining world order after the War, according to Johnston, but should keep its own interests in mind and should avoid "reckless commitments."

According to *PM*, Johnston's domestic program is not actually much more specific: he "has produced little affirmative talk or program beyond assurances that free enterprise would save the world." These assurances do not exactly resemble N.A.M. pronouncements. Johnston announces himself as much against cartels and private monopolies as he is against government "bureaucracy." He announces that trade unionism and some public supervision and legal restraints on business must be retained, though warning that the present trend —ever-increasing government controls—may lead to totalitarianism. He speaks well of high wages for the worker. On the other hand, he speaks against any governmental plans to assure full employment after the War—private industry can do the job, he says. He calls for the end of Government financing of housing after the War, for the end of grants of Federal funds for public works of states and municipalities, for a revision of tax laws "to

JOHNSTON, ERIC A.—*Continued*

stimulate the investment of risk capital." Harold Laski '41 calls his "control system," his "new capitalism," reminiscent of Woodrow Wilson's thirty-year-old "new freedom."

On few legislative issues does Johnston side with New Dealers. In May he opposed the Kilgore '43 bill for an Office of War Mobilization. In December he opposed consumer subsidies, saying that the "flexible" line of inflation could be held without "spending the taxpayers' money." (In 1942 he had participated in a closed meeting of farm lobby leaders, called in an attempt to increase parity and break price ceilings, and in October 1943 it was reported that he had told various British industrial and financial groups that a twenty-five per cent increase in the cost of living could be looked for in the United States in 1944 and an additional twenty per cent the following year, whether the War was over or not.)

In October 1943 a campaign to win the Republican Presidential nomination for Johnston was announced. He promptly replied: "Do not want to live at either end of Pennsylvania Avenue, prefer to live at either end of Main Street in any good American town." At the end of 1943 he was, in spite of this pronouncement, still being groomed as the "dark horse" candidate for the nomination.

Called "a glutton for extra-curricular punishment" by *Business Week,* Johnston has found time to serve in various official capacities as well as on an endless list of committees of his local Chamber, the United States Chamber, and the Manufacturers' Association of the Inland Empire, of which he is a past president. He is the director of several banks and life insurance companies. In 1940 Johnston was the Republican candidate for United States Senator from Washington State, but failed to be elected. In addition to these activities, he has written a number of articles which have appeared in various periodicals, and has made a number of speeches, both on the radio and directly to an audience. "The best orator to top the Chamber in a long, long time," according to the late Lemuel F. Parton, Johnston is said to be unusually compelling on the platform. A firm believer in the proposition that more can be done for business by personal acquaintance and conference than by charges and countercharges in the press, Johnston is in frequent demand as a conciliator in Washington disputes between conflicting elements. He has a genial manner, a sense of humor, and a virtually photographic memory—assets which explain much of his political and business success. "A past master at making friends and influencing people," Johnston, wrote *Business Week* enthusiastically, has a smile that is "something special." He is working on a book, *The Middle Way,* to be published by Doubleday, Doran and Company.

Johnston is good-looking, tall, slim, and has the "lean, hard look of the habitual tennis player," and is well-dressed, although he did shock his colleagues in the Chamber by appearing hatless at their summer sessions. The Johnstons have two daughters, Harriet Ballinger and Elizabeth Hughes Johnston.

JONES, MARVIN Feb. 26, 1886- United States Government official

Address: b. House Office Bldg, Washington, D. C.; h. George Washington Inn, Washington, D. C.; Amarillo, Tex.

War Food Administrator Judge Marvin Jones of Texas is well fitted to qualify as an expert on food production and agriculture, for he was born on February 26, 1886 on a cotton farm near Valley View, Cooke County, Texas, the son of Horace K. and Dosia Jones, pioneers who had moved there from Tennessee. He attended country schools in the neighborhood and, after receiving a teacher's certificate from the John B. Denton College at Denton, entered Southwestern University at Georgetown, Texas. He worked his way through college—teaching school for a year, when he was only seventeen, raising cotton and wheat as a tenant farmer for two years, and working on ranches as a cowboy during summer vacations. He completed the four-year liberal arts course in three years of study, receiving his B. A. degree in 1905. As an undergraduate he participated in many extracurricular activities, ranging from baseball to literature and oratory. Following his graduation he entered the University of Texas, and two years later he received his LL. B., again having completed his course in less than the required amount of time. He was admitted to the Texas Bar in the same year, 1907.

From 1908 on Jones practiced law with his headquarters in Amarillo, although, as a plains lawyer, he actually had to travel from county seat to county seat all over the Texas Panhandle, enduring every sort of physical discomfort en route. In 1913 he achieved the distinction of becoming the youngest man ever to be appointed chairman of the Board of Legal Examiners of the 7th Supreme Judicial District of Texas. Eight years after he had first hung out his shingle in Amarillo he was elected to the Sixty-Fifth Congress of the United States, as Representative from the 13th

Texas District (one of the largest Congressional districts—in area—in the country), and he was to continue to serve until the Seventy-Sixth Congress in 1941, his only absence being during the First World War, when he served as a private in the United States Army. (His first vote cast in Congress had been for the declaration of war against Germany.) From 1917 until 1933 he also served as Texas member of the Democratic Party's National Congressional Campaign Committee.

Jones' war service resulted in his becoming a member of the American Legion and, through the years that followed, he also became a Mason, a Woodman, and an Elk. Because of his farm background Jones was very much interested in agriculture, and early in life had become convinced that "farmers were getting a raw economic deal." When, therefore, he was appointed chairman of the House Committee on Agriculture in 1931, he was able, according to *PM,* to promote legislation to improve their lot. As "legislative father and savior of the AAA," he helped to write the act and redraft a substitute when the Supreme Court ruled it unconstitutional. He also backed the President on the Sugar Bill and was one of the first to advocate extension of the food stamp plan. Some of the other bills which bear Jones' name are the Soil Conservation Act, the Imports Act, the Farm Loan Act, the Ever-Normal Granary Bill, and the Insured Mortgage Plan. Jones has been called "the author or sponsor of perhaps more farm legislation put on the statute books in the last decade by Congress than any other single member." Jones, said the New York *Times,* "fights well. Time and again, when he led Administration forces through the maze of New Deal farm legislation as chairman of the House Agricultural Committee, his was the only amendment to alphabetical legislation that Congress would enact." A staunch New Dealer, he was a trusted adviser of President Roosevelt ['42] and of the then current Secretary of Agriculture, Henry A. Wallace ['40].

In 1940 the President appointed Jones a judge in the United States Court of Claims, and his appointment was quickly confirmed by the Senate. He assumed the duties of his office on November 20, 1940, following his resignation from the House of Representatives. In the beginning of 1943, however, he took a leave of absence from his judicial duties in order to become a temporary assistant to James F. Byrnes ['41], then stabilization director, by Presidential appointment. There Jones learned much about the problem of food supplies in war and was consequently named chairman of the United States delegation to the United Nations Food Conference at Hot Springs, Virginia. There delegates from forty-four countries gathered at President Roosevelt's invitation in order to discuss food problems. After seventeen days the conference concluded with a declaration of principles which included such facts as: "Freedom from want can be reached"; "In areas devastated by the War . . . the most urgent demand will be for cereals and other foods which maintain human energy"; "More production [is] needed if the people of the world [are] to have sufficient food for adequate nutrition"; and "Freedom from want cannot be achieved unless there is a balanced and worldwide expansion of economic activity."

MARVIN JONES

As president of the conference, Jones led its deliberations. When it was all over, reports *Time* Magazine, he presided at a final dinner and made a "ringing declaration": "We have set out to make a world in which, for the first time in history, every man, everywhere, will know certainly that he can get enough to eat." "Then Jones dashed about slapping backs. . ."

In June 1943 Jones succeeded Chester C. Davis ['40] as food administrator of the United States. Davis had resigned his position after a disagreement with President Roosevelt over a matter of food policies. Judge Jones' appointment met with much opposition from Congress, particularly from the Republican faction. Davis' supporters alleged that Roosevelt "had dropped a 'no man' for a 'yes man,'" and Mark Sullivan wrote in the New York *Herald Tribune*: "It is an advantage that he was for twenty-three years a member of Congress . . . and has the favorable acquaintance of many in that body. At the same time farm leaders in Congress remember Mr. Jones as an especial partisan of the Administration's farm policies during ten years past. Some of these policies are now out of favor. One of the policies was to give subsidies to farmers, in the form of 'benefit payments.' The subsidies were accompanied by onerous regulations. Part of the present suspicion of farm leaders in Congress against wartime policies about crop production and food is apprehension that the War may be made an excuse for still further regulation." It was also alleged that Jones had been granted many powers not given his predecessors. On the other hand, various Democratic members of the House praised Jones' appointment, and Speaker Rayburn remarked that the President could not have found a better man to be War Food Administrator.

(Continued next page)

JONES, MARVIN—*Continued*

"If," said Jones, "we work together, plan properly, and recognize the production and marketing problems of the farmer and the processing and distributing problems of the food industry, I am confident we can supply the necessary demands for food, provided, of course, that God in his infinite wisdom blesses us with good weather."

Since that time Jones has been far less vigorous in support of either subsidies or price control than OPA General Manager Bowles '43 or Economic Stabilization Chief Vinson '43, concentrating chiefly on plans to stimulate the production of essential crops, and consulting Congress frequently. In August he called for a "floor" on farm prices, suggesting also that the Government buy food surpluses from the farmer in order to assure continued production. The next month he asked that the borrowing authority of the Commodity Credit Corporation be enlarged by $500,000,000 if such production was to be increased in 1944, talking about "support prices" rather than subsidies. In November he asked—again in vain—for funds for loans to small farmers, pointing to the record of increased production by Farm Security Administration borrowers. In December he told the Senate Banking and Currency Committee that he wanted an "early disposition" of the subsidy controversy, and warned that abandonment of the program would blow the lid off price ceilings. ("It takes a long time to grow a crop, and a man ought to know what to rely on," he also said.) Congressional attacks on him have not been frequent, but he has often been unable to act at all because Congress disapproves of one course of action and his colleagues of the other. The milk crisis, in which he was afraid to grant either subsidies or price increases, is a perfect example.

In October 1943 President Roosevelt appointed Jones the American representative on the Combined Food Board, the Anglo-American body charged with obtaining and distributing food supplies for the two countries. At the same time he became chairman of a new interdepartmental committee on food requirements and allocation which was to distribute available supplies among claimant groups in the United States.

A man "of mild manner and pleasing personality," Jones has few recreations and hobbies—he reads a lot, likes Wild West motion pictures and hunting, and before the War went fishing frequently. Little is known about him, for the tall, drawling Westerner prefers to keep himself out of the headlines. Jones is a Democrat and a Methodist. He is, says the newspaper *PM,* "often reluctant to commit himself on issues."

JUIN, ALPHONSE (PIERRE) (zhYOEN al'fōNs) 1889(?)- French Army officer

General Alphonse Pierre Juin, former commander in chief of the French forces in North Africa and acting Governor of Tunisia pending the arrival of General Charles Mast, is a professional soldier who was born in North Africa some fifty-odd years ago at Bône, Algeria, the son of a policeman. He has had long fighting experience: as a captain in the Moroccan Divisions in the First World War, and as chief of staff to the late Marshal Louis Hubert Lyautey, the organizer of North Africa. A divisional commander at the time of the fall of France in the spring of 1940, he was taken prisoner by the Nazis and not released from captivity until 1941, when General Maxime Weygand '40 was relieved of his command in North Africa. The Vichy authorities wanted to put Juin in Weygand's place, and the Germans agreed to release him on the condition that he take an oath not to again take up arms against them. In August 1941, then, Admiral Darlan '41 appointed him commander of the Vichy troops in Morocco, where General Noguès '43 was still serving as Governor General.

GEN. ALPHONSE JUIN

At the time of the Allied landings in North Africa in November 1942 General Juin was one of those responsible for the short-lived French resistance. Shortly after midnight on the morning of November 8 it is said that Robert Murphy '43 paid a surprise visit to his home and informed him that an American force lay off Algiers and other North African ports ready to come ashore and determined to stay. Murphy gave Juin the impression that the force numbered something like 500,000 fully equipped men, and concealed the fact that the British were participating in the enterprise, too. This story impressed Juin, and together Juin and Murphy telephoned Darlan, who hurried over, infuriated, and who, after discussion, tried to leave to dispatch a message to Pétain '40. Arrested at this point, Darlan finally agreed to write a message to Pétain recommending that Vichy order resistance to cease. Sixteen hours after the landings Juin and Darlan agreed to surrender Algiers, over whose docks the flames and smoke were still rising.

On December 29, 1942, after the assassination of Darlan, it was announced that Juin had been appointed commander in chief of the French forces in North Africa. Because of his record this was not a welcome move with de Gaullists, and Juin's personal popularity was not increased when that same day, on orders from him and other ex-Vichyites, the mobile guard began a vast police roundup in which many Frenchmen who had helped the Allies to take Algiers were arrested. Any doubts as to Juin's sincere desire to cooperate with the Allies were removed, however, when he later led the French forces in the Tunisian fighting.

In May 1943 Juin was named Acting Governor of Tunisia pending the arrival of General Mast, who had been named to the Tunisian post by General Giraud '42 on May 7. Mast was reported in Beirut recovering from serious injuries suffered in an accident. The work of ferreting out those known to have been rabid Fascist Party leaders under the Axis occupation of Tunisia was soon proceeding energetically under Juin's direction, and on May 15 the General attended the investiture of Sidi Lamine Bey as the new native ruler of Tunisia. In the speech which he made on that occasion he expressed "all our confidence in your person and our best wishes for a successful reign."

There was some slight comment on the fact that when on May 30 the long-awaited meeting between Generals de Gaulle '40 and Giraud took place in Algiers, General Juin was not present. The next month, however, the newly-formed French Committee of National Liberation approved his nomination as commander in chief of Giraud's armies. Somewhat later General René Bouscat, Giraud's chief of staff for the Air Force, was made chief of staff for all the French Air Forces. Since at the same time many former Vichyites in civil positions in North Africa were being replaced by de Gaullists, these appointments were seen as an indication that de Gaulle had agreed to give Giraud a free hand in Army matters in return for Free French control over civil affairs.

On June 22, when a permanent military commission was created to coordinate the armies of Giraud and de Gaulle and to oversee their rearmament, General Juin was, of course, made a member. And when later that month General Giraud left Algiers to visit the United States, Juin remained to command Giraud's North African armies and to represent his superior in the event of a meeting of the military commission. Apparently, however, de Gaullists remained dissatisfied with a commander in chief who in any way carried the Vichy taint, and in the reorganization of July 1943 Juin was replaced by General Leyer. It was said that he would probably return to a field command in the event of French participation in future operations in Europe.

General Juin is described as a "tall, jolly" man—"a typical Gallic type" who "gesticulates and talks animatedly, rubbing his hands together in the characteristic French fashion, caressing an old wound in his arm, motioning at the map." He "knows literature and history—a self-made soldier." In August 1943 President Roosevelt '42 honored him with the award rank of chief commander.

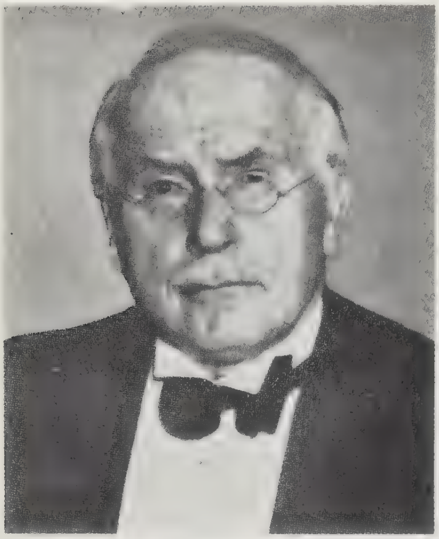
JUNG, CARL GUSTAV (yŭng) July 26, 1875- Swiss psychologist; psychiatrist

Address: h. 228 Seestrasse, Küsnacht, Zürich, Switzerland

One of the most famous of living psychologists, Dr. Carl Gustav Jung has been a center of controversy during most of his long life. Once the foremost disciple of the great Viennese psychologist Freud, he invented the association word test and contributed to psychology the word "complex," the description of "introvert" and "extrovert" types, and a classic study of dementia praecox patients. In 1912, however, having developed psychological theories that differed basically from Freud's, he resigned from the International Psychoanalytic Society. Since that time he has been distrusted as a "mystic" outside the circle of his own followers, and he has even been accused of helping to provide an ideological foundation for Nazi race theories—theories which he says he abhors. Jung denies equally that he is an opponent of Freud's and that he is a mystic—he is accused of mysticism, he alleges, because he believes in "the equal balance of the flesh and the spirit." "We moderns," he says, "are faced with the necessity of rediscovering the life of the spirit; we must experience it anew for ourselves. It is the only way in which we can break the spell that binds us to the cycle of biological events."

It is perhaps because of his religious background that Jung places so much emphasis upon the return of spiritual concepts to the modern world, and the end of the age of rationalism. His father was a liberal Protestant clergyman with an interest in Oriental studies, his mother a lady of an old family of Basel. Jung's paternal grandfather, a German professor of medicine, went to Basel as a political refugee in 1822, and it was there that Carl Gustav was born, fifty-three years later.

As a youth, Jung first entered his name on the philosophy faculty of the University of Basel with the intention of becoming an archeologist; but a dream turned him to medi-



DR. CARL GUSTAV JUNG

cine, although at this time he knew nothing of the psychological significance of dreams. "Once at the University," according to Elizabeth S. Sergeant in *Harper's* Magazine, "he began to work toward a career in internal medicine, with natural science and pathology as his main interests." In 1896, when he was twenty-one, another one of those signals which seemed to guide his life arrested him: he became profoundly interested in the case of a somnambulistic girl with gifts as a medium. "The manifestation in her of several distinct personalities aroused his speculation; there must be, he conceived, something in the background, a hidden life of the mind, showing itself in fantasy and dream, a world beyond the conscious world with which she was in contact."

"This patient turned Jung's interests toward psychology, and in 1900, after receiving his medical degree and studying psychology under Janet in Paris, he became a physician at the Psychiatric Clinic of the University of Zurich. During these years of his early professional life in Zurich, Jung established himself as a lecturer and physician on the psychiatric side of medicine, and as an experimental psychologist. From 1905 to 1913 he lectured on psychiatry at the University of Zurich. He also wrote a book, *Studies in Word Association* (1918), in which he acknowledged a debt to Freud. "Freud," wrote Miss Sergeant, "was then a bogey in regular medical circles. Jung received solemn warnings to desist from his support, lest his own academic future be prejudiced; and he characteristically replied: 'If it means that, to hell with my academic career.'"
